Mr. PORTER. Instead of the \$147,000,000. So let us say \$117,000,000 instead of \$147,000,000, or a net reduction of \$30,000,000.

Chairman RICHARDS. Now, you are proposing a larger grant this year than you proposed last year to Greece. Is that right?

Mr. PORTER. No, if we take it on the basis of totals; last year, you see, the request was broken down into two parts. One was for economic aid and the other was for military common-use items.

(Discussion off the record.)

Mr. VORYS. Mr. Porter, what is your comment on the question of our chairman, as to whether the Greeks would always need some sort of economic assistance? What would happen in Greece, not from the Communists and not militarily, but what would happen in Greece if we quit all forms of economic assistance?

Mr. PORTER. If we were to quit immediately, I think that there would be an internal collapse in Greece. But I am profoundly convinced, sir, that we must proceed progressively to reduce the amount of American aid until the stage is reached when none will be needed. I believe that they can be made independent of American aid by 1954 or 1955.

Mr. VORYS. You do?

Mr. PORTER. Yes, sir. When I left Greece I believed that by 1954 they could become self-supporting. I have since revised that in view of the very rapid increase in raw material prices, and consider a year may have to be added to that date before the Greeks could become fully self-supporting.

However, I am convinced if we continue a program in Greece we can make the Greeks self-supporting in another 4 years at the most.

Mr. VORYS. I am encouraged to hear that.

Mr. PORTER. Well, sir, I think we have to be very tough about it in order to accomplish that.

Mr. JUDD. Mr. Porter, do those Greeks who are engaged in all sorts of shipping enterprises all around the world, and a whole lot of other enterprises, some of which are legitimate and some of which are sort of fast curves—do they pay proper taxes, so that they are assisting their Government?

Mr. PORTER. I think that matter has been straightened out, sir. I will describe that story very briefly.

In 1946 we sold 100 Liberty ships to private Greek shipowners, I would say at bargain prices. The Greek shipowners were able to make some very substantial earnings with these ships.

One of the conditions of sale which was imposed by the United States Government was that the shipowners would pay taxes to the Greek Government and the ships must be registered under the Greek flag. The shipowners, however, had been very delinquent in the

payment of these taxes. After the matter had dragged for about 3 years, I informed the Greek Government that we would have to suspend some of our aid to Greece unless they collected the delinquent taxes from the shipowners. They were very reluctant to take this decisive action, and we had to exert a great deal of pressure upon them.

Eventually, we did persuade the Greek Government to direct its consuls throughout the world to refuse shipping documents to all of the shipowners who were in arrears in their taxes. In a period of about 10 days the Government collected about \$10,000,000 worth delinquent taxes.

I think there is less than \$1,000,000 that is now delinquent.

Mr. JUDD. Are all those ships registered under the Greek flag?

Mr. PORTER. Yes, sir.

Mr. JUDD. Where did they get all the ships that I am told are owned by Greeks under the Panamanian flag?

Mr. PORTER. Those are ships they had already owned and transferred to Panamanian or other registry. But all of the ships which were sold to them by the United States Maritime Commission as a condition of sale had a requirement that they be registered under the Greek flag.

Mr. JUDD. And the Greek Government cannot get at the profits they are making on the ships under the Panamanian flag?

Mr. PORTER. It is very difficult for them to do that because these Greek ships do not touch Greek ports. As a matter of fact, many of the Greek owners do not live in Greece, but live in New York or London.

Chairman RICHARDS. All right, sir. Let us take the next one, please. It is Italy, I believe.

Mr. PORTER. Iceland I might comment on very briefly. The total aid to Iceland last year was \$12,400,000, of which \$8,400,000 was given in dollar aid, and \$4,000,000 through the European Payments Union.

(Discussion off the record.)

Iceland represents one of these difficult cases that makes it impossible for us to predict just when they will be independent of American aid. As you know, almost the sole industry is fishing, and they have not been able to reestablish the fish markets that they had before the war, or to maintain the fish catch before the war. It is possible that the schools of fish are shifting their locale to such an extent that it may be a very serious injury to the Icelandic economy.

Iceland is certainly one of the countries that would be in need of aid beyond June 30, 1952.

Mr. VORYS. You mean because of this fish business?

Mr. PORTER. Yes. Primarily because of that, sir.

Mr. VORYS. Is there anything else they can do except fish? I mean, would that mean a permanent need there?

Mr. PORTER. I would like to have leave to submit a further statement on the prospects for the Icelandic economy later, because I am not familiar with that, Mr. Vorys.

Chairman RICHARDS. They fished before the war, and they fished since, and they got along all right then. They had no military destruction there, and they had the advantage of dollars spent there. I cannot see this continuing with economic aid to Iceland in this picture.

Mr. PORTER. As I said earlier, Mr. Chairman, I do not want to bluff with any answer. I do not feel I can give a correct one at the moment, but I will consult the man who handles Icelandic affairs for us and submit a statement for the record.

(The following information was submitted for the record:)

ECA aid to Iceland is helping Iceland diversify its economy and render its standard of living less dependent on fluctuating fish catches and highly changeable export markets for those fish. The principal part of the diversification program is the development of Icelandic agriculture, which is being furthered by land drainage and reclamation, increased use of agricultural machinery, silo construction, and a nitrogenous fertilizer plant which ECA is financing. An increase in agriculture production will enable Iceland to reduce its imports of agricultural commodities and thus save foreign exchange. ECA has encouraged the more effective use and marketing of Iceland's fish catches; for example, the marketing of frozen fillets, which has increased its exports. ECA is endeavoring to accelerate the development of other Icelandic resources which may furnish additional export earnings. However, a diversification program will take considerable time to achieve any results, and in the meantime Iceland is dependent on ECA assistance to supply necessary imports without which its economy would have difficulty in operating.

(Discussion off the record.)

Mr. VORYS. The Norwegians, when the whales quit staying around Norway, chased the whales clear down to the Antarctic Ocean. If a country had to go on relief every time fishing got poor near it, and it is our obligation to take care of them, then we have got a dandy.

Chairman RICHARDS. But when fishing is poor, it is poor. I know. I am a fisherman myself.

Mr. VORYS. We have a little island up in Canada, my family and I, and the same thing happened to us that happened to Iceland. The fish do not live there any more, and I think we ought to get some relief.

Mr. JUDD. Maybe we should push more for that bill on the love life of the tuna fish in order to keep them reproducing.

Chairman RICHARDS. Yes; we might do something about that.

Mr. PORTER. I am happy to report, sir, that Ireland does not need any American aid. They received \$15 million last year, and are now no longer in need of aid.

Mr. VORYS. Would you care, or do the military wish to comment on the suggestions for amendments in this legislation that were proposed with respect to Ireland at our hearing last night?

Mr. PORTER. I know of the testimony last night, but since we are not giving any aid we are not in a position to exert any pressure for a united Ireland.

Mr. JUDD. A good answer.

You give aid to England, and it is in her hands as to whether or not there is a united Ireland, is it not?

Mr. PORTER. Well, we are not giving any economic aid to England.

Mr. JUDD. The Irish will get their own if you will just not give military aid to the British.

Chairman RICHARDS. How about Italy, Mr. Porter?

Mr. PORTER. Right, sir.

The total aid to Italy last year was \$237 million. That again is largely for the reasons that I have already stated, of the increased Italian military effort.

Mr. VORYS. When did you say Italy would have come out even if it had not been for this military effort?

Mr. PORTER. By the end of this year we believe that with a very low standard of living the Italians could become independent of American aid.

(Discussion off the record.)

I think Italy illustrates perhaps more clearly than that of any other country how difficult it is to draw a sharp line between economic assistance and military assistance, or economic assistance to obtain additional military effort.

As I said yesterday, Mr. Vorys, one of the reasons for that is that some of the unemployed Italians go to work and start earning a larger income. They are then obviously going to spend more of that income on food and clothing. Therefore, they will have to have increased imports of food and cotton in order to provide a somewhat higher level of consumption.

We have calculated that the level of consumption in Italy next year will be 3.9 percent higher than it is this year. You must bear in mind that the average national income in Italy is one of the lowest in Europe. It is \$286 per year. After their military expenditures it is \$266 per year.

Mr. JUDD. I saw in the paper last night where it is less than \$200 in Mexico.

Mr. VORYS. Here is a statistic that I had a member of our staff figure out for me; that is, out of our population the number of people spending their time on defense is 11 million; the Armed Forces, 3,500,000; defense production, 6,200,000; civilians in defense, 1,300,000. That is 0.71 or 7 percent of our population.

(Discussion off the record.)

Mr. VORYS. If you do not have it there do not stop to figure it out, but could you run off a comparable figure on not only those that are in the armed services, but those that are in the nonproductive or economically nonproductive work of making defense materials?

Mr. PORTER. If we are able to do so we most certainly shall, and I shall submit that for the record.

Mr. PORTER. I can give you the approximate proportion of men in active military service in 1951. I have that right before me. In the United States it is 21.2 per thousand. In Western Europe as a whole it is 12.6 per thousand, but excluding Italy it is 14.4 per thousand. With respect to Italy you know the size of the Italian Army is limited by treaty now to 300,000 men.

Mr. VORYS. Yes.

Mr. PORTER. So, excluding Italy, their ratio is about two-thirds of ours of men actively in military service.

Mr. VORYS. Not right now, but if you have not done it see if you can get somebody to run a figure off of how many per thousand in Europe are in defense production.

Mr. PORTER. I believe, Mr. Vorys, we can give you that exactly for some of the countries, and rough estimates for the others.

(The information requested is as follows:)

In addition to the 2,200,000 members of the Armed Forces in the nine European NAT countries, it is estimated that some 3,400,000 workers will be engaged in defense work in 1951. This estimate represents workers engaged in the production of military end items, civilians in jobs in the military establishment, and those workers indirectly contributing to military production in such industries as mining and transportation.

This figure is necessarily derived from over-all figures relating to planned defense expenditures, gross national product and the civilian and military labor forces and represents a rough average for the year. The fact that defense expenditures in 1951 in the nine countries are expected to double those for 1950 is indicative of a rising trend which may well be reflected in a considerably larger number of defense jobs by the end of the year.

Chairman RICHARDS. Have you finished with Italy, Mr. Porter?

(Discussion off the record.)

Mr. JAVITS. Can I ask a question, Mr. Chairman?

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. When I was in Italy I heard a good deal about what is called overemployment in various plants, that is, they have many more people on the payroll than they need. It is just another way to deal with the unemployment figure.

Mr. PORTER. That is undoubtedly correct.

Mr. JAVITS. Is there any estimate of that so that we have a realistic picture of what their situation is? In other words, you can have work relief in private plants as easily as you can on the public payroll.

Mr. PORTER. If I may just make a rough estimate I would think that probably would involve three-quarters of a million to one million men. It is one of the factors that will make it most difficult to get a successful productivity program under way in Italy, because there is very little incentive for a manufacturer who is carrying surplus men on his payroll to try to improve his productivity if he is not able to reduce his employment. However, that is not deterring us from trying to undertake a productivity program in Italy.

Mrs. BOLTON. Are there absolutely idle plants that could be used in Italy?

Mr. PORTER. I do not know if there are any absolutely idle but there are many working only to partial capacity.

Mrs. BOLTON. If we increased the need they could increase their productivity?

Mr. PORTER. To a very substantial extent.

Mrs. BOLTON. And that is what we are trying to do?

Mr. PORTER. Right. Shall I turn now, Mr. Chairman, to the Netherlands?

Chairman RICHARDS. Yes.

Mr. PORTER. Our total aid to the Netherlands last year was \$132 million, of which \$30 million was provided through the European Payments Union and \$102 million as direct dollar aid.

(Discussion off the record.)

Mr. PORTER. Do you wish a discussion of their balance of payments, Mr. Chairman, or shan't I ask for that unless there are questions?

Chairman RICHARDS. That is all right.

Mr. PORTER. We have estimated a decrease in the level of consumption in the Netherlands to about 98.3 percent of the current level.

Mr. VORIS. How many people are there in the Netherlands?

Mr. PORTER. 10,280,000.

Mrs. BOLTON. Consumption of what?

Mr. PORTER. Over-all consumption—goods, food, clothing, shelter, and so forth.

Mrs. BOLTON. Is that because they are not doing more, or is it because they are going to do without?

Mr. PORTER. I think it will be because they will be tightening their belts to make a greater military effort. As I have stated yesterday,

this is our forecast or our target of what we want them to do. It does not yet represent a commitment of what they are willing to do.

(Discussion off the record.)

Mrs. BOLTON. Are the Dutch in the same boat? Do they also want more than we want to give them?

Mr. PORTER. Oh, yes. They have asked for substantially more than we are proposing to your committee.

Mr. JAVITS. Mr. Porter, is the only way we found to stimulate these people by negotiation? We have yet developed no technique for getting them to do these things other than by the arts of negotiation. Is that right?

Mr. PORTER. Well, there are other techniques, but we feel that negotiations are necessary to raise their effort from the level which they have projected for themselves to that which we think they are capable of making.

That is where the negotiation comes in. Fortunately we do not have to negotiate the whole load, but about the last 15 percent.

Mr. JAVITS. Do you have enough discretion under this legislation which you are proposing to us so that that negotiation has some teeth in it? In other words, do they always feel that you have the power under the law to grant or withhold aid, so that, even though you do not make it naked power, at least you have it? Is that clear to the people you are negotiating with?

Mr. PORTER. I think it is, sir. The power that we will have insofar as the recipients of aid are concerned will be the amount of aid that we will give to them.

Mr. JAVITS. That you allocate?

Mr. PORTER. Yes. That is right.

Mr. JAVITS. Mr. Herter has been advocating that a heavy part in allocation of end-item aid be given to the Supreme Commander, General Eisenhower. What do you people think about that? Mr. Herter's feeling is that he ought to have a participation in allocation.

Mr. PORTER. Certainly I do not think we should make any allocation of military end items that are inconsistent with General Eisenhower's judgment, and I think our allotments of economic aid should be consistent with his judgment of the military requirements.

Mr. JAVITS. And you will do that and are proposing to do that?

Mr. PORTER. If we are responsible for the administration of the program, I can assure you that will be the intent of Mr. Foster, Mr. Bissell, and myself.

Mr. JAVITS. Thank you, Mr. Chairman.

Mr. PORTER. I said "If we are responsible for the administration of the economic-aid program."

Chairman RICHARDS. Mr. PORTER, how many more countries have you got there?

Mr. PORTER. Norway and Turkey, as recipients of aid, and then I would like to say a few words about the United Kingdom.

Chairman RICHARDS. You have just Norway, Turkey, and the United Kingdom?

Mr. PORTER. Yes.

Chairman RICHARDS. I would like to finish that, but we have to adjourn here in a minute. We have another meeting at 7:30. If you can make that brief on each one of them, please, we would appreciate that.

Mr. PORTER. Right, sir. Last year the Norwegians received \$106,000,000, of which \$46,000,000 was direct aid and \$60,000,000 was received through the European Payments Union.

(Discussion off the record.)

Mr. PORTER. We have assumed a very slight increase in the amount of consumption in Norway of three-tenths of 1 percent.

I think it is true that the Norwegians more than any other people in Europe have held their belt very tight.

(Discussion off the record.)

Mr. PORTER. We think the Norwegians can make a greater military effort than they have, but I would like to say that, if all of the other countries did as well as the Norwegians, our job would be a lot easier.

Mr. JUDD. Is it not true that they have not made any efforts to wangle stuff out of us that there was no legitimate need for? They have come before us with what were their bottom needs?

Mr. PORTER. That is right. I would say that I think probably they have tightened their belt too much to maintain a very heavy capital-investment program.

Mr. JUDD. They told us over there they had just put on themselves a 10-percent sales tax on food, clothing, and shelter, and everything else, and even medicines. When a country will do that, it means business.

Mr. PORTER. Right. I think we can be well satisfied on the whole with the efforts the Norwegians have made.

(Discussion off the record.)

Mr. PORTER. I am commenting briefly on Turkey. Their military budget last year, or the current fiscal year, is \$192,000,000. A very poor and a very underdeveloped country like Turkey cannot make a substantial increase as the others have. Also, we should bear in mind the Turks have already been making a much greater military effort than have the other countries of Europe.

Mrs. BOLTON. And they have been doing it for years.

Mr. PORTER. That is right. So, I think the increase we have forecast for the Turks is about all that can be expected of them.

(Discussion off the record.)

Chairman RICHARDS. Let us go on to the United Kingdom.

Mr. PORTER. Last year we gave to the United Kingdom net aid of \$148,000,000. We have given them a total of \$298,090,000, but the British in turn made a contribution of \$150,000,000 to other European countries through the European Payments Union.

(Discussion off the record.)

Mr. JUDD. Well, they advised me publicly over the radio last night that they were sending Mr. Atlee over here to reopen the question of getting aid from us because their financial position had deteriorated so drastically in the last few weeks.

Mr. PORTER. I was so busy preparing for the committee, Mr. Judd, that I did not have a chance to read that.

Mr. JUDD. I got that over the radio last night.

Mr. BATTLE. We should have a radio in here.

Chairman RICHARDS. Last year, when you submitted your appropriation request, it was estimated the United Kingdom would have a dollar deficit of \$600,000,000.

Mr. PORTER. Right.

Chairman RICHARDS. Actually the result was a dollar surplus of \$1,098,000,000.

Mr. PORTER. That is right.

Chairman RICHARDS. How did this happen?

Mr. PORTER. That was largely accounted for, sir, by the increase in the price of raw materials which the sterling area were able to sell, after the general price rise following the outbreak of the war in Korea. Some of the commodities that the sterling area have for sale to the dollar area, like wool, tin, and rubber, as you know, increased in price very substantially. It was largely because of that unanticipated rise in prices, and thus the rise in sterling-area earnings, that we were able to terminate aid on the 1st of January rather than later in the year, or rather than their requiring aid throughout the year, as we had anticipated 12 months ago.

Chairman RICHARDS. And also because they continued their austerity program.

Mr. PORTER. Right.

Chairman RICHARDS. They have really done that.

Mr. VORYS. What is the change that has taken place here?

(Discussion off the record.)

Mrs. BOLTON. It was a little disappointing because yesterday the Irish said of course they would come in for the major share; that is, the British. We kind of hoped we could just tell the Irish they were wrong, but now it looks as though they will be right after all.

Chairman RICHARDS. They claim, too, that the rearmament program is responsible for that.

Mr. PORTER. The rearmament program is putting a very heavy burden on them. Their military budget during the fiscal year 1950-51 was \$2,485,000,000, and we have forecast for them next year a military budget of \$3,995,000,000.

Chairman RICHARDS. Thank you very much, Mr. Porter.

The committee stands adjourned until 7:30 tonight.

(Whereupon, at 5:35 p. m., the committee adjourned until 7:30 p. m. of the same day.)

NIGHT SESSION

The committee met in the House Foreign Affairs Committee Room, the Capitol, at 7:30 p. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The hearing will come to order, please. We are continuing the hearings on the so-called Mutual Security Program.

It was necessary to rearrange our schedule, and General Scott will begin in the morning. Our first witness tonight is Mr. Adolf A. Berle, Jr., former Assistant Secretary of State.

Mr. Berle, will you proceed in your own way?

STATEMENT OF A. A. BERLE, JR., FORMER ASSISTANT SECRETARY OF STATE

Mr. BERLE. Mr. Chairman, I have drafted a statement here which I should like to put in the record. There are copies available for those who wish to read it. Because I know the committee is under press of time, I won't take your time to detail the substance of it; it is there in print.

Chairman RICHARDS. Your statement will, without objection, be included in the record in its entirety.

(The statement is as follows:)

STATEMENT OF ADOLF A. BERLE, Jr., FORMER ASSISTANT SECRETARY OF STATE

This statement is directed to the drafting of a mutual security act of 1951 (program for 1952). I am convinced that the House committee should recommend that the Congress pass a mutual security act along the lines of the administration draft. In my judgment, certain changes could usefully be made in that draft.

I

The danger of the United States, and to the free world, is, I think, far greater than is realized. It is, in fact, greater than the statement appearing in the memorandum submitted by the executive branch. While predictions are always dangerous, let me risk one here.

Late in 1952 or early in 1953, the Soviet Union will be approaching her maximum military strength and her external political warfare operations will be at peak. She is likely then to take moves even at the risk of precipitating world war III. She is not prepared to take that risk at present. But she is clearly putting herself in a position to take that risk.

The area of greatest danger, in my judgment, is the basin of the Indian Ocean—the huge area running from Persia and Arabia on one side, to Burma, Thailand, and Malaya on the other. She is far more advanced in that area than we realize. While American attention has been fixed on Korea, the Kremlin empire builders have substantially absorbed Tibet and have created, or assisted in creating, substantial anarchy in Burma (you can no longer go from "Rangoon to Mandalay" even by water). At the same time, they are steadily creating a situation which may lead to their seizure of Iran and their entry into the Persian Gulf. If you look at the map, you will see that a combination of these moves almost completely encircles India. They would hamper, if not prevent, any use of naval power in the Indian Ocean. They will probably be a prelude to a direct move southward toward Aden on the northeast coast of Africa.

This move would shift the entire balance of world power. World wars are commonly won or lost in just that area: The holder of the Middle East holds the key to world empire.

This is more important even than Western Europe. Western Europe has several times been lost to would-be world conquerors who have nevertheless been defeated by the powers holding the Mediterranean and the Near East. The holder of the Near East is rarely dislodged except after several centuries.

The free world is less well prepared in this great basin than anywhere else along the whole iron-curtain line. Even the map supplied by the State Department to this committee and printed with the memorandum is, if anything, unduly optimistic.

The United States Government has had only one of two choices: Draw in, arm the hemisphere and await the worst—that is, surrender two-thirds of the world to the Kremlin, and defend here in terrible danger; or try to meet the situation on the ground. It has finally chosen the latter. Rightly, in my judgment. The proposed Mutual Security Act is the principal instrument of that policy. Few well-informed Americans, I think, would willingly accept reversal of the choice.

Our one chance of avoiding world war III lies in this program. First, build up military preparedness to a high point. This is being done. Second, push a program of political warfare with a vigor equal to the Kremlin's. We are slowly coming to that. Third, set up an economic program so strong, so direct, so immediately geared to the actual personal problems of great and very humble populations that they resist organization into Communist governments and mercenary armies by agents of the Kremlin empire. Meanwhile, we can assist populations within the iron curtain who know, now, that the Communist promises are not fulfilled, and the enslavement of a population is a substantial result.

II

The time element is bitterly pressing.

Let us begin with Iran. Again I risk prediction.

The current dispute is over oil, but the real issue is what government will emerge in Iran. We did not enter that situation strongly when the Shah a year ago proposed a strong government under Razmara, and his later attempt ended with Razmara's assassination, and the present government took over. Negotiations to settle the oil controversy are presently proceeding with the government of Mossadegh. There is, however, no solid assurance that the Mossadegh govern-

ment will maintain itself long. Some observers here give it only a month to live: This seems unduly pessimistic. Unless, however, the tide is reversed, the present Persian Government will be replaced by still more extreme governments, coupled with growing anarchy in the country, possibly coupled with armed action against the British, and eventually open or concealed Soviet intervention. It is needless to state here how great would be the ensuing catastrophe. For one thing, it might well mean that every American automobile owner would have his gasoline rationed. For another, General Eisenhower's mission to recreate European defense would be terribly crippled. Third, the political and military balance of the Middle East would begin to run heavily against the free nations.

If this is to be checked, work on a huge scale has to begin immediately—"haste, haste, posthaste," as Cromwell used to say.

On the opposite side, in Burma, the situation is even more critical. Practically, the country is slowly disintegrating under the persistent attacks of various factions, with Russian or Communist Chinese inspired guerrilla bands. We have a mission and an excellent public relations program in Rangoon; but where, a year ago, it was safe for our people to go about the country, now they find increasing difficulty in going outside the capitol.

These two countries are perhaps now the front line. They are where Syria, Iraq, Arabia, Egypt, and Ethiopia will be by 1953, if we do not work immediately and hard and fast. We have seen the effect of delay in China where we could not work up an effective policy while we still had access to that country. It would be gambling with the safety of the free world and the United States to make any more mistakes.

Equally, we have seen a measurable effect of what could be done through the Economic Cooperation Administration in Western Europe. There we had time, we had access, and we had economic resources, and we used all three to good effect.

Now we have, particularly in the great Near Eastern area, access and economic resources, and a little—all too little—time. This is a case where days count, and where every day lost may cost a bitter price a year or two from now.

In other areas of the world we have access, and more time, but pressing necessity.

Most important of these areas is, of course, Latin America. For some curious reason, most Americans take for granted that a continent and a half, inhabited by 160,000,000 people, will be there and on call whenever we need them, though they do not belong to any American empire and are able to make their own decisions. But they expect action and economic aid. I quote from a letter dated July 10 from my daughter presently in the extreme interior of Brazil:

"Francis Truslow, point 4 envoy to Brazil, died on the boat coming here. This creates an extremely difficult situation up here. Brazil has wanted to draft national legislation for what the Association for Credit and Rural Assistance is doing in the State of Minas Geraes. The United States has already delayed its envoy several times and now, as he was finally coming, he died. Brazil apparently has been counting on point 4 help and is prepared to negotiate a loan with us which Americans here feel extremely favorable. Brazil needs American technicians. * * * Some fine day, Brazil is going to wonder why it should bother with us. * * * If you have any information or any good guess, do let me know. Everyone here is extremely conscious of the fact that Brazil is an unlit powder keg. The United States doesn't help much."

This last is not quite accurate: The United States has helped a good deal but it is minimal compared to the problems of a country of 50,000,000 people. The same thing could be said of a number of other countries in South America.

The other huge and pressing areas are, of course, the tremendous and rapidly developing areas in West Africa—the huge hinterland behind Dakar—and the East Indies. In both cases, we have access and some time. Matters are not quite as pressing as in the Near East, though the East Indian situation is no joke, and, for that matter, the Philippines are in considerable danger. If we have a safe year in the Middle East, we may have 2 or 3 years in the East Indies and the Philippines and 5 or 6 years in west Africa and Latin America. In any case, there is no time to lose.

Because of the hair-trigger situation in the Middle East especially, not only does a mutual security act have to be passed, but it has to be passed in such form that rapid and decisive action can be taken immediately in the critical areas.

III

This brings us to the organization of mutual security. The point is highly controversial, and it has to be resolved partly on the question of expediency.

The form of organization should be chosen which can be most rapidly activated and can most rapidly get into action. If the perfect, logical form of organization is not politically possible, the best possible alternative should be chosen. There is no way out of this; action seems to me essential.

In strict logic, security aid should be split. Military aid should be separately organized and administered. Strict relief operations—like that in Korea—should likewise be separately administered as is proposed. Economic assistance and point 4 aid should be a third division. Never should the military men be in a position to take resources needed for roads and put them into tanks, or vice versa. The two operations are parallel but they are quite different.

Also in strict logic, economic aid should be administered by an organization dependent on, but subordinate to, the Department of State. Traditionally the Department of State is not particularly good at administering huge enterprises. Equally, the administrator of an economic program in a country cannot have a policy separate and distinct from that of the State Department; he cannot be in competition with the ambassador.

On the other hand, the State Department has been having its troubles, as we know. If we have to choose between no substantial mutual aid, and aid run by an independent agency, clearly we must choose the independent agency and rely on the President and the respective officers to hammer their staffs into cooperation.

Mr. Nelson A. Rockefeller, the head of a very distinguished committee, studied the situation, at the request of the President. His report (the report of the International Development Advisory Board, dated March 7, 1951) assumed a single, central, over-all agency, not destroying, but taking over the present Economic Cooperation Administration (ECA), the present Technical Cooperation Administration (TCA, now in the State Department), the Institute of Inter-American Affairs (now under State), and the Export-Import Licensing (now lodged in the Department of Commerce). This was a drastic shake-up, and many of the agencies in Washington disliked the idea. The administration proposal, which appears in the draft of a Mutual Security Act presented to the committee, maintains the various existing agencies, putting them, presumably, under the Department of State, though there is considerable flexibility.

Given all the factors, including the political situation here, I am inclined to believe that an independent agency picking up, taking over, and maintaining the existing organizations of ECA, TCA, with as little disturbance on the ground as possible, probably is the best solution presently available.

A little emphasis ought to be on giving the field missions guidance, stimulus, directive, authority and responsibility to move, to move fast, and to move in large magnitude, especially in the critical areas. For instance, we do not have time to take and train numbers of Persians in agricultural methods so as to change the productivity of that country over a period of 20 years or so. You need teams which can take a hundred men from a hundred villages and train them for 6 weeks or 2 months, sending them out immediately, each to train a hundred men, and limiting their work to the simplest sort of thing; use of hoes instead of forked sticks, drilling of quite ordinary wells, and the like. For the real task is to make it clear to many millions of people in vitally critical areas that American programs mean something immediate to them, and that their hopes and fortunes lie in staying with the free world. They will understand that only by something immediate and direct, available to them, and that actually happens and that happens fast. This sort of work is not a matter for high negotiation in over-stuffed palaces. It is a job of devoted men, working against time, and talking to the simplest and humblest of people in language they can understand, accompanied by deeds which they can see and appreciate.

Finally, I should like to express the hope that the portions of the bill which deal with point 4 be isolated so that the point 4 program emerges as a reality. I think that in the administration draft, the points are all covered with a couple of exceptions I will later mention. It will be highly advisable to sort them out and collect them. There is no real distinction between much of ECA and point 4 work—especially in the Near East and in southeastern Asia. TCA is, of course, primarily point 4. The limited discretion asked by the President would enable him to strengthen point 4 where it could be done. Point 4 work can, in certain respects, be followed up by loan capital through the Export-Import Bank or the International Bank for Reconstruction.

As a matter of detail, I note that for the American republics \$22 million is suggested for assistance. This strikes me as low. I believe it should be increased to at least \$50 million, with appropriate authority to transfer. This is not

asking a great deal. We cannot have literally millions of people living adjacent to the United States on the peon level without substantial hope of changing their position, and expect a stable situation between the Rio Grande and Cape Horn.

It ought to be made perfectly clear that the object of this act is not to build up more huge agencies in Washington. The product, the end result, must be a peasant or an artisan in Burma, or in Iran, or in West Africa, or in Chile or Brazil, who sees that he is taking the first step, however short, toward getting benefits of the amazing industrial civilization and comforts of the twentieth century. One hundred first-class, able and devoted, though wholly obscure, operators in the field are worth a thousand administrators and subadministrators, clerks and so on, in Washington. This is not to decry the able and devoted work done by many and many of these Washington men who do the work which furnishes the reputation and headlines for other people. It is to say that the man in the field who is doing a job is what this is all about.

CONCLUSION

I hope this mutual-aid bill will pass. I hope it will pass rapidly, accompanied by legislative and executive realization that we are approaching the greatest crisis in American national security we have yet encountered in our history.

Mr. BERLE. The first most important point I have to make is that I hope everyone can get the sense of urgency about this bill that some of the rest of us do. Although I have been in private life now for about 5 years, I have followed these situations with a great deal of care both from old friendship and because, as you know, I have spent perhaps half my life in foreign affairs, back to the days of the Wilson administration.

My estimate is that the situation is deteriorating a good deal more rapidly than many of us like to realize. This is not clairvoyance. I won't give you all the calculations.

The timing appears to be that we cannot count on more than 2 years to work in a peaceful way and that probably from or after the year 1953, we will be faced with situations which we must more likely meet by force than in any other way.

Obviously, the most economical thing we can do is to use nonforceful means wherever we can. I should like to try my hand at assigning priorities. My belief is that the strain in this deteriorating world situation is going to be greatest in the Middle East—an area not quite defined in the supplementary pamphlet which the executive branch has given you. It is there, but it is split up.

Having observed the Kremlin's strategy since 1919, I have noticed that they are inveterate two-fronters; always when they make one move, there is a second, parallel move going on at the same time. This appears to be true now. The move in Korea has been stopped by armed force but two complementary moves are appearing now, one of them in Iran and the other on the other side of India, Tibet, Nepal, Burma. These are proceeding with very great rapidity. I have had the privilege of talking to people who have come back within the past few weeks, both from Burma and from Iran, and they confirm that impression.

Specifically, there is evidence that a main-line move is now going on to flank India on both the east and the west.

While we have been looking at the drama of the events in Korea, the Soviet system has absorbed most of Tibet—I think probably all of it although I notice the State Department registers only half. They have certainly got a fair handhold in the companion kingdom of Nepal, which is close by. The situation in Burma is rather rapidly disintegrating, so much so that the wives of the American staff in

Rangoon are probably not going back from their leaves this fall. Even the water communication between Rangoon and Mandalay is cut. That is one side.

The other side, of course, is Iran which has been so much in the newspapers I need not say anything about it.

I imagine that probably all of you know—I think all the committee is probably better informed on it than I am—that the combination of those two moves would go a long way toward denying the entire use of the Indian Ocean to naval power. The fleets which sail the Indian Ocean commonly bunker with oil that comes out of the Persian Gulf. If the Soviet system succeeds in taking over Iran, and is able to cut the head of the Persian Gulf, the nearest place that a fleet could successfully bunker with oil would be either in the Dutch East Indies—the former Dutch East Indies, themselves in somewhat shaky condition or alternatively all the way back in Venezuela. The mere distance cuts down in large measure the utility of any fleet.

By consequence, the double move here is not merely absorbing some more loose territory. It is a main line movement which, if successful, would go very far toward completely encircling India and giving a strangle hold on the huge central bridge which unites the five continents.

It is a matter of history that you may lose all of Western Europe, but if you keep the line open to the Mediterranean and the Middle East, you eventually dislodge the invader from Western Europe. But the power that has successfully planted itself on that near eastern bridge can stay there a long, long time.

The experts who follow Iran most closely consider that the Russian move which follows the set pattern will probably be complete inside of a year. I myself, with the valor of ignorance, think that is a little pessimistic. I would give ourselves a little more time than that. But you cannot be sure. The Mossadegh government may evenicker out a solution on oil, but oil is really a secondary issue. The real fact appears to be that the oil issue has been used as a wedge to subvert any organized government in Iran. The only strong remaining power is the so-called Tudeh Party. The Tudeh Party is actually administered by a very large staff at the Russian Embassy in Tehran and it is clear that the Communists are following the old Kerensky pattern, with their heavy drive coming later. Anything that is to be done must be done quickly while we still have access and while we have a little time.

Somewhat the same thing is true of Burma. There the Soviet take-over of power is less obvious. The Chinese Communists, of course, are on their flank. At the moment a situation of anarchy is emerging. Again, while we have access, we must work as fast as we can.

Now this is a case for both money and guns. I have no illusion that merely doing international good is going to stop a main line, armed Soviet drive. I would be thankful if it could. Maybe this could have happened if we had started 5 or 10 years ago. But we have not now the 5 or 10 years.

Now it seems to me that the form of organization of mutual security aid adopted, if the substance of this bill passes and I hope it will—has to be selected with a view to the quickest possible operation in the Middle East and in southeast Asia. We have more time in Africa

where, by the way, the report supplied by two executive branches seems to me unduly optimistic. I do not think that this report adequately reflects the degree of communist organization which has gone on on the northeast shoulder of Africa, that is to say in Ethiopia, and the Sudan, and so on, or in Egypt. I think the situation there is more serious than appears. But the African crisis, though certain, will not be precipitated, obviously, until some of these other moves are more or less complete.

The figures in this bill are obviously approximate. They are estimates. I should suggest that some flexibility -- there is some in the proposed act -- be left so that funds can be assigned to areas where it is possible to move fast. Some of the programs now will have to be different. You could work out a long-range program of economic improvement along with gradual organization of militia, let us say, in Africa. But in Iran you are much more likely to have to do shotgun job in which you try to set up overnight the most elementary kind of economic assistance, village by village, in a program designed to reach the bulk of the country in a year's time.

For instance, to take the suggestion of Max Thornburg, who is one of the experts who has worked on it, a program may be needed by which you draw in 100 representatives of villages for very rapid training in the most elementary of agricultural techniques, and then send them each to train 100 others, with American advisers to help. This probably is still possible; and thereby actually to touch 10,000 out of 50,000 villages in Iran, inside of a year's time. Short of that, you will find that someone else is there first and whatever you do has got to be done by quite different methods.

On the Latin-American side, I think the figure is rather small. You have a program running to billions, and \$25 million is assigned to Latin America. My feeling is that more flexibility ought to be allowed. It is one of the strange things, perhaps not to this committee, but to me, that the United States assumes that a continent and a half, south of the Rio Grande, with 160 million people will just be there whenever you want it, while between times you do not have to do much about it. This continent and a half is not part of the American empire. Actually, it is maintained in the American orbit by an endless number of private Americans who spend an infinite amount of time keeping personal and economic ties good with those countries. Now, it is perfectly clear that the lines have to be tightened. I should think that the \$25 million figure is low for what has to be done. What an economic and point 4 program means in terms of the interior of a country like Brazil I tried to illustrate graphically by simply quoting a paragraph from a letter my daughter sent me from Minas Geraes, to give you what it looks like from the South American angle. The experience could be duplicated all over Latin America.

One of the problems with which this committee is struggling is the problem of how this kind of economic aid program ought to be organized. I have been through it three times in a lifetime. The problem will never be easy or wholly solved. Ideally, of course, all foreign policy ought to be under State. But that Department which has absorbed a great part of my life and for which I have great affection, as a department has never had a great tradition of first-rate rapid administration. It has been a policy-making group far more than an executive group. That is nothing against it. That has not

been its job. Mr. Cordell Hull used to decline to let us, his then assistants, load up the State Department with administrative functions for that reason, and whenever we had some wished on us, he instructed us to negotiate with you gentlemen to put them into some place which he thought better equipped.

There is the danger always in a split administration, that is to say, an economic administrator who thinks he is the ambassador and wants to fight with the ambassador, and so forth. I have dealt with that in Washington. I have also been Ambassador myself and I likewise represented economic missions, so I have seen all three sides. I have had the pleasure in many travels in the last few years of working informally with the various American missions abroad, where the ECA men were living alongside the Embassy men.

My conclusion is this: I agree with Mr. Nelson Rockefeller who has very considerable experience himself in that, that the military should be left where it is, that is, in the Department of Defense. The economic aid ought to be separated out and put under a separate administration generally coordinated through the State Department with policy. I think on the whole, given all the elements including the political element here, that probably is the most practical thing to do if something has to be done quickly, as I am sure it does.

Care should be given, I believe, not to destroy the very excellent organization which Paul Hoffman built up in ECA, but in this case that will not be difficult.

The ECA has done its best work in the developed countries of the world where the arrangements are government to government, or high level to high level.

In what are called the undeveloped areas, it is less what goes on in the palace, but what is done by fairly well-trained and highly sympathetic men almost of the foreman type who talk to villagers at their own level that counts. That is the end product, rather than a trade agreement or a loan agreement. It would seem to me that an economic aid administration could conveniently be divided into the kind of thing that ECA has done well in the West European countries, with a separate administration to do the kind of thing which Mr. Rockefeller's organization did extremely well during World War II in Latin America. In some undeveloped areas, the ECA has already got something started which could be apportioned to one or the other on an administrative basis.

As to a mutual aid administration fighting abroad, let us say, with a State Department mission there, my observation has been that when you have got two capable men on the job, they always work together. We had the possibility of conflict between agencies when I was Ambassador to Brazil. We simply agreed with each other that there would be no feuds and no fights. That might go on in Washington; we could not afford the luxury in South America. There were none. The agreement was that I could call on the staffs of the Economic Mission if I needed them; the heads of those missions, could call on mine, and the thing was settled in 5 minutes. We never had any questions between us that could not be settled by a half-hour's talk with ordinary give and take.

I feel, therefore, that a separate Economic Administration is indicated. I think that we have to leave it to the senior administrative

officials of the United States to hammer into their staffs that a good working alliance is necessary.

The reason for not trying to combine the economic with the military is not because they cannot get together, but because they are talking a different kind of arithmetic. The military man is thinking about one thing, the economic man about another. You cannot have the kind of situation in which the Army raids the money set aside for roads or agriculture, because they want more guns. Apportionment between military and economic aid has to be made primarily on a political basis,—that is to say, on the basis of what your estimate of the urgency is. But such estimates and arrangements based on them which might lead to conflict are normally settled at a very high level.

The Army knows what it is doing, and why. It does not always understand and often has less direct interest and familiarity with economic problems. I should like to add, parenthetically that I do not think this will be true a few years from now. Today, both the Army, the Navy, and the Air Corps have staff schools in which they are systematically instructing the younger officers in that kind of problem and that kind of administration. They haven't got their men trained yet, and until they do, I think we might as well recognize that we have two quite different types of thought.

Ladies and gentlemen, I have said enough. I would like to add merely one comment. This is not any attempt to create a sense of urgency to put on political pressure: I am in private life. But if you look at the world situation as it stood in 1946 or 1947, or 1948 or 1949, or the last year or now, you can see a steady deterioration going on implacably. You will see that it has been stopped in two places. One was in Greece which I want to say a word about, where the Truman doctrine accompanied by American show of force and a fleet in the Mediterranean finally gave check to aggression. The second was in Korea where we have fought a year's war substantially to maintain the status quo as it was before.

I opened by saying that the Russians like triangular moves. Those of you who have followed Russian policy must have realized, of course, that the move in Greece was not designed primarily to seize Greece. It was designed to get Crete, cross the Mediterranean and enter Egypt, thereby sealing off the Middle East which was the stake of the game in 1947 as it is now. Then we took a bold course. Fortune favored us. The Yugoslav defection made further Russian aggression impractical. What we are getting now in Iran and Burma is substantially the same thing we met in Greece 4 years ago.

In September 1944, I wrote a memorandum to the State Department suggesting that I thought the policy of the Soviet Union at that time would be to try to seize Greece and cross the Mediterranean and also to try to seize Iran and cross the Persian Gulf in a pincer movement. The attempt was made in the following 2 years. You are aware of how the Greek move was defeated by our intervention, and the Persian move was blocked through United Nations action. Now, of course we see it coming again.

I have no end of respect for the ability of our former colleagues and present enemies in the Soviet Foreign Office. They are good. They plan moves by which they risk relatively little, but stand to gain an enormous amount. The new operations are moves of just that kind. The Russians risk little or nothing for themselves in Burma, little or

nothing in Iran; but the success of those moves would give them another third of the world, and another half a billion of people and great added resources. Inevitably the time will come when in our own interest, or for our own safety, we shall have in that area to risk again the arbitrament of war as we did in Korea.

The intelligence people apparently believe that the Soviet Union expects to put herself in position to risk war by the end of 1952 or early 1953. You perhaps have access to their information. I, of course, do not. But that the Soviet rulers are putting themselves into that position as rapidly as possible is obvious. For this reason I hope:

First, that this bill including the military assistance angle passes with whatever administrative revisions are needed;

Second, that there may be a separate administration for foreign aid which, however, shall make use of all of the organization now in being, that is particularly the ECA. And the new administration will have instructions to give priority "Haste, haste, post haste," as Oliver Cromwell used to say, to the areas most in danger. That means the Middle East.

Third, that you somewhat increase both the flexibility and the money which may be allotted to Latin America, a part of the world which is peculiarly in partnership with us and on whose good will in the long run we have to depend to maintain the ultimate citadel in what seems to me one of the great world crises of all times.

Mr. Chairman, thank you very much.

Chairman RICHARDS. Thank you, Mr. Berle, for that very fine statement.

I will go around the room, observing the 5-minute rule. Mr. Chipersfield.

Mr. CHIPERFIELD. No questions.

Chairman RICHARDS. Mr. Gordon.

Mr. GORDON. No questions.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. I have no questions but I want to compliment Mr. Berle on a very fine statement. He has given us a great deal to think about in this committee.

Chairman RICHARDS. There is no question about that.

Mr. Vorys.

Mr. VORYS. Mr. Berle, you have had a lot of experience in and out and around the Department of State. On the organizational aspects of it you seem to come up with a recommendation for a perpetuation of ECA, maybe under other initials.

ECA was a temporary agency with a deadline put in and was given a lot of special legislative flexibility such as exemption from civil service, and also, because of its nature, had an appeal to a type of man who is not a career man in government.

Now, don't you think that whatever we set up now is not going to be a temporary thing but pretty nearly from now on as long as you and I are alive, so that we have got to contemplate whether we will cut off economic functions from the State Department and make them independent, or not. What do you think about that?

Mr. BERLE. You are quite right about ECA, of course. I know not whether now is the time to dissolve it. I may be unduly impressed by the need for using the running gear that you can use quickest and

that probably warps my thinking. I do not think you are now undertaking to give form to a final organization of the economic relations of the United States.

Eventually, I think, an economic agency operated under or in connection with the State Department has to be worked out. I am with you there. If I thought we had time to organize and do that job in the time at our disposal, I would say that is the logic of it and I have so stated here. I wish I thought that we had time to do that in the present emergency. I think I would vote for doing the thing that could be done quickest, and working rather rapidly toward the solution you suggest as soon as we have got a few main line problems stabilized.

Mr. VORYS. If I have time, Mr. Chairman, and I hope you are holding the watch on me because we have a long evening, I do not know how closely you have followed it, but whether for good or bad, we have got a second team in the game now for ECA, from Paul Hoffman right on down through. There are comparatively few of the fellows in the positions that they were in 3 years ago when this thing was thrown together in a dreadful hurry to pour money into Europe to restore the balance of payments. We now have just another agency. I wonder from your experience in government which you would think best, merely to give ECA a new label or to change it around. Even though we are to have this independent agency with an entirely new function, not limited to Europe, not limited to recovery, but as it is labeled before us, mutual security, would it be smart to create a new agency so that there could be some method of sifting and sorting the personnel, or do you think that ECA, with its second team in the game now, should be preserved more or less at all costs, because the substitutes are so good.

Mr. BERLE. I do not think it should be preserved at all costs. I should yield to your greater knowledge of the administration. I have seen it in the field. You are quite right that it is now a second team, the first team largely having considered the big job was done and gone back to their own affairs.

I have considered myself that the strict functions of ECA would be declining from here out. They have counterpart funds. They have certain localized problems. The questions of exchange on a large scale probably will entirely shift in character if you do purchases for munitions and the balance of whatever arrangements are made in supply of arms.

I do not consider that there is anything sacred about maintaining ECA. The ECA has had missions in two or three—not two or three but various—of the undeveloped areas and some of them are said to be good. Salvaging the ones that are there and most effective it seems to me would be wise. I am by no means clear that a resifting would not be a good idea. I do not wish to be heard as a protagonist for maintaining ECA as its work draws to a close. We all know that agencies often like to go on when their day is done and what they ought to do is salute, take a bow, and knock off.

Mr. VORYS. I attended the third anniversary meeting of the ECA staff at the Statler. It was a very quiet meeting until Mr. Harriman read the statement from the President that ECA was to be a continuing organization and then the applause was thunderous. I did not join in the applause.

I have taken my time.

Mr. BERLE. I have only this to add, Mr. Chairman: the controlling consideration, particularly in the danger areas, is speed. If I thought that speed could be got by holding on to some ECA, I would hold it. If I could not, then I would take the thing that could most quickly be done effectively.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. Mr. Berle, in your statement you say that you think in late 1952 or early 1953, the Soviet Union will be approaching her maximum military strength and her external political warfare operations will be at peak, and she is likely then to take moves even at the risk of precipitating World War III. Do you feel that Russia will then have a great advantage, a greater advantage over the free world than she has at the present time?

Mr. BERLE. I cannot tell. It becomes a race between what the Soviets are doing and what we are doing. Obviously, our whole job is to see that she is not better off.

On the other hand we know, or more accurately I know, very little about the actual state of her preparation. I get the gossip and certain information from my foreign friends who claim to have information. I cannot say that I think it is very accurate. I do think that on the evidence that is available to anyone not in official life, it is clear that the Soviet Union is pushing her program for all it is worth. Based on an analysis of her 6-year plan and three or four subsidiary plans she proposes to be in the best possible situation. Their target date, as you know, is late 1952, which they claim to be fulfilling.

Relatively I should think we ought to be able to beat them out-and-out, but whether the Russians will think so, I do not know. I think that then Russia will consider that she is as well prepared as she is likely to be. That opinion has to be hazy, since many of us are not in Mr. Stalin's confidence and we can only guess, but that is my guess. It cannot be more than that, sir.

Mr. CARNAHAN. Do I understand you correctly to rather strongly feel that different forms of aid should perhaps be administered through different agencies? I think you mentioned the military as one, and that relief should be administered separately and Point 4 should be administered separately.

Mr. BERLE. I think economic aid and Point 4 belong together. I think military aid probably belongs where it is. I at least should feel that we would lose time by trying to shift it.

There are one or two specialized relief agencies. Korean relief, I think is probably a separate problem. I think, probably, too, there is merit in the State Department's statement that Formosa is a peculiar problem. Those possibly can be left as they are. Then there is, of course, the question of the displaced Arabs in the Near East which very likely might yield to specialized treatment. As to that, I have only an impression because I cannot say that I am well enough informed to know.

Plainly, relief work is not the same as straight economic. If you are going to classify, it could be done that way. I am by no means sure that some of that relief could not be done by a division of economic aid agency if you wished to have a single agency including that.

Mr. CARNAHAN. I notice that you say in your prepared statement:

Finally, I should like to express the hope that the portions of the bill which deal with Point IV be isolated so that the Point IV program emerges as a reality.

Do you mean to imply by that that we should place more hope and confidence in the Point IV program than in some of the others?

Mr. BERLE. No; I meant this: Point IV was widely advertised to a waiting world. The world does not draw the same distinctions that we do administratively here. They would like to see a Point IV program and for that reason I think it would be wise, if there were time to segregate in the bill those provisions which are peculiarly applicable to Point IV which is more a matter of arrangement, I think, than anything else. In some parts of the world, Point IV will take precedence as an effective measure. In Latin America, I believe that you will probably do more good with Point IV work than you will with straight aid. In fact, you would try to do it all through Point IV if you had time. My suggestion there was that I know many countries have been looking for a separate Point IV program and I think it would be good if in the final draft the Point IV proposals could be separately stated or separately numbered rather than scattered as they are more or less through the generality of a bill.

Chairman RICHARDS. Your time has expired, Mr. Carnahan. Mrs. Bolton.

Mrs. BOLTON. It is delightful to see you again and have you here; also to have the benefit of historical knowledge from you, and of your know-how in the handling of international matters. We are grateful to you for this very fine statement.

You have put emphasis on such an important matter—that of speed, that I think we want to thank you very truly for that.

I am interested in Mr. Carnahan's asking you about possible dates and the Soviet Union. You say here that she will be approaching her maximum military strength in 1952 or early 1953. You have discussed the military end of it. Do you have any sense that there may be some truth in the stories that we get rather increasingly, that there is unrest inside the iron curtain?

Mr. BERLE. Yes. In fact, I have some reason to. As you know, a great many groups inside what is the iron curtain now worked with us against Hitler. I worked with them in order to win the previous war. I do not like to remember what happened to those groups whose principal crime, it seemed, was that they trusted us. I have spent a great part of my time since I got out trying to make good our pledges to them as best I could with what tools I could find to work with. Some of these groups tell me there is unrest. But don't place too much reliance on unrest. That alone won't take us out.

Mrs. BOLTON. But it would help?

Mr. BERLE. It certainly would; only dissident groups behind the iron curtain have to be in contact with or close to, force that can back them up. If you were to give the word now asking a general rising, you would be merely responsible for the useless death of thousands and thousands of people. These groups can be of tremendous use over a long pull if we are able to create a stand-off, in which the Soviet neither cares to declare nor dares to risk war as a result of some move. Eventually, dissident groups inside the Soviet system will create a situation in which we no longer feel oppressed by fear. But that is going to be a long pull. It will require a great deal of work and will require a great deal of help from us and it will require taking a very firm and strong position with ability to render help where necessary.

That, however, is a separate question. My ideas on that I should be very glad to give you privately sometime.

Mrs. BOLTON. I am sure that everyone around this table would very much like to have the privilege of such an executive meeting with you, sir. Most of us think there may be such a possibility; as you do, we feel that it must not be taken too soon.

Mr. BERLE. I also feel this, that it would be very unwise to discuss that generally unless you want to precipitate some very unhappy things.

Mrs. BOLTON. Definitely so.

Mr. BERLE. There is hope in that direction if combined with a strong economic and military policy as well.

Mrs. BOLTON. After all, human beings are human beings.

Mr. BERLE. Propaganda is a great thing but you don't stop a bullet with a radio broadcast. We often wish we could. There is no easy, cheap way out of this, Mrs. Bolton.

Mrs. BOLTON. I wish there were.

It is very good to have your very strong word, to that effect. Thank you very much.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. Your statement certainly was excellent, Mr. Berle. How do you get around the problem of having cooperation from villagers on the village level when in countries like Iraq you have 200 families controlling all the land; the question of Iran where the large landlords control the political and economic life; Syria that does not want any part of technical assistance? Now, when these people do not realize where their own interests lie, how do you get into these nations to build them up quickly even on a minimal basis that you suggest?

Mr. BERLE. This is a task that your Foreign Service has to work out area by area. I would not like to sound off. Let me give one instance where it could have been done a while ago and I think may be done now. This is Iran. We have access there, and the Shah, for whatever that oriental title means now, is well disposed to us. I believe that village-to-village contact could have been worked out a year ago; the Iranian experts believe it could be worked out now.

Iraq is another story. That clearly has to be done on a different level. We have to overcome certain obstacles arising from policies which are dear to us and not so dear to them. I have met men who have suggested various means of doing it. I would not like to undertake to pose as an expert on that region myself because I am not.

I can say that having stacked up in the field against a number of these situations, I have never yet seen a situation in which men who were factual and determined and devoted could not find a way to establish contact with the plain people in some fashion. They encounter obstacles and frequently become controversial and eventually leave. I have noticed, however, that in the diplomatic history of the United States, the man who does the best job for the United States on the ground is usually eliminated after getting the desired result. Perhaps that is as it should be. Certainly it has been true persistently since 1800 and there is nothing new about it.

Mr. RIBICOFF. That is a tragedy that mediocrity can stay and effectiveness has to leave.

Mr. BERLE. That is all right, too.

Mr. Ribicoff. I think this point you make about the moves that Russia is making to sort of put a pincer on India is certainly borne out by history.

Now, how do you explain Nehru's apparent obliviousness to what is going on and his feeling that he can play this game of neutrality, playing the west against Russia and still come out whole?

Mr. Berle. I do not try to explain it. I have only met Mr. Nehru once myself. I have read all of his writings and particularly the huge volume he wrote while he was in jail. At that time he swallowed the Marxian hypothesis. I do not mean that he was a Communist—but he swallowed the Marxian theories lock, stock, and barrel. He makes great point of the fact that never in history has China invaded India. I personally believe that he himself is likely to change his views. I believe a substantial part of his own party have already changed their views. Whether, faced with the huge and staggering problems they have, they will be able to pull themselves together in the event that a main-line Soviet drive is made against them, I do not know. If India is left alone, she is not only no danger but may be able to pull out. If she is subjected to communist pressure on three land sides with a very heavy degree of control over the fourth side which is the Indian Ocean, Indians have a very great problem on their hands. Without trying to explain Mr. Nehru—he is only an incident in Indian history, like others—I should say that the logic of events will even convince Indians, too, in time.

Mr. Ribicoff. Do I have any time left, Mr. Chairman?

Chairman Richards. Half a minute.

Mr. Ribicoff. I just pose the question, talking about the Middle East, in Israel you have a showcase of what can be done by determination and a pioneering spirit to take barren land and make it bloom and support many people at a standard of living and a type of society consistent with western society.

Now, what effect do you think that will have on the eventual Middle Eastern pattern?

Mr. Berle. Over a long period of time, Israel will raise the whole level there. But that does take time. After all, the present Israel development is a development of 20 years. My father worked with Brandeis on the Israel foundations before Zionism was a household word, even among American Jews. As a young man I worked with him on it. What you are seeing now is the flowering of plans and thoughts, with infinite amount of patience and affectionate attention, which now begins to bring forth—

Chairman Richards. Your time is up, Mr. Ribicoff. Mr. Smith.

Mr. Smith. In the light of your experience you might give this committee the benefit of your thinking on a question that I think has disturbed some of us. I know it has disturbed some of the witnesses who have appeared in behalf of this program and that is the question as to why the increased productive capacity of Western Europe has not gotten down to the man in the street who is such an important part of this whole program. For myself, the program has failed in that respect.

Mr. Berle. I agree with you. I spent considerable time in Europe last summer and the summer before asking that. Obviously Europeans are in process of overhauling their system. They have to learn that taxes have to be paid and not avoided. The upper classes have to

develop a great deal more interest in the faith of the less favored classes; an entire atmosphere has to be created.

The European lower classes are not worse off than usually they were. They are actually no worse off, comparatively, than they were before World War II. Only, now faced with the tremendous possibility of industrial civilization, mass demands are higher and humble Europeans do not accept as immutable the low status which some years ago they were quite content to take for granted.

Overhauling the European system is a subject that would need a longer time perhaps than our few minutes.

In spite of the fact that I have been dogmatic here, I do not know all the answers by a long shot. I have been trying to answer definitely because of time. Obviously there is a steady shift in the social systems of Europe that is going on, with resistance, as usual, but which is pounding toward a balance. That is peculiarly true in Italy. There you see the demands against an Italian government which I had a good deal to do with putting together and most of whose members are my friends. I think the social reorganization of Europe will be achieved.

Mr. SMITH. What would be wrong with saying to some of these people who are asking for aid: we will give you this aid upon conditions one, two, three, four. When suggestions have been made to do that, the answer always is, well, it is better to use persuasion. Well, we have been using persuasion since UNRRA and Lend-Lease and all these give-away programs. We have made no progress by using persuasion and it seems to me that the time is appropriate to talk tough and insist upon conditions precedent.

Mr. BERLE. I can only say that it is not easy to force your point of view on a country that is intellectually unwilling to accept it. You have got to do it by a bit of persuasion, a bit of missionary work, and also a bit of pressure if it is to be effective. At the moment, until stability in terms of defense is created, I do not see that we are going to be able to spend a great deal of time revising other people's social systems.

Mr. SMITH. Can there be stability in our defense plans without the cooperation and support of those people?

Mr. BERLE. That is a very deep question and a question I have asked of myself many times. The answer, I think, is yes. France felt just that way in 1914, but she put on one of the best defenses that ever happened in spite of the fact that a French Socialist leader had been assassinated by a crazed conservative only a short time before. I think the Europeans, and particularly the peasants, the labor men in the cities, know very well that what they have now is changeable and reversible; whereas if they fall into the Soviet grip, nothing but an endless amount of death will ever win their way out.

My reason for feeling so is that I had three leaders of European labor unions in my office last week. They were asking us for propaganda material, help, in connection with a general system of economic education. I was glad to put the resources of the Twentieth Century Foundation Fund, which does economic research, at their disposal and tried to see whether anything could be got out of the Voice of America.

I agree with everything you say. I think, however, that while asking that, you still cannot delay the other. I do not think that the one is dependent on the other. The European workman, the European

lower class people, economically lower class people, have plenty of brains; they are not dumb at all; they still would rather risk working out their system—that is, most of them, not all, but most of them, working out their system in their own country than otherwise.

Chairman RICHARDS. Your time has expired, Mr. Smith. Mr. Zablocki.

Mr. ZABLOCKI. No questions.

Chairman RICHARDS. Mr. Roosevelt.

Mr. ROOSEVELT. No questions, Mr. Chairman, except I want to express my gratitude for Mr. Berle's appearing before the committee. We are always glad to see him.

Chairman RICHARDS. Dr. Judd.

Mr. JUDD. Mr. Berle, I want to express my appreciation for the excellent, sobering, and yet, I think, completely sound analysis and presentation you have made.

I noted your sentence that the Middle East is more important even than Western Europe. Do I understand correctly that what you mean by that is not that you are partial to the Middle East or sentimental about it but that you believe we cannot save Europe without the Middle East?

Mr. BERLE. I mean that. I also perhaps should have used the word "urgent." My impression is that the Soviet plan will challenge in Western Europe last because there they expect military resistance. The Middle East, however, is that part of the iron curtain where we are less prepared. It is wide open. This is why I gave it priority.

Mr. JUDD. Is this not also a reasonable conclusion, that if they get the Middle East and all that goes with it they will not have to destroy Western Europe in an invasion? They will shut it off from much of its raw materials and all our wonderful machinery just installed under the Marshall plan, they can take over and use; don't you think that is more likely their desire and goal than to invade Western Europe or destroy it?

Mr. BERLE. Very probably. Western Europe is like a city house with a big farm behind it and the Middle East is very largely that farm. You are absolutely right about that.

Mr. JUDD. Last month when the Secretary of State was before us, I asked him this question:

You said yesterday that time was on our side. Well, obviously the Russians seem to think it is on their side, because all their maneuvering since VJ-day has been to produce delay—for instance, at numerous conferences.

They have just finished one in Paris where months were consumed in gaining them time. I do not know whether they are more accurate and realistic in their estimates than we are. I hope we are, but their record for realism is better than ours.

I am not sure that time necessarily is on our side in a situation like that in the Far East.

What is your view on that?

Mr. BERLE. I feel that time probably is on our side, but I think we will be hopelessly derelict if we guide our policy on that theory. I mean by that that I have tremendous faith in the huge productive ability of the United States. But there is this difficulty: If you bet on time based on only the increase of our production, when the show-down comes you will also be betting American blood. Our production will only be made good by American boys beating their brains out against armies in some foreign country. For that reason, while I

think in the cosmic sense the Secretary of State was accurate, I should dislike to think that he was urging anyone to pursue a policy of delay on the theory that time would kindly take us out.

Mr. JUDD. I did not want to give the impression that that was his position, but I wondered what is your judgment, independently.

Mr. BERLE. Probably statistically time is on our side, but I do not feel that we can count on it and I think that to hold back on that ground means adding to time the product, American life.

Mr. JUDD. I further said to Mr. Acheson:

I think you will agree that, as was said yesterday, they would not have come into Korea if they had not expected they could get a quick victory and that we and the free world would not fight back.

Now that we have fought back they may think that they have gained all they can from that operation and it would be better to pick off Burma. By splitting India from the rest of southeast Asia, they would neutralize both of them, especially when they are also able to create trouble in Iran on the west of India.

My question is: What hope is there of salvaging the situation in Burma unless we can stop the Communists in the southern provinces of China?

Mr. BERLE. I cannot answer you, Mr. Judd. I am afraid, but would not care to commit myself, that the Burmese situation has got to a point where some organization of force will be needed, at least on that frontier. I have not enough information and could not have except as an official—should not have except as an official of the Government—to be able to answer it. I hope that there is still time to meet that situation in Burma with a little support from the outside.

We were wise—I like to think that maybe some words I was able to put in may have helped, to strengthen our Mediterranean Fleet. I think we would be wise now, if we can, in seeing that the line is run farther east, assuming that that is operationally possible. I hope it will be possible to create in Burma enough of a strength cadre, so the Chinese force does not rip up that country.

Your other question turns on whether it is operationally possible to move in the southern provinces of China. I cannot answer. I think the only people who can answer that are the Pentagon folks.

Mr. JUDD. I do not mean with our forces; what I want is to strengthen the anti-Communist Chinese enough so that the Communists could not move through them into Burma.

Chairman RICHARDS. Mrs. Kelly.

Mrs. KELLY. I, too, want to join my colleagues in welcoming Mr. Berle here today.

Do you feel that the people of the Middle East are aware of the critical situation now?

Mr. BERLE. Except in Iran, I rather doubt it. I believe that Iran is acutely conscious, the Iranians are acutely conscious that they lie within or between two huge forces because they have been repeatedly occupied and disoccupied by one or other of these powers. I am not sure that is equally true in Turkey. I have no evidence which suggests that the Arab fellahin or the fellahin in Egypt know very much about any of this or really care. But I cannot say that I am so well informed that I could be dogmatic about them. I think there that we really have not penetrated below the top layer but that may be wrong.

Mrs. KELLY. Did I understand you correctly in saying that we should give both economic aid and military aid, to that section of the world?

Mr. BERLE. I did not cover that point, but I think we must. Economic aid has certainly helped. How you handle military aid in each case would have to be a very close and very level-headed calculation as to whether military aid would tend to stabilize a region or whether it would be merely lost. I think the question would have to be dealt with region by region depending on each situation.

If you mean by military aid that eventually that area is going to have to be defended, my answer is, yes; I do not think that the United States could safely allow the eastern, especially the Arabian quadrilateral, to fall into Soviet hands without gravely prejudicing her own safety. And I think that probably the support we gave to Turkey was one of the most effective steps militarily that we have taken. Could like aid be given elsewhere? I rather doubt it. I do know that any of the countries, with the exception of Israel, are not yet in such shape that direct military aid could be of great help. But I stand subject to correction by men who have been over that subject in those areas.

Mrs. KELLY. I have one other question. In your statement, on page 3, I quote:

we can assist populations within the iron curtain who know, now, that the Communist promises are not fulfilled, and the enslavement of a population is a substantial result.

Have you any suggestions how we could do that?

Mr. BERLE. Yes, Mrs. Kelly, I have. I prefer not to make them in open session for reasons with which I am sure you will sympathize.

Mrs. KELLY. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Fulton.

Mr. FULTON. Do you think it is worth while to try to get the word through the iron curtain itself as well as the satellite countries? If we show the difference in ways of living we might bring pressure to break the repressions without having to use military force?

Mr. BERLE. I think a good deal can be done along that line. As a member of the National Committee on Free Europe, I have had something to do with the operations of what is called Radio Free Europe which, being private, can take somewhat more dangerous positions.

Mr. FULTON. I wanted to ask you about your success in that field.

Mr. BERLE. I can only say, as evidence of that success, that in connection with one of the diplomatic matters now pending, the Oatis case, it was obliquely suggested that the way would be smoothed to settle it if the United States would agree to shut down Radio Free Europe. I am glad to say that the State Department promptly refused to accept that suggestion. Obviously we have scored there. Such returns as one can get for an operation of that kind indicate that the scoring is steadily increasing.

Of course, we are not there representing the "American" point of view. We are permitting the exiles and the people who come out to state their own point of view. That is, we are not selling America so much as trying to give effect to the voices that feel otherwise than iron curtain in those countries.

Mr. FULTON. There are three countries that we have recognized and continue to recognize that have gone behind the iron curtain and have been obliterated before World War II. We still have their representatives, I believe. Those are Estonia, Latvia, and Lithuania. Do you think it would be wise to have something in this bill to encourage those governments-in-exile to keep going and also to keep contact with the people behind the iron curtain?

Mr. BERLE. There, I think, I can speak with a certain degree of assurance. As a very young man I was on the Baltic Commission after World War I, attempting to draw the boundaries and recognizing those countries. As an Assistant Secretary of State, when those countries were seized, I asked the Department, Mr. Hull, to use the power that the Secretary of State has to recognize what officer of a government is entitled to use the foreign balances of those countries in the United States. Those three governments had reserves which they kept, I believe, with the Federal Reserve Bank of New York. These balances were then frozen under the then-legislation which I think still persists. Mr. Hull recognized that the power over those balances should rest in the only remaining representatives of those countries which were their legations and consulates here, under a budget which would permit them to continue their representation. I believe those funds are not exhausted, though this is a pure guess on my part. I do not think as to that you need special action in this bill.

Mr. FULTON. I was inferring by that, do you think we ought to have them join us on these programs? Also to help on the things that we might be doing to help these people get out from behind the iron curtain and restore independence and freedom?

Mr. BERLE. The National Committee on Free Europe was originally set up for the iron curtain countries, excluding those three. In the past few months they have revised their policy to include Estonia, Latvia, and Lithuania so that there is one forum through which a certain amount can be done. Technical arrangements to beam broadcasts to the Baltic countries are slowly being worked out. I merely mention that something is being done along that line. I should defer to the State Department, which must decide these things, as to whether they would want to go further than that. It raises some questions. There is only a pitiful remnant of a government which is outside these countries. One of the terrible tragedies is that in at least one of those countries, Estonia, I do not know whether many Estonians are left now.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. Despite the deterioration, politically, in Iran, we do have one asset on our side, do we not, in that Russia has no immediate access to the oil; that is, they do not have any pipeline or efficient rail lines running by which they could utilize the oil output immediately.

Mr. BERLE. That is true. If Russia seized Iran, it is not a move which gives oil to Russia. It is a move which cripples western union. It is a distinctly offensive move. It is true that there is a railroad which runs up, winding through the mountains to the Russian border; we used it to send lend-lease goods into Russia during the war.

There is another fact which bears on your question. I understand that when the Russians occupied Azerbaijan 3 or 4 years ago they—later withdrew—did some oil drilling then. At all events, five or six wells were found, capped. They have never been uncapped, I am informed. It may be that the Russians have taken some steps to get additional oil supplies capable of being sent into the Soviet Union. My impression, however, is that the Russian underground oil reserve in her own country is adequate. It is drilling facilities and development that she needs.

The attempt to seize Iranian oil is more offensive. Only if she could command control of the Arabian quadrilateral, the Red Sea, and Suez and get through the Dardanelles, could she bring Iranian oil by water around to her Black Sea ports. In other words, she would have to get the whole Middle East. Russia would then have that oil and could use it rather rapidly by sea.

Mr. REECE. Since we have been giving rather close attention to that area and Iran in particular for some time, and conditions have tended to worsen, I am wondering if you out of your experience have any discussion as to how we could, and when I say, we, I mean America primarily, improve our situation there? It is somewhat discouraging when we have been giving attention to such an important area to see it almost slipping away from us.

Mr. BERLE. There is no use in going back to yesterday. I personally felt that we should have backed up—

Mr. REECE. If you will permit an interruption, I am sometimes impressed with the inscription on the Archives Building: What is past is prologue—study the past.

Mr. BERLE. Sometimes history helps. However, someone said that the only thing we learn from history is that we learn nothing from history. I suppose it may be true. I felt it would have been a good idea last year to back up the request of the Shah for a declaration of support when he proposed general reorganization of the Iranian Government. Later, as you know, he tried it without that support; General Rasmara was the man whom we had hoped to use for that purpose. Rasmara was later assassinated. Perhaps if we had used what in the light of hindsight appears to have been an opportunity, we would have been better off.

I rather wonder whether somewhat similar opportunity may not still be possible today? I feel that we still have access to the sovereign power of Iran. I feel that at least the head of that Government—I am not speaking of Mossadegh, I do not know—would be rather glad if he could see a way out; and if we were prepared with a rapid program which would tend to reorganize that Government, we might be able to act.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Chairman, I will just take a minute.

Chairman RICHARDS. I would like to say that we have four more witnesses tonight. For the information of the committee we want everybody to ask as many questions as he can in the 5 minutes. But we have to take into consideration the other witnesses who have come a long distance and expect to be heard.

Mr. Javits.

Mr. JAVITS. Mr. Chairman, I gather I am the last questioner.

Chairman RICHARDS. I should have called on you just now but I was recognizing Members on this side.

Mr. JAVITS. I am very glad to have you with us, Mr. Berle. Your statements and answers to questions have been very helpful. I gather you feel that in terms of nonmilitary effort the best thing we can do is get down to the grass roots in the areas we still have a voice in, the free world, and make it worth while, especially in the Middle East that you have described, for people there to defend freedom with their lives.

Mr. BERLE. That is right.

Mr. JAVITS. That is going to take not so much in the way of money because it is going to be elementary equipment, but it is going to take technically skilled personnel. Let us get our people out there right on the ground as widely spread as possible, following the very excellent example of the rural reconstruction effort for which my colleague, Dr. Judd, was so responsible. But that is the key to activity in the underdeveloped areas.

Mr. BERLE. That is right.

Mr. JAVITS. The other thing I gather you bring us is that our time is so short in military terms that we have got to capitalize wherever possible on our assets and hence the emphasis which Mr. Ribicoff, I think, so truly gave on an area which is sensitive, weak, and yet has a hard nut like Israel which can be a focal point of defense when you just have not time to build up others. Do I gather that you go along with that?

Mr. BERLE. Yes. In dealing with Israel, I hope no one will take it amiss if I say, do not forget the Arabs, too. Strong and magnificent as the achievements of Israel have been, there is still a tiny island in a huge Arab sea. We need to work both sides of the street.

Mr. JAVITS. No one has been more convinced than I of the fact that Israel is part of the Near East and as the Near East goes so Israel will go. She is intimately linked with the destiny and success of the whole area and of the Arab States.

Mr. BERLE. She lives or falls with the Near East and with the free world.

Mr. JAVITS. Thank you very much, Mr. Chairman.

Chairman RICHARDS. Thank you very much, Mr. Berle. We appreciate your testimony. I am sure that it will be very helpful to us.

Without objection, the statement submitted by the Honorable Joseph W. Martin, Jr., will appear in the record at this point.

(The statement referred to is as follows:)

STATEMENT SUBMITTED BY HON. JOSEPH W. MARTIN, JR., MINORITY LEADER,
HOUSE OF REPRESENTATIVES

In deciding how much we should contribute of our resources to strengthen the free world, we should be guided by certain principles.

We must help those whom we know to be sincerely with us in our fight for universal freedom. We must give special consideration to those nations that will more than match our contribution by the maximum use of their own resources and labor. The paramount test must be the security of the United States.

It was these considerations which moved me to respond affirmatively when the Government of Israel formally applied to our Government for a grant of \$150,000,000 to enable it to meet the critical problems arising out of its immigration program and to consolidate its economy. Recognizing the validity and the propriety of Israel's appeal, I introduced H. R. 3188 to authorize financial aid to Israel.

I said that we must help those who are with us in our fight for universal freedom. In the 3 years of its existence, Israel has given clear demonstration of its determination to stand with those people favoring a free world. It is an outpost of the free world in an area under the shadow of the totalitarian menace and under pressures from the same sinister and antidemocratic forces which threaten our own security.

All of us are familiar with the fact that Israel introduced free institutions into a region where these were almost literally unknown. Going beyond that, Israel, taking a course conspicuously different from that of some of its neighbors in Asia, has repeatedly voted with the west in the United Nations—affirming its belief that aggression must be checked and that the free world must be defended. Israel has not been affected by the false doctrines of neutralism and hypernationalism, which are the propaganda tools of Communist aggression.

Israel's appeal for aid comes from a people who have done and are continuing to do everything possible to attain economic self-sufficiency and stability by their own labor. In the first 3 years of its existence, the new state defended its frontiers, established the apparatus of government, and made remarkable progress in the expansion of industry and agriculture. But its most extraordinary achievement was that it made good on the pledges of its founders by providing a haven for more than 600,000 immigrants—many of them utterly destitute.

All of us recall that our country favored the opening of Palestine to Jewish immigration. I do not think any of us ever dreamed that within such a short period the people of Israel would empty all the Jewish displaced persons camps in Germany, Austria, and Italy and, in addition to that, absorb close to 300,000 Jewish people from the neighboring Moslem countries. The great part of these incoming settlers are without means of any description and it has been a tremendous financial problem to receive them and to settle them—a problem which has been solved largely by the heroic sacrifices of the people of Israel themselves who generously shared what little they had with those less fortunate than themselves. Our own Jewish citizens in this country responded with magnificent generosity to Israel's appeal for help and by and large this huge immigration was financed by the Jewish people themselves. But the program has not come to an end. We are told that this little country is determined to receive another 600,000 immigrants in the next 3 years. From the experience of the last 6 months, this would appear to be a conservative estimate for, according to figures I have seen, for the first 6 months of this year, 128,000 came into the country. In the month of April, they came at the rate of more than a thousand a day.

Now it has seemed to me that our Government might well have given economic assistance to help put this little State on its feet. Several years ago, we were spending large sums of money to take care of the DP's in Germany, Austria, and Italy. We no longer have that responsibility. Israel has assumed that burden. The plain fact is that American foreign policy gave political support to the establishment to the State of Israel for some years. But we did not back up this political aid with the economic assistance this struggling State so urgently needs despite our close friendship with them and the significant role we played here in Congress and at the United Nations to bring this State into being.

I am proud to recall that the Republican Party for many years supported the principle of establishing a national home for the Jewish people. The first national legislature to adopt a resolution affirming that principle was a Republican Congress, which, in 1922, established the foundation of our American policy on this issue. In 1944, the Republican Party was the first to write into its national platform a declaration subscribing to this objective. We have been steadfast in our support throughout. Yet here is an issue which must transcend partisan views and I am happy that this legislation has been sponsored similarly by my colleague, the distinguished majority leader, Mr. McCormack of Massachusetts.

Since the introduction of H. R. 3488 and similar legislation in the Senate, the administration has accepted the principle of aid to the Near East and Israel is to be included in the proposed Mutual Security Program for 1952. I understand the amount allocated does not take into account Israel's actual needs but appears to have been determined by some sort of artificial formula which seemingly equalizes Israel and her Arab neighbors.

In making this statement in support of assistance to Israel, I would emphasize that I do not oppose assistance to the Arab states. I favor such assistance. In particular, I warmly support the proposals to resettle the Arab refugees. The sooner the Arab refugees are resettled in the Arab countries, the closer we will be to the solution of a tragic problem.

In urging American aid to Israel, I have in mind the extraordinary burdens which Israel has assumed and I am primarily concerned with American interests

in the consolidation of a sound and secure and friendly state in the Near East. It seems to me, we should consider each request for aid on its merits. Israel has made a plea for substantial assistance. We ought to consider that plea, objectively and fairly. We cannot in justice have our answer to that request on the needs and attitudes of other countries in the area in which Israel exists.

We have pressed for a realistic and American attitude in the formulation of our foreign policy. Sometimes we have acted on unrealistic policies which have led to costly errors and as a result of which we have been compelled to make sacrifices of blood and treasure. We should beware lest we should again be plunged into a crisis because of an inability to apprehend the relative significance of the Near East. There is every danger that this area will become a vacuum into which totalitarian forces will flow unchecked. We must take steps to assure that this will not occur. The Near East is a strategic target of Communist imperialism. Let us bear that in mind as we consider the amount that is to be allocated to Israel and to the area as a whole. Let us ask whether it is an adequate proportion of our over-all foreign-aid program in the light of the increasing importance of the Near East and our neglect of the area in the past.

We must have an American policy in the Near East that recognizes the friends in that part of the world who are ready to cooperate fully with us in the defense of freedom. If we consider the question from that viewpoint, I am sure that we will go far to honor the request of this young republic. Here is aid to a country which will over the course of the years, repay us many times over. For it will stimulate the forces of freedom in the area. It is giving the positive answer to totalitarian propaganda. It is demonstrating conclusively that in a country which honors the freedom of the individual there can be a steadily advancing standard of living for all the people.

The devotion of the people of Israel to liberty is one of the bright spots in the Old World today. We have seen how the gallant young people of that country bravely fought through a war of independence—a struggle which stirred the American people, for it recalled the epic chapters of our own history. The Israelis have not relaxed their vigilance. They live in a tense and troubled area; they know that they are on the frontier of danger. They are prepared for any eventuality. The young army of Israel, with more than 200,000 men and women, is one of the strongest forces for the survival of freedom in the Near East. The expanding industrial plant in Israel, steadily growing in quantity and diversity of output, can make that country the industrial workshop of the Near East. By word and by deed, the young State of Israel has demonstrated its willingness to stand firmly and resolutely against the forces of tyranny and despotism. It can be an outpost of American strength and influence in the Middle East. There is no doubt in my mind that to help Israel is to make America more secure.

Chairman RICHARDS. Our next witness is Mr. Louis Lipsky representing the American Zionist Council. I believe there are two other witnesses, Dr. Joseph Schwartz and Mr. Robert R. Nathan, who wish to be heard tonight. Is that correct?

Mr. LIPSKY. That is correct.

Chairman RICHARDS. Do you have separate statements?

Mr. LIPSKY. That is right.

Chairman RICHARDS. All right, sir.

STATEMENT OF LOUIS LIPSKY, CHAIRMAN OF THE AMERICAN ZIONIST COUNCIL

Mr. LIPSKY. Mr. Chairman, ladies and gentlemen, we are grateful to you for the opportunity to be heard on the important matter now under your consideration, especially with reference to aid for Israel. I represent the American Zionist Council, which includes all Zionist groups in the United States and speaks for an aggregate of about 700,000 members. The parent body of the present council dates back to 1897. We are parties in interest here, for what has been achieved in Israel during all these years is to a large extent the result of a half century of devotion to a great humanitarian cause on the part of American Jews.

I would like to submit to this committee our views on the Mutual Security Program in the Near East and North Africa. We wish to place on the record our conviction that the program does not provide adequately for the area as a whole and for Israel in particular.

We would recall to this committee that in March of this year, the Government of Israel formally requested a grant-in-aid of \$150 million to enable it to overcome the extraordinary economic problems resulting from its immigration program. With the permission of the chairman, I would like to introduce into the record, unread, the text of the note to the Secretary of State by the Ambassador of Israel, Mr. Eban, as well as a memorandum, "Why Israel needs American Aid," submitted by the American Zionist Council.

Chairman RICHARDS. Without objection, that will be included in the record.

(The documents referred to are as follows:)

WHY ISRAEL NEEDS AMERICAN AID

A memorandum presenting the reasons why Israel has asked assistance from the United States Government and why it is in the interests of the United States to respond to Israel's request. Submitted by American Zionist Council, New York, N. Y.

I. THE AID TO ISRAEL LEGISLATION

Legislation has been introduced in Congress to authorize a \$150,000,000 grant to the State of Israel "to assist the people of Israel in developing their natural resources, expanding their agricultural and industrial economy, and increasing their productive capacity and facilities, and, by such assistance, to promote the security and general welfare of the United States and of Israel. * * *

2. In the Senate, S. 1247 is sponsored by Senators Douglas, Taft, Anderson, Benton, Brewster, Butler of Nebraska, Cain, Duff, Ferguson, Gillette, Hendrickson, Hennings, Hill, Humphrey, Hunt, Ives, Johnson of Colorado, Kefauver, Kilgore, Lehman, Lodge, Magnuson, Martin, McMahon, Morse, Murray, Neely, O'Connor, Pastore, Saltonstall, Smith of Maine, Smith of New Jersey, Sparkman, Thye, Tobey, and Young.

3. Similar legislation has been introduced in the House by the majority and minority leaders, Representatives John W. McCormack (H. R. 3458) and Joseph W. Martin, Jr. (H. R. 3488). More than 150 Members of the House of Representatives have signed a declaration supporting these bills.

4. This legislation affirmatively answers the request submitted by the Government of Israel to the Department of State on March 22, 1951.

Consistent with past American policy

5. The proposal is consistent with past American policy. Our country played a decisive part in the establishment of the modern State of Israel. Six Presidents favored that objective; the American people gave bipartisan endorsement to it. Congress, through a joint resolution adopted in 1922, was the first National Legislature in the world to go on record in favor of Jewish aspirations to Palestine. In 1945 Congress adopted a concurrent resolution advocating free Jewish immigration into, and unrestricted development of, Palestine as a democratic commonwealth. The United States gave its support to the United Nations resolution of November 29, 1947, which authorized the establishment of a Jewish state in Palestine. On May 14, 1948, the United States was the first Government to recognize Israel on the day of its birth.

II. THE INTERESTS OF THE UNITED STATES

6. *A strong Israel is vital to the security and welfare of the United States.*—Israel is a significant link in the chain of free countries which must counter the threat of totalitarianism. Assistance to Israel would be in accord with the program which the United States has carried on since July 1, 1945, in its efforts to brace the free world and to make it possible for democratic nations to consolidate the military victory of World War II. More than 65 countries have been aided in our country's foreign assistance program which has exceeded \$40,000,000,000 in grants and loans. In his state of the Union message on January 8, 1951, the President urged

continued overseas assistance. For Western Europe, he emphasized the need for military defense. For the Near East, Asia, and Africa he underlined the need for economic assistance to "help people who are striving to advance from misery, poverty, and hunger, and to give them a real stake in the future and reason to defend their freedoms."

And on May 23, 1951, in his message to Congress, the President disclosed that the administration had accepted the principle of Israel's inclusion in the foreign aid program. Without specifying the amount to be allocated to Israel, the President declared:

"The program for Israel will help that country to maintain her economy during an especially trying period of her national development."

Israel is a bulwark

7. In presenting the Israel aid bill in the Senate on April 2, Senators Douglas and Taft joined in asserting that "important strategic factors indicate the vital importance of helping this new nation to keep herself healthy and strong and free. The menace of new aggressions by Communist tyranny in Iran or elsewhere in the Near East is great. Israel is a bulwark in that area for world democracy. In the light of American self-interest, we cannot ignore the situation prevailing in those countries."

8. The democratic world must heed recent alarming trends in the Eastern Mediterranean. Invaluable oil resources may be denied the west as a result of developments in Iran and Iraq, while Egypt has stepped up its campaign to force Britain to withdraw the last western defenses from the vital Suez Canal. Fanatic nationalists gain ground, diminishing the credit of the democracies, encouraging Communist elements, preaching neutrality and making the Near East easier prey to Soviet ambitions. Once again, as in the last war, the Arab world gives sign that it will be immobilized, and, in the event of conflict, withhold friendship and assistance from the cause of freedom.

9. Against this background of distrust and intrigue, Israel stands out clearly as the dependable exponent of democracy in the Near East. The new state has given impressive proof of its democratic character. Having fought a bitter struggle for independence, the people of Israel cherish the rights guaranteed by democratic governments. The new state introduced democratic institutions and practices into a part of the world where these were almost unknown—democratic elections, universal franchise, representation for minorities, votes for women (Arab women voted for the first time in history) and compulsory education.

10. *The people of Israel are ready to fight for democracy.*—The Prime Minister and the Foreign Minister of Israel have declared repeatedly that Israel will resist by force any attempt to invade it from without or to subvert its institutions from within. In his address before the National Press Club at Washington on May 8, 1951, Prime Minister David Ben-Gurion pledged his country to the full support of "every measure which strengthens world peace and opposes aggression. We shall cooperate untiringly with all who set their faces against the enslavement of the soul of men."

Israel supports the UN

11. Israel's foreign policy is based on the Charter of the United Nations. Israel supported the Security Council resolutions branding North Korean aggression and the General Assembly resolution calling for a unified and independent Korea. She contributed medical supplies for the United Nations forces fighting in Korea and for Korean refugees. Surrounded by hostile Arab states which refuse to make peace, Israel is not in a position to risk dispatch of a military detachment to the Korean front. Israel also voted for the resolutions indicting Communist China as an aggressor and calling for sanctions, and she backed the United States plan to strengthen the General Assembly in the event of a veto in the Security Council. Israel's active support of the principles of the United Nations throughout this critical period has been in sharp contrast to the stand of other states in Israel's neighborhood.

12. The people of Israel have demonstrated their capacity to fight in democracy's defense. They were the one community in the Near East which fought on our side in World War II. Some 30,000 men from Jewish Palestine were in the British forces. Many others who now serve in Israel's Army fought in the United Nations' coalition in Europe and in underground anti-Nazi resistance movements.

13. The Israelis were greatly outnumbered by the Arab armies which launched their invasion to reverse the United Nations decision in May 1948. The Israelis fought with crude and inadequate weapons and with little assistance from outside. They suffered heavy casualties. But they won decisively.

Israel's fighters . . .

14. Today, aside from Turkey, Israel has the strongest army in the Near East. Official figures are not made public, but it is estimated that the army grew to more than 100,000 during the war for independence. With the arrival of many new immigrants and universal military training for both men and women, it is estimated that the army, air force, and navy potential now stands well over 200,000—many of them well-trained and seasoned fighters.

. . . And workers

15. Israel's industrial capacity is equally significant. In World War II, Jewish Palestine delivered approximately \$100,000,000 worth of goods and services to the allied forces. In addition, it met many essential civilian requirements of the Middle East, thus saving the Allies vital shipping space. Among the military end products which were delivered were 3,000,000 land mines, 8,000,000 to 9,000,000 yards of electric cable, 1,000,000 pairs of boots and shoes, and many other items, including storage and dry cell batteries, machine gun parts, barbed wire, light naval craft, cranes, tents, tarpaulins, uniforms, pharmaceuticals. Jewish engineers, architects, building contractors, and workers constructed fortifications, bridges, harbor installations and air fields, all over the Middle East, as far as Iran and Bahrain. Jewish Palestine delivered oil from its Haifa refinery and vast quantities of potash, bromine and other chemicals from its potash plant.

16. The peak World War II industrial effort was in 1943, when the Jewish population of Palestine totaled 639,000 persons and the gainfully occupied numbered 225,000. By the end of 1950, the Jewish population of Israel had reached 1,200,000, and in July of that year the gainfully occupied were estimated at 395,000. While the total labor force in industry and handicrafts in 1939 was 36,000, this figure had increased to 90,000 in January, 1951. Moreover, there has been an even more rapid influx of capital into Israel's industry. During the World War II years of 1940-42 about £ P3 million were invested in industry per year. This rate of investment was about the same as prevailed in prewar years. In 1949, £ 11.5 million were invested in industry and in 1950, £ 15 million.

17. A considerable volume of this investment came from United States corporations and individuals. The General Shoe Corp. of Nashville, Tenn., participated in financing and setting up a modern \$1,000,000 shoe plant in Jerusalem. Kaiser-Frazer participated in a \$2,600,000 automobile assembly plant near Haifa. The new Petach Tikva tire factory of the General Tire & Rubber Co. of Akron, Ohio, is now being completed, and an equally large tire and rubber factory is being constructed with the aid of technical services supplied by the Dayton Rubber Co. Machinery for the new \$500,000 Precision Tool & Die Co., Ltd. plant (sponsored by Bulova) is now being installed.

18. Scientific research in Israel is on a high level and is geared to the country's development. Israel's workers and machines can service and maintain the vital equipment of a modern military force.

19. The result of the influx of labor and capital into Israel is a net output of industry (national income originating in industry and handicraft) of £ 62 million (\$173,600,000) in 1949 and £ 80 million (\$224,000,000) in 1950. The most reliable indicator available for measuring the growth of Israel's industrial output, the consumption of electric power by industry, shows a growth from 25.1 million KWII in 1939, to 49.5 in 1943, to 96.9 in 1949 and 140.6 in 1950. The percentage increase from 1948, the year of the establishment of the State of Israel, to 1950 was 97 percent.

20. To provide food for its rapidly expanding population, the new State has been pushing its agricultural development. The rapid growth is demonstrated by the increase in irrigated land. Thus on April 1, 1949, 80,000 acres were under irrigation. Two years later, this area had increased to 121,000 acres. By 1953 will be 201,000.

Israel's strategic importance

21. Israel is strategically located. A bridge between three continents, it has a relatively long coast line, with a major seaport at Haifa and a great airport at Lydda. The port at Tel Aviv is to be developed. There are a number of important airports both in the north and south. Israel is 125 miles from the Suez Canal, 160 miles from the British sea and air bases at Egypt. It is adjacent to oil-rich areas. Jewish Palestine was a base of land, air and sea operations in the Allied campaign in World War II.

22. It is in this context that Israel's unprecedented immigration program must be appraised. That program, which has so severely taxed Israel's economic re-

sources, is designed to give sanctuary to people in need, and at the same time to advance the economy and security of the country. The steady increase in Israel's population provides trained and efficient workmen and manpower for the army, navy, and air force, enhancing the country's military security and its capacity to resist aggression and to maintain the peace.

23. Israel's role as a communications center, supply base, and production arsenal must be taken into account by those concerned with the defense of freedom.

III. THE NEEDS OF ISRAEL

24. Why does Israel, growing in population, productivity, and strength need economic assistance? The answer is that the population has virtually doubled in 3 years and that those who have been coming into Israel are, for the most part, destitute and without resources. The land itself, barren and neglected for 20 centuries, has not had the agricultural and industrial plant and the necessary capital to absorb the vast new influx as it poured into the country.

25. Under normal conditions, Israel might have gone far toward self-sufficiency without outside help. But one of the major reasons why the new State came into being was to provide a home for the hundreds of thousands of homeless Jews, dispossessed, displaced, and dispersed by the Hitler era, the Second World War, and postwar persecution. The plight of these homeless people, many of whom were liberated from the Nazi concentration camps and saved from the gas chambers and crematoria by American soldiers, aroused the deepest sympathy and concern everywhere. But even after their liberation they were compelled to remain for many months in displaced-persons camps. The Congress of the United States in 1945 called for their transfer to Palestine.

26. President Truman made repeated efforts to secure the admission of 100,000 Jews into Palestine, and on July 2, 1946, the White House declared that the Government of the United States was prepared to assume technical and financial responsibility for the transportation of these immigrants. Again, on October 4, 1946, the President declared:

"Should a workable solution for Palestine be devised, I would be willing to recommend to the Congress a plan for economic assistance for the development of that country."

The population almost doubled

27. Not 100,000—but 600,000 immigrants—have been brought into Israel since the establishment of the state. The population practically doubled, for there were only 650,000 Jews in Jewish Palestine on May 14, 1948. The newcomers came at a spectacular rate. Between May 14 and December 31, 1948, there were 101,622 immigrants (although during that period the country was engaged in repelling the invading Arab armies); in 1949, there were 243,538; in 1950, 169,831. Immigration has soared in recent months. In the first 4 months of 1951, there were 79,719. In April 1951, alone, 30,202 refugees came into the country.

28. These immigrants included most of the Jewish displaced persons in Germany, Austria and Italy. Great numbers came from Eastern Europe, many of them members of the now dispossessed middle class. Most of what was left of the Jewish communities in Germany, Austria, Bulgaria, Yugoslavia, Czechoslovakia, Poland, Yemen, and Cyrenaica have now emigrated to Israel. Analysis of the countries of origin shows that as of May 1, 1951, 273,355 or almost half came from Yemen, Iraq, and the unhappy ghettos of other Moslem lands in the Near East and North Africa. The migration of many of these people to Israel has been in the interests of world peace, for they had been living in sensitive areas at points of potential friction.

How the program was financed

29. Israel's resettlement program substantially reduced the expenditures of international relief agencies and of our own Government. For, prior to their transfer to Israel, great numbers of the displaced persons had been wards of those agencies and of the American Government in Germany and Austria.

30. Theoretically and morally, the salvation of displaced persons was an international responsibility. But Jews throughout the world, concerned for their kin, took a great part of the burden upon themselves. From 1918 to 1950, the American Jewish community raised approximately \$230,000,000 to assure permanent sanctuary in Israel for the refugees. This is exclusive of large contributions to Jewish Palestine before the state was established. The Jews of Israel surpassed even American Jewry in self-sacrifice. The 650,000 Jews living there when the state was created contributed more than \$245,000,000 through taxes, advances, and gifts for the reception of the newcomers during the same period.

31. In contrast to this \$475,000,000, sums provided by international and governmental assistance were not large. During the 3-year period, the International Refugee Organization paid to the Joint Distribution Committee and the Jewish Agency for Palestine a total of approximately \$21,000,000 for transportation costs.

32. Israel was not included in the ECA, nor did the economic program for Palestine which the President proposed in 1946 develop. The assistance Israel has been able to secure in the United States has been primarily in the form of loans. The United States Export-Import Bank authorized 15-year loans totaling \$135,000,000 at 3½-percent interest for machinery, equipment, and supplies to be purchased in this country. The United States entered into a point 4 agreement for \$100,000 to train Israel technicians. Under the Smith-Mundt bill, \$87,580 was allocated for the exchange with Israel of professors, specialists, students, etc. Through American charitable organizations which assumed the transportation costs, the Department of Agriculture channeled surplus agricultural commodities valued at \$23,000,000. This aid has been warmly appreciated by the people of Israel and it is gratifying that our Government has given this measure of assistance to the new State. But it must be emphasized that the greatest part of this unprecedented immigration was financed by the sacrifices of the people of Israel and the unparalleled philanthropy of the Jewish people of the United States.

The effect on Israel's economy

33. The great influx of immigrants, coming at the average rate of more than 4,000 a week (it was 7,000 a week in April 1951) has resulted in an adverse trade balance characteristic of all countries flooded by new settlers while in the early stages of economic development. Israel must import far more than she can export. In 1950, imports totaled \$287,220,000 while exports brought in only \$38,960,000. With its limited dollar supply, Israel has had to choose between meeting the daily needs of its expanding population and acquiring the machinery and materials essential to make its people productive. It chose the latter course and its people have had to pull in their belts. The story of Israel's economic crisis is told most grimly by Israel's rations. An Israeli is allowed no more than 4.3 ounces of meat each week (if it is available) and no more than three eggs each week. And some weeks, he does not receive even that.

34. *Israel's economic problems are intensified by the need of maintain large military forces and to be ready for any military eventuality.*—Israel has repeatedly declared its readiness to negotiate a peace settlement with its Arab neighbors. Unfortunately, these efforts have not yet culminated in peace. As a result of this abnormal political situation, there is no official trade between Israel and its neighbors. Israel cannot acquire food nor sell its products in its immediate vicinity. It must bring some of its imported products from long distances at much greater expense. This blockade, which the Arab states have vowed to tighten although it does injury to the Arabs no less than to Israel, makes further inroads on Israel's hard currency.

The task is far from completed

35. The inescapable fact is that Israel's enormous tasks and responsibilities are inadequately financed, despite the outpouring of philanthropy and the sacrifices of the population. There is much more to be done. The end is not in sight.

36. There are large Jewish communities which cannot remain where they are. They must emigrate to Israel. It is their only hope of deliverance. At this moment there is a dramatic exodus from Iraq; where a reign of terror has been visited upon the Jewish community, the oldest in the world. More than 100,000 Jews have registered to go to Israel. By government decree, Jewish bank accounts and property amounting to \$44,000,000 were frozen. In 1950, 26,492 Jews came out of Iraq to Israel; in the first 4 months of 1951, another 45,775; in April 1951, they came at the rate of 5,000 a week.

37. Meanwhile, immigration of Jews from other countries must go on. The threat of world conflict impels oppressed Jewish minorities to find haven while they still can. The Israel Government cannot assume the moral responsibility of delaying the migration of any Jewish community whose security is threatened. The brutal extinction of 6,000,000 Jews in World War II sears the memory of every Jew. The Government of Israel is determined that nothing shall be left undone to rescue those who still survive. Jews everywhere understand and share that determination. This historic impulse will not be denied.

IV. ISRAEL'S 3-YEAR PROGRAM

38. Concerned with Israel's needs and responsibilities, leaders of the American Jewish community and the Israel Government, meeting in Jerusalem last Septem-

ber, agreed on a 3-year development program to consolidate and expand the economy of the State and to make possible the absorption of another 600,000 immigrants whose entry within the next 3 years is imperative.

39. The estimated cost of this 3-year program is \$1,500,000,000. To raise this sum, the people of Israel are ready to make continued sacrifices. They have undertaken to provide one-third of the goal—\$500,000,000. Jewish communities throughout the world and especially in the United States have promised to continue contributing to the United Jewish Appeal, to stimulate private investments in Israel and to purchase Israel bonds.

Mortgaging Their Future

40. The Israel Government's \$500,000,000 bond issue went on sale in the United States on May 1, 1951. There are two issues: One, 15-year 3½-percent coupon bonds, and the other, 12-year saving bonds which mature at 150 percent of issue amount. Thus the people of Israel, providing a large part of the cost of their 3-year program out of taxation, savings, sharing, and gifts, are, in addition, mortgaging their future earnings for years to come by this large-scale borrowing. From the outset they have been determined to do as much as they could without appealing for outside help.

41. Those who have suggested that the proposed grant for Israel should be converted into a loan should take into account the extent to which the people of Israel have already sacrificed and obligated themselves and to consider further that 83 percent of the United States foreign-aid program for other countries in 1949 was in the form of grants rather than credits, and that in 1950, grants accounted for 92 percent of the program. (Source: Department of Commerce.)

42. Clearly, this rehabilitation and development program is of such magnitude that it cannot be completely financed by private effort alone. It is for this reason, and because of the international significance of Israel's effort, that an appeal is being made to the Congress of the United States to aid Israel as it has aided so many other freedom-loving countries.

V. THE EFFECT ON REGIONAL AND WORLD STABILITY

43. Some Arab League leaders have already attacked the proposed American aid to Israel (indeed, they go so far as to attack American aid to the Arabs). It will therefore be contended that assisting Israel will alienate the Arab states, which still maintain economic, political, and guerrilla war against the new state.

44. The threat of Arab displeasure is not a new argument. It has been projected into every turn of the Palestine debate for the last 30 years, and discredited by every development. On the eve of World War II, as a concession to the Arab states, immigration to Jewish Palestine was sharply restricted, and untold thousands of Jews who might have found sanctuary there were condemned to die in Hitler's death camps. Yet, despite this tragic bribe, the Arab states remained neutral and nonbelligerent, refusing to join the Allied forces, and Arab leaders collaborated with the Nazis. To suggest that Israel should be offered up to the Arab states as the price of their appeasement and therefore to reject Israel's urgent plea would be injustice. It would make the United States a partisan on the side of those who engage in boycott and war. It would further that boycott and war.

Congress—Not Arab League—Must Decide

45. On the other hand, if the United States grants Israel assistance, ignoring Arab threats and complaints, it will promote the pacification of the Near East. For it will encourage those elements in the Arab world which seek a peaceful settlement with Israel. It will demonstrate the futility of the misguided policy of those who spurn peace and strive for Israel's economic collapse and eventual military subjugation.

46. The relations between Israel and the United States, affecting the pace of Israel's growth and development, the life and security of the hundreds of thousands who have found home and freedom in Israel, concepts of American security in a strategic area—all these must not be determined by the Arab League. They are matters for our own Congress to decide.

47. The President's message calling for economic assistance to the Arab states and Israel in a regional program brought angry protests from Arab nationalists, directed against the proposition that the Arab states become beneficiaries of the United States. Arab countries have been reluctant to ask for American assistance lest they thus forfeit their independence.

On May 29 and 30, dispatches reported indignant reaction in Damascus and other Arab capitals. The New York Times said on May 29:

"Khaled al Azam, Syrian Premier, responded cautiously to the uproar in the press and the comments by various political leaders. Without mentioning directly the American aid offer, he told Parliament tonight:

"We are not ready to barter our liberty and independence, and we are not ready to sell our liberty for a few coins. We are well aware of the importance of the geographical location of our Arab countries."

"Radical leaders in Parliament were not cautious. Mustafa al Sibal, chief of the Islamic Socialist front and the principal preacher of the Moslem Brotherhood, made this warning in a press declaration:

"Although we need military aid, we refuse to throw our sons and our country into the furnace of a war in which we have no interest. To place us on an equal footing with Israel is, I fear, the result of a desire to extend military aid to Israel without provoking Arab anger."

"Maaruf al Dawalibi, who created a sensation when, as Minister of Commerce in the previous Cabinet, he proposed a pact with Russia, said:

"The Arabs will not benefit from this proposed American aid. Israel will receive tenfold the Arabs' share. To accept aid would amount for Arabs to committing suicide."

48. Arab indifference and hostility to American assistance would seem to invalidate proposals that Israel's needs and request should be considered only in the context of a regional arrangement. It is inequitable to "equate" Israel with the Arab states in a foreign aid program. In such an approach there is the danger that aid may be allocated on the basis of mechanical calculations—area, population, etc.—which ignore the dynamic factors of need, growth, and opportunity. All the states of the Middle East need aid. The only fair approach is to allocate them aid on the merits of their objective needs which do differ widely, and not to attempt artificial equalization. Account must be taken of the vast differences between Israel and the Arab states:

(a) Israel asks for assistance. The Arab states make no such request.

(b) Israel needs assistance because its population is growing and it does not have the resources to absorb all its newcomers. The Arab states remain static and their rulers reveal no passionate desire to improve their lands or raise the standards of their peoples. Significantly, the recent border clashes arose out of Syria's bitter opposition to the Israel project to drain malaria-infested marshes. The incident illustrates the incongruity of permitting countries whose leaders make war against reclamation of the land to determine the standards, objectives, and progress of a region.

(c) Israel faces economic difficulties and an acute foreign exchange deficit. The Arab countries have had substantial hard currency income from oil royalties, cotton crops, tourist trade, and the tolls of the Suez Canal. But rather than spend their funds on the development of their economy, Arab rulers prefer to use their balances to import expensive cars, jewelry, radios, and other luxury goods. These countries are heavy purchasers in the gold markets of the world.

(d) Israel is a democratic country, standing with the democracies. The Arab states are semi-feudal societies, whose rulers are primarily concerned with the maintenance of their own status. The Arab states stand by themselves. Thus Syria and Egypt refused on May 18, 1951, to join the west in imposing sanctions against Communist China, at the United Nations.

Initiative must not be crippled

49. These differences in attitude and need make it extremely difficult—if not impossible—to find a fair formula for the allocation of assistance on a regional basis. The refusal of the Arab states to promote development must not be used as a curb on Israel's progress. Israel, having survived its neighbors' hostility must not be crippled by their inertia.

50. Nor should this attitude of the Arab states be permitted to prejudice the proposed resettlement of the Arab refugees, victims of the war of aggression launched against Israel by the Arab states and the Arab Higher Committee in 1948. The program of financial assistance to the Palestine refugees contained in the President's message of May 23, 1951, should be given favorable consideration, independently and on its own merits. Funds are urgently needed for the resettlement of the Arab refugees, just as they are required for the resettlement of the Jewish refugees coming into Israel. Neither of these humanitarian projects should be allowed to suffer because of the apathy and hostility of the leaders of the Arab League.

51. Israel has not objected to economic aid to the Arab states. It favors social development and rising standards throughout the Near East for it looks forward to the time when all states in the area will unite in economic cooperation. Israel's economic program—the simultaneous rehabilitation of the people and reclamation of the land—will eventually give stimulus to similar development elsewhere in the Near East. Here is a pilot plant—an example of what can be done in underdeveloped areas. It will lift the hopes and aspirations of other peoples. The governments of the neighborhood may, by the force of Israel's example, be compelled to join in the development of their own neglected lands, the stimulation of production, the expansion of trade and—above all, the emancipation of millions of people from want, ignorance and disease.

52. But, until these governments are aroused from their lethargy and indifference, Israel must not be penalized and denied the assistance it so vitally needs. If Israel can overcome its economic problems, if it can achieve stability and raise the living standards of its people, it will have demonstrated the integrity of democracy in the undemocratic Middle East. Should Israel succeed, democracy will win new adherents and allies among many millions of people who have not attained full political freedom and economic equality. But should the one advocate of democracy in the area fail, the democratic concept would be discredited in a crucial frontier zone and antidemocratic propaganda would reap a harvest. Feudal soils are fertile ground for alien ideologies.

VI. CONCLUSION

53. Aid to Israel means aid to a people eager and ready to aid themselves. Their country is poor in natural resources but rich in a major asset—people, who have made the most of very little. Whatever aid is given them, they will multiply many times by their initiative, their enterprise, their dedication to their independent future.

54. Aid to Israel means:

(a) A continuation of the American policy of friendship for the new State which our country helped to create.

(b) The regeneration of masses of homeless people, of an undeveloped land and of unexploited resources.

(c) The strengthening of the economy, the agricultural and industrial potential and the military force of the one genuine democracy in the Near East.

Finally, aid to Israel means strengthening the United States and the United Nations. It means fortifying the one community in the strategic Near East which is strongly determined to defend its independence and the part of the world in which it stands.

TEXT OF NOTE PRESENTED BY THE AMBASSADOR OF ISRAEL, ABBA S. EBAN, TO THE SECRETARY OF STATE—REQUEST FOR GRANT-IN-AID

1. The Ambassador of Israel presents his compliments to the Honorable the Secretary of State and has the honor to submit herewith a request by the Government of Israel for financial assistance by grant-in-aid from the United States of America, to the extent of \$150,000,000 for the period July 1, 1951, to June 30, 1952.

2. After estimating its potential sources of foreign exchange for that period, and notwithstanding the remarkable efforts and sacrifices which the people of Israel are making toward the attainment of economic stability, the Government of Israel still faces the prospect of a considerable dollar deficiency. If this shortage cannot be made good, it will become impossible to maintain living standards even at their present reduced level, while Israel's industrial and agricultural development is liable to become impeded, or even paralyzed, through lack of continuous supplies of raw materials and capital goods. On the other hand, the availability of adequate dollar exchange would enable Israel to advance rapidly toward increased productivity and economic equilibrium during the coming few years of heavy immigration.

3. The Government of Israel has observed the historic role of the United States aid programs in enabling many other friendly countries, in similar emergencies, to achieve rapid economic recovery. It also recalls with gratitude the many acts testifying to the special ties of friendship between the peoples of the United States and Israel. In that spirit the Government of Israel now calls attention

to its economic problems, many of which go far beyond the normal scope of national responsibility.

4. Immediately upon the proclamation of its independence, and while still struggling against heavy odds for sheer physical survival, Israel set itself to discharge the primary mission for which it was established. Waves of immigration have converged upon Israel from all parts of the world, especially from Central, Southern, and Eastern Europe, and from Islamic countries in West Asia and North Africa. The Jews remaining in Central and Eastern Europe are but the pathetic remnants of once prosperous communities whose manpower and institutions were ruthlessly consumed by murderous persecution unparalleled in the annals of history. Their desire to abandon the scene of their people's agony and martyrdom is overpowering. It is reinforced by their inborn preference for a life of democratic freedom in a society which upholds as the chief focus of national pride the very Jewish traditions and associations which had been the target of such brutal persecution in Europe. On the other hand, in many parts of the Moslem world Jewish minorities have lived for centuries under an intermittent and precarious tolerance, punctuated by periods of disorder and oppression. In recent generations the rise of a strong national consciousness throughout this area has imparted to Jewish minorities a sharpened sense of separateness and insecurity. At the same time, the echoes of Israel's achievement have awakened a messianic urge for redemption, which makes Jewish minorities in Arab countries increasingly unwilling to sustain a lot so stoically borne by their ancestors for centuries past, as long as it seemed inexorable. An independent state which makes the absorption and rehabilitation of Jewish immigrants the central purpose of its life has become a compelling magnet to all Jews who lack freedom and dignity in their present abodes. This is one of the spontaneous and irresistible movements of mass migration which have revolutionized the history of peoples. In recent months the threat of world conflict has added a fresh incentive to Jewish immigration--a desperate urge to find shelter before the storm breaks, and while liberty of movement still remains.

5. While the rate and scale of immigration to Israel are largely determined by conditions in Europe and the Moslem world, Israel's resolve to accept immigrants without restriction is animated by a sense of inescapable responsibility. The people of Israel are themselves, for the most part, immigrants--survivors of pogroms and persecution; they know well that to refuse entry to their kinsmen now may mean the renunciation of that crucial opportunity forever. Indeed, some countries have actually established official deadlines before which all prospective emigrants must leave. It is inconceivable that Israel can incur the moral responsibility for whatever might befall Jews who seek admission to Israel and are denied it. Jewish communities throughout the world, and especially in the United States, have spent much effort and sacrifice on Israel's behalf, in the clear expectation that they were thus establishing a permanent haven for all oppressed and insecure Jews in need of a home. It is noteworthy that President Truman's recommendation in 1948 for the transfer of Jewish displaced persons from Europe to Palestine marked the beginning of the United States specific interest in the search for a solution of this problem. Thus, every circumstance of humanitarian concern and moral principle compels Israel, with the fervent approval of its own public and of Jewish opinion everywhere, to uphold and maintain freedom of immigration. Moreover, from the viewpoint of Israel's own interest, even if heavy immigration is accounted an economic liability in the short term, it must certainly in the long run be regarded as an asset, since it will enhance Israel's self-reliance, its economic strength, and its creative capacity.

6. The conditions which govern the scale of immigration to Israel can well be illustrated by reference to the Jews of Iraq. When the Government of Iraq allowed Iraqi Jews to register for emigration, it was thought by many observers that no more than 30,000 would exercise that option. In fact, about 105,000 out of a total 130,000 Jews registered for emigration and made plans to leave for Israel. On receiving permission to leave the country, an Iraqi Jew loses his citizenship, whereupon it becomes urgent to effect his emigration without delay. In recent months, the Government of Israel has been exhorted by the Governments of the United States and by the United Kingdom to make every effort to speed up the evacuation of Iraqi Jews. The Government of Israel, in pursuance of its own policy, has increased the monthly rate threefold in full knowledge of the resulting aggravation of its financial problems.

7. As a result of this immigration, the dominant feature in the life of Israel is the spectacular increase of its population. On May 14, 1948, the Jewish population of Palestine was 650,000. Between that date and the end of 1950, 511,000

immigrants have entered the country, representing a 78-percent increase in the over-all population total. About half a million new immigrants are expected to arrive within the next 3 or 4 years. By the end of 1951, Israel will have tripled its population mainly by immigration. This rate of population increase has no precedent; manifestly it calls for a financial effort on an unusual scale.

8. In receiving these immigrants Israel has solved problems which would otherwise fall on international agencies and on other governments. For example, the admission to Israel of nearly all Jews from displaced persons camps in the American zone of Germany has directly liberated the United States Treasury from a considerable and continuous expenditure. For many years the European refugee problem had battled the resources and capacity of the refugee organizations established under the auspices of the League of Nations and the United Nations. Israel has absorbed large numbers of refugees who were the objects of this international concern, without even having received any reparation from Germany for the wholesale spoliation and destruction of Jewish property in Europe. Moreover, by absorbing Jewish communities which were living in conditions of insecurity or discrimination, Israel has eliminated potential points of friction and instability in more than one area of the world.

9. The difficulty of financing the absorption of this enormous population increase has been aggravated still further by Israel's defense burdens. At its very inception, Israel was forced to mobilize all its resources in fighting, alone and unaided, its battle of survival against overwhelming odds. The aggressive onslaught of the Arab States was successfully repelled; yet their persistent refusal to conclude a final peace settlement continues to strain the resources of Israel by necessitating heavy defense expenditure, on which also the mounting international tension has an inevitable bearing.

10. In addition to the burdens imposed by immigration and defence, the Government of Israel has undertaken to make its due contribution toward the solution of the Arab refugee problem in the Near East. It has declared its willingness to support the reintegration fund to be established by the United Nations by paying into it funds accruing from compensation for abandoned Arab lands, on the understanding that such funds will be used for the permanent resettlement of Arab refugees in conditions which would conform with their own welfare and with the ultimate stability of the Near East. Under this arrangement, which has been publicly announced in the United Nations, Israel is probably assuming a heavier financial commitment in the Arab refugee problem than any other single member Government, notwithstanding the fact that the problem itself was actually created in the course of a deliberate attempt to destroy Israel's existence, as a result of which Israel sustained heavy and widespread material damage.

11. A country which increases its population by 80 percent in 2½ years, while simultaneously sustaining a heavy burden for its defense and preparing to make a substantial financial contribution toward the solution of the Arab refugee problem, cannot obviously develop its productive resources to the extent required by these vast burdens without massive outside assistance. Israel, however, has itself made a maximal effort to solve the economic problems with which it has been confronted. This effort has been made in two directions. On the one hand the standard of living of the population has been drastically reduced. On the other hand, every possible means has been adopted to increase production in both agriculture and industry, with impressive results. Whereas the population increased by 80 percent in 2½ years, agricultural production rose during the same period by 70 to 80 percent and industrial production by 10 to 50 percent. It is clear, therefore, that Israel is seeking supplementary external aid only after having imposed upon itself heavy sacrifice and considerable self-denial.

12. The magnitude of the effort which Israel has put forth for its own economic development is illustrated by the achievement of net new investment of approximately the equivalent of \$190,000,000 in the calendar year 1949, and of approximately \$275,000,000 in 1950. This new investment was equivalent to more than 25 percent of Israel's total national income in 1949, and to more than 30 percent of the national income in 1950. Yet, Israel now proposes further to raise its annual investment target to the equivalent of approximately \$500,000,000. There is no choice; no lesser target would be compatible with the full productive employment of Israel's people. But it is obvious that the gap in the balance of payments, which is the most striking expression of Israel's economic difficulties cannot be closed by its own exertions in the immediate future.

13. Since heavy immigration seems certain to continue for the next 3 or 4 years, the consequent dislocation of Israel's economy is bound to persist for that period. The very measures which Israel is adopting to add to its productive

capacity are liable, in the short run, to increase the disturbance in the balance of payments. The required diversion of Israel's own resources from production for current consumption to investment work will create inflationary pressure on scarce supplies of consumption goods. Israel is grateful for the great contribution to her long-term productive facilities which is being made through the credits of \$135,000,000 received from the United States Export-Import Bank. Israel also places great reliance for her economic development on the resources for productive purposes which will be sought through the sale of bonds to the public in the United States of America. These imports for specific investment purposes, however, need to be supplemented by a diversion of Israel's own productive capacity from consumption needs to the production of capital goods. The grant-in-aid from the Government of the United States, for which the Government of Israel is herewith applying, would bridge this gap in the availability of consumption goods until the increased production of Israel, which will be the consequence of the capital imports, can catch up with the needs of the population and assure economic stability. This American aid, extended over a brief period of time, can lead to the achievement of Israel's economic equilibrium, in full conformity with the concept of economic recovery which has inspired the aid programs of the United States since their inception.

14. Most prominent among the purposes for which grant-in-aid assistance is requested is one most directly connected with immigration: If the immigrants are to be employed productively, they must have houses near their places of work. The house to be provided is of the simplest character, having an average total cost of approximately 11,750, the equivalent of \$2,100. At the present time, many tens of thousands of immigrants are in huts and tents. The average housing rate of the population of Israel is three persons per room, while a large part of the population lives at the standard of five persons per room. To alleviate this shortage, it is proposed to build approximately 70,000 housing units in the year July 1, 1951-June 30, 1952, to accommodate roughly 250,000 persons. The total cost would be approximately \$150,000,000—and Israel is reconciled to the need for meeting by far the larger part of this total cost from its own resources. A grant-in-aid of approximately \$30,000,000 is needed to meet foreign exchange costs of materials, imported fixtures, and construction machinery. Israel's own investment in the program would be four times as great as the requested grant-in-aid.

15. Grant-in-aid assistance in the form of supplies needed specifically to restrain the stress of the inflationary pressures is requested in the amount of \$105,000,000. As mentioned above, in the year July 1, 1951-June 30, 1952, Israel will be attempting to raise her total investment towards the target of an annual rate of approximately \$500,000,000. Even under a system of austerity, Israel will require, in the year July 1, 1951-June 30, 1952, at the price levels which prevail today, about \$225,000,000 of imports apart from imports for specific investment purposes.

16. An additional grant-in-aid of approximately \$15,000,000 is requested for the insurance and shipping costs connected with the delivery of the above commodities in Israel. This amount has been estimated on the assumption that the affected commodities would be purchased not only in the United States but also in other friendly countries, from which shipping costs might in some cases be lower than from the United States.

17. The specific uses of the requested grant-in-aid might then be outlined as in the following table:

Approximate list of purchases to be financed with requested grant-in-aid

A. Materials, fixtures, and equipment required to be imported for the construction of 70,000 housing units.....	\$30,000,000
B. Supplies required to restrain the inflationary pressure of the investment and defense programs:	
(a) Wheat.....	\$25,000,000
(b) Fodders.....	15,000,000
(c) Oilseeds.....	10,000,000
(d) Fertilizers and seeds.....	10,000,000
(e) Cotton, other fibers, and textile materials.....	10,000,000
(f) Leather, hides, chemicals, and minor materials.....	10,000,000
(g) Petroleum.....	25,000,000
C. Shipping and insurance services.....	105,000,000
	15,000,000
Total.....	150,000,000

18. The close link between economic stability and political freedom is becoming increasingly understood in all parts of the world. The future of Israel's social and political system is an issue of direct consequence to the cause of world democracy. Israel has established a parliamentary democracy in an area where democratic ideals and principles have not yet struck deep roots. While many countries have recently achieved institutional freedom, not all have simultaneously fought with any marked effect against the traditional social and economic inertia which condemns countless multitudes to a life of squalor and misery. Unless democracy proves its capacity both to insure political freedom and to realize a vision of society based on expanding horizons of material welfare and cultural progress, it will find itself hard-pressed in its struggle to compete against feudal traditionalism on the one hand and modern iterations of political democracy on the other. The success of Israel's efforts to combine political freedom with economic progress will certainly affect the prestige of democracy in the crucial area of which Israel is a part. Israel's experience and achievement in soil conservation, land development, irrigation, technological research, industrial progress, as well as in cooperative organization and social freedom, are intimately relevant to the most acute problems which afflict such wide areas of the Near East with conditions of backwardness and dearth. Thus, any strengthening of Israel's efforts to achieve a high degree of development must be regarded as a contribution to the progress and stability of the entire Near East. For, despite the transient political conflicts which now divide it, the Near East cannot in the long run fail to be affected by progressive examples. In this respect, too, aid to Israel would fully conform with the principles which have determined the United States' aid programs.

19. On June 20, 1922, the Congress of the United States of America unanimously recorded its sympathy for the "aspirations of the Jewish people to rebuild their ancient homeland." On December 19, 1945, the Congress, in a concurrent resolution, advocated the establishment of a democratic commonwealth in Palestine "to the end that the country should be opened for free entry of Jews." In a resolution of greeting on the anniversary of Israel's independence in May 1950, the United States Senate paid tribute to the emergence of Israel as an objective in which the American people had indicated their sympathetic interest for many years. In the last three decades successive Presidents of the United States have associated the American people, by close bonds of sympathy and support, with the rebirth of Israel as a modern embodiment of an ancient tradition which bequeathed to the world some of the basic moral ideals on which western civilization is founded. At every decisive stage in Israel's recent development, the efforts and sacrifices of Israel's people, and of Jewish communities working for Israel's welfare, have received notable support from the President, the Government, and the Congress of the United States of America. American representatives in the United Nations have carried this policy into the highest international forum. Israel will always feel the most profound gratitude for the memorable steps taken by President Truman and the Government of the United States in favor of the reestablishment of an independent Israel, its official recognition, and its formal admission to the world community. In seeking the support of the United States for its arduous task of economic development and consolidation, and for its unprecedented efforts in providing homes for so many within so short a time, the Government of Israel is advocating the maintenance and extension of a traditional relationship firmly established in the hearts of both peoples.

Mr. LIPSKY. Subsequently, Representatives John W. McCormack and Joseph W. Martin, Jr., introduced identical bills into the House authorizing a grant in that amount. In the Senate, similar legislation was introduced by Senators Paul H. Douglas, Robert A. Taft, and 34 other Members of that body. This legislation has won widespread support in the Congress and throughout the country. We respectfully urge this committee to take these bills into consideration in the discussion of amendments to title II of the proposed Mutual Security Program.

It is our purpose here to present the reasons why we consider the allocation proposed in title II wholly inadequate. My associates here will contribute the factual data. Dr. Joseph Schwartz, the executive vice president of the United Jewish Appeal, will describe Israel's immigration program. Mr. Robert R. Nathan, the eminent

economist, who has mastered the economic facts of Israel, will discuss Israel's economic problems and their solution. They will be available to answer questions dealing with these aspects of the matter.

American interest in Palestine, now Israel, was rooted in an ancient tradition that the scattered Jewish people, suffering disabilities and persecution in many lands, would one day return to "Zion and Jerusalem," free to live their lives in their own way. The aim was the settling of Jews in Palestine with the good will and cooperation of the civilized nations.

The beginnings of the Jewish colonization of Palestine were difficult and progress was slow. It met with many obstacles, internal and external. Finally, during World War I, in 1917, the Allied nations, led by England and the United States, recognized the historical connection of the Jewish people with Palestine, proposed the creation of the Jewish National Home, and, when the League of Nations was organized, issued a mandate to England to become the trustee of Palestine for the purposes of the Balfour Declaration.

The lofty sentiments that inspired the authors of the declaration were not fulfilled. The mandatory power soon began to interpret the mandate to mean a dual purpose in Palestine, one to its Arab inhabitants, the other to the national aspirations of the Jewish people. Finally, it virtually annulled the declaration in its white paper of 1939.

During the entire period—from 1897 to 1939—the Jews of America, cooperating with Jews of other lands, gave expression to their confidence in the ultimate fulfillment of Jewish hope, and their humanitarian interest in their kinsfolk, by contributing their moral and financial support to the Jewish settlement in Palestine. Through our efforts the absorptive capacity of the desolate land was enhanced, a network of farming communities was developed, cities and roads were built, schools, technical institutes, and a university were established, and the ancient Hebrew language was reborn. The Jewish population increased from 84,000 in 1922 to 445,000 in 1939.

The early development took place under relatively normal conditions. But 1930 witnessed the beginning of an anti-Semitic movement unparalleled in history which rose to a rapid climax of tragedy, resulting in the death of 6,000,000 Jews and the scattering of the survivors to all parts of the world. The madness of genocide seized the German people and all who came under their influence. The poison of anti-Semitism seeped through the democratic defenses of many lands, including, for a time, our own. The refugee Jew became the moving symbol of the Jewish tragedy; and the closed door of the Promised Land, the index of man's inhumanity to man.

That Jews everywhere should have been stirred to their depths by the great catastrophe was not surprising. They would have been untrue to the common instincts of blood relationship had they not come forward with generous sacrifices to relieve the plight of the survivors. The humanitarian feelings of large masses of non-Jewish Americans became involved, and were reflected in repeated expressions of sympathy and good will by our own Government. This committee's strong declaration in 1945 greatly encouraged our efforts.

The motive that led to the establishment of the State of Israel was not one of merely setting up a territorial state. The state was the form freedom had to take at that moment in Jewish history. It was incidental to the creation of a haven of refuge for the oppressed. It

was an essential preparatory act for the in gathering of the exiles. It was the vessel in which was to be poured the ideals of the Jewish people—their concepts of justice and democracy, their ideal of brotherhood of all peoples, their tradition of peace. It was the only way for them to defend their way of life; no longer to be helpless and unarmed when attacked; to be free as a matter of right. These ideals were not to be fostered in isolation behind iron walls of prejudice and ill-will. There was to be free trade with the world—in material goods, in ideas, in knowledge of the ways of noble living. Once again, the voice of a rejuvenated Jewish people would emanate from their own land and would be heard in the councils of the nations.

The tragedy of Jewish life did not end with the defeat of Hitler and the Nazis, with the rescue of the prisoners awaiting death in the concentration camps of Germany. The flight of the survivors in the direction of the Promised Land began years before the end of the war, but the Promised Land was blockaded. Those who returned in spite of the blockade were hounded as "illegals." Palestine was partitioned by the vote of the United Nations. The British gave up their mandate, which led to the proclamation of the Jewish State. Israel was established under the pressures of disaster. No sooner was its authority created than there followed a declaration of war by the neighboring Arab States, and reborn Israel was encircled by forces intent upon its destruction. It had to fight its way through obstacles which tested its staying powers, its courage, and its dedication to the cause of freedom. And, unhappily, the end of the war was an armistice, not the beginning of real peace.

The administration of government in Palestine was left in great disorder. Israel had to improvise its own forms of government. It had to assemble an army of defense in the face of invasion. At the same time, however, the doors were opened wide to the masses of fugitives from Europe and other lands where the refugees had been crowded, awaiting the signal of liberation. Over 640,000 refugees were admitted into the struggling country in 1948, 1949, 1950, and the first half of 1951. Attention is called to the fact that of these new arrivals, over 300,000 came from Moslem countries in the Middle East. A country which increases its population by 80 percent in 2½ years, while simultaneously sustaining a heavy burden for its defense, obviously cannot develop its productive resources to the extent required by these burdens unless it receives outside assistance. The standard of living of the population has been drastically reduced to austerity levels, while every possible means has been adopted to increase production in both agriculture and industry. Israel has had to organize and pay for the transport of refugees. It has had to provide them with food and shelter on arrival. It has made provisions for the equal treatment of all the inhabitants of the country, including those Arabs who did not take up war against Israel and who remained in the country.

In its desperate efforts to survive, Israel has had the great support of American Jews who came forward with unexampled generosity to help carry on a great humanitarian program and the redemption of their kin.

In these struggling years, world tension has increased and threats to world peace multiplied. The defenses of the democracies are menaced by totalitarianism, aggression, infiltration, and sabotage.

These tensions have retarded postwar recovery, forced the adoption of large military budgets, divided the world into blocs and placed the United States in the vanguard of the defenders of democracy.

In this situation the Middle East has become of critical importance. Because of its low living standards, its lack of experience in the democratic way of life, its racial excesses, its backwardness in industrial production and the techniques of science, this region, occupying a vital strategic position, is peculiarly vulnerable to propaganda and military attack and must be given special and immediate objective consideration.

The Middle East has not been given adequate attention in the strategy of democracy's defense. This may be due to the fact that the area has been the scene of controversy, boycott, blockade, the development of unrestrained chauvinism, and racial animosities. The mood of peace is absent. Peace has not yet been achieved between the Arab States and Israel.

A general boycott against Israel is being preached by the Arab League. Iraq cuts off the flow of oil to the Haifa refineries. Egypt blocks the Suez Canal to Israel-bound trade and shipping. The armed forces of Syria interfere with the drainage of the Huleh swamps in Israel territory. Jordan still denies access to the Hebrew University and the Hadassah Medical Research Center on Mount Scopus. And they continue the sinister policy of pressing Jewish people out of their territories by confiscation of property, denial of rights, and elimination from the economic structure.

As Americans, we are vitally concerned with the organization of the democratic forces to oppose totalitarian aggression. Israel's resourcefulness and stamina and courage give it an opportunity to establish at least one factor in the Middle East which, on its own merits, may be relied upon. The story of what the Jewish national home did for the Allied cause in World War II is instructive in this connection.

The Jewish national home was prepared to take up arms against a common enemy with Britain when World War II broke out. A mass registration of Jewish volunteers for war service totaled 85,800 men and 50,400 women. This recruiting was discouraged by Britain for reasons of its own. But ultimately 33,000 Palestinian Jewish volunteers served in the Army, Navy, and Air Force, and in full-time local defense. Over 26,000 served in various segments of the Allied front. There were 60 units in the Royal Engineers, Transport, Ordnance, and Mechanical Services. Selected civilian volunteers carried out secret raids in the Middle East and parachute missions in enemy Europe. Half of them lost their lives.

Army orders totaling over 36 million pounds in the economic field were executed by Jewish industry. The Hebrew University, the Technical Institute at Haifa, and the Sieff Scientific Institute at Rehovoth performed technical and scientific services of special value. The armed services in Palestine and outside relied on skilled Jewish labor for important tasks of construction and repair. Jewish contractors, engineers, and skilled personnel helped to enlarge the oil refineries in Abadan, Iran; bridged the Euphrates; covered Syria with a network of roads and camps and maintenance airdromes in Iraq, Bahrein, and Cyprus.

Since World War II, Israel's population has doubled. Its people are trained and battle-tried. They have fought and won their independence. They have repelled invasion. This is a generation which rose from the degradation and enslavement of Hitler's concentration camps to the heights of freedom. They are determined never again to make the descent from those heights. They can be counted in the front ranks of democracy's defenders.

Moreover, during and since World War II, the land of Israel has been transformed industrially. The country is today the workshop of the Middle East. Its rapidly expanding military, industrial, and agricultural army is one of the strongest forces for freedom in the old world.

It is against this background that we urge you to give adequate aid to Israel, as well as to the Arab states, on their own individual merits, assessing what each needs and what each can contribute to the welfare of the free world. Of course, we urge measures to insure the earliest possible resettlement of the Arab refugees. In our view, the amount provided for the Middle East in the Mutual Security Program should be substantially increased. We therefore urge the inclusion of Israel in the program for 1952 for an amount based on its own potentialities. This view is reflected in concrete form in the McCormack-Martin bills.

Israel is qualified as an outpost of western civilization. The pioneers who laid its foundation brought with them the Hebraic ideals which have greatly influenced the west. They have reintroduced into their new homes modern arts, industrial skills, the sciences, and modern ways of life which they acquired in the western homes they had to leave. All their equipment, their skills, and their new experiences can be utilized in an atmosphere of friendly cooperation to transform the segment of territory they occupy into a pilot plant of great significance for the entire region. We plead that they be allowed to show their mettle in the struggle that lies ahead. As their American sponsors, we are certain they will meet the challenge with intelligence, courage, and the utmost of loyalty and sacrifice. Give them what they need and they will make good beyond your expectations. Give them what they need for defense and they will make good beyond your expectations.

Chairman RICHARDS. Mr. Lipsky, that was a very able statement.

There will be some members who want to ask questions; some will not. So, I am not going to go around the table.

Mr. LIPSKY. May I ask that you hear Dr. Joseph Schwartz and Mr. Nathan, and then have the questions generally put to the three of us?

Chairman RICHARDS. That is a good suggestion, particularly in view of the lateness.

I believe I omitted to state for the record that Mr. Lipsky is chairman of the American Zionist Council, and I would like to have the record show that.

Mr. LIPSKY. And Dr. Schwartz represents the United Jewish Appeal.

Chairman RICHARDS. We will now hear from Dr. Schwartz. In what capacity do you appear, sir?

STATEMENT OF DR. JOSEPH J. SCHWARTZ, REPRESENTING THE UNITED JEWISH APPEAL

Dr. SCHWARTZ. I appear as the representative of the United Jewish Appeal and as the former director general of the American Jewish Joint Distribution Committee.

Chairman RICHARDS. Are you an official of the United Jewish Appeal?

Dr. SCHWARTZ. I am the executive vice chairman of the United Jewish Appeal.

Chairman RICHARDS. All right, sir, proceed with your statement.

Dr. Schwartz. Mr. Chairman and members of the committee, I have submitted a rather lengthy statement of some 20 pages, which I will not undertake to read to you tonight. I think that the time is short and the statement is available; so, I will just try to give you a brief summary of what that statement contains and some of the important facts in connection with Israel's immigration program.

Chairman RICHARDS. Without objection, we will hear Dr. Schwartz in the manner he has suggested. But his entire statement will be placed in the record.

Dr. SCHWARTZ. Thank you very much.

(The statement referred to is as follows:)

STATEMENT BY JOSEPH J. SCHWARTZ, EXECUTIVE VICE CHAIRMAN, UNITED JEWISH APPEAL

The last two decades have been the most momentous in the history of the Jews in modern times.

Roughly two decades ago, we saw the coming to power of Adolf Hitler and the Nazi Party in Germany.

A major policy in Hitler's diabolic program to achieve world domination was—as he so often avowed—the extermination of Europe's Jews.

The rise of Hitler saw a succession of incredible disasters befall the once-great Jewish populations of the Continent during a period of nearly 15 years.

Then these very disasters were followed by events that constitute near-miracles: The rescue and rehabilitation of hundreds of thousands of Jews overseas who survived Hitler's tyranny, and the reestablishment after 2,000 years of the State of Israel.

History has never recorded a more amazing contrast than is provided by these juxtaposed events.

When the liberating Army of the United States, together with the liberating armies of our allies, received the unconditional surrender of Germany on May 8, 1945, there was revealed to the full view of the world the tragedy that was visited on the Jews in the Hitler era.

American newspaper correspondents reported a terrible fact: of a prewar European Jewish population of 9,000,000 men, women, and children, 6,000,000 were dead.

In 15 years, the total world Jewish population had been reduced by more than a third.

Entering for the first time into the newly liberated Hitler concentration camps—such as Dachau, Bergen-Belsen, and Auschwitz—these same correspondents were able to report that these places, so long hidden from the world's view, were in reality death factories.

In these camps, Hitler's cohorts systematically put to death millions of old, young, and weak. Systematically, too, the strong and able-bodied were forced to work on starvation rations until their strength ran out. Then they too were consigned to the Hitler gas chambers and the crematoriums.

As for those who remained alive, they were a shattered, ragged remnant.

In sharpest contrast to May 8, 1945, as it bears on the situation of Jews overseas, is a second May date—May 14, 1948.

Three short years after Hitler's overthrow, the Jewish people of Palestine—tens of thousands of them refugees from the Nazis—proclaimed the democratic republic of the State of Israel.

The ebb tide of Jewish tragedy and suffering had given way to an incoming tide of hope and opportunity.

In their Proclamation of Independence—so reminiscent of our own Declaration of Independence—the people of the State of Israel declared to the world: "The State of Israel will be open to the immigration of Jews from all the countries of their dispersion."

And now, just this last May, on the occasion of the third anniversary of the State of Israel, it was possible for the new State to announce that in 3 years it had received upward of 600,000 Jewish immigrants, most of them the one-time victims of Hitler and his terrible persecution policy.

This fundamental change in the position of Jews overseas represents the joint accomplishment of three major forces:

First, the people of Israel fought for their own independence against great odds, and kept the doors of their land open in the face of the greatest hardships. To them must go a major share of the credit for what has been achieved.

Second, an enlightened and generous attitude on the part of our own Government has been basic to the whole course of events which has seen tens of thousands of Jewish survivors rescued and helped to go to Israel.

It was this committee and the Congress of the United States which in 1945 approved a resolution calling for the opening of Palestine to Jewish immigration. Additionally, it was this Government—through the humane action of the United States Army in caring for Jewish displaced persons in occupied Europe, by its support of the UNRRA and IRO, by its prompt recognition of the State of Israel, and through its extension of Export-Import Bank loans—which has helped immeasurably to create the inspiring reversal of fortune for distressed Jews abroad.

Finally, one very considerable factor has helped to change the picture of Jewish despair and destruction as it existed in May 1945.

I refer to the voluntary aid which has gone to Israel from the private citizens of America, mainly American Jews, through an effort that is, I believe, unparalleled in the history of wholly voluntary giving.

From January 1945, through December 1950, there has been provided voluntary, private funds totaling \$115,000,000 in aid to Israel, and by December 1951, these sums should reach an approximate total of \$300,000,000.

Additionally, voluntary giving has made available large sums for the relief and rehabilitation of the war-shattered Jews of Europe, for Jews in desperate circumstances in Moslem countries, and for displaced Jews who have come to the United States under the DP Immigration Act.

The voluntary aid furnished Israel is, of course, impressive. But these sums have in no wise been sufficient to meet the full costs of receiving, integrating, and absorbing Israel's 600,000 newcomers. The major share of these expenditures have had to be borne by the people of Israel themselves. The average cost of transporting, receiving, and integrating a single newcomer is estimated to be \$2,500, and the total cost for meeting the needs of 600,000 new immigrants to Israel has been put at \$1,500,000,000.

The bulk of these voluntary sums for aid to Israel and Jews in distress abroad has been raised through the United Jewish Appeal, of which I have had the privilege of being the executive vice chairman since January of this year.

Previously, it was my privilege to serve as director in Europe for some 12 years of the work of the joint distribution committee, one of the constituent agencies of the United Jewish Appeal.

It is from my experience with both the UJA and the JDC that I should like to sketch in for you in greater detail the circumstances and events which have motivated this outpouring of voluntary American generosity.

I should like, too, to put before you the situation as we see it at this moment, and to state why, in my opinion, the problem we are dealing with goes far beyond both the responsibilities and capacities of private voluntary assistance, and invites the fullest measure of support from the United States Government.

1,350,000 SURVIVING JEWS IN EUROPE

In the spring of 1945, at the time of liberation, the best estimates of the number of Jewish survivors in Europe were that some 1,250,000 Jews had survived in all the countries of the continent west of the Soviet Union.

In the Soviet Union there was known to be about another 125,000 Jews of Polish origin, who had fled to the U. S. S. R. when the German army marched into Poland in September 1939.

The Soviet Union was also believed to contain about 1,500,000 native Jews. These, then, made up the approximately 3,000,000 Jews of the Continent, survivors of a former Jewish population of 9,000,000.

Following are figures on specific countries:

Poland's prewar population of 3,250,000 was reduced to 80,000 by the spring of 1945.

These were the people who had survived in hiding—in the forests, where they fought the Germans as guerrillas, or in deep underground bunkers.

In Hungary, an estimated 200,000 Jews survived of a 1938 population of 403,000.

In Czechoslovakia, about 45,000 remained of a prewar 360,000.

In Rumania, the 350,000 Jews who remained represented less than half the prewar Jewish population.

In Yugoslavia, 14,000 were left of 75,000.

In Greece, 10,000 remained of a one-time 75,000.

Such was the situation in Eastern Europe, where a total of some 800,000 Jews remained of a former population of 5,000,000.

In central Europe, only 100,000 Jews remained in three occupied countries: Germany, Austria, and Italy. The majority of these, 75,000, were survivors of the concentration camps, and now found themselves installed by the United States and British armies in what became known as displaced-persons camps.

But, in the larger sense, almost the entire Jewish population of Europe was a displaced population—the 350,000 Jews remaining in Western Europe and the 800,000 in Eastern Europe, along with the Jews of the DP camp countries of central Europe.

The Jews of Poland, seeking to return to their former homes, came back to such cities as Warsaw. Walking into the Warsaw ghetto, they found the entire area, more than a mile square, reduced to absolute rubble by the Nazis. Not even a street post remained to tell a survivor where he had once lived.

Thousands on thousands of Jews everywhere on the Continent now discovered that they were the only survivors of their immediate families. I recall a distinguished head of the Dutch Jewish community, whose family had lived in the Netherlands for generations, who told me that of the 325 male members in a widespread family group only he and three others had survived.

In the spring of 1945, it could be said that the majority of the Jews of Europe were displaced sociologically, economically, and spiritually as well as physically. Their homes and families were gone, their jobs and occupations nonexistent, their former community ties wiped out.

THE RESPONSE TO A SITUATION

In Europe, in the spring of 1945, the vast majority of surviving Jews desired just two things:

First, they wanted immediate help to get on their feet again—food, clothing, shelter, medical care, and a way to earn their daily bread.

Second, hundreds of thousands of them wanted to get out forever.

They wanted to leave the bitter memories of Europe behind. They wanted to leave centuries of ingrained anti-Semitism in Eastern Europe, the rubble of ruined homes in many countries, the bloody soil of hated Germany.

They wanted freedom, and a chance to build new lives. And for most of these people, there was but one choice—to go to a land of their own—to Palestine.

But in 1945—and for many months afterward—the opportunity to leave simply did not exist for the vast majority. Palestine, under the British mandate, permitted the entry of less than 10,000 Jews from Europe and north Africa in all of 1945. Immigration to the United States and other Western Hemisphere countries was almost at a standstill.

There were two bright spots in an otherwise dark picture. Both had their origins in the United States.

In this country, an aroused American Jewish community undertook to supply help to the distressed Jews abroad and to the Jews of Palestine, on a scale never before approached. In December 1945, American Jews, who had raised about \$35,000,000 through the United Jewish Appeal during that year, voted to seek \$100,000,000 for the year 1946.

To their great credit, they raised \$103,000,000 in that year in an unprecedented effort.

And spurred on by this success and the rapid pace of developments abroad, they went on to raise even greater sums in 1947, 1948, and 1949.

Meanwhile, our own Government not only began to assist displaced persons in Europe's occupied zones, but expressed deep concern that some solution be found for the DP problem.

In line with this concern, in June 1945, President Truman directed Mr. Earl G. Harrison, then the American member of the Inter-Governmental Committee on Refugees, to make a survey of displaced persons in Europe, with particular reference to the problems, needs and views of Jewish refugees in Germany and Austria.

At the invitation of the State Department, I had the honor of being associated with Mr. Harrison on this mission.

MR. HARRISON'S RECOMMENDATION—100,000 CERTIFICATES FOR PALESTINE

I shall not go into the details of the Harrison report, which was released by the White House in September 1945.

But Mr. Harrison's principal recommendations, made after visiting every important DP center in Germany and Austria, were:

1. That the British Government, as the mandatory power in Palestine, grant a request of the Jewish Agency for Palestine that 100,000 certificates of immigration be made available immediately so that displaced Jews, particularly in Germany and Austria, might immigrate there.

2. That the United States should, under existing immigration laws, permit a reasonable number of displaced persons to come to this country.

The Harrison report was received in some quarters as visionary and unrealistic. It was argued that Palestine, with a Jewish population of barely 600,000, could not possibly accept 100,000 newcomers in a matter of a year or more.

It is worth recalling these arguments, because in the light of what has subsequently happened the proposal for 100,000 immigrants now seems modest indeed.

In the last 6 months alone, in Israel today, 130,000 immigrants were brought in under conditions far more trying than were entailed in the removal of the DP's from central Europe.

In the spring of 1946, there came a second recommendation that 100,000 Jews be admitted from the DP areas to Palestine.

This was contained in the report of the Anglo-American Committee of Inquiry, established by the Governments of the United States and the United Kingdom, to examine the conditions in Palestine as they bore on Jewish immigration, and the position of Europe's Jewish victims of Nazi persecution.

These recommendations for 100,000 certificates, as the members of this committee are aware, were not acted upon by Great Britain.

And now the years 1946, and 1947, saw the position of the surviving Jews of central and eastern Europe reduced to one of despair.

The joy of liberation, the renewed hope for a future of freedom and opportunity, were slowly throttled by each passing day in which it became plain that there was to be no immediate solution for their problems.

My own organization, the Joint Distribution Committee, was actively engaged at the time in speeding the physical rehabilitation of Europe's Jewish survivors. With funds provided by American Jews through the United Jewish Appeal, and by other world Jewish communities, we spent \$25,490,000 in 1945, then \$54,500,000 in 1946, and \$73,310,000 in 1947.

But while we could give the people bread, care and training, we could not give most of them what they wanted most—a home.

Meanwhile, the need for a home was given new emphasis by critical developments in eastern Europe.

In the spring of 1946, and all through 1947, tens of thousands of Jews began to flee eastern Europe into the DP camps of Germany, Austria, and Italy. They poured over the borders of Poland, Czechoslovakia, Hungary, and Rumania. Their immediate goal was sanctuary under the American flag—but their real goal was to reach Palestine.

THE EXODUS FROM EASTERN EUROPE

Who were these people, and what inspired them to leave?

They were mainly Polish and Rumanian Jews, who had fled during the war years to the Soviet Union. Although the U. S. S. R. offered them citizenship if they chose to remain in Russia, practically the entire group decided that life in a Communist country was not for them.

At the war's end they returned to Poland—or Rumania—with the initial thought of trying to discover what was left of their homes and families. And in the backs of their minds was the second thought that they would try to leave these countries for Palestine.

Then, in Poland, on July 4, 1946, just as thousands of Jewish returnees from the U. S. S. R. were arriving in that country, there occurred a pogrom in the city of Kielce. Some 36 Jews were killed by the Fascist underground, which pursued a policy of anti-Semitism as a means of embarrassing the new government.

That event served as a signal for the beginning of a great Jewish exodus to the west, in the hopes of reaching a land that might serve as a stopping-off place on the road to Palestine.

After their bitter experiences during the Hitler period, these people were determined not to take up their lives again in lands where anti-Semitism still prevailed, and the risk of further persecution was real.

And so, the returned Jews, joined by others, fled from Poland, Rumania, and Hungary. In a matter of months, the DP camp population of central Europe swelled from 100,000 to a peak of 250,000.

In addition, tens of thousands of DP's made their way into various western European countries, where they did not live in camps—but were permitted to stay, largely on the guaranty of the Joint Distribution Committee that they would not become public charges.

Thus, by the end of 1946, by a strict definition of the term "displaced persons", there was in central and western Europe a total of 366,000 Jewish DP's.

THE EFFORT TO REACH PALESTINE

The longer these displaced persons remained in the DP camps, the greater grew their despair of ever reaching Palestine.

In 1946 and 1947, the mounting pressure of this despair caused thousands to try to make their way to Palestine by unofficial means. Some got through. But even greater numbers were turned back by the British authorities, and detained on the island of Cyprus.

Thus, for 50,000 Jews, turned back to Cyprus, the concentration camp and the DP camp gave way to the detention camp.

I shall not go into the events which led to the outbreak of hostilities in Israel in the spring of 1948. These are undoubtedly known to this committee.

But I do wish to emphasize that the defending army of Israel, fighting off the invasion of seven Arab powers, was fully conscious of the fact that they were not only fighting for themselves—they were fighting as well for their brother Jews on Cyprus, in the DP camps, in Poland, Bulgaria, Rumania and other lands.

They were fighting for the right of their fathers, mothers, brothers, and sisters to come and live with them.

ISRAEL'S OPEN GATE POLICY

The spring and summer of 1948 marked the turning point for those Jews who wished to leave Europe.

Our own country, the United States, enacted the first DP immigration legislation in July 1948, and by October, qualified Jewish refugees, along with non-Jewish DP's, began to emigrate from the camps to this country.

But the chief opportunity for Jewish DP immigration was provided by the newly established and independent State of Israel. The gates once closed, were now thrown wide open.

In June, a boatload of 660 DP's, the first to emigrate with Israeli visas, sailed from Marseille. September saw nearly 11,000 sail. And, in December 1948, nearly 24,000 DP's entered Israel—more immigrants in a single month than the British mandatory power had permitted for the entire year of 1947.

The following table will give some idea of how immigration, officially held at a trickle of 1,500 monthly before May 14, 1948, increased to a flood after that date:

Immigration to Israel, May 16, 1948–June 30, 1951

May 15 to Dec. 31, 1948.....	101, 622
1949.....	243, 538
1950.....	169, 403
January to June 1951.....	128, 000
Total.....	642, 563

The Jewish population of Israel, which numbered 655,000 in May 1948, stood nearly doubled by the end of December 1950, increasing to more than 1,203,000.

THE EFFECTS OF ISRAEL'S IMMIGRATION POLICY

Many important developments have followed in the wake of the opening of Israel's doors to large-scale immigration.

First, the number of Jewish DP's in Germany, Austria and Italy has been reduced from a high of 250,000 persons to the present population of 31,000 persons. (The total Jewish number of DP's who passed through the camps was, of course, greater than 250,000.)

Some of the Jewish DP's were admitted to countries other than Israel. Thus, since the passage of the United States Displaced Persons Immigration Act in 1948, 51,000 Jewish DP's have come to this country. Several thousand have gone to other Western Hemisphere lands. But at least 150,000 Jewish DP's have gone to Israel. The problem of the Jewish displaced persons could not have been solved without the help of the State of Israel.

This departure of DP's from Central Europe had two important results. It greatly eased the task of the United States Army of Occupation, and it saved millions of dollars for the American taxpayer.

Meanwhile, a second development of importance was that the greater part of the Jewish populations in certain East European countries was moved to Israel.

Thus, 37,500 Jews of Bulgaria have been evacuated out of a one-time Jewish population of 43,000. Of Yugoslavia's 11,000 Jews in 1945, less than 1,000 remain. A total of 105,000 Jews of Polish origin, both from the DP camps and Poland, were moved. Today, Poland has less than 40,000 Jews.

Also, 100,000 Jews have been moved from Rumania, about 25,000 from Hungary and some 20,000 from Czechoslovakia.

A third development of great significance began to be apparent in 1949.

It arose out of the Israel-Arab war which created a difficult situation for Jews living in the Moslem countries.

In 1949, about 850,000 Jews lived in Arab-Moslem lands in north Africa and the Near East, including Morocco, Libya, Tunisia, Egypt, Turkey, Lebanon, Syria, Yemen, Iraq, and Iran.

In several of these countries, the situation of the Jew became a desperate one. Jews have lived in these lands for centuries, but in most of these countries they have been second-class citizens, the poorest of the poor, with fewest rights and privileges. Now, Arab anger at the defeats in Israel was vented on Jewish populations in these lands.

Immediately, the need and the desire to emigrate to Israel became the dominant factor in the lives of these Jews, just as it had been for the Jews in the DP camps.

Following an increase in oppressive measures in Yemen, thousands of Jews began, in 1949, to pour into Aden, a British protectorate at the tip of the Arabian Peninsula, in the hope of emigrating to Israel.

Their fervor was Biblical—for these were Jews who for 2,000 years had treasured the Biblical prophecy of their return to Israel.

"I will bring thy seed from the East, and gather thee from the West; I will say to the North, give up and to the South, keep not back; bring my sons from far, and my daughters from the ends of the earth."—Isaiah xliii: 5, 6.

To meet this emergency situation, American Jews, in 1949 and 1950, made possible the air-evacuation to Israel from Aden, a matter of 1,600 air-miles, of 60,000 Jews—the entire Jewish community of Yemen. This great airlift, known as Operation Magic Carpet, remains one of the most dramatic mass migrations in all history.

A second, and equally dramatic, air evacuation has just been completed—this time from Iraq.

By decree of the Iraq Parliament, just over a year ago, all Jews in that country were advised that emigration to Israel would be permitted only for a period of a year. (The time limit was later extended to 14 months.)

Iraqi Jews, desperate under the mounting difficulties of living in that country, chose to leave by the thousands. In 14 months, American Jewish funds furnished through the United Jewish Appeal made it possible to remove 100,000 Jews by air from Baghdad. Several thousand others, who had escaped to Tehran, in Iran, were also moved out. Today, all but 20,000 Jews are gone from Iraq.

A tense situation in Egypt, in 1948 and 1949, caused 16,000 Jews to leave for Israel. Approximately 80,000 have emigrated from Morocco, Tunisia, Libya, Algeria, and other Arab countries. Some 14,000 Jews have gone from Turkey to Israel.

In all, more than 300,000 Jews from Moslem countries have arrived in Israel since May 15, 1948. And the pressure to leave is still great in several areas, notably Iran, where 60,000 Jews are now waiting to go.

The fourth effect following out of this vast immigration was on the life of Israel itself.

THE EFFECT OF IMMIGRATION ON ISRAEL

The doubling of the population in 3 years of any country, no matter how great its resources, would severely disrupt the normal life of that land.

In Israel, just emerging from its bitterly fought war of independence, short of housing, its major resources still undeveloped, its energies simultaneously geared to the problems of defense and economic expansion along with immigration, there was bound to be the most drastic sort of dislocation.

I shall leave it to others to describe the full effect of this immigration on Israel's life.

As can be surmised, that effect has been drastic. Each new wave of immigration has contributed to shortages in the way of food, housing, and all the facilities that go to make up normal life in a civilized country.

Every 30,000 immigrants coming into Israel today, means that 300 tons of wheat monthly must be imported from abroad to feed them.

Shelter is required—shelter in the form of the simplest improvement beyond an immigration camp tent—a one-room hut, a wooden prefabricated house, a simple concrete building.

Such shelter is being provided at a very speedy rate, yet not at a rate fast enough to care for all the newcomers. At this moment more than 100,000 new immigrants still live in tents. And many before them lived in tents for months.

New cities and villages must be built, new schools provided, new roads, new farmlands, new water facilities, and new economic opportunities.

What has made the burden of absorption and integration even more difficult is that the majority of newcomers have come into Israel with little more than the clothes on their backs.

The costs of this process of absorption are so vast that even the best efforts of the American Jewish community have not been able to meet them. Instead, they have been shared by the Jews of Israel and the Jews of America, with the people of Israel bearing the major burden of these costs.

In the year 1950, Israel received approximately \$60,000,000 in aid through the agencies of the United Jewish Appeal. Meanwhile, about another \$20,000,000 was furnished by various other American organizations raising funds in this country for Israel. Certain additional funds were derived from other free countries.

Meanwhile, in the budget year of 1950, the Government of Israel itself allocated and spent an additional sum—representing \$150,000,000—for the housing, employment and agricultural settlement of newcomers.

These funds—roughly twice as much as was contributed to Israel from voluntary sources—were realized only at the cost of heavy sacrifice on the part of Israel's people.

It should be understood that since the State of Israel has come into being, enormous strides have been made in the direction of increasing both agricultural and industrial production.

Nevertheless, extreme rationing, extreme economy, became and are the by-words of Israel. The country, its exports far below its necessary imports, suffers from a severe shortage of dollars needed to buy goods in the world market. Life is austere, and promises to be austere for many years to come.

TENSE SITUATIONS STILL

Since immigration is obviously the key to Israel's current economic difficulties—then why does the country persist in admitting vast numbers of immigrants?

The people of Israel answer: "If there had been a State of Israel during the Hitler years, 6 million Jews would not have died for lack of a haven."

Events since the founding of Israel bear out their answer. When danger threatened the Jews of Yemen, and of Iraq, they were saved.

In the last 3 years, one critical situation for Jews after another has been met by Israel's open doors.

The Jews of Israel are very much aware that the time of crisis for Jews in many lands has not passed.

In Eastern Europe—in two countries which constitute great reservoirs of remaining Jewish populations—critical situations still exist. These are Rumania and Hungary.

In the increasing effort by the Governments of Rumania and Hungary to consolidate their countries along purely Communist lines, the position of their remaining Jews has deteriorated gravely.

Jews—once the middle class in those countries—have been subjected to all restrictions imposed upon the middle class. The bulk of the 300,000 Jews in Rumania, and the 130,000 Jews in Hungary, find themselves with little opportunity to work, with little chance to send their children to universities, with little hope for the future. Their communal institutions—hospitals, children's homes, old-age homes, have been nationalized.

At this moment, Hungary is removing from the cities what it terms "non-productive" elements and is turning over the living quarters of these people to workers moved in from the country.

The Jews of Hungary are mainly an overaged group—50 percent of them are more than 50 years of age, and most of these are elderly widows. The Nazis killed off the young, and most of the men. These people have been largely supported by relief provided by the Joint Distribution Committee.

Today, these elderly people are being moved out to isolated villages—cut off from help, and with little chance of being able to help themselves.

Hungary has permitted relatively few Jews to leave for Israel; but the Government of Israel is making frantic efforts to get the Hungarian Government to permit these "nonproductive" people to be moved to Israel. The Jews of Israel will take them in, and the American Jewish community will do its best to provide funds for their immigration.

Rumania is a somewhat different story.

The Rumanian Government permits emigration—between 5,000 and 8,000 persons to Israel a month.

The people of Israel feel that no effort must be spared to make possible the continuance of this immigration. Tomorrow may be too late.

THE SITUATION IN IRAN

Meanwhile, there is Iran—at this moment a country of grave concern to the entire Western World.

It is also a country of grave concern to the Jews of Israel.

Iran had the distinction of being a Moslem country which did not declare war on Israel. It accorded Israel de facto recognition and maintained a consulate general in Jerusalem.

But the rise of Moslem and Nationalist sentiment in Iran caused the present Iranian Government to close its consulate in Israel as of July 7.

Some 80,000 Jews dwell in Iran. The Arab News Agency recently has reported from Damascus that Iran is about to announce the "compulsory repatriation" of all her Jews to Israel.

Israel, then, is faced with the prospect that just as it evacuated the Jews of Yemen and Iraq, it now may have to evacuate the Jews of Iran.

MORE THAN 200,000 IN 1951

At the beginning of 1951, Israel's immigration authorities estimated that at least 180,000 Jews would have to be brought into the country. At a maximum, they expected they might have to accept 200,000, knowing very well what additional strain this immigration would impose on the land.

But the pressures to emigrate have been even greater than anticipated. In the first 6 months of this year, 130,000 entered. That the number of 200,000 will be exceeded is almost certain. The number, depending upon the pressures which may develop in the next months, may rise to 225,000—perhaps to more than 250,000.

ISRAEL HAS SAVED LIVES

In the light of the circumstances just placed before you, it is obvious, I believe, that Israel cannot meet the problems which face her, alone.

What is apparent, too, I believe, is that Israel should not be asked by the free world to meet these problems by herself.

The history of Israel in its three brief years represents a notable advance for democracy.

The State of Israel has shown itself to be a true democracy in a critical part of the world—which in itself should continue to evoke, I believe, fullest American sympathy and support.

But over and above these things stands one fact about Israel which I feel merits her the fullest assistance by our own country.

Israel, today, stands as one of the most gratifying and heartening ventures in our troubled times in the area of saving lives.

Israel, today, represents a guarantee of hope to a vast body of distressed people—to the Jews of Eastern Europe and the Arab world.

Israel, today, represents a realistic and inspiring solution to the age-old problems of anti-semitism and anti-Jewish hatred.

Israel has already saved 640,000 lives in three short years. Its agenda calls for saving 600,000 more lives in its second 3 years.

Each life already saved, each life to be saved, represents a recruit to the building of democracy and a better world.

The best interests of our Government—world leader of the democratic ideal, champion of human life and dignity throughout its entire history—will be well served by aiding Israel to attain its program for the future.

Dr. SCHWARTZ. There are two dates in modern Jewish life which provide an amazing contrast in human history. These two dates are May 1945, when the war in Europe came to an end and when Germany surrendered unconditionally to the Allied armies, and May 1948, when the State of Israel was proclaimed as an independent republic.

What was revealed at the end of the war in May of 1945? The world was confronted with the fact that 6,000,000 Jews in all parts of Europe had perished at the hands of Hitler and his cohorts. More than that, those few who did survive the Nazi holocaust were living ghosts; every one of them was a symbol of human suffering and a miracle of human survival.

In Poland, for example, we found that whereas before the war there was in that country a Jewish population of 3,250,000, at the end of the war, in May of 1945, only 80,000 survived. Those who survived came from the forests, where they fought the Hitler forces as guerrillas. They came from the bunkers which were built deep in the earth, and they were the remnant of the heroic warriors of the Warsaw ghetto, who stayed to the end in order to defend their dignity and their lives, and left through the sewers of Warsaw when opposition was no longer possible.

In Germany, which before the war had a Jewish population of 600,000, constituting a prosperous, dignified, self-supporting community, there was left at the end of the war only a handful of Jews, and most of those were in displaced persons camps that were managed and conducted by the American and the British Armies. Only a handful of German Jews managed to survive, and they were the old and the sick and the weak, whom the Nazis had not had time to send to the crematorium.

And what was true of Poland and of Germany was true of every country in Europe. For example, Hungary, which before the war had a Jewish population of some 400,000, had 200,000 survivors after the war. Czechoslovakia, which had a Jewish population of 360,000 before the war, came out of the war with 45,000 survivors. Rumania, with a prewar population of 800,000 Jews, came out of the war with 350,000. Yugoslavia, which numbered 75,000 Jews before the war, ended the war with a Jewish population of 14,000. And Greece, which had a prewar Jewish population of 75,000 came out of the war with a population of less than 10,000.

Those were the ravages which Hitler brought to the Jewish population of Europe. In summing up, we find that in all of Eastern Europe west of the Soviet Union which before the war had a Jewish population of 5,000,000, only 800,000 were left at the end of the war.

But the destruction wrought by Hitler didn't stop even there; it penetrated even into the West. In Belgium, which before the war had a Jewish population of some 85,000, 30,000 were left at the end

of the war. Holland, with a population of 90,000, ended the war with only 35,000 survivors.

Mr. Judd. Were the people killed in those countries?

Dr. SCHWARTZ. This is a reduction of people by the Germans who sent them to the extermination centers and the crematoria.

Mr. Judd. They weren't killed in those countries; they were taken out?

Dr. SCHWARTZ. They were taken out and killed in concentration camps about which I will speak. And even France, not all of which was occupied for the full length of the war, which before the war had a prewar Jewish population of 300,000, ended the war with half of the population deported, exterminated, never to return.

The end of the war brought American editors and correspondents to such places as Buchenwald, Dachau, Bergen-Belsen, Auschwitz, and other camps then unknown but now infamous.

Mr. JAVITS. I would like to point out that our chairman as well as Mr. Vorys, one of the senior members of our committee, visited certain of those extermination camps shortly after our forces liberated them.

Chairman RICHARDS. It was more terrible than anything I had ever seen.

Mr. VORYS. And we saw the few who got out, with the numbers on their wrists.

Dr. SCHWARTZ. And then it was revealed to the world that these places, many of them, were death factories, and millions of people had been systematically put to death in them. The able-bodied were sent away to labor camps and worked on starvation diets as long as they had strength in their bodies. And after that, they too were sent to the crematoria, from which there was no return.

Those who at the war's end were left were entirely without roots. They had no families, no homes, no occupations. There were tens of thousands of children who had had no schooling during the entire period of the war, which in most cases meant that they had had no schooling at all, because they were too young to go to school when the war broke out. They had received no training of any kind.

There were thousands upon thousands of full orphans—both father and mother had been done away with. There were other thousands of half-orphans, and in many cases these were separated by the circumstances of war from the one surviving parent.

To anyone who looked into the tragic face of Europe's Jewish survivors, as I did, and who talked to them, it became obvious that they wanted but two things: They wanted immediate help in the form of food, clothing, and medical care, and second, they wanted a home of their own. They wanted to leave the bitter memories of Europe behind forever. They wanted to leave centuries of ingrained anti-Semitism in Eastern Europe, the rubble of ruined homes and broken families, the bloody soil of what to them had become hated Germany. They wanted freedom and a chance to build new lives.

We, the organized Jewish communities in the United States, could give them and did give them one of the things they wanted—immediate help in getting on their feet. In the first 2½ years of the postwar era, the American Joint Distribution Committee alone spent more than \$150 million in bringing urgent relief to the shattered remnant that managed to survive. But while we could give them bread and

care and training, we could not give them what they wanted most, a home. There were two main reasons for this: Immigration to most countries had been halted by the war, and the policy of the British Government, which at that time was the mandatory government in Palestine, prevented the sending of any significant numbers of surviving Jews to that country.

Meanwhile, the need for a home was given even greater emphasis by critical developments in Eastern Europe. On July 4, 1946, a pogrom took place in the town of Kielce, Poland, in which 36 Jews lost their lives. This was an unprovoked and an unexpected attack. Those few Jews who survived and those few who managed to come back from places of exile and deportation, had hoped that the pogrom period had been left behind forever. But now they were faced with this new outbreak of hatred and anti-Semitism. Thus, this pogrom in Kielce in July 1946 was the signal for 100,000 Polish Jews—Jews who had just returned from the U. S. S. R. to which they had fled during the war, and Jews who had survived in Poland proper—to pick up their meager belongings and to start walking.

They began walking across fields, across mountains and rivers and streams, with passports and without passports, with permission and without permission, with documents and without documents. They were headed, in the first place, for the protection of the American flag in the American zone of Germany. But this was only a stopping-off place on the road to their ultimate goal, to what they considered to be their home—Palestine.

And be it said to the credit of the American Army and to the glory of the American Government that they opened the gates wide to these refugees, took them in, gave them welcome, and granted them haven and refuge until they could continue their journey.

What happened in postwar Poland was repeated in Rumania and in Hungary. As a result, additional tens of thousands of people broke out of those countries and came into the American zones of occupied Europe. And as a result of this mass exodus, the Jewish population in the camps increased from some 80,000 in 1945 to about 250,000 in the middle and end of 1946.

In the meantime, efforts were being made in many quarters to secure a home for these homeless people, to secure some kind of constructive solution to the problem of their homelessness. Such efforts were being made right here in the United States. The President of the United States designated Mr. Earl G. Harrison, of Philadelphia, then the American member of the Intergovernmental Committee on Refugees, to undertake a mission to investigate the condition and the status of Jews in the displaced persons camps and to submit to him his findings and recommendations.

At the invitation of the State Department, I had the honor and the privilege of being associated with Mr. Harrison on this mission. And one of the recommendations which Mr. Harrison brought back, the principal recommendation, was that immediate steps be taken to permit 100,000 displaced Jews to immigrate to Palestine, thereby relieving the pressure on the camps in Germany, thereby relieving the American Army of a heavy responsibility, and thereby making it possible to begin to realize a constructive solution for this problem of displaced persons.

A similar recommendation came out of the Anglo-American Commission on Inquiry, which met in Washington, then went to Europe, and finally met in Palestine. They recommended also that 100,000 certificates be distributed to the displaced persons in the camps in order to help bring about a solution to a grave problem. Also, in 1945, this very committee, and the Congress of the United States, passed a resolution calling for the opening of Palestine to Jewish immigration. But all of these efforts led to nothing because the policy of the mandatory government continued to maintain that it was impossible to liberalize the restrictive immigration policies which were then in practice.

In 1945 the total immigration of Jews to Palestine was less than 10,000. In 1947, 2 years and more after the end of the war, 1,500 immigration certificates a month were distributed by the mandatory government. Thus, 18,000 people a year came into Palestine, and I would like to call your attention to the fact that the birth rate in the DP camps was greater than 1,500 monthly. So, limited immigration was no solution to the problem of emptying the displaced persons camps.

With each passing day, the position of the Jews in the camps and out of the camps, of the Jews in Eastern Europe and other areas, was becoming more and more desperate and more and more intolerable, and efforts were then made to find other ways of getting to Palestine. Many thousands embarked on what was then called "illegal" immigration. A few managed to get through, but the great majority were stopped by the British, sent to Cyprus, and then they became, not inmates of concentration camps or of Displaced Persons camps, but inmates of detention centers. They found themselves surrounded by barbed wire, crowded into quonset huts, and without sufficient water or any of the essentials that are necessary to dignified human living.

Within a very short time, 50,000 Jewish refugees were crowded into the Cyprus camps under the most intolerable conditions. And one ship, the *Exodus-1947*, was even sent back to Germany by the British authorities. This was the situation which prevailed until 1948.

I will not go into the events which led to the outbreak of hostilities in Palestine in 1948. These are well known to this committee. But I would like to make this statement: The young men and women of Israel who were defending the infant state against the combined forces of the neighboring Arab states and against overwhelming odds, were fully conscious of the fact that they were fighting not only for themselves but for their brother Jews on Cyprus, in the DP camps in Poland, Bulgaria, Rumania, Hungary, and other lands. They were fighting for the rights of their fathers, mothers, brothers, and sisters to come and live with them; and it was that, I believe, which gave them the courage to accomplish and to achieve all those heroic deeds for which they were responsible during Israel's bitter struggle for independence.

With the establishment of the State of Israel in May 1948, the situation took a change for the better almost immediately, and the first ships with displaced persons and with refugees from all over the world began to arrive in the port of Haifa. The first ship left shortly after the war began, and some 650 immigrants arrived. In the month of December 1948 alone, 24,000 Jews, most of them from Cyprus and the displaced persons camps in Europe, arrived in Israel—more

immigrants in a single month than arrived in the entire year of 1947 under the British mandate.

As a result of this policy and as a result of the American policy as expressed in the DP Act, which was enacted in July 1948 and made possible DP immigration to this country, the DP camps were almost emptied of their Jewish inmates. At the present time there are only 31,000 Jews left in the DP camps of Germany, Austria, and Italy, and most of them are waiting for the opportunity to come either to the United States or to go to Israel.

But Israel's open-gate policy accomplished more than emptying the DP camps. It was a stroke of good fortune for hundreds of thousands of men, women and children that the State of Israel was proclaimed when it was. Because in the summer of 1948 the crisis in Eastern Europe, particularly as Jews were concerned, deepened.

The Communist policy of crushing the middle class, of expropriating private property, of blocking bank balances, and of nationalizing private enterprise, hit the Jews much more severely than other sections of the population, because the Jews constituted an urban population in East European countries where 90 to 95 percent of the people were engaged in agriculture or were peasants. As an urban group, Jews constituted the backbone of the middle class, and the wrath and fury of the Communist governments were vented against the middle class. The members of the middle class—and therefore the Jews—were crushed; they were impoverished; they were imprisoned; they were subjected to discriminations of every description.

And with this policy of economic discrimination, of being deprived of the possibility of earning a livelihood, there came also a deprivation of religious freedom and of cultural freedom. As a result of all these developments, a great urge arose among these people to emigrate as soon as possible, to go to a country where they could live a life of freedom with a measure of security for themselves and their families.

And so thousands upon thousands of Jews from all parts of Eastern Europe began to march toward Israel, with the result that Bulgaria has less than 5,000 Jews left today; there were 45,000 Jews there at the end of the war. Yugoslavia has only 4,000 Jews left out of some 14,000 when the war ended. Poland has less than 40,000 Jews left, in a country which once numbered three and a quarter million and which after the war—when Polish Jews returned from the U.S.S.R.—had more than 200,000. Czechoslovakia has less than 15,000 Jews today, out of a population at the end of the war of some 45,000.

This great exodus of Jews from Eastern Europe could never have taken place without the establishment of the State of Israel. And, as a result, as Mr. Lipsky has stated to you, within a period of some 3 years, the Jewish population of Israel has increased by some 642,000 through immigration, thereby doubling the population.

Now, I will not elaborate on what Israel's immigration policy has meant to the country from an economic point of view; I will leave that to Mr. Nathan, who is much more competent in economic matters. But it has meant austerity; it has meant hardship; it has meant a lower standard of living; it has meant deprivation of all kinds for the people in Israel. And while we, the Jews of the United States, through the United Jewish Appeal, have made every effort through voluntary contributions to deal with this great and overwhelming problem, we

have become convinced, despite everything that we have done—and I believe that we have done a magnificent job, unequalled in the history of private philanthropy—that the problem is too great to be handled through voluntary giving alone. In five years, more than \$600 million has been contributed for the relief of Jews overseas and for help to Israel in taking care of the newcomers who were flooding the country; \$600 million has been raised through an all-year-round effort on the part of the organized Jewish communities of the United States.

But the fact of the matter is that, despite all of these great efforts and despite all of the hard work and sacrifice on the part of American Jews, the problem has been, as we soon became convinced, too great to be handled through philanthropy alone and that governmental and intergovernmental aid and assistance are necessary in the time that American Jews have contributed \$600 million for overseas and Israel aid. The people of Israel have contributed an even greater amount for immigrant aid out of their earnings, out of their savings, and by depriving themselves of the necessities of life.

Yet, even the combined sacrifice on the part of the population of Israel and the generous giving on the part of the Jews of the United States has not been able to solve the great economic burden of Israel's immigration. In 3 years, more than 600,000 people have been saved—saved because they had no future in the countries in which they lived. In the next 3 years, it is the purpose of the Government of Israel to save another 600,000 people.

Where are those people coming from? Most of them will come from Rumania and Hungary, which represent a reservoir of some 600,000 Jews even today. Some of them will come from the countries of the Middle East, from the Moslem countries, from countries like Iran, where there is great tension today and where the Jewish population feels insecure. You are acquainted with the great movement which has evacuated almost the entire Jewish population, numbering 50,000, of the country of Yemen, and, more recently, that great human undertaking, the saving of 106,000 Jews who were practically expelled from Iraq. These people were flown out of Yemen and Iraq and brought into Israel because that was their only hope and that was their only chance of survival.

These miracles which have been accomplished in the years which have just passed must be repeated in the years that are ahead of us. In order to do that and in order to accomplish this great task of saving human lives, the Government of Israel must have help from outside sources.

The establishment of the State of Israel has brought about many great and fine achievements. It has brought democracy into a corner of the world where democracy was unknown; it has brought into being a country where the people believe in free institutions, freedom of worship, in a free press and in free speech—all ideals to which American democracy has been devoted.

But it seems to me that the greatest and the most glorious achievement of all on the part of Israel has been its contribution in the saving of lives. In recent times, too many lives have been destroyed; too many people have perished needlessly; too many people have been the victims of a policy of anti-Semitism and anti-Jewish hatred.

In the brief period of time in which Israel has been in existence, some 640,000 people were saved from that kind of existence and from

that kind of fate. It is our hope that, with the help and the understanding and the sympathy of the American Government, an additional 600,000 will be rescued in the immediate years to come.

Thank you.

Chairman RICHARDS. Thank you, Dr. Schwartz.

The next witness is Mr. Robert Nathan. Mr. Nathan whom do you represent?

STATEMENT OF MR. ROBERT NATHAN, REPRESENTING THE AMERICAN ZIONIST COUNCIL

Mr. NATHAN. I have been asked to appear here, Mr. Chairman, for the American Zionist Council.

Chairman RICHARDS. Have you a prepared statement?

Mr. NATHAN. No; I have not, sir. I just flew in from Minnesota this afternoon. If I may, I would like to speak extemporaneously.

May I just state briefly that my work is that of a consulting economist. In 1944 and 1945, I went to Palestine to direct a study on the economic potentials of the country. That resulted in a book, of which I was coauthor, entitled "Palestine, Problem and Promise," outlining the progress, current conditions, and the prospects there. More recently, I have spent some time as economic adviser to the Jewish Agency for Palestine, and in that capacity I have registered with the Justice Department, in their foreign agent registry, on behalf of that organization.

Mr. VORYS. Before that, you were with the Government, and it seems to me you debated up at Williams College one time, didn't you?

Mr. NATHAN. With Congressman Vorys, yes, sir. We had a good time. I have had great respect for the Congressman ever since that meeting. As a matter of fact, the timing then was almost identical with the recent timing. It was in the early stages of the mobilization period, and we were debating then about problems of controls and mobilization.

Mr. VORYS. You were a very effective debater yourself.

Mr. NATHAN. I would like to take only a very few minutes. I know it is late, and therefore in the interest of saving time I may be a bit dogmatic, perhaps, in drawing a few economic observations on Israel and Palestine and in giving my reasons for urging an amount of aid larger than what is provided for in the Mutual Security Program and more in line with what was proposed in the special resolution.

The needs of Israel are needs which relate to one factor alone, and that is immigration. I want to emphasize that over and over again. Every statistical analysis, every economic analysis of that country demonstrates conclusively that the settled population of the country is self-supporting and has been self-supporting for the past decade to 15 years.

Put another way, I would say that had it not been for immigration, or were it not for immigration at the present time, given a short period of time for the most recent immigrants to become integrated and absorbed economically into the community, there would be no need for further assistance of a philanthropic or an investment nature in that country. The settled population has developed an economy which, in the fields of agriculture, industry, trade, finance, and services, is a sound, solid, going, self-supporting concern.

That has been done in the face of serious limitations of natural resources. Records would show that in the period of literally one generation, from the end of World War I, they have really performed an economic miracle in that area, in a country which was quite deteriorated and quite degenerated economically. I have often said that if the country ever had the characteristics of a land of milk and honey, those characteristics were quite hard to find in 1918.

With limited resources, these people with tremendous energy and imagination have built a solid industrial and agricultural community, a well-balanced modern productive community; today Israel has about as large a proportion of its total labor engaged in manufacturing activities as has the United States; today its agriculture is intensive and yields high values of output per acre comparable with the more advanced countries; and today one who visits there finds a marked contrast with what the statistics and pictures and facts and descriptions show existed there just 30 short years ago.

Even with this tremendous progress and even with the very favorable prospects which I feel that country holds in terms of economic opportunity, its problems are great. I might digress here to say that our report which came out in 1946 has already proven to be too conservative in its appraisal of what could be accomplished. In other words, the increases in economic activity in that country—in production, in agriculture, in employment—since 1946 have far exceeded our most optimistic projections at that time, which then were regarded by many as being far too optimistic.

I think the prospects are excellent and the progress has been remarkable, but the problems are very, very large, because of one specific reason, and that is immigration. At no time in the history of any country in the world has there been a relative increase in population of the relative magnitude as has occurred in Israel in the past 3 years. As Dr. Schwartz pointed out, in the first 3 years of the new State of Israel, 600,000 newcomers entered that country. The population was practically doubled in a 3-year period, which is unprecedented anywhere.

On the basis of present prospects elsewhere in the world—and I might say that immigration into Israel is determined more by external forces in other countries than by the forces within Israel itself—on the basis of the best judgments that can be made at this time, it appears that probably an additional 600,000 will seek a haven there in the next 3 years. It is possible, if there are no changes in general conditions in other countries, that at the end of that period, so-called compulsory immigration might come to an end, and from then on it will be more orderly, more normal, and more of a voluntary nature.

Mr. MANSFIELD. Mr. Nathan, could you tell the committee what is the area of Israel?

Mr. NATHAN. Eighty-one hundred square miles is the area of Israel. It is approximately the size of the State of New Jersey.

The rate of immigration in the last 3 years is quite startling when one compares it with the rate of immigration into Palestine. In the 30 years under the mandate, nearly 450,000 Jews entered that country, which is about 15,000 a year. In the first 3 years of the new state, the immigration has averaged about 17,000 a month. The rate of immigration into Israel has been roughly 15 times the rate of immigration into Palestine under the mandate.

In these past 3 years, a remarkable degree of progress has been achieved in absorbing these people and putting them to work. But despite the fact that perhaps 75 percent to 80 percent have been economically absorbed, there has developed a sizable backlog of people who live in transient camps, who live in work camps, who haven't fully productive jobs, who haven't the housing, who haven't the productive tools essential for productivity comparable with their predecessors or with their abilities. That backlog is becoming increasingly disturbing, of course, to the country. The backlog will grow more serious unless adequate amounts of capital and facilities are forthcoming to absorb these individuals. That in essence is the real problem of the country—facilities for productive employment of the newcomers.

I might say that this backlog has developed despite the fact that they are liquidating the sterling balances, which the country owned at the termination date of the British mandate, and which enabled them to buy machinery, materials, and equipment in the sterling area; and despite the fact that Israel received a \$100 million Export-Import Bank loan in 1949 and another \$35 million Export-Import Bank loan in December 1950; despite the generosity of the Jewish community in other countries; and despite the severe austerity, very severe rationing, and deprivation accepted by the people of Israel, who consume considerably less than they produce. Despite these factors, there has been developed this backlog, which necessitates considerable supplementation of financial assistance on top of the previous methods and techniques of financing the country's development.

Mr. ROOSEVELT. What is the approximate size of the backlog?

Mr. NATHAN. About 150,000 are in work and transit camps. Most of these individuals are employed in work camps where their productivity is far below what it could be if they had the capital and the raw materials with which to work.

Now, normally a country provides the investment for its growth of population and for its rising standards of living out of savings. We produce a certain quantity of goods and services a year; we consume less. We set aside a portion of our production in the form of savings which are invested and appear in the form of buildings, new machinery and equipment, housing, and other durable goods. These investments enhance production and provide the basis for further rises in living standards.

Of course, some of the backward countries of the world produce so little in terms of total output that they can't put much aside. Therefore they find it very difficult to develop. That is one of the great justifications and great needs for our helping the less-developed countries. They just haven't it within their own power to set aside much for capital expansion and for investment to increase their standards of living and their production very rapidly.

Now, that normal process of savings and investment must be supplemented when you have large-scale immigration. There is no country in the world which has increased its population by any significant amount through immigration, which has been able to provide the capital for those new immigrants out of its own production. We here in the United States were a debtor nation for 140 years; America imported more than it exported for a considerable period of our initial development. We had capital being brought in by the im-

migrants; we had foreign investments; we had loans from abroad. We had to have capital to absorb our immigrants.

I believe at no time in our history did our population increase by more than 2 percent a year through immigration and yet we needed foreign assistance and a net import balance; Australia, which is a highly productive community, is contemplating a 4-percent increase in population through immigration and will require foreign capital for that program; in Israel the population increase in the first 3 years averaged over 30 percent a year as a result of immigration alone. I think it is obvious that the process of production, savings, and investment could not conceivably provide the absorption capital to put these people to work and get them to a point where they become productive and self-supporting as have their predecessors.

The Israeli people have definitely made magnificent contributions to the absorption of these newcomers. That is clear through their austerity, through their taxes and their contributions, through their savings, forced and voluntary. But that is by no means enough.

The Israeli officials, on the basis of their best experience, have estimated that the per capita cost of absorbing newcomers is around \$2,500. I looked back in our book, *Palestine, Problem and Promise*, which we published in 1946; I looked at our estimates of absorption costs in that book and brought them up to date for adjusted prices in the world picture in the interim, and I found that \$2,500 per capita estimate of the Israeli officials is a very minimum and a very conservative estimate.

Now, it doesn't take much to figure that \$2,500 per capita times 200,000 people per year means Israel needs 500 million dollars a year to absorb those newcomers in a complete economic sense. Part of these funds—about 10 percent—are needed for so-called relief, for transportation of those who haven't even the means to pay for their own transportation, who had to leave their resources behind when they left the countries from which they departed. Part of the money is needed for the initial food, the initial clothing, the initial tents or minimum shelter, the minimum requirements of life in the first days or weeks or months until jobs are available, until housing is available, until there is the machinery on which they can work.

Five hundred million dollars a year is, of course, a fabulous amount for a small country of 1,400,000-odd population. As a matter of fact, their total national income in the year of 1950 was about 900 million dollars.

Mr. VORYS. Bob, they have spoken of 600,000 immigrants as doubling the population. Then I have seen the figure 1,300,000. You say 1,400,000?

Mr. NATHAN. That includes the Arabs. There are about 1,300,000 Jews in the country now. Immigration for the first 3 years was about 600,000. Jewish population was a little over 600,000 when the State was established. With the natural increase from the excess of births over deaths, total Jewish population now comes to about 1,300,000, and you have about 150,000 Arabs. So, the total population in Israel today is just short of a million and a half.

Now, this 500 million dollars, as I say, is needed for two purposes. One purpose is for relief, the initial assistance, and that is estimated to be 50 million dollars a year. About 90 percent or 450 million dollars

is needed for housing, public works, public utilities, and all kinds of productive facilities. Much is needed for machinery, lathes, punch presses, drill presses, rolling mills, tractors, irrigation equipment, things whereby you produce and live and create and become self-supporting. Some is needed for housing, for public works, for schools, for highways. No country can double its population in 3 years or triple its population in 6 years without needing huge increases in all these capital facilities, whether they be public works or hotels or housing or factories. The total capital requirements of a country obviously must be very substantially expanded when a country doubles its population in 3 years and will triple it in 6 years.

The big, really sizable need of Israel today is the capital for the absorption of these people. Take housing. Say there are four persons per family and 200,000 immigrants. That calls for 50,000 living units. Let us say that the minimum that goes into new housing there is \$2,500 per family unit. That is \$125,000,000 each year just for housing. And then when one thinks what is needed for public works and public utilities and machinery and equipment, for production—what has to be invested per person—the needs obviously are very large.

I noticed the other day that the hundred largest corporations in America have an average investment of over \$15,000 per employee in machinery, equipment, and plant. That is what makes for production—ability and skills plus capital. A man with ability without capital can't produce a great deal; and, of course, a man who has machinery and doesn't know how to use it can't produce a great deal, either. Our average investment per capita in the United States is between \$6,000 and \$7,000. The modesty or conservatism of Israel's estimated needs are revealed by the fact that their immediate investment goal per newcomer will be only about one-third the United States level, even though Israel is a modern mechanized community.

In Israel there is the know-how. They have demonstrated their ability to produce once they have the machinery, the equipment, the facilities. For that country to absorb 200,000 a year, as they are being called upon to absorb, the needs are far beyond anything that had been contemplated or anything that has been forthcoming. That is why the United States is being called upon for assistance.

The balance of payments of Israel, of course, is adverse. I use that economic term. In economics we say that an unfavorable balance of trade exists when a country imports more than it exports. I don't think such a balance is adverse in a real sense. You have to have more imports if you are going to develop and absorb these new immigrants in any number. The problem of Israel is not achieving a trade balance today or tomorrow; they can't do it, and they shouldn't even try to do it until immigration slows down. As long as immigration comes in in large numbers, they have to bring in more imports than they export. The problem is, how do they finance that balance of payments?

Part of it is financed out of contributions, and the Jews of America have been wonderfully generous. The Israel Government is now floating a bond issue in the United States, and the response has been encouraging. I happen to be a member of the board of governors of the organization which is responsible for the distribution of those bonds; they are going very well, and the prospects are excellent.

Much progress has been made because of contributions, these bond sales, and through direct private investment by such companies as Kaiser-Frazer, General Shoe Co., General Tire, Dayton Tire, Philco, and others. But the magnitude of Israel's requirements is so great as to create major economic difficulties. It is that deficit which has brought so many of the newcomers into only partial production.

It seems to me tragic that individuals who have skills, who have ability, who have capacity, should be denied the opportunity to apply those skills for increased production, especially in that part of the world where the democracies need a strong ally, a country which is dedicated and devoted, as is Israel, to the democratic philosophy.

I believe that Israel today can and will become a spearhead of economic development in the Middle East. I personally have a great deal of confidence as to what the Arab countries can do if they are given an opportunity. I saw Arabs in Palestine long before the partition. I saw how they learned and produced; how they raised their standards of living; and the standards of living of the Arabs in Palestine were substantially higher than those of the Arabs in the adjacent countries.

I am convinced that peace will come between Israel and the Arab countries; and, once that does develop, it seems to me that a modern, highly industrialized Israel cannot help but be a stimulating force in that part of the world. The horribly low standards of living that prevail in the Arab countries and the frustration which those low standards of living bring to those people make them subject to all kinds of totalitarian appeals. Therefore, I feel that because of our need for allies in every part of the world, because of the need for some spearhead to help the development in that strategic area, we ought to go all out in providing the maximum economic assistance.

It is my judgment that the 150 million dollars requested in the resolution is much more in line with Israel's very minimum needs than the 23½ million dollars that is proposed in the suggested bill. The dividends which we will have here in the United States in terms of economic development there, in terms of the stronger friendship, in terms of the impact that it will have on all the countries in that area, will more than repay us, and I would urge not only the 150 million dollars for Israel but I would also urge substantially greater assistance to the Arab countries.

Chairman RICHARDS. Thank you, Mr. Nathan. I venture to say you gave Brother Vorys a rather hard time that night.

Mr. VORYS. When you say 90 percent of something is for capital, and you draw the analogy to our own country's development, that immediately makes me think not of grants but of loans. Now, I am not debating, I am scared to debate with you, but I just wanted to say that that is what it sounds like to me.

Dr. NATHAN. Actually, the line of demarcation between relief and investment is not a very clear and sharp line. Ten percent of this 500 million dollars a year that is required is needed for outright relief; that is clear. Now, of the balance, about 250 million dollars a year is needed for strict economic enterprises, such as power factories, farm equipment and the like. Another 200 million is needed for housing and public works, health, and education. These are areas which one might describe as not of a strict investment nature. Normally that

is paid for out of flotation of loans, payment of taxes, and so forth. These kind of projects have been financed by our grant-in-aid program in many countries.

I would say there is justification for a grant as well as loans. And, by the way, the 135 million dollars Israel has received in loans from the Export-Import Bank all went to specific, concrete economic projects, such as power plants, factories and specific agricultural settlements.

The burden which the Israelis are imposing upon themselves and their posterity is so great that they ought to be given help in the form of grants for things like housing, public works, schools, hospitals, and items of that nature.

Mr. FULTON. We in the United States were paying approximately 74 million dollars a year to keep the displaced persons in the IRO camps. By Israel's taking these people out of the camps and assuming a portion of the burden, they have (1) assumed the duty of keeping those people, which the United States otherwise would have had to take care of almost entirely through the United Nations, and (2) assumed the burden of resettling, which again was a United Nations Refugee Organization expense. So that there are those two continuing expenses that the United States would have had to take care of had Israel not moved in so strongly to take care of the refugee problem. And that is not a capital expenditure but an immediate expense and a drain on the economy of Israel, which would have been on ours.

Mr. VOYTS. I was the author of the IRO bill. After the chairman and I had seen those camps, I had a special interest in the matter. I was the author of the bill, and our chairman was extremely helpful in getting that through in 1947.

I have just had run-off here copies of the per capita economic aid proposed in this legislation before us. For title 1—that is Europe—the per capita aid is \$7.22. For title 2 it is \$1.03 per capita; title 3, 59 cents; title 4, 16 cents per capita. The 150 million dollars proposed is \$1,000 per capita.

Mr. NATHAN. No; it is \$100 per capita.

Mr. VOYTS. You said \$2,500 per capita.

Mr. NATHAN. That is the total absorption. Of course, I might say one thing on that, Congressman. You see, the differences between needs that arise out of immigration and needs that arise out of normal development and natural growth in population are very substantial. Suddenly you drop a person in a country, and for that person you have to have a house; you have to have schools; you have to have highways; you have to have electricity, you have to have factories. So that the total impact suddenly falls upon the country and if immigration is large the impact is large. If you are going to have the kind of economy which Israel has there, which is a westernized economy in which the investment is roughly today about \$2,500 per capita, then the needs are large. If they had a very undeveloped country with very low investment per capita, the needs for absorbing newcomers would be smaller.

You see, in a country where you are trying to pull up living standards it is so much different. If Israel were asking for participation for economic development for its existing population, I would agree with you 100 percent that on a per capita basis it might bear some relation-

ship to some other countries. But needs for immigration are different. I might say that, if we tried to double the capital and production and living standards of a country's population over a 3-year period, then the needs would be comparable with the needs arising out of a doubling of population through immigration in 3 years. But that is a goal—doubling production of a given population within 3 years—which is beyond the realm of achievement.

Mr. JAVITS. Mr. Chairman, I would like to insert in the record, if I may, by unanimous consent, a declaration signed by 164 Members of the House in support of the McCormack-Martin bill.

Chairman RICHARDS. Without objection, that statement will be included in the record.

(The statement referred to is as follows:)

It is the sense of the undersigned members of the House of Representatives that the United States should now grant economic assistance to the Government of Israel in order to assist it in absorbing its large influx of immigration and in developing its natural resources and industries, so that, with its security and independence thus strengthened, Israel may become a military, economic, and ideological bastion for the free world in the Middle East, aiding in the maintenance of world peace, security, and liberty, and thereby promoting the general welfare and security of the United States.

Accordingly, the undersigned express their support of H. R. 3458 and H. R. 3188, the bipartisan bill authorizing economic assistance to Israel, introduced by Hon. John W. McCormack, majority leader, and Hon. Joseph W. Martin, Jr., minority leader, and S. 1247, introduced by Senators Douglas, Taft, Anderson, Benton, Brewster, Butler of Nebraska, Cain, Duff, Ferguson, Gillette, Hendrickson, Hennings, Hill, Humphrey, Hunt, Ives, Johnson of Colorado, Kefauver, Kilgore, Lehman, Lodge, Magnuson, Martin, McMahon, Morse, Murray, Neely, O'Connor, Pastore, Saltonstall, Smith of New Jersey, Sparkman, Thyne, Tobey, Young and Mrs. Smith of Maine, continuing the traditional policy of the Congress shown by the joint resolution passed September, 1922, favoring Jewish aspirations in Palestine, and the concurrent resolution of December 20, 1945, favoring free Jewish immigration into and unrestricted development of Palestine as a democratic commonwealth. The undersigned urge early study and favorable action on these bills.

Mr. JAVITS. Mr. Chairman, I also wish to insert in the record a statement on the Mutual Security Program submitted by the National Council of Jewish Women.

Chairman RICHARDS. Without objection, the statement will be included in the record.

(The statement referred to is as follows:)

STATEMENT SUBMITTED BY NATIONAL COUNCIL OF JEWISH WOMEN, NEW YORK, N. Y.

Throughout its history, the National Council of Jewish Women has supported all measures designed to build a world of peace and stability. In the recent post-war years, the NCJW has recognized the grim fact that peace and stability require military defense as well as the economic and social measures which normally line the path to peace and plenty.

The members of council have not turned aside from the realities of the world today. When Korea was invaded the NCJW took a firm stand in support of the action of the UN Security Council and the United States in resisting aggression in Korea.

But, at the same time, the NCJW firmly expressed the view that military might alone would fail to secure a free, peaceful world. "We have had many tragic lessons to show us that military objectives once obtained fail us unless they become the prelude for broader democratic goals. * * * The United States must particularly give concrete evidence of our intentions to the people of Asia. This can best be done by increasing the scope of our point 4 program, by giving them direct economic aid such as the Marshall plan provided for Europe and by supporting the forces of democracy and independence now making themselves felt throughout Asia."

Americans are faced now with the same problem of dividing our strength and resources between military and economic aid. Again, the NCJW stands firm in the belief that economic aid must not be sacrificed to the military; that we must not forget our total and long-range aims under the immediate threat of aggression.

It is because of this unwavering conviction that we of the NCJW are writing to urge that the legislation for foreign aid give full and bold recognition to the need for economic assistance, especially to the people of Asia who are in such desperate need of help to achieve freedom and security.

It is one of the tragedies of our time that the rich fruits of the great industrial power of the United States must be devoted to defense and security for as long as the threat of Soviet aggression continues. The tremendous obligations that we have undertaken in the Mutual Security Program must be maintained at full strength until the possibility of peace without military strength has been reached.

But, although the United States is now forced to engage in defensive military preparations on a scale unequalled by anything in American history, we cannot allow ourselves to forget that our military preparation is not an end in itself. We are prepared to defend the free way of life and, if necessary, to fight for it, but military defense is not enough. We must at the same time work constantly

to strengthen freedom throughout the world and thereby prevent the encroachments of communism.

The most susceptible area for these encroachments is that vast part of the world where the majority of the people are on the verge of starvation, and where ill health and illiteracy dominate. It was about this part of the world that President Truman spoke when he urged a "bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas." Our aim should be to help the free people of the world, through their own efforts, to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burdens. Aid to the backward areas of the world is vital to the defense of freedom. If freedom is to be successfully defended, we must give this aid to the very limit of our ability. Through such a "bold new program" we will make clear to all the world our support of the United Nations Charter, which aims to create conditions of stability and well-being in the world through higher standards of living, full employment, and conditions of economic and social progress.

Economic assistance to raise the living standards of backward countries is not new in the history of the United States. In the Philippines and South America the United States has been giving such aid for many years. But the critical necessity which requires that we give generously of our economic aid now at the same time that we are so burdened by the tremendous cost of defense preparations is new now, and because it is new it has perhaps not been given its proper importance.

The critical necessity stems from the fact that the Soviet Union and its satellites are using more than military weapons in their struggle to gain mastery of the world; they are also using the weapons of ideological propaganda. We are all familiar with the theme of this propaganda which claims that only communism will bring peace and plenty to the world. What we must recognize now, before it is too late, is that the answer of the free world to this Communist line is proof in deed as well as word that the free way of life is the abundant way of life both materially and spiritually.

The United States can prove this by making the point 4 program of technical assistance to the backward areas of the world the "bold new program" that was envisaged when President Truman first set forth this program in 1949. The needs of the backward areas of Asia and the Near East, of India, Iraq, Pakistan, and the other countries of this wide area which lack the means to support their populations, seem overwhelming, but they can be met and overcome if sufficient aid is given in time.

The United States is embarked on a tremendous program of establishing the mutual security of those nations of the world which are not under Communist domination. Security in the world today cannot come from military strength alone, no matter how important it is at present. In the long run what will build the strength of the free nations and enable them to counter Communist pressures is the social and political strength that come with economic stability and a high standard of living for all. Because we believe so firmly in the need for economic strength alongside of military strength, the NCJW urges that provision for economic aid to the backward areas of the world be on a scale large enough to achieve the ends of freedom and security which are our goal. We believe, moreover, that in order to give this program of economic assistance the importance it warrants it must be kept separate from the provisions for military security. The two are separate and distinct and should be kept so for the best effectiveness of both.

Mr. FULTON. Could I go just a little further on the question of the per capita cost? In order to compare two countries on a simple per capita basis, it would be necessary to have the same situation existing in each country. It is very hard to get the same basis in each country with the variety of countries we have under the program.

Secondly, even if we took for comparison, countries where the people were settled, comparing them with other settled countries, we would be unable to get some relative figure of population for comparison.

Thirdly, taking a country where the people have an immigration influx of great proportions and also an expense without a capital addition to the economy, it is awfully hard then to compare that kind of country with a settled country. In conclusion, if we should

try to make the comparison per capita, we would have to deduct the preliminary expense of the arrival of these immigrants and then look, per capita, to see what goes to the country on a capital basis or for military aid or for the economic aid supporting military aid in the country. Would that not be the case?

Mr. NATHAN. Exactly. And what you said at first, Congressman, is so true. I would say today the per capita wealth in a country like France is probably around \$2,000 per person; the per capita wealth in the United States is around \$6,000 to \$7,000 per person; the per capita wealth in India probably is not over \$200 to \$300 per person. Say you wanted to try to increase the income of the French people by 10 percent. Income is related to wealth; it is the machinery plus the productive capital plus the ability. If you wanted to increase the income per capita in France by 10 percent, you would have to increase the wealth by that percentage. A 10-percent rise of wealth and income in India would call for much less investment than a 10-percent increase in France.

Mr. FULTON. Another point is this: Certainly the Jewish communities of the United States, and especially Pittsburgh, have more than done their share on the philanthropic approach to Israel. In addition to that, these United States Jewish citizens have participated as usual in our community in local philanthropic activities that are mostly non-Jewish and general public welfare in character. So, I think we could say that the Jewish people in the United States, as well as Israel have done everything they could before coming to the Government for aid.

Chairman RICHARDS. Mr. Nathan, Mr. Vorys spoke about relative per capita contribution that was proposed here. You say this is an extraordinary case on account of the refugees that come in. You have to add to that the refugees who were forced out of Israel whom we are helping to support.

Mr. NATHAN. I think you should. Of course, there is a question, Mr. Chairman, as to whether they were forced out. That is political. I, of course, feel they should be given the maximum aid. I think they have got to be given every opportunity and every assistance for reabsorption.

Mr. FULTON. On that particular point of the Arab refugees that have left Israel, is it not a fact that preliminary steps have been taken by Israel under United Nations auspices to determine the value of the property which they left behind? Israel, through its Government, has already accepted the policy that it will make reasonable payment to those Arab refugees for property abandoned.

Mr. NATHAN. Yes; they have the comparable organization such as our Alien Property Custodian.

Chairman RICHARDS. Of course, that doesn't take care of livelihood and subsistence.

Mr. NATHAN. No. But if your funds provide the tools with which to work, there is a basis for self-support. Let us say you have Bedouins who have departed who had a herd of 10 goats or 20 sheep. Once those goats or sheep are restored, the opportunity for livelihood is restored.

Mr. VORYS. I remember your speaking of what it takes to increase per capita income. Here is a report of a group of experts appointed

by the Secretary General of the United Nations on measures for the economic development of underdeveloped countries. They say:

It remains the case that a 2-percent increase in the per capita national incomes cannot be brought about without an annual capital import well in excess of 10 billion dollars.

That is for the underdeveloped countries, and in their list in the Middle East is Israel.

Mr. NATHAN. It takes a tremendous amount of investment to increase income and production.

Mr. Chairman, I intended to ask if it would be all right to submit as part of the record a statement made by Mr. Sidney Sherwood, Secretary of the Export-Import Bank, in a speech in Philadelphia on February 20 of this year concerning the use of the Export-Import Bank loan by Israel.

Chairman RICHARDS. Without objection, that will be included in the record.

(The material referred to is as follows:)

EXCERPTS FROM AN ADDRESS DELIVERED IN PHILADELPHIA ON FEBRUARY 20 BY SIDNEY SHERWOOD, SECRETARY OF THE EXPORT-IMPORT BANK OF WASHINGTON

The Export-Import Bank, with \$3 billion in outstanding loans or undisturbed commitments in over 40 countries, has few borrowers who have used their loan dollars more wisely or meticulously than has Israel.

The loan to Israel was made in January of 1949 in the amount of \$100 million to assist the new state in carrying out its economic development program. This loan to Israel was made only after long and thorough study of the economic risks involved. \$35 million of this was allocated for the establishment of new farms and equipping and expanding of old farms; \$20 million for expansion of existing industries and establishment of new ones; \$20 million for transportation and tele-communications; and \$25 million for housing and community facilities. In December of 1950 an additional credit of \$35 million was authorized for continued agricultural development and construction of fertilizer plants.

Now what has happened? In the 2 years which have elapsed since the first credit for agricultural development was established in the amount of \$35 million, Israel has invested twice that amount or the equivalent of over \$70 million. These funds have been used for the development or expansion of about 20,000 farms. Israel's food output has increased approximately 50 percent in the 2 years since the beginning of the Export-Import Bank program. More than 300 separate Israeli firms, large and small, have received loans under the \$20 million allocated from the credit for industry. The total invested capital of these firms is four times the amount of the loans.

Out of funds allocated from the Export-Import Bank loan the port of Haifa has been enlarged and equipped with cranes and other handling equipment which have increased its capacity by reducing the turn-around time of ships which formerly had to lie at anchor for long periods awaiting a berth at the pier.

Six million dollars of the loan was used for the purchase of trucks and busses to replace and augment outworn equipment. In order to make the loan dollars available go as far as possible, the Israelis purchased the chassis and motors in the United States and either built their own bodies in Israel or converted bodies from old British lorries. This is an example of Israel's prudence and ingenuity in utilizing its credit.

However, one basic fact continues to challenge the new state. Even with the phenomenal progress made thus far in increasing the output of farm and factory, the increase in Israel's productive capacity is not keeping pace with the increase in her population. Until this gap is closed, Israel will continue to maintain her balance of payments only in precarious equilibrium through foreign contributions and investments.

But I believe that Israel will succeed in her economic program. I base that optimism on my recognition of Israel's greatest asset—the dedication of one and all to the successful economic development of the country, backed by the will to work. One cannot visit the farms and factories of Israel today without noting

that same pioneer spirit, courage, and determination which dominated the United States in the early stage of its development.

Mr. CARNAHAN. Mr. Chairman, the Jewish people, in their new nation, Israel, have very dramatically shown what can be done by intelligence and hard work, with a purpose and with determination. They are and can continue to be an effective force in the struggle for survival now so dangerously challenging the free world. Now, when all free peoples must unite or perish, this new democracy should be encouraged and helped to further use their skills in the struggle.

Mr. ROOSEVELT. Mr. Chairman, I would just like to point out that a great deal of emphasis has been placed on the fact that this bill is in the national interest of the United States and its people, as well as in the interest of peace and security for the world. I have visited Israel, and it is my deep conviction that the free peoples of the world have a showcase for the advantages of a free society in this great little country. We owe a great deal to Israel for having taken the refugees off our hands out of the DP camps.

On the other hand, we have a showcase which can be a great moral force in a very sensitive area, in the whole Middle East, as was said earlier. For that reason, I don't think we ought to apply a per capita standard in any way at all.

Mrs. KELLY. Mr. Chairman, I join my colleagues in welcoming Mr. Lipsky, Dr. Schwartz, and Mr. Nathan. After listening to their report one wonders if we are living in a civilized world. I am sure the people of Israel will remain a strong force in defense of the free world. I would like to know if there is any dollar estimate of the property that the Jewish refugees were forced to leave behind in the countries of the world when they sought refuge in Israel, and the dollar estimate of their confiscated property in Germany.

Mr. NATHAN. I know one discussion was had with the authorities in Germany concerning the possibility of reparations. As I recall the figure there, the estimated value of property lost in Germany alone was somewhere around a billion and a quarter to a billion and a half dollars. That would involve some 500,000 or 600,000 people. I don't know of any estimate of all the other countries, but I am sure it would run into many, many billions of dollars.

Mrs. KELLY. Is there any estimate of how much it cost the Allies to support a refugee person in a DP camp per annum.

Dr. SCHWARTZ. You mean per capita cost or total cost? According to our calculations, the per capita cost of supporting a person in a camp in 1947 ran about \$30 to \$35 per month. Of course this includes expenditures other than those of IRO or UNRRA.

The State of Israel has taken in people who are IRO-eligible refugees, in the neighborhood of 150,000. Those are people who would be eligible for IRO assistance if they remained not only in the DP camps but in any one of the countries of Europe. Now, if you take the 150,000 and multiply that by the per capita cost, which incidentally has increased today because of rising prices, you get a fair estimate.

Mr. NATHAN. It would be about \$100 million per year.

Mr. CARNAHAN. Is there any estimate of how many more refugees Israel will likely have to take?

Mr. NATHAN. On the basis of present judgments as I pointed out, the Israel leaders believe that probably another 600,000 will move

there under some degree of compulsion or other. On the basis of the present judgment they believe that will pretty much bring an end to compulsory emigration. Of course no one can tell what might happen because a country which today may be forcing Jews to emigrate, may tomorrow close its gates and another country, where Jews live in high insecurity but are denied exit, may open its gates tomorrow and force them out. On the basis of the best judgments, another 600,000 will go to Israel and so-called compulsory emigration may be over in another 3 years.

Mr. CARNAHAN. Another 3 years?

Mr. NATHAN. Yes, sir.

Mr. CARNAHAN. What is the density of population in Israel?

Mr. NATHAN. One million four hundred and fifty thousand in the country of 8,100 square miles, which equals about 180 per square mile. The density is quite a bit lower than some of the very densely populated countries of Western Europe, substantially higher than other countries.

When you go into Israel—and I was there a few months back—it is significant to note that vast areas of the country are not populated in any real degree, such as in Galilee and most of Negeb.

It is my judgment that perhaps Israel's population could go to 3 million to 4 million persons in a decade on a self-supporting basis, provided there is adequate capital.

Mr. CARNAHAN. And they are only up to 1,250,000?

Mr. NATHAN. One million four hundred and fifty thousand.

Mr. CARNAHAN. At the present time?

Mr. NATHAN. Yes, sir.

Mr. FULTON. Isn't it true that the land which is owned by the Arabs in Israel has gone up very much in value?

Mr. NATHAN. Yes.

Mr. FULTON. And in Israel the productivity of the Arabs there has gone up considerably so that their real wages are much higher?

Mr. NATHAN. Yes, sir.

Mr. FULTON. And the relative standard of living of the Arabs in Israel has therefore improved since the State of Israel has been formed? Is that right?

Mr. NATHAN. Yes. There are studies that have been made—I haven't the precise figures—but they definitely indicate a rise in the income and productivity of the Arabs in Israel.

Mr. FULTON. In countries where the refugee Arabs have moved to, I believe there is now a recognition that these refugees will have to be resettled and those countries are pressing programs of long-time resettlement among their ethnic groups. Is that right?

Mr. NATHAN. That is right.

Mr. FULTON. So that the problem is not being neglected in respect to the Arab refugees, nor is the problem of the Marshall plan development being neglected. Is that right?

Mr. NATHAN. Yes. The amount involved under the present bill for Arab countries is perhaps inadequate under the present circumstances. On the other hand, I want to emphasize that there are countries where you cannot pour resources in quickly.

I am interested in the problem of Burma. I may go there in 3 or 4 weeks. I have been in Indonesia. You cannot take a country that is undeveloped and expect it to be fully developed in 3 or 4

years. You have got to develop know-how in the country in order to utilize modern techniques. We have to make rather large inroads quickly and we should go a little further than may be justified rather than give less.

Mr. JUDD. When we worked on the ECA a balance of payments formula was worked out for determining how much to give them; rather how much to send them, for it was not money but goods. How do you arrive at the \$150,000,000? Is that to be goods?

Mr. NATHAN. It is the basis of net imports above and beyond what they can foresee as being financed from existing and prospective sources.

Mr. JUDD. Is it the same formula?

Mr. NATHAN. Yes; it is the same formula.

Mr. JUDD. What is it mostly, tools, or for housing, or what?

Mr. NATHAN. Yes; a little of it is for housing and some is for raw materials, and some of it is for food. You might ask why is some of it for consumer goods. When you divert a large part of your population to producing capital goods your people have to be fed and therefore imported consumer goods help increase investment outlays.

Mr. JUDD. Have you got some of that money earmarked for tobacco?

Mr. NATHAN. I do not believe there is any in there for tobacco.

Mr. JUDD. You ought to have some in for tobacco if you want maximum support in Congress. A lot of the ECA countries have.

Mr. FULTON. We have friendly countries around the world who can be of help to us in developing the free world. I believe Israel has approximately 100,000 men trained or under arms at the present time in an active force. In addition, Israel has another 100,000 men in a reserve who are fully trained, so that there is a total force of armed men of approximately 200,000 that Israel is supporting, forming its economy, who are in large part nonproductive but nevertheless for our defense. Is that right?

Mr. NATHAN. I do not know the precise figure, but I have read about such figures, and on the basis of what I have read, and on the basis of what I have experienced I think that would be a very reasonable figure.

Mr. JUDD. Ten percent of the population under arms must include most of the men in the country.

Mr. NATHAN. Their ratio of total mobilized forces in 1948 and 1949 was quite out of the ordinary.

Mr. JUDD. They were at war then.

Mr. NATHAN. Yes.

Mr. JUDD. Is there a shortage of employment there?

Mr. NATHAN. There is full employment today.

Mr. JUDD. I mean a shortage of people to work.

Mr. NATHAN. Well, in a sense it is not possible to answer the question outright because a lot of the people are working at what I would call not fully productive activity. You take a man who is good on working at machinery, but he has hand tools to work with. He is employed, but not fully employed.

By and large, there is a reasonable balance in the supply and demand of labor.

Mr. JUDD. It has always been a source of wonder that there are so many Jewish communities in so many places. For example, in

Iraq, is it possible that the Jews there are descendants of the ancient peoples who were taken there at the time of the Exile?

Dr. SCHWARTZ. It is one of the oldest Jewish communities in the world. They are direct descendants of those exiles.

Mr. JUDD. You don't mention Spain. Have there been anti-Semitic pogroms in Spain?

Dr. SCHWARTZ. There have not been any pogroms. The population in Spain, the Jewish population, is insignificant. They had a population of Jewish refugees during the war, but the refugees were there temporarily. The Jewish community in Spain is very tiny.

Mr. JUDD. Franco told some of us one night that one of the reasons his country was not to be compared with Hitler's Nazi state was because the basis of nazism was nordic racial supremacy and persecution of the Jews, whereas Jews had been living in Spain for many centuries, and had not been persecuted.

Chairman RICHARDS. I was in Spain a number of years ago, and we talked to a group of Jews. They told us there was no persecution now.

Dr. SCHWARTZ. There is a Jewish community in Madrid and a Jewish community in Barcelona, both of them very small. They are insignificant in numbers and have not counted very much, politically or economically, in the country, and, therefore, did not come within the purview of the broad picture we are trying to portray here.

Mr. RINICOFF. I would like to ask one question to round off the picture of your statement: Is there to be some comment about the present anti-Semitism behind the iron curtain, including Soviet Russia today?

Dr. SCHWARTZ. We know very little about what happened to the native Jews of Russia during the war except that substantial numbers of them had disappeared and were killed. Some of that was due to the fact that the armies of Hitler occupied a very substantial part of Russia where there were large concentrations of Jewish population.

We do not know very much about what happened to the Jewish communities in Russia, except that we do know there is a great desire on the part of many of them to get out and to leave the country. If Russia ever adopted a policy of permitting people to emigrate I am certain there would be a tremendous flow of Jews from that country toward Israel and toward the west. That, again, has not come within our purview because Russia has consistently adopted a policy of not permitting anybody to leave the country. There is no use at the present time in talking about the emigration of Jews from Russia. They are not permitted to leave.

We do, however, have a substantial body of facts about people in other countries behind the iron curtain. In Rumania, Poland, and Hungary the people have been anti-Semitic, and have been for a long time. Today the Jews are subject to all kinds of discriminations, primarily by reason of the fact that they are looked upon as class enemies and undesirable.

At the present moment thousands of Jews, former middle-class people, are being expelled from the principal cities of Hungary on the basis that they are nonproductive persons, and therefore not desirable in the population and their places are being taken by so-called productive workers. The nonproductive people are being ordered out of their homes and businesses on a 24-hour notice.

In Rumania some of the most prominent Jews have been thrown into jail, and have no right of counsel and no right of habeas corpus, and their families cannot see them. There are about 100 of the most prominent Jews who are in that category.

These are some of the most important factors in this desire for emigration. There are thousands upon thousands of Hungarian Jews who are begging and pleading for the right to leave the country. Up to this time the Hungarian Government has been very strict about the allocation and distribution of passports. In Rumania where the policy of the granting of passports is more liberal, from 7,000 to 8,000 are leaving for Israel each month, and that number could be increased to 15,000 if the shipping were available and if the Government would liberalize its policy.

Mr. JUDD. Did you say this persecution was on a class basis?

Dr. SCHWARTZ. Well, most of these people are middle class.

Mr. JUDD. Do you yourself believe it is on the basis of their being middle class people, or is it anti-Semitic?

Dr. SCHWARTZ. It is difficult to draw the line. The Government says it has nothing to do with religion or race. They say it is purely social, but when you talk to the people at large in the streets you get a different picture.

Mr. JUDD. For the record, what is the national debt of Israel?

Mr. NATHAN. The internal debt of the country is 115,000,000 Israeli pounds, which is about \$300,000,000 in American money.

Mr. JUDD. Total internal direct debt?

Mr. NATHAN. Internal and external. The internal debt is 74,000,000 pounds. The amount of debt payable in American dollars, mostly to the United States Export-Import Bank, was at the end of 1950 37,000,000 pounds. The balance is about 4,000,000 pounds sterling, Swiss, and some other currencies. The total external and internal debt is about 115,000,000 pounds, which, as I said before, is equal to about \$300,000,000.

Mr. VOYTS. The question came up of the cost of the DP's under IRO. I find that for the first year 1947-48 it was supposed to be \$115,000,000, and we put in \$73,500,000, but they only received, all together, they only spent \$75,675,840. There were at that time, according to our committee report, 1,037,404 in the camps, of which 193,332 were Jews.

It would look, figuring roughly as I have, that the cost the first year was about \$75 a head. The second year they collected \$117,000,000, and I presume there was a reduction in the number in the camps the second year, so that it would have gone up from that low figure of only about \$75 a head.

Dr. SCHWARTZ. That probably does not include some of the costs which were borne by the Army rather than by the IRO. Quite a number of costs were borne directly by the United States Army in Germany.

Mr. VOYTS. Not after IRO started. Up to 1947 the Army did bear a great deal of the costs, of course, my figure does not include the very large and substantial charitable support which came from many organizations, including the Jewish Welfare Organization.

Dr. SCHWARTZ. Nor does it include some of the charges made against the German economy.

Mr. FULTON. Nor the amounts put up by individuals. The original expenses were paid by the Resettlement Exchange or by private individuals in many cases.

Chairman RICHARDS. We have one more witness from the American Veterans Committee. He has been waiting patiently.

Mr. JAVITS. What is the maintenance cost of the Israeli armed forces in terms of money, and the gross national product?

Mr. NATHAN. Those figures are not available.

Mr. JAVITS. That cannot be estimated?

Mr. NATHAN. I do not know the basis for an estimate. That is all internally financed, but they never publish their defense cost in the budget.

Mr. JAVITS. We are comparing similar costs for security of the free world and we have received figures like that as to other countries.

Mr. NATHAN. I think you could possibly get it in executive session. I know it is sizable.

Mr. JAVITS. Would you tell us, if you can, to what extent the United States could depend upon the Israeli forces in the event of armed aggression in the Near East?

Mr. NATHAN. I am not a military expert, but I think I know the Israeli people, and I think they are highly individualistic and highly resistant to regimentation and totalitarianism. There is not any doubt in my mind but that the over-whelming orientation is to the west, in the minds of the Israeli people. In spite of the way they felt at the beginning of World War II, when the situation in central Europe was desperate for Jews, when they could have been moved out and the British severely held down Palestines immigration, the Jews joined with the British to fight on the side of the allies. It would be my judgment that we could count on that country 100 percent in the terms of real participation, and they would throw in their forces completely.

During World War II they produced over \$100,000,000 worth of equipment for the British armed forces, including land mines, Jerry cans, and industrial equipment. I do not think the industrial potential is insignificant by any means.

Chairman RICHARDS. Are there any other questions?

Thank you very much. We appreciate your being here. I am sure we will profit by what you told us.

We have one more witness. We have with us tonight Mr. Andrew E. Rice, member of the National Planning Committee of the American Veterans Committee.

Mr. Rice, have you a prepared statement?

Mr. RICE. Yes; Mr. Chairman, I do.

Chairman RICHARDS. It is a very short statement, I see.

Mr. RICE. Yes; I would like to read it.

STATEMENT OF ANDREW E. RICE, MEMBER OF THE NATIONAL PLANNING COMMITTEE OF THE AMERICAN VETERANS COMMITTEE

Mr. RICE. Before I read my statement, I would like to say this: Unlike the other witnesses, I am not an expert in total world diplomacy. I represent the general citizenry who has strong feelings on the general picture of our foreign policy without reference to any

single part of it, and I think the opportunity to testify here is one example of the sort of thing that could not happen in a totalitarian country, and the sort of thing which I, and my organization, appreciate very much.

My name is Andrew E. Rice. I am a member of the National Planning Committee of the American Veterans Committee, an organization of World War II and Korean War veterans. AVC is grateful for this opportunity to appear before the Foreign Affairs Committee to present its views on the Mutual Security Program.

AVC wholeheartedly endorses the broad outlines of the Mutual Security Program. The basic principle of this program is expressed in its title—the concept that the security of the free world is dependent upon the cooperation of all its members. AVC from the beginning has rejected the “go it alone” thesis advocated by General MacArthur; as veterans who fought side by side with our allies in the Second World War and who are again fighting side by side in Korea, we know the value of teamwork. Collective security is the only possible answer to the world-wide threat of Communist aggression.

Because we support the principle of mutual action, we support also the strengthening of the military and economic might of our allies in Western Europe. AVC'ers can testify from personal experience that Europe is easier to defend than to liberate. But I should like to add one word of warning, and that is that in our plans for the common defense of Western Europe, we must never forget that the system we are defending is the democratic way of life. The people of Western Europe, who have suffered the terrible destructiveness of two world wars within a single generation, must have faith that they are defending a philosophy that really means what it says. AVC believes that to include Spain in the North Atlantic Pact and the Mutual Defense Assistance Program would seriously undermine the confidence of our allies in our firm devotion to the democratic system and would offer ready-made and effective propaganda to the Communists. Moreover, the recent civil disturbances and strikes in Spain raise serious doubt as to the reliability and effectiveness of Franco's armies.

Europe must remain the focus of our plans for military security. Elsewhere in the world military aid can help to build a strong shield of protection. But even more important in these less developed areas is the strengthening of the economic fabric which underlies a healthy society. Part of our economic aid in Asia, the Middle East, and Latin America, will be rightly directed to developing the sinews of effective armed defense: strategic raw materials, adequate transportation facilities, and the like. But an equally important part will—and must—be aimed at a general raising of the living standards of the people.

This concept—that the wealthy nations of the world should provide their technical and economic services to help the poorer countries increase their productivity to provide better conditions of life for their people—is known today as Point 4. Although the proposed program clearly recognizes the value of this aspect of our foreign aid, AVC believes that it fails to make the promise of Point 4 a vivid and convincing one to the nearly 2 billion people who live in the underdeveloped areas. It is vitally important to remember that whereas we may hope that within a few years the total mobilized strength of the free world may be great enough to discourage armed aggression

and permit us to taper off all the military end-item and related programs, the Point 4 concept is a long-range one. Standards of living cannot be raised overnight; it is a slow, difficult process. The aspirations of the people of the new nations of south and southeast Asia, however, are burning ones, and if we fail to set our sights for the long pull they will become disillusioned and bitter.

One basic consideration must not be overlooked: It is the confidence and loyalty of the people which we must seek. Governments, many of them still inexperienced with democratic forms and processes, may come and go and their support is utterly meaningless if the democratic way of life has not also succeeded in fulfilling the hopes of the people. AVC believes that it is unfortunate that the President in his message did not give a ringing affirmation of the Point 4 idea. In the battle for the minds and hearts of men, the promise of Point 4 is perhaps our greatest weapon. I hope the committee, in presenting its report, will emphasize its faith in the expanding opportunity for progress which Point 4 offers.

One further point should be made. I have already spoken of the significance of the principle of mutual aid. This principle is now well-established in our military and economic programs in Europe. For the underdeveloped areas of the world, however, the United States has been grudging in its support of the multilateral approach. For the 1952 fiscal year, for example, exactly the same amount is proposed for the United Nations Technical Assistance Program as in 1951—a paltry \$12,000,000. No consideration whatsoever appears to have been given by the President to the recommendations of his own International Development Advisory Board, headed by Nelson Rockefeller. The Rockefeller report outlines a comprehensive program for international financing of development projects. Here is an imaginative, yet practical plan. Congress should take steps soon to translate the Rockefeller recommendations into law.

Finally, it is never inappropriate to recall that, just as our military, economic, and technical aid programs abroad should be closely linked for effective action, so are domestic happenings in the United States closely linked with the success of our policy abroad. It is a bitter fact but there can be little doubt that the tragic race riot in Cicero, Ill., recently, for example, will be a potent weapon in the unceasing war of ideologies which the Communists are waging against us. Our actions at home must live up to the brave promises of freedom and justice we make abroad. The United States cannot afford to be the weakest link in its own world wide mutual security program.

Chairman RICHARDS. Thank you, Mr. Rice.

Are there any questions?

Mr. Judd. Mr. Rice, did you protest when we sent aid to Russia during the war against Hitler?

Mr. Rice. No; we were not in existence at that time.

Mr. Judd. Would you have protested if you had been in existence?

Mr. Rice. No; because they were an ally in a great war against a common enemy.

Mr. Judd. Do you think there is more democracy in Russia than in Spain?

Mr. Rice. Certainly not.

Mr. Judd. But you put it on the basis that Spain is undemocratic?

Mr. Rice. Yes.

Mr. JUDD. And that the Mutual Defense Assistance Program would seriously undermine the confidence of our allies in our firm devotion to the democratic system. Yet you favor aid to Tito. I am in favor of suitable aid to both of them for the same reason. Tito and Franco are of no threat to the United States and insofar as they oppose Russia which is a threat, they are valuable to the United States, and I think you can do more to improve conditions in the countries by trying to work with them than by quarantining them.

Mr. FULTON. Do you think it would be advisable to apply some conditions to the aid?

Mr. RICE. I know it has been done. In the Philippines some very stringent conditions were attached before aid was given. It is different in Spain. Spain does not make a pretense of representing itself as a democratic country.

Mr. FULTON. I went to Spain in January and was considerably surprised by the amount of freedom of speech. Most of the people in the streets stated that Franco's regime was greatly limited. In your statement you say:

Moreover, the recent civil disturbances and strikes in Spain raise serious doubt as to the reliability and effectiveness of Franco's armies.

That statement, to me, raises considerable doubt as to whether Franco's type regime is lasting and permanent. It is one of the best evidences why we should be helping, because you said on the other side that it is the confidence of the people we should seek in these countries.

I was in Barcelona when the United States Navy arrived, and we were never so well received as American citizens. There was not a Communist demonstration against the men in the fleet, or the fleet itself. In fact, I have changed my mind completely about the present problem of Spain now after having been there, and after going to the University of Madrid and having been given an opportunity to discuss the democratic system, and how it works in this country.

Don't you think it is possible by this aid and by our example to help them move further toward liberties and human rights? Maybe we should not quarantine them.

Mr. RICE. The danger is we will strengthen a regime which has already lost the confidence of the people, as you have indicated.

Mr. JUDD. As you improve the condition of the people the pressures for greater freedoms within the country become irresistible. My experience is that spreads the ideas and improves the conditions for the people, and then no genuinely Spanish Government—and whatever Franco's government is, it is a Spanish Government as against a foreign country—and no genuinely Spanish Government can long resist those pressures which I mentioned.

Mr. RICE. Much of our aid to the Marshall plan countries has not reached the people.

Mr. JUDD. The people of Greece were not much better off than in 1947, but their country is free, and if it is free they get a chance to strengthen their Government. If it had not been given to them in the first few years after the war there wouldn't be as much chance to improve themselves.

Mr. FULTON. The Marshall plan was originally based on capital items, and the people do not consume power plants. The rise in consumption level comes later. There is a necessary delay. The

United States first put in emergency relief needs, and then we later fill in an increasingly greater percentage with the capital items. The level-of-living rise must come necessarily as the individual economies produce.

Mr. RICE. Greece was in the throes of civil war within its own borders. That is not the situation in Spain. They are not quite similar.

Mr. JUDD. If you get to the people with the ideas, even if you have to do it under a bad government, that is the best way to do it rather than sitting on the side and throwing brickbats at them.

You said you reject the "go it alone" policy of General MacArthur. He said there are situations where if the other allies don't we must go it alone.

The Secretary of State recently made a reference to the United Nations and what would happen if the United Nations should decide to withdraw. Do you think we should withdraw troops and go it alone?

Chairman RICHARDS. I disagree with you that the United Nations wants to withdraw our troops from Korea.

Mr. JUDD. I did not say that. I said suppose the United Nations would decide it would be better to pull out. I would favor going it alone under those circumstances.

Chairman RICHARDS. Thank you very much, Mr. Rice.

Mr. FULTON. We thank the witness for his fine statement and good presentation.

Mr. JAVITS. I want to join in that expression of appreciation to the witness for his statement.

Chairman RICHARDS. The committee stands adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 11:01 p. m., the committee adjourned until Friday, July 20, 1951, at 10 a. m.)

THE MUTUAL SECURITY PROGRAM

FRIDAY, JULY 20, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., the Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please. We will continue hearings on the Mutual Security Program legislation. Our first witness this morning is Gen. S. L. Scott. General, will you tell us what your job is and what you do?

STATEMENT OF GEN. S. L. SCOTT, DIRECTOR, MILITARY ASSISTANCE, DEPARTMENT OF DEFENSE

General SCOTT. I am Director of Military Assistance in the Office of the Secretary of Defense.

Chairman RICHARDS. What is your function?

General SCOTT. I am in charge of the coordination of the Mutual Defense Assistance Program for the Secretary of Defense.

Chairman RICHARDS. Will you proceed, General? Do you have a prepared statement?

General SCOTT. No, sir. I would prefer to take up several points which I think the committee is very much interested in.

Chairman RICHARDS. Would you rather complete your point before questions are asked, or would you mind being interrupted along the way? It is all right whichever way you want to do it.

General SCOTT. I have no objection to being interrupted. The elements divide themselves into parts so that you will find that the questions come after each part.

Chairman RICHARDS. Suppose we ask the questions after each point as it is presented.

General SCOTT. This morning I would like to cover the following points: First, the ceiling of \$100 million on the outstanding contractual authority under reimbursable aid (sec. 408e) provisions of the act; second, the ceiling placed upon excess limitations; third, the criteria and the basis for our programs, how they are developed; fourth, our obligations; fifth, deliveries; and sixth, the country set-up for programs and how it is broken down.

Taking the first point, the question of the ceiling on the outstanding contracts that is available for reimbursable aid; as you know, the present legislation limits that—

Chairman RICHARDS. What kind of contracts?

General Scott. Reimbursable contracts under 408 (c). The present limitation, \$100 million, which was included in the 1950 MDAP Act, is definitely limiting our operation and especially affecting the sales to Canada. They are modernizing their army; they are adopting American standards. As a result of that policy they need a lot of equipment from us and are willing and able to buy it.

Of the present \$100 million ceiling, 98 percent has been used, leaving \$2 million. \$81 million of the \$98 million is in connection with our operation in Canada.

(Discussion off the record.)

Mr. Rinehoff. I think any restriction as to what we should do with Canada would be shortsighted, because, if we have one friend it is Canada, and we should allow them to strengthen their forces at their expense rather than ours.

General Scott. That is why we are raising it. It does restrict Canada in buying materials for war.

We think that the proposed \$500 million ceiling will meet the requirements of Canada and other nations desiring to purchase war materials.

Are there any questions on that?

Chairman Richards. Are there any questions on that point?

Mr. Mansfield. Are there other countries besides Canada?

General Scott. There are around 47 countries throughout the world that are buying from us, but in most cases the amounts are small and contractual authority for lead-time items is not involved.

Mr. Mansfield. There are 47 countries that you can work with on a reimbursable basis under 408 (c), just as you can with Canada?

General Scott. Forty-seven countries have made application for reimbursable aid throughout the world.

(Discussion off the record.)

General Scott. Practically all of it is for Canada. The rest is in small amounts. I can give you the figures if you want them.

Chairman Richards. Do you not think we ought to have those figures in the record?

Mr. Smith. I think so.

Chairman Richards. So do I.

General Scott. I can give you the countries to whom we are making available reimbursable aid and the amounts.

Chairman Richards. You would not want to put that on the open record; is that correct?

General Scott. That is true.

Mr. Vorys. Is that information about Canada classified?

General Scott. What they propose to do I do not think has been released. I do not think it should be released.

Chairman Richards. You will furnish that information to the members of the committee?

General Scott. Yes, sir.

Chairman Richards. Which will take in all of these countries.

Mr. Vorys. Generally, is it South American countries?

General Scott. There are many South American countries included.

Mr. Vorys. We hope they buy instead of getting it for free.

Mr. Eaton. What was your hope based on—experience?

Mr. Vorys. Just hope.

Mr. Eaton. Or imagination?

Mr. SMITH. Not experience.

General SCOTT. I can read the countries if you want them Argentina, Australia, Belgium, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Denmark, Dominican Republic, Ecuador, El Salvador, France, Indochina, Haiti, Honduras, India, Italy, Korea, Malaya, Mexico, National China, Netherlands, Norway, Pakistan, Paraguay, Peru, Philippines, Portugal, Saudi Arabia, Thailand, Union of South Africa, United Kingdom, Uruguay, and Venezuela.

Mr. EATON. What basis do you place the eligibility on?

General SCOTT. Under the act, we are not permitted to make equipment available to any country unless their own self-defense, or defense of the area is important to the security of United States.

Mr. VORYS. That must be mostly chicken feed, odds and ends. What is it in general for the end items that they need? Can you give us a general description of that, the \$9 million worth?

General SCOTT. It is largely for South America. It is for the equipment which is made available to them from our surpluses.

Mr. VORYS. What would a country like Denmark want with that, or Iceland?

General SCOTT. Denmark is very small. The amount is only \$600. Iceland has around \$15,000, consisting of some radio tubes urgently required for a radar navigation station, and not available except from service stocks.

I want to make clear that this list of countries that I just gave you includes countries whose eligibility has not been determined. It includes countries which have made application for reimbursable aid, but not funded. In other countries the amounts have been funded.

Mr. SMITH. General, to what extent is Canada swinging into the defense business?

General SCOTT. We think they are doing very well.

Mr. SMITH. What percentage of their industry is getting into defense work only?

General SCOTT. I do not know.

Mr. SMITH. I think that is important.

General SCOTT. The percent of the total effort?

Mr. SMITH. Yes.

General SCOTT. I cannot answer the question.

Chairman RICHARDS. Are there any other questions on this point?

Mr. SMITH. Do you know what Canada's program is in the defense field, the gross total? How much are they spending for rearmament?

General SCOTT. Their defense budget?

Mr. SMITH. That is right.

General SCOTT. We have that.

Mr. VORYS. Does that come up later? I thought, from the way you have set it up, that you are going to give us what the various countries are doing.

Mr. SMITH. I think the point Mr. Vorys is making relates to some material that you will be covering later on. He is thinking of continuity; are you not?

Mr. VORYS. If you are going to give us all of that—

Mr. SMITH. I do not think we should take too much time on that.

General SCOTT. We can give you the Canadian budget and also the amount of deduction. We could give you that for the record.

(The information requested is as follows.)

DEPARTMENT OF DEFENSE,
Washington, D. C., July 24, 1951.

HON. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: During my testimony on July 20, 1951, Mr. Smith asked for information concerning Canada's defense program. In my opinion, Canada is making a very substantial contribution to the collective security of the Western World. In this connection, I am sure that the members of the committee are aware of the fact that Canada has never accepted any grant aid from the United States. During the Second World War Canada paid in full for all the matériel obtained from the United States and did not accept anything on a nonreimbursable lend-lease basis. Canada also made substantial contributions to the United Kingdom, in addition to supporting her own armed forces. The Canadian Government is following the same policy today. A brief statement concerning the Canadian defense effort is enclosed.

I would also like to take this opportunity to submit for the record an additional statement concerning the proposed technical amendment to the law increasing the revolving fund for contract authority for reimbursable sales from \$100 million to \$500 million.

Mr. Vorys and Mr. Roosevelt asked for more specific information concerning the types of matériel that make up the Defense Department estimate that an additional \$450 million worth of excess matériel will become available for use in the MDA program. I am enclosing a statement on this matter, and have included explanatory information pointing out that the amendment to the law will not of itself produce any additional excess matériel. The amendment we are recommending will merely permit the use of this matériel for MDAP rather than disposing of it as scrap.

It would be appreciated if this letter and attachments were made a part of the record.

Sincerely yours,

S. L. SCOTT,
Major General, United States Army,
Director, Office of Military Assistance.

CANADIAN DEFENSE EFFORT

Canada is making a very substantial contribution to the collective security of the western world. The Canadian Government plans a total expenditure of over \$5 billion for defense during the next 3 years, which includes approximately \$1 billion for mutual aid to other NATO countries.

Expenditures for defense and mutual aid during fiscal years 1951-52 will be approximately \$1.6 billion, an increase of 90 percent over the \$724 million expended during the previous fiscal year.

Canada in the present fiscal year will devote approximately 8.1 percent of the gross national product to defense. Approximately 45 percent of the Canadian Government's budget will be for defense.

AMENDMENT OF SECTION 408 (E) OF THE MDAA

(Public Law 329 as amended by Public Law 621)

1. Procurement assistance to foreign countries on a reimbursable basis is authorized by section 408 (e) of the MDAA as amended. Terms of sale require full payment before delivery. Prices charged are gross costs to the United States, or in the case of excess matériel not less than fair value as defined in the act plus the cost of repair and rehabilitation. Attached tab A lists for the information of the committee the major items and categories of items which have been or are being sold under the provisions of this section of the law.

2. This wise provision of the law has been of great benefit to the mutual security program in that:

(a) Allies with dollar resources, notably Canada, can build up their own defensive capabilities at their own expense, without cost to the United States taxpayer.

(b) Contracts let in the United States for production of items for sale to our allies increase our own mobilization base.

3. The United States makes no advance payments to contractors on behalf of the foreign purchaser. Before an item is delivered, funds from the foreign government for which the procurement is undertaken must be in hand.

4. Recognizing that, in the case of long lead time items, requirement for full payment in advance would tie up substantial dollar assets of foreign customers for a long time, Congress authorized the use of contract authority for this purpose up to a limit of \$100 million. Upon receipt of a firm order accompanied by a dependable undertaking to pay when called on, the military departments may enter into procurement contracts on behalf of foreign purchasers, provided the outstanding amount of such contracts at any one time does not exceed \$100 million. It is a revolving contractual authority fund. As prior contracts are liquidated by payment by the purchaser, additional contracts may be entered into.

5. Orders or inquiries have been received from countries listed on tab B. Firm orders have been accepted, and payment made, or a dependable undertaking accepted under the contract authority provision for a total of \$175 million of which \$98 million is presently outstanding as contract authority.

6. There are only three cases in which it has so far been necessary to use the contract authority provision, and Canada, with \$81 million now outstanding represents the major part of this.

7. The outstanding amount is now being liquidated at the rate of about \$2 million per month, and as production and deliveries increase the rate of liquidation will increase. It is expected to reach \$4 million by September.

8. The Canadian Government alone has indicated that it expects to place orders within the next fiscal year for long lead time items, mostly aircraft, amounting to almost the entire additional amount requested. Under the present limitation it is impossible to accept these orders (unless Canada makes full payment in advance) and phase the procurement for Canada into our own production schedules. Therefore, in order to avoid delays in provision of aircraft and aeronautical matériel and tanks which it is essential that Canada procure from the United States, the ceiling on outstanding contracts under section 408 (e) (2) (b) should be raised to \$500 million. Approval of the increase is necessary in order to avoid putting Canada, which is paying for matériel obtained from the United States at a disadvantage compared with other countries which are obtaining similar matériel as grant aid.

CATEGORIES AND TYPES OF MATÉRIEL (AUTHORIZED AND CONTEMPLATED TRANSACTIONS)

Vessels:

Patrol crash boats, patrol frigates, destroyer escorts, cruisers (light).

Vessel equipment of all types (including electronics): Naval guns, naval aircraft (P2V-5) and spare parts.

Aircraft:

GFP for F-86 planes, F-51 mustang fighters, T-6 trainers, T-33 trainers, B-26 Douglas bombers, B-17 Boeing bombers, aircraft spares for several types.

Road construction machinery (scrapers, air compressors, tractors)

Engineer shop equipment.

Engineer supplies and spare parts.

Radios and radar equipment.

Clothing, gas masks, field ranges, miscellaneous quartermaster supplies, subsistence.

Medical equipment and supplies.

Armored cars and medium tanks.

Motor transport vehicles.

Small arms and machine guns.

Artillery and fire-control equipment.

Small arms and machine gun ammunition.

Artillery ammunition.

Bombs, rockets, and miscellaneous ammunition.

Miscellaneous: Sand bags, tools and tool sets, plans and specifications, publications, instruction manuals, films and film strips.

COUNTRIES FROM WHICH ORDERS OR INQUIRIES HAVE BEEN RECEIVED FOR REIMBURSABLE AID

Argentina	El Salvador	Pakistan
Australia	France	Paraguay
Belgium	French Indochina	Peru
Bolivia	Haiti	Philippines
Brasil	Honduras	Portugal
Canada	Iceland	Saudi Arabia
Ceylon, withdrawn	India	Sweden, withdrawn
Chile	Italy	Thailand
Colombia	Korea	Turkey, withdrawn
Costa Rica	Malaya	Union of South Africa
Cuba	Mexico	United Kingdom
Denmark	Nationalist China	Uruguay
Dominican Republic	Netherlands	Venezuela
Ecuador	Norway	

The following additional countries are eligible for reimbursable aid, but have not submitted specific requests for such aid:

Burma	Nicaragua	Iran
Greece	Panama	New Zealand
Luxemburg	Indonesia	

AMENDMENT INCREASING LIMITATION ON TRANSFER OF EXCESS BY \$450 MILLION

1. The Mutual Defense Assistance Act of 1949 (Public Law 329, 81st Cong.) defines "excess" as meaning the quantity of equipment or materials owned by the United States which is in excess of the mobilization reserve of such equipment and materials. Mobilization reserve means the quantity of such equipment or materials determined by the Secretary of Defense under regulations prescribed by the President to be required to support mobilization of the Armed Forces of the United States in the event of war or national emergency until such time as adequate additional quantities of such equipment or materials can be procured.

2. The act limited the worth of such excess equipment and material to be transferred under this act, and under the Greek and Turkish Aid Act of 1947 (Public Law 75) to \$450 million. Public Law 621, approved on July 28, 1950, authorized an additional \$250 million worth of excess equipment, thereby increasing the ceiling to \$700 million.

3. As of May 31, 1951, \$635 million of existing excess material had been scheduled for delivery under this authority. Of this amount, \$423 million had been delivered. Attached tab A shows the acquisition cost, by major categories, of the material delivered to date.

4. The authority for the transfer of excess equipment has permitted disposition to friendly nations of substantial quantities of some types of material not needed for United States Forces, but valuable in building up the strength of the combat forces of the free world. About 67 percent of the material planned for transfer under this authority is being furnished as grant aid, and will be without charge to the appropriation except for the cost of repair and rehabilitation. The remaining portion of the excess material will be transferred as reimbursable assistance under the provisions of section 408 (e) of the act, in which case the recipient country reimburses the United States for the cost of repair and rehabilitation plus the fair value, before rehabilitation, of the material. In no case is this fair value less than 10 percent of the original acquisition cost of the material.

5. In view of the fact that the authorized ceiling of \$700 million has nearly been reached, the proposed legislation includes an amendment increasing the limit by \$450 million to a grand total of \$1,150 million. Presently planned programs will substantially exhaust current excess stocks of the military departments. Generation of excess, however, is a continuing process. As new and improved weapons and other items of military equipment are developed and delivered, the military departments are able to release some of the older material as excess. It is impossible to forecast exactly the amount and nature of excesses that may be generated in the future. Attached tab B is the best estimate presently available of the nature and amount of additional excess material.

6. The material deficiencies are met through a combination of indigenous effort, United States grant aid from appropriated funds and available excess stocks. Unless the present limit of \$700 million is increased as recommended in the proposed legislation, it will be impossible to fully meet the material requirements

without increasing appropriated funds. Without such authority the United States cannot make effective use for MDAP of the excess material generated, and, further, the military departments would eventually have to dispose of such excesses, resulting in a net loss to the military potential of the free world.

7. The law very clearly and specifically defines the term "excess" for this purpose. The military departments make the determination of excess in accordance with this definition. The proposed amendment to the act will not, of itself, generate any additional excess, but will permit the Department of Defense to apply any excess that may be generated to the mutual defense assistance program. In the absence of the proposed increase in the authority to transfer excess material, such excesses would have to be disposed of as scrap in accordance with the provisions of other laws.

Chairman RICHARDS. General, before you go on, may I make a statement? Some of the members came in a little late. The matter now under discussion is reimbursable aid. Will you give us the citation?

General SCOTT. Paragraph 408 (c) of the act.

Chairman RICHARDS. I want to refer to the act. Page 10, the third paragraph, states, "The President may, from time to time, in the interest of achieving standardization of military equipment and in order to provide procurement assistance without cost to the United States, transfer, or enter into contracts for the procurement for transfer of, equipment, materials, or services," and so forth. That is what the General is talking about. A few of the members came in a little late, and I wanted to have that in the record.

General SCOTT. It should be recognized that the \$100 million is really in the form of a revolving fund.

Mr. VORYS. Have you spent more than the 100?

General SCOTT. Yes, sir. If an article is delivered off the shelf, for instance, and they pay for it immediately, the revolving fund is not involved. For a long-lead item—

Mr. VORYS. How much have you procured all together? You said there was 98 used, I thought.

General SCOTT. Of this contract authority.

Mr. VORYS. Yes. I had forgotten it was reimbursable, that is, that it was revolving. And you said that 98 out of the 100 had been used, 81 to Canada?

General SCOTT. That is right.

Mr. VORYS. Is the total procurement more than 100?

General SCOTT. Yes.

Mr. VORYS. How much is it?

General SCOTT. The last report I have indicates that the total of about 175 million has been funded.

Mr. VORYS. That means paid for?

General SCOTT. Part of it has been paid for, and part of it is outstanding in the form of contract authority.

Mr. VORYS. What do mean by "funded"? That is a new word, in this connection.

General SCOTT. That the countries have either paid cash, or submitted a satisfactory "dependable understanding" as required by the act.

Mr. VORYS. Then you must mean that 77 million has been paid for—

Chairman RICHARDS. And the other is in process of payment?

Mr. VORYS. Yes. If you want a new limit of \$500 million outstanding, how much is the total?

General SCOTT. That depends on the application made by the countries. It is pretty hard to project that into the future.

Mr. VORYS. At that rate it could run pretty nearly a billion of procurement, that is, if that percentage were projected. If you have procured \$175 million against a \$100 million limitation on the outstanding contracts, do you think it is going to go along like that?

General SCOTT. I do not think it will rise much higher than that for items other than long-lead items, which require this financing under the \$100 million limitation.

In other words, the \$500 million will cover all aspects of that type of requirement, because we are liquidating right now at the rate of about \$2 million a month in this revolving fund.

Two million dollars a month is liquidated or twenty-four million dollars a year. That will probably be stepped up to about double that, about \$4 million a month, which would be around \$50 million a year.

Mr. ROOSEVELT. Will the gentleman yield?

Mr. VORYS. Yes.

Mr. ROOSEVELT. How many applications have you now got outstanding which would lead you to believe that \$500 million would take care of it?

General SCOTT. I think there is sufficient slack there so that the service estimates will take care of that.

Mr. ROOSEVELT. Do you have a lot of outstanding applications now which you cannot handle because of the \$100 million? Is that the problem?

General SCOTT. We could get along with \$100 million if Canada did not enter the picture. That is basically the question.

Mr. VORYS. \$390 million is for Canada.

Mr. ROOSEVELT. Thank you.

General SCOTT. We would not require this change in ceiling except for Canada.

Mr. VORYS. Would you contemplate a possible impact there of \$500 million, plus 5 times 75, \$375 million, which would be \$875 million on your military production within the next year? Or would you contemplate the impact of \$500 million?

General Scott. I would count on an impact from Canada—

Mr. VORYS. Of \$390 million?

General Scott. Say \$400 million, if this program materializes, plus, roughly, I would say, not over \$100 million for other countries; between \$500 million and \$600 million at the present estimate.

If there are no other questions on that subject—

Chairman RICHARDS. Restate your next point.

General Scott. The next question is the subject of excess limitations which are prescribed in the act. The authority to transfer excess property, including excess transferred under the Greek-Turkish Aid Act (Public Law 75) was limited to \$450 million. In Public Law 621, approved July 26, 1950, \$250 million more was added. So that under present legislation the excess limit is \$700 million.

Mr. ROOSEVELT (presiding). 408 (d)?

General Scott. Section 504 of the proposed act.

Mr. REECE. May I ask what provision the General is referring to?

General Scott. Of the new act? Section 504 of the present proposed act.

Mr. VORYS. Could I say this for Mr. Reece and the other new members. We had long, drawn out arguments about the pricing, and so forth, of excess equipment.

You will find in 403 (c) some definitions that were sweated over at great length, and apparently that formula is still satisfactory. Is that right?

General Scott. Yes.

Mr. VORYS. We did not want them to buy stuff and then have them say, "We don't need it," and let to go for a song.

We were fearful that the limitations we put on it—

Mr. REECE. I see it now.

Mr. VORYS. That is what this is about.

General Scott. We have now, as I have stated, a \$700 million ceiling under those two acts. There was no request made to increase the ceiling when the supplemental appropriation bill was up for consideration last year. So we still have the same limitation of \$700 million.

Of the \$700 million, \$635 million has been programed, either under 408 (c) or in our grant aid program. I would say in general that two-thirds went into grant aid and one-third into 408 (c).

Of the \$635 million, \$423 million has been delivered. We are requesting in the proposed legislation that the ceiling be increased by \$450 million. So that our new total will be \$1,150,000,000.

We feel as time goes on we will continue to generate excesses, as we always have, and if we can properly use these excesses in connection with our programs it will cut down the over-all cost to the United States.

In other words, we feel it is better to use the excesses than to dispose of them under other arrangements or by other means.

Mr. VORYS. What is the latest date of manufacture in the items that we are declaring in excess?

General Scott. I do not think you can state a date. It depends on whether it is obsolete or not.

Mr. VORYS. That is what I am trying to find out.

General Scott. I do not think you can establish a date.

Mr. VORYS. I would like to know where you have a possibility of \$400 million worth of stuff that would come within the excess definition.

General SCOTT. I would say about half of it is programed and half of it is not. As you know, it affects our reimbursable aid ceilings very substantially. Of course, this is only the equipment which would be normally declared surplus or excess to our own requirements.

I might read the definition of excess: The Mutual Defense Assistance Act of 1949, Public Law 329, defines excess as meaning "the quantity of equipment or materials owned by the United States which is in excess of the mobilization reserve of such equipment and material. Mobilization reserve means the quantity of such equipment or materials determined by the Secretary of Defense under regulations prescribed by the President to be required to support mobilization of the Armed Forces of the United States in the case of attack or national emergency until such time as additional quantities of such equipment or materials can be produced."

Mr. VORYS. That is what I want to find out. You delivered \$423 worth. I would like to find out where you have got kicking around any \$700 million worth of equipment that is excess to our mobilization requirements, because I thought we were pretty thoroughly mobilized, and were short of equipment. At least, we tried to mobilize for Korea and the fellows were shy of all kinds of things over there.

General SCOTT. As you notice, there was six-hundred-and-thirty-odd-million dollars' worth of this amount already programed, of which only some \$400 million has been delivered.

That means that the ceiling under the present law has almost been reached. We would be stopped in our efforts to make much more available under 408 (e). Lend-lease vessels took up a good part of the \$630 million. Let me give you the categories of those delivered items, if I have it here.

Of the \$423 million worth of equipment transferred, \$198 million was in vessels, \$130 million in ordnance, \$90 million in aircraft, and just miscellaneous items in other types of equipment.

Mr. ROOSEVELT (presiding). Were those naval vessels or merchant marine?

General SCOTT. Naval vessels.

Mr. ROOSEVELT (presiding). What types of craft?

General SCOTT. Destroyer escorts, principally.

Mr. ROOSEVELT (presiding). Two cruisers to Brazil?

General SCOTT. Yes. One submarine, I believe; one aircraft carrier.

Mr. ROOSEVELT (presiding). Have you any programing of the anticipated excess? I think that is what Mr. Vorys is really worried about; how we are going to find enough excess to justify the additional amount of money appropriated.

General SCOTT. If we do not have the excesses, we will not use the authority.

Mr. ROOSEVELT (presiding). If you have the money, there is always a tendency to declare excesses.

Mr. VORYS. You have your request of \$450 million additional, raising it to \$1,150 million. Four hundred of that has been delivered. How much do you say there is for ordnance?

General SCOTT. Delivered?

Mr. VORYS. Yes.

General SCOTT. \$130 million.

Mr. VORYS. I just wonder where you think you are going to have five, six or seven hundred million dollars of military equipment that we can transfer without detriment to the national security of the United States, and that is not needed by the Reserve components of the Armed Forces to meet training requirements.

General SCOTT. Well, you will find a lot of this equipment is equipment which is no longer needed by our own forces. Artillery is one classification. Propeller aircraft is another. There may be some ships in the future programs.

Mr. ROOSEVELT (presiding). Does that mean all the Reserve Air Force are completely equipped today? I get reports that our Air Force and Naval Reserve units have a terrible time to get enough equipment to get in their flying hours.

General SCOTT. We will not release the equipment until it is declared excess to our requirements under the definition which I just gave you.

Mr. ROOSEVELT (presiding). Once we have given you the money, it is out of our hands. What we are trying to find out is how can you give us the assurances that that amount of money value is going to become really an excess.

I think that is what is really worrying some of us.

Mr. CARNAHAN. What is the process of declaring it surplus? Who declares it excess?

Mr. VORYS. This is the law [reading]:

That no equipment or materials may be transferred out of military stocks if the Secretary of Defense, after consultation with the Joint Chiefs of Staff, determines that such transfer would be detrimental to the national security of the United States or is needed by the Reserve components of the Armed Forces to meet their training requirements.

When it is declared so to be excess it has a special price on it, a special value put on it, and it goes cheaper or it goes for free, is that not correct?

General SCOTT. It flows two ways. It flows into the grant aid program or into the 408 (e) program.

Mr. VORYS. Reimbursable aid?

General SCOTT. Yes. If it flows in the grant-aid program, the only thing that is chargeable to the program is the rehabilitation cost, packing, handling, crating, and shipping costs.

If it goes into the 408 (e) program, then according to the requirements of the law we must charge it either as scrap value, market value, or 10 percent of the acquisition cost, whichever is the larger.

Mr. VORYS. What it means, though, is that it is an addition to the total authorization. It is an addition which is justified. I am trying to find out what is the prospective stuff that is going to be justified as excess in the coming year so that it should be included in this bill.

I cannot think of any propeller-driven aircraft that could be available because of the things you mentioned, Mr. Roosevelt. I do not think that the Reserves have all they need. At least, they are "holering" for more; possibly it is true with ships.

As a layman, I cannot think of any ordnance or pretty nearly anything else that could be declared excess in the coming year in any such amount.

Mr. ROOSEVELT (presiding). Maybo, General, this could be cleared up a bit if we had an idea of the process that goes on in the Department of Defense in arriving at how this is brought up to the Secretary of Defense and the Joint Chiefs of Staff.

How does item A become excess? Does the unit commander say, "We don't like this thing any more"?

General SCOTT. No.

Mr. ROOSEVELT (presiding). How does it work? I know it is not that simple.

General SCOTT. It is processed by each service. The basic criteria are established by the statement I just made. It must be excess to our mobilization requirements.

The item is developed in the services through obsolescence or excesses. There are very few of those right now. It goes to each of the Government departments to see if they can use that item, before a final determination is made that it is excess to the requirements of the Government. It is a very comprehensive procedure.

Mr. VORYS. I suppose part of those 97 million can openers that we have read about will be excess?

General SCOTT. I am not familiar with your can openers.

STATEMENT OF COL. H. C. BURGESS, CHIEF, FOREIGN MILITARY AID BRANCH, SUPPLY DIVISION, G-4, UNITED STATES ARMY

Colonel BURGESS. Would you like to have something on the type of things that are involved?

I am Colonel Burgess. I have charge of the Foreign Aid Branch, G-4, Department of the Army.

The excess items that we are now using, both grant aid and reimbursable, are such things as the 1903 rifle.

To answer your question, Mr. Vorys, we go way back to 1903. Some of our bayonets and things go back to the Spanish War. It is items we have on hand that anyone would have a use for. Someone might like a nice sharp bayonet. They are all good. We want to sell them and get some revenue from them.

Another item would be the M5A1 tank, which is a tank with a 37-millimeter gun on it. We no longer use that, and it has no use in our training. It bears no relation to an M40 or M47.

Another item would be the Thompson submachine gun, caliber .45, which no longer has any use. There is a 57-millimeter ground gun. Some of you may remember that. It was used by the infantry during World War II. That is no longer needed. The 57 recoilless has taken its place.

It is items of that type and items generated by the receipt of new weapons that determine whether it is excess as far as the Army is concerned.

As far as the determination of excess is concerned, that is done by a board in the Department of the Army, to determine if there is any possible use for it by the National Guard, Reserve, or Regular Army; if not, then it goes into an obsolescence stage. But it all depends on the receipt of new equipment. It is just a question of purifying the entire Army system and trying to derive some revenue, in the case of 408 (c), from these old items which we no longer use, and furnishing the items that have some application.

Mr. ROOSEVELT (presiding). Your stuff is mainly ordnance, I gather?

Colonel BURGESS. Mostly ordnance.

Mr. ROOSEVELT (presiding). About \$130 million of the \$423 million so far expended is ordnance. What is the rough value of the excess ordnance now on hand in the Department of the Army?

Colonel BURGESS. I have not got the figure. I could get it for you. It is considerable.

Mr. ROOSEVELT (presiding). An important question is how did we arrive at that figure of the additional \$450 million. How did we arrive at that? Is that an estimate of what is on hand as excess now, and what probably will be in the next year, due to this purifying process, as you call it? Did the Army, Navy, and Air Force get together and say, "We have this on hand. That is excess, and we expect so much more through the purifying process, therefore, we come up with a figure of \$450 million"?

Colonel BURGESS. We submitted an estimate to the Department of Defense as to how much we thought we could use. It depends on whether the countries ask for this equipment or not. It is a selling job on our part. If the country will not ask for the equipment, we cannot by law make them take it. It is a selling job on our part.

We have estimated to the Department of Defense how much we need for the next year. That is combined with the other two services' estimates to arrive at the figure of \$450 million in our request.

Mrs. KELLY. Will the gentleman yield? Is this excess sold to individuals?

Colonel BURGESS. No; government to government. No commercial concerns would buy it.

General SCOTT. Do you want to hear from the Navy and Air Force?

Mr. ROOSEVELT (presiding). Yes.

STATEMENT OF COMMANDER GEORGE D. HOFFMAN, OFFICE, MILITARY ASSISTANCE, SECRETARY OF DEFENSE

Commander HOFFMAN. My name is Commander George D. Hoffman. I am on General Scott's staff. For the Navy the excesses have been mostly in the nature of destroyer escorts. These vessels are very slow, about 16 knots, Diesel-driven. They are not up to the best standards of even destroyer escorts, because we have better ones that are steam-driven and are faster. We have been reluctant to release any, and thus far have not done so. Each instance is weighed very carefully as to whether or not even the slow escorts will be made excess.

In addition to the destroyer escorts, there are certain amphibious vessels that are unsuitable to the mobilization requirements, such as landing ships, infantry, large, and landing ships support, large.

The name "large" is a little misleading because actually they are quite small. A large number of those vessels have been found unsuitable for future use, and have therefore been declared excess in, I believe, a very thorough manner of calculation by various boards, and have been programed at no cost except for the rehabilitation charges in the grant-aid procedure, and have been made available for

possible sale in reimbursable procurement, at which they would go at 10 percent of their acquisition cost plus charges for rehabilitation.

Then as we know, six old cruisers were sold to Latin-American countries for some 6, 8, or 7 million dollars apiece.

Those old cruisers were found to be unsuitable in our mobilization plans for the future. Also, there have been aircraft known as SB2C's. They are dive bombers which were successful in World War II, but which now are outmoded. I think the Navy is very glad to either program them on grant-aid programs or, if possible, sell them to any country wishing to buy them.

There are probably other instances of smaller craft. I think that is a general explanation.

The Navy has used the military aid program to some extent as a means of settling outstanding lend-lease accounts.

An instance of that is the six DE's that have been in the possession of France since World War II. To get them off the books they have put them in the program. That lodges a charge against excess, because each one of those vessels has a value of 3, 4, 5, or 6 million dollars, and when multiplied by 6, one can quickly arrive at a possible lodgment against excess charges of about \$30 million.

Mr. VORYS. I saw the first shipment of military aid on March 8, 1950. It went aboard the *Dismude*. That was a lend-lease ship. It was loaded up, I think, with these SB2C's.

We had \$110 million worth of stuff shipped the first year. How is that first shipment carried on the books?

Commander HOFFMAN. The SB2C's and the F4F's are carried as excess. But the program was charged for the rehabilitation of those planes. France got the planes at no charge.

Funds were charged to the program for the Navy's work in rehabilitating the aircraft. The vessel itself, the *Dismude*, happened to be a lend-lease vessel.

I believe it is the Navy's desire to write that vessel itself off the books. I think that is still an outstanding, unsettled lend-lease account.

What the value of it would be I do not know. It would be several million dollars and therefore would require the availability of an adequate excess limitation.

Mr. VORYS. Instead of trying to pull this out item by item, I think General Scott or somebody could just say, "We are asking for excess equipment, what is left over, \$500 million, half a billion dollars, of authority for next year."

"We are sure about it. This is why we asked it. Here is what will be excess." They can either say that or say, "We just got in a corner and by guess and by God wanted to see if you would stand for the \$500 million in excess equipment."

I do not want to take the time of the committee further on that, but I want the answer.

Mr. ROOSEVELT (presiding). We can get either one or the other. We can find out if they had any estimates for it or find out whether it was just a guess.

General SCOTT. I will give you that breakdown right now. This is for the total of \$1,150,000,000. Furnished under the Greek-Turkish program, \$1,696,000; the fiscal year 1950 grant-aid program, \$298,408,000.

Mr. VOYTS. If you will pardon me, that does not tell me a thing. I want to know what the future stuff is. If you are doing this for my benefit, there is no use reading those past deliveries. What I want is to see a list of the stuff that is either now excess or you think is going to be excess, when you come in with a half-billion dollar request for excess.

Mr. ROOSEVELT (presiding). The colonel said that the Army submitted its estimate of what either was excess or probably would be. General SCOTT. Dollar estimate.

Mr. ROOSEVELT (presiding). If we can have that for all three services, we can see how the total comes out and how the \$500 million is arrived at. If you will submit that for the record later on, General SCOTT, we can proceed to the next item.

(The information referred to appears on p. 702).

General SCOTT. The next subject is the question of the development of the program, or the programming process and the criteria which underlies our programming.

I thought since this was such an important subject and has been discussed on a number of occasions here, it would be well to go into that in considerable detail.

I have before me a draft of a directive which we have prepared in connection with this matter. This program process, as we call it, requires a number of steps. The first is the review or determination of the United States objectives in countries or areas to receive assistance.

Second, a determination of the forces to be supported.

Third, a determination of the scale of equipment of these forces.

Fourth, the calculation of gross matériel requirements for the forces.

Fifth, the determination of assets on hand or anticipated in countries or areas.

Sixth, the calculation of net matériel deficiencies, and last, the preparation of matériel program.

The equipment and supplies for the NATO members will be provided only for those forces required by the medium term defense plan and accepted by the country concerned as definite commitments.

In NATO countries, equipment and supplies will not be furnished for the following: those forces, facilities, and establishments which do not contribute to the definite country commitments to meet the requirements of the medium-term defense plan.

Second, home guards and territorial groups which after M-day will be operational on a part-time basis only.

Third, gendarmerie; fourth, infrastructure.

For the non-NATO countries; that is, countries under title II and title III—

Mr. CHIPERFIELD. May I ask a question there? Home guards; is that correct?

General SCOTT. That is correct.

Mr. CHIPERFIELD. There is an underground in Norway; is there not? I know there was during World War II. Could they be utilized? Could you not furnish them some equipment?

General SCOTT. Our objective now is to get the forces equipped that are going to be in General Eisenhower's field forces.

As a policy, as stated here, we do not propose to furnish equipment for other forces. We expect the countries to do a part of this job. They should accept that responsibility.

Mr. CHURCHFIELD. I understand.

General SCOTT. For non-NATO countries, equipment and supplies will be provided only for those forces that are essential for the accomplishment of the United States objectives in the respective country, in consonance with United States plans and policies, and are in being or immediately mobilizable and have the capability to absorb and utilize the aid effectively.

Equipment and supplies in the non-NATO countries will not be provided for forces which after M-day will be operational on a part-time basis only; forces which are not under centralized military control.

Mr. VORVY. What do you mean by "not under centralized military control"?

General SCOTT. In certain southeast Asia countries there are many individuals who are provided military equipment who operate locally and who are not under centralized military direction as organized forces. We are saying we give aid and assistance only to organized forces.

Mr. VORVY. You mean the other fellows would be guerrillas or a local police force?

General SCOTT. They suppress guerrilla activity under some local authority. Many of them have equipment, but we do not think it is our responsibility at this time to undertake that obligation, when we have so many other obligations to undertake. Countries will have to find ways of meeting this requirement.

Now, on this question of scale of equipment for foreign forces, it was given considerable study by the Joint Chiefs of Staff and by the services. They have laid down certain general conditions which are considered in arriving at the basic factors they use in preparing the programs. I would like to read these, if I may.

In general, the magnitude of the rearmament program makes it imperative that the United States limit its commitments to those of the highest priority only.

(b) Combat forces of some, but not all, of the countries need be so equipped as to approach a capability of performance comparable to similar United States units. The scale of equipping these forces should be related to the missions they are expected to execute, and the conditions under which they are expected to operate.

(c) Those forces scheduled for combat in support of United States and NATO plans should be equipped along lines equivalent to those of comparable United States units.

"Equivalent" does not necessarily imply complete equality of organization and equipment. For the specific tactical mission involved, however, there should be equality of capabilities.

Now, I am going to read to you what I consider to be a very important policy that relates to spare parts and ammunition. Some parts of this I will have to edit.

Mr. ROOSEVELT (presiding). Do you want this off the record completely?

General SCOTT. It goes into combat reserves, and I would rather have it off the record.

Mr. ROOSEVELT (presiding). This will be off the record.

(Discussion off the record.)

General SCOTT. Briefly, for the record: In the interest of inducing countries to achieve a self-supporting basis for those items, the

United States will no longer provide on a grant basis the spare parts and ammunition required to maintain and supply United States equipment on hand to countries with the capacity of (1) purchasing such items from the United States under the provisions of 408 (c) of the MDA Act of 1949, as amended, or (2) producing, or otherwise procuring such items.

In the preparation of the fiscal year 1953 programs, the following policy governs: For spare parts (1) not to exceed 1 year's supply at United States peacetime rates may be supplied for end items in the fiscal year 1953 programs; (2) in addition, not to exceed 3 months' supply at United States or NATO approved combat rates may be supplied for items in the fiscal year 1953 programs; (3) spare parts may be furnished on a grant basis for equipment furnished under previous programs to a total on hand not to exceed the above levels, provided such action is determined to be essential to the combat effectiveness of forces; (4) spare parts will not be included for items furnished under previous MDA programs, lend-lease, or other sources when they can be provided from country production or country purchase.

The same general principle applies in the case of ammunition.

On recommendations of the respective United States military services, or the country MAAG, and in the cases of NATO countries, JAMAAG, the Department of Defense may approve exceptions to the above policy when such exceptions are clearly in the interests of the Mutual Security Program.

That covers, I think, broadly enough, this whole question of ammunition and spare parts.

Now, to discuss the contents of the material programs. Material programs will exclude the following types of items:

(a) Obsolete or obsolescent items, unless the country itself agrees to accept them;

(b) Equipment of questionable operational value;

(c) Equipment which for security reasons should not be made available; and

(d) Equipment for which a country has no direct military need, will be unable to absorb, or will be incapable of utilizing at the time of expected delivery.

It follows that no equipment which would go into a country's stockpile should be shipped except for authorized reserves and maintenance levels.

Mr. FULTON. Could we ask there, does that mean no excess of equipment, as distinguished from surplus?

General SCOTT. That means we will send no equipment to a country if the forces are not in being to accept it, except those items which you normally have to store, such as spare parts, ammunition, and so forth.

The point is, we are not shipping equipment to be stored.

Mr. FULTON. Yes. But within what period of time must it be used? For example, there is the distinction between excess equipment that we have and surplus equipment. For example, is it intended to be usable within a year?

General SCOTT. This has nothing to do with excess or surplus equipment. We are talking about equipment we are making available to these countries under our end-item programs.

Mr. FULTON. That equipment it is assumed is to be usable. It does not get into the question of being excess equipment at all in those countries.

General SCOTT. Will it become excess in those countries?

Mr. FULTON. Yes. Excess to immediate needs, but usable within a certain period of time.

General SCOTT. Well, we do not furnish the equipment if it is going to be excess, but we do furnish equipment for forces which are mobilizable just the same as we do for our own forces—mobilizable in units. Then that would be furnished to the unit direct and would not be excess.

Mr. FULTON. The other part of the question is, if they need that, do you supply any equipment for reserves?

General SCOTT. We supply equipment for forces which are included in the NATO plan and which are mobilizable within 90 days.

Mr. FULTON. That is part of the answers.

General SCOTT. But they are supposed to be combat effective at that period.

Mr. FULTON. Thank you.

General SCOTT. (e) Human blood and human blood derivatives.

(f) Also narcotics and antibiotics.

(g) Housekeeping equipment, such as field ranges, tents, typewriters, and so forth.

(h) Personal equipment and personal supplies of a type peculiar to the armed forces.

(i) Prefabricated warehouses, bulk storage facilities for POL.

Mr. VORYS. Would you tell us what that personal equipment means? Is it uniforms?

General SCOTT. That is right. Uniforms, undershirts, belts, web equipment of various kinds; mess kits and all the items that a soldier has with him.

Mr. SMITH. Is there any tobacco in that?

General SCOTT. No.

Mr. VORYS. Yes. The tobacco is in the list that is excluded.

General SCOTT. This is all excluded. We do not furnish that.

Mr. ROOSEVELT (presiding). Yes; but ECA takes care of that.

General SCOTT. (j) Common use items, including but not limited to the following which are not furnished. Automotive spare parts, such as spark plugs, fan belts, brake shoes, tires and tubes, and so forth. Second, clothing and textiles. Third, engineering equipment not on a table of organization and equipment of the United States engineering troops. Food, forage, medical supplies, POL. Raw materials are not furnished.

Mr. VORYS. General, have you finished the list of exclusions?

General SCOTT. Yes, sir.

Mr. VORYS. I have two questions. One is, Could you give us an example of security items that are under (e), I think it is, or, in any case, security items? I immediately would think we are going to hand around atom bombs under this program.

General SCOTT. Atom bombs are not furnished, nor are cryptographic equipment. I am not familiar with all the security items, but they are prescribed in service regulations.

Mr. VORYS. General, I would think it would be of the utmost importance, and I cannot see any military reason or any security

reason for not including substantially that list in the public hearings and also in the report. It seems to me it would answer a thousand questions that come up. I hope you will consider that.

Mr. CHIPERFIELD. General, just one moment. You excluded raw materials?

General SCOTT. Yes.

Mr. CHIPERFIELD. Who pays for the building of an air base and the runways?

General SCOTT. We are not setting it up in our programs. Raw materials are furnished by the ECA programs to the extent authorized. The country pays for building an air base unless it is classified as NATO infrastructure. The financing of infrastructure is currently under consideration in NATO.

Returning to the discussion of end items excluded from our programs, I should like to state that there are some exceptions. As you know, there are now and then going to be exceptions, particularly outside the NATO countries.

Where a valid requirement exists for any of the types of items listed above, where special circumstances indicate consideration, and where contingencies dictate that the items will not otherwise be supplied in time, material programs may include any of these items, provided adequate justification on an item basis for approval of the Department of Defense, accompanies the material program.

In other words, we cannot make a blanket statement, but we require, when they are included, that they be justified, item by item.

Mr. VORYS. We marched clear up the hill and then down again, have we not?

General SCOTT. What do you mean?

Mr. VORYS. How much of the excluded stuff has been supplied up to date?

General SCOTT. None to NATO countries. This is not a new policy. The exceptions apply to such countries as Greece and Turkey.

Mr. VORYS. But you do that under the military program? For instance, common use items?

General SCOTT. We used to, for Greece and Turkey only. Now we are turning over the civilian type of item to ECA.

Mr. VORYS. I wondered, for the information of myself and the committee, and possibly the House, if we could have this. As I say, I think this exclusion list is an interesting list. Could we know if there had been no exceptions in NATO, or if the exceptions are trifling? The amount would show if it was trifling or not.

General SCOTT. Yes. There was some specialized flying equipment for Norway which was very special equipment. But that is the only one I know of.

Mr. VORYS. I can see that the Greeks and maybe the Filipinos, or some others, might have to be given mess kits, or things like that.

General SCOTT. The exception paragraph is inserted not for the NATO countries, but for the other countries.

I think you might discuss some of the factors in the determination of the net matériel deficiencies. In order to determine net deficiencies the country's assets must be subtracted from the gross requirements. The assets to be considered include the following:

(a) Equipment on hand and serviceable.

(b) Equipment programed on previous mutual security programs, but not yet delivered and counted as on hand.

(c) Anticipated output within the country as a result of the country's production program.

(d) Equipment scheduled for procurement in a third country, including direct purchase from the United States.

(e) Equipment scheduled for repair from unserviceable stocks on hand.

Items are eliminated which the ECA country missions indicate can be produced or procured by the country itself.

Mr. VORYS. What is the last sentence?

General SCOTT. Any item which can be produced by a given country should be included in the indigenous production program of the country, and such economic assistance as may be necessary should be provided to assist in that production.

Mr. VORYS. By ECA?

General SCOTT. By ECA. Not by Defense.

Mr. VORYS. Could I ask you this, General? In your whole \$6,200,000,000 program, is there any economic aid of any kind? Is there any material furnished, or is there any dollar aid of any kind furnished?

General SCOTT. There is no dollar aid, and to my knowledge no material furnished.

Mr. VORYS. And no end use items like food, and that sort of thing?

General SCOTT. None.

Mr. VORYS. Is there any food in your program at all?

General SCOTT. None. No, sir.

Mr. FULTON. General, could I ask if you could come up with several alternatives? We on the committee must face the fact that this program may be cut on the floor. Now, if it is cut, then we should be able to explain what the effects of a cut will mean.

For example, Senator Taft has recommended that the program be extended over 2 years instead of 1 year. We would say that is equivalent to a 50-percent cut in the military aid program.

Would you then supply us with some sort of a not-too-detailed plan showing how the program would be handled on that basis? Let us say, on the basis of a 50-percent cut, or, in the alternative, on stretching it over 2 years. Then give us the effects of such a cut.

In addition, the other question is: What would the effect of a billion dollar cut be, and how would you have to change the program to meet a billion dollar cut? Those are the two things I would like to have submitted to me and to the committee, as they are contingencies that we directly face on the floor of the House.

Mr. ROOSEVELT (presiding). Could I ask a question on that to clarify what your question is?

As I understand Senator Taft's proposal, he merely says we are going to give you this amount of money, but it is going to be spent over 2 years. Now, under that kind of a limitation there is no reason why the three agencies concerned could not go ahead and spend it in the first year and come back to us next year and say, "Boys, your money is gone. Your 2-year program is finished in 1 year. The security of the free world now depends on your modifying your original position."

Now, that is one answer. I mean, General Scott can come back and say that under Senator Taft's proposal it makes no difference at all, because we are going to spend it all as we have a program.

The other thing is: Do you mean that Senator Taft's proposal is to cut this total program by 50 percent in this year, so that the other 50 percent must be and can only be spent in the second year?

Mr. FULTON. May I comment first that I am in the position of having to take Senator Taft at his word, that he intends this program to be spread over 2 years.

I have asked for an answer in the alternative, if there is a difference either on the spreading of the program over the 2-year period, as Senator Taft says it, or taking it on a simple 50 percent cut for the year.

Mr. ROOSEVELT (presiding). That is correct.

Mr. FULTON. The third one, though, was the plan that would have to be followed on a billion dollar cut and the effect then of what that plan would be either upon United States security or upon the program.

Mr. ROOSEVELT (presiding). May I ask for a clarification of that?

Mr. FULTON. I can clarify that a little. I am talking about a billion dollar cut on the military program and not on the economic aid.

Mr. ROOSEVELT (presiding). All right.

General SCOTT. Of course, we feel very strongly that this program should be approved as is.

Mr. FULTON. Yes, sir. We must make these points on the floor, though.

General SCOTT. It is based on military requirements. If the question involved is whether or not we approve the program and appropriate the money, or approve the program and appropriate only a portion of the money and the rest of it is contract obligation, I think that can be worked out, because manifestly all of the money cannot be spent this current fiscal year. That is, actually spent.

Mr. FULTON. We should leave that mechanical part of it out of my question.

General SCOTT. That can be worked out. I think there would be no objection on the part of Defense to such an arrangement if it is a question of appropriating a certain amount and the rest of it is contract obligation.

Mr. FULTON. I would rather not bring up that particular mechanical process in my question. My question is what kind of a program will the United States have, first, if the military program is cut on the floor \$1,000,000,000?

Secondly, What kind of a program will the United States have if Senator Taft's suggestion is approved that the program be extended over a 2-year period instead of a 1-year period?

Then as a corollary to that, take the alternative. If there is simply made a 50-percent cut in military program, what do you have?

I think you should give us those alternatives because they seem to be very likely alternatives at this particular moment.

Mr. VORYS. Will the gentleman yield?

Mr. FULTON. Yes.

Mr. VORYS. It seems to me that they should give the program they want, which they have never yet done, before they give us the program that they might have under other conditions.

Mr. FULTON. Yes, but I have asked for this later, and not at this time. In fact, that is why I brought it up to begin with, so that it can be worked on by the Department.

Mr. MERROW. Mr. Chairman.

Mr. CARNAHAN (presiding). Mr. Merrow.

Mr. MERROW. I would like to ask the question for clarification. Is this excess to be in addition to the end items in the main bill? In other words, will the amount that we allow you for excess be in addition to the \$8,500,000,000 bill?

General SCOTT. It will not be an additional appropriation.

Mr. MERROW. You asked for a limitation of \$1,300,000,000.

General SCOTT. \$1,150,000,000.

Mr. MERROW. \$1,150,000,000. So that actually, to get that over-all picture you would have to add \$1,150,000,000 to the \$8,500,000,000. Is that right?

General SCOTT. No, sir.

Mr. VORYS. 515 is added to it.

Mr. MERROW. But I mean to get the over-all assistance for both military and economic aid. The excess will be outside of what we will authorize and appropriate in the large bill. Is that it?

General SCOTT. The increase in the ceiling of \$450,000,000 we are asking for in this bill for excesses has no relation to the dollars requested in the act.

Mr. MERROW. Is this right then? If you add up the economic aid and military aid under the large bill and the limitation that you want for excess materials, it would be 8.5 plus 1.150?

Mr. VORYS. No.

Mr. ROOSEVELT. Plus 450.

Mr. MERROW. I see. Plus 450.

General SCOTT. Remember that 450 is the acquisition cost.

Mr. CARNAHAN (presiding). Will you proceed?

Mr. ROOSEVELT. To my knowledge it is not really fair to add the 450 on to the 8.5 because that represents the acquisition cost and it would not actually be costing us that, or the taxpayer that, at this point.

Mr. VORYS. Except for this: If they finagle this excess formula and take new stuff, it could be that way. As a matter of fact, it is an authorization that for sure at one time or the other cost the taxpayers \$450,000,000.

Mr. ROOSEVELT. That is correct.

Mr. VORYS. Now, it depends on the way this excess formula is administered, whether it is really old stuff or is declared old for the sake of the expanding of the program.

Mr. MERROW. It could be up to \$9,000,000,000 then.

Mr. ROOSEVELT. No, because normally the record shows the stuff they have declared excess under their procedures, which we went into, the current value is at the most 10 percent, and even under the 408(e) program the resale value is at the most 10 percent. So that you are only really adding possibly \$40,000,000 on to the 8.5 in actual value spent.

The taxpayer has previously spent, and the United States Army, Navy, and Air Force has gotten value out of this stuff before it became excess.

Mr. VORYS. The rehabilitation costs would come out of the appropriation authorization?

General SCOTT. Out of the appropriation.

Mr. CARNAHAN (presiding). Then you should make it clear there would be no addition to the appropriation at all.

General SCOTT. It does not increase the appropriation, but in raising the ceiling on excesses and permitting us to use more excesses, it permits us to utilize equipment which would not be otherwise utilized in our grant aid programs and will also permit us to sell equipment under 408 (e). The value of it on the market would be very low. It is excess in any event, the only question being whether we find a useful place for it in the mutual aid program, or sell it as junk or scrap.

Mr. MERROW. I think I can see although it does not increase the authorization and appropriation, it does substantially increase our military aid to the countries. Is that right?

General SCOTT. That is true.

Mr. MERROW. In other words, they would get what we would authorize and appropriate for end items in this bill, that is, military assistance plus all of this excess, so that they would be getting more military aid than the bill actually shows. Is that right?

General SCOTT. That is true, but some of the more expensive items, such as aircraft are going to have to be replaced. That aircraft will ultimately be replaced by jet aircraft.

Mr. MERROW. To get the whole picture then, when we finally make the authorization and appropriation for military end items, you will have to set that forth, and then you will have to add on what we allow you to give for excess, so that if the entire \$8,500,000,000 should go through it would still be more if this \$1,150,000,000 goes through. That is, we will give more military aid than is shown in the large bill.

General SCOTT. You do two things, as I see it, if the act is passed as proposed. One is you raise your ceilings on excesses from \$700,000,000 to \$1,150,000,000.

Mr. MERROW. That is right.

General SCOTT. Also, you increase the appropriations to \$8,500,000,000. The same plan that you are applying this year was applied in 1950 in the Turkish Aid Act.

I am still confused as to exactly what Mr. Fulton wants when he said you spread the program over 2 years. By spreading the program over 2 years, is it to be understood that half of it would be appropriated for this year, and that half of it would be reserved for appropriation the following year?

Mr. FULTON. I believe Senator Taft's suggestion is that you would get the money with the understanding that this amount of money would be all that you would receive for 2 years. Now, the breakdown as between the years I do not believe you went into, but if you had this program that you now set up for this fiscal year extended over a 2-year period, you would then have to plan on what you would need to put in the pipelines for, say, future delivery, and do some prior ordering, and it would cause you to make a change in plan.

So that you have a problem then of how a 2-year stretch would affect your planning program.

General SCOTT. I can answer that right now. As far as NATO is concerned, it would practically wreck it. Our 1952 programs—

Mr. FULTON. I am putting up alternatives that probably most of us do not favor. Would you say what your planning would have to be under these two or three sets of circumstances, because they are far more than just a small cloud over the horizon. There are substantial groups who will take those positions on the floor.

Mr. RIBICOFF. May I comment that in the field of foreign affairs the position of this group usually is defeated in the Congress.

Mr. FULTON. But at least we must meet on the floor what is now part of the planned opposition. That is, not just to defeat the program, but to cut it down. We should then see, if we were a board of directors, what the alternatives are for action.

So that means, first, how do you plan to do it if the program for this fiscal year is cut \$1,000,000,000? Second, what are the effects of that plan upon security, on the program and on the production here at home?

How would you plan if Senator Taft's proposal were adopted? Certainly the Army comes up with what happens in all probable eventualities and plans for them. It would help us greatly on the floor if you would then tell us the situation as it affects your planning.

General SCOTT. Well, in general this program for 1952 for the NATO countries is to provide certain essential equipment for the forces that they have agreed to have in being in 1952. In other words, this program is to meet the requirements of the forces that the NATO countries have agreed to have in being in 1952.

Mr. FULTON. That is correct.

General SCOTT. When you get to discussing a cut in the program and a different amount of money, there is a terrific processing that has to be done to arrive at the readjustments. There would have to be thorough study by the Joint Chiefs of Staff before the funds could be redistributed.

Mr. FULTON. Certainly you people did not come up here with only one plan based on a certain specific number of dollars. You must have come up with alternatives. As a military planning agency, you must have come up with what we could do on this amount of money, and where it would lead us, or what we would have to do if the time were extended.

You have to study these various alternatives and then say let us see what is the best plan. You are giving us the best plan, and yet you say you have no other alternatives. I am saying, take two or three alternatives, which you might not like, and let us hear what the effect is and what the difference in your planning is.

Mr. VORYS. Could we please get their plan before we start talking about alternatives? So far as this record is concerned now, if we go to the floor we do not have very much explanation for this plan. Now, before we get to alternatives, let us get the plan.

Mr. FULTON. I am not asking for an answer upon the questions now, but I want them to think about it ahead of time before we get through with this.

Mr. CARNAHAN (presiding). General, you understand the request that has been made by the gentleman, and if you will I will ask that we proceed, and that that information which the gentleman wants be at least thought of by you.

Mr. FULTON. Thank you, Mr. Chairman.

(The following was submitted for the record.)

THE SECRETARY OF DEFENSE,
Washington, July 28, 1951.

Hon. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives.

DEAR MR. RICHARDS: The statements which Mr. Fulton made on July 20, 1951, at the Mutual Security Program hearings before the Committee on Foreign Affairs as to the need for alternate plans in the event of a major reduction in proposed authorization of fiscal year 1952 funds for military assistance have been given most serious consideration in the Department of Defense, and I trust that the following discussion of the relationship between the principal factors affecting our foreign-aid planning will assure the committee that the possibility of attaining our security objectives with lesser sums of money has not been neglected. I do not intend this discussion to be taken solely, or even primarily, as an argument that the funds should not be reduced; I hope rather to point out that these funds are carefully calculated as one element in a complex plan to bring about a certain result. The alternative is a change in the basic aims which we had when we agreed to the appointment of General Eisenhower as Supreme Allied Commander in Europe.

We must assume that the impact of any substantial reduction in foreign military aid funds would be borne by the nations participating in the plan for the defense of Western Europe, since over 80 percent of the funds are earmarked to assist in carrying out that plan. Any other assumption would imply almost complete renunciation of our current objectives in other parts of the world.

The plan agreed to by the North Atlantic Treaty members for the military security of Western Europe is based on the provision of certain land, sea, and air forces, primarily to General Eisenhower's command, on a time schedule which insures steady improvement in the European military position, approaching the minimum strength which can give reasonable assurance of security in about 3 years. Each member of the North Atlantic Treaty Organization has committed itself to bring certain elements of these forces into being on scheduled dates. It is true that the sum of such commitments does not yet equal the requirements, but there is no reason to doubt that this gap can be reduced within the time limit as the rearmament effort gathers momentum. But the ability of the European nations to create combat-ready forces is limited by the availability of modern weapons and other matériel. Some of this matériel they can and will provide for themselves in increasing amounts under the stimulus of General Eisenhower's leadership and United States economic aid. During the critical period which faces us, however, the bulk must come from the United States. Thus, the raising of European forces is directly related to the scale and time schedule of United States matériel deliveries. The funds requested for this purpose in fiscal year 1952 are calculated with the greatest practicable precision, on the basis of carefully screened lists of deficiencies, to provide essential matériel for those European forces which will be in being by December 31, 1952.

I am sure the committee fully understands the military basis for the matériel program as summarized above, but I have tried to put it in such a way as to emphasize the essential relationship between European military manpower, United States matériel, minimum security objectives, and the time we reckon to have for rearmament.

As to our plans in the event we cannot provide matériel on the time schedule under which General Eisenhower's forces are building up, we must obviously face a dislocation of the other balanced factors. On a purely theoretical basis, all such reductions point to an extension of our objective in time; we could theoretically attain the same minimum military security at a later date. Very roughly, the time extension would be proportional to the reduction in matériel deliveries. If a reduction of funds required extension of a planned 1-year program through 2 years, we might attain our objectives about 1 year later than we had originally planned.

More significant than a theoretical exercise in time factors, however, is a consideration of the moral and psychological impact of a program which would fail to equip the men whom the European nations have already engaged to furnish at a certain time and for whom they are budgeting funds for maintenance and locally produced equipment. Immediately the United States will lose the initiative and leadership in pressing for greater European contributions and for accelerated effort in producing the forces now projected. The momentum which General Eisenhower is trying to build up in rearming Europe will stall and pos-

sibly slide into reverse. Under such conditions, no date can be set for our readiness to meet an attack on terms which offer a reasonable chance of success.

The foregoing discussion derives its most serious implications from Mr. Fulton's assumption based on Senator Taft's proposal for stretching fiscal year 1952 military assistance through 2 years, whether by a 50-percent cut in fiscal year 1952 or by a 2-year authorization which might delay the full impact until manpower and other European resources were available for activation of those forces scheduled for calendar year 1953. Mr. Fulton's alternative, a flat \$1 billion cut, would probably have to be applied to eliminate that part of the program which provides speed and flexibility in taking advantage of accelerated efforts which we expect on the part of our NATO allies, and anticipated participation in the defense effort by certain nations presently outside NATO. Since the total amount planned for these purposes in fiscal year 1952 is considerably less than a billion dollars, the remainder of the cut would ultimately have the effect of reducing the European NATO forces in being on December 31, 1952, by an indeterminate number, the precise order of which would depend on European reaction to a continued deficiency in certain essential matériel.

The specific answer to Mr. Fulton's request for information as to the course of action which the Department of Defense must contemplate in the event of a large-scale reduction in fiscal year 1952 military assistance funds is quite evident in the light of the foregoing discussion. In any event, regardless of the language of the enabling legislation, our action must be to inform General Eisenhower and the member nations of the North Atlantic Treaty Organization that the present time schedule for attaining a sound defense position in Western Europe is not feasible, that the United States Government is prepared to accept the risk of substantial delay, that no adequate provision can be made for prompt initial equipment of friendly European nations presently outside the North Atlantic Treaty Organization, and that any further action taken by the Supreme Commander must be without the full United States support upon which he had hitherto depended. The Supreme Commander must then make a revision of his defense plans in the light of the lesser means which he could expect to have at his disposal during the critical period ahead.

Faithfully yours,

G. C. MARSHALL.

Mr. CARRAHAN (presiding). Will you proceed, General?

General SCOTT. Do you desire any further discussion on this question of programing? I might carry on the discussion we started yesterday on the tying together of the military and item programs and the economic aid program.

We feel that these programs under this scheme that I have indicated today are tied together, can be tied together at the country level, because what we are trying to accomplish is to arrive at the deficiencies in order to have the forces in being there at a specific date. Now, that list of deficiencies is what they require to equip the forces.

When the deficiency list is reviewed by the country MAAG and the ECA mission, it is divided into two parts. One part consists of the items which must be produced in the United States, and the other part lists those items which must be produced in the country.

The economic support program is based on the items that must be produced by the country. It takes both parts to equip the forces that will be in being.

This chart does not apply to title I, but applies to the total appropriations. It gives the obligations of the fiscal year 1950 and 1951 funds.

This blue curve indicates the obligations.

This curve here indicates the expenditure, and these lines indicate the allocation of the funds to the Department of Defense.

Mr. VOUYA. Does expenditure roughly parallel materials shipped?

General SCOTT. That is correct.

Mr. Vorvys. About \$948,400,000. That is what this green book shows: 743 is the first, of 1950, and 205 out of the 5,381 made available last year.

General Scott. That shows how much shipped in dollars?

Mr. Vorvys. Shipped from ports 743.4 of all three titles in program year 1950.

Shipped from port, program year 1951, \$205,000,000. I have added those and they come to 948.4.

General Scott. Is that for June? What date is this?

Mr. Vorvys. May 31, "Selected statistics." This is just what we were handed.

General Scott. There are two ways you can figure values. One is the expenditure under the act, and the other is the expenditure under the act plus the value of other equipment from excesses that may be furnished. I do not know what was used in the preparation of those data, but our figures indicate for both 1950 and 1951, as of May 31, that the expenditure was around about \$800,000,000. It is over a billion by this time.

The obligations as of May were \$1.8 billion, approximately, and we expect to obligate by the end of June - we do not have the reports yet, but we estimate the obligations will be about \$5.8 billion, or close to it. In other words, 92 percent of the funds made available will be obligated. Approximately \$500,000,000 will be unobligated.

Now, on deliveries. The 1950 program is about 80 percent delivered. The 1951 program was 9 percent delivered by June 30, 1951. We expect the deliveries of the 1951 program in the fiscal year 1952 to be about 75 percent.

Mr. Vorvys. You mean that from May 31 - how much did you ship in June, because the \$205,000,000 in the book that was handed to us is not anywhere near 9 percent of \$5,183,000,000.

General Scott. We do not have the figures. We estimated the amount that will be shipped in June. There was a very large shipment in June.

Mr. Vorvys. And \$734,000,000 is not any 80 percent of \$1,685,000,000.

General Scott. To repeat what I have said, the deliveries under the 1950 program to June 30, 1951, amount to about 70 percent. The deliveries during the fiscal year, 1951, for the 1951 program, amounted to 9 percent. Both those quantities are estimated. We do not have the final reports in for June 30.

The deliveries we expect during the fiscal year 1952 are as follows:

The remainder of the 1950 program will be delivered; 73 percent of the 1951 program will be delivered; approximately 8 percent of the 1952 program will be delivered.

Mr. Vorvys. What does that total in billions?

General Scott. That runs about \$3,750,000,000.

Mr. Vorvys. What does that show for deliveries of 1950 and 1951 in billions?

General Scott. This will be a very rough estimate. About \$300,000,000 of the 1950 program; about \$3,000,000,000 of the 1951 program, and a half a billion of the 1952 program for a total of \$3.75 billion.

For the fiscal year 1953 the remainder of the 1951 program will be delivered and about 81 percent of the 1952 program. The total deliveries we think will run around \$5.0 billion.

Mr. VORYS. Who is the Comptroller of International Security Affairs?

Mr. VASS. The Department of State.

Mr. VORYS. Is he here?

Mr. VASS. He is not here. It is Mr. Murphy.

Mr. VORYS. This document was prepared by him. It shows less than 50 percent of the 1950 program shipped from port as of May 31, 1951, and you just told us that 79 percent has been shipped.

Now, do you mean that 29 or 30 percent of the whole 1950 program was shipped in the month of June?

General SCOTT. The information I have is that they estimated that on June 30 shipments would amount to 79 percent.

Mr. VORYS. Who estimated?

General SCOTT. The services.

Mr. VORYS. It is now July 18 or 19. Do you have to make an estimate as to what was shipped in the fiscal year ending June 30, 1951?

General SCOTT. The reports are now coming in. Do you know whether they are in yet?

Mr. O'HARA. The reports from the military departments come in normally as of the 25th of the month. The month of June, however, is a month in which they try to clean up all their little odd balancing figures and so forth, to clean out the fiscal year accounts, so they allow an extra 15 days for those reports so that they will not be in until August 10 for the June 30 fiscal year. There were heavy deliveries anticipated during June, and the preliminary reports indicated that approximately \$400 million worth of materials for MDAP was shipped from ports in June.

Mr. CARNAHAN (presiding). General, will you proceed?

Mr. VORYS. Yes; go ahead.

General SCOTT. I have here the categories of items, of major items, and the quantities that have been delivered through June 30, 1951.

The combat vehicles for the Army amounted to 4,480, and there are about 18,000 trucks and 2,900 pieces of artillery. There are 396,000 small arms and machine guns, 178,000,000 rounds of small-arms ammunition, and 5,000,000 rounds of artillery ammunition, and 921,000 mines and rockets.

The Navy has delivered 188 vessels through June 30, 1951, and 241 aircraft during the same period.

The Air Forces have delivered 605 aircraft.

This is an over-all chart of major categories of materials in 1950, 1951, and the proposed 1952 mutual security programs. The 1950 is shown in red; the 1951 in green; and the proposed 1952 in yellow.

Mr. VORYS. When you say "estimated charges" that means that is what you are going to deliver out of these programs, or just what does estimated charges mean?

General SCOTT. It is the cost of the item, excluding packing, handling, crating, and shipping and repair and rehabilitation of excess stocks.

Mr. O'HARA. That will include the cost of the items either at the acquisition cost, the replacement cost, the procurement price, and excludes the rehabilitation cost in the case of excess items, Mr. Vorys.

Mr. FULTON. Will you please say that again?

Mr. O'HARA. The basis for the charges is either acquisition cost, replacement price if it must be replaced, and new procurement cost if it is procured for this program. Repair and rehabilitation costs in the case of excess items are excluded.

Mr. VORYS. But this is cumulative.

General SCOTT. That is correct.

Mr. VORYS. This is everything that has been done, and you think is going to be done, through fiscal year 1952.

General SCOTT. The yellow is what you add on to it for 1952. You add the 1950, 1951, and 1952 programs, and you get your total.

Your 1950 program for vessels was this. You add this much more for 1951 and this much more for 1952.

Mr. VORYS. What I do not get is whether, for instance, for vessels, whether that includes for vessels all that you have shipped and intend to ship for 1950? Is it a combination program of what you have done and what you expect to do?

General SCOTT. It is a program by years. It is money made available for a 1950 program. We have a 1951 program which has two parts--the regular and the supplemental.

Of the 1951 program, very little has been delivered. Then there is a 1952 program.

So this is independent of deliveries. It is how we set up these programs and where the money goes. You can see that the major category, taking the three programs, 1950, 1951, and 1952, on aircraft and aircraft equipment, is hitting around about \$3 billion.

Mr. VORYS. Could I ask just one more question? You have a request for \$6,200 million. Is that what it is this time?

General SCOTT. 6.3 approximately, including administration.

Mr. VORYS. So we are looking at the chart, and that is \$7,066.4 million for 1950 and 1951. That is \$1,685,200,000 for 1950, and \$5,381.2 million for 1951. Add to that \$6,300 million and we are looking then at a \$13,366 million program. Is that correct?

Mr. FULTON. It could not be from the figures that are there.

Mr. VORYS. That is what I mean. We have all these lines there, and I am trying to figure out what it is.

Mr. EFRON. The total for matériel is about 12.7.

General SCOTT. I get 12.6 roughly, including the excess.

Mr. VORYS. I took it out of the book here just now; 1 billion 685.2 was 1950. Is that right?

Mr. O'HARA. Yes.

Mr. VORYS. 5 billion 381.2 is budgeted for 1951, and 6.3 billion is budgeted for 1952.

Mr. O'HARA. That includes administration and packing, handling, crating, transportation, and training.

Mr. VORYS. Surely.

General SCOTT. Matériel is 12.6.

Mr. VORYS. How much?

General SCOTT. 12.6 or 12.7. Around that.

Mr. VORYS. So out of the whole business there is \$766,400,000 that has been or is going to be spent for administration and training? I am subtracting 12.6 from 13,336.4, which are the budgeted figures, and the only ones I can find.

Mr. O'HARA. Administration does not include very much in comparison with the total of the program. It is a low percentage. Train-

ing is not much more than the administration over-all. There is a large cost, however, for packing, handling, shipping, and crating. Preparation for overseas shipment is an expensive thing, and then the shipment itself. That shipment itself is a large item of expense. On most items it runs somewhere around 15 percent of the value of the item, that is, the cost of packing and crating for overseas shipment and shipping to port and shipping overseas.

Mr. FULTON. Could I point out to you on that chart that I think the figures shown on the chart do not make 12.6 billion. The chart shows approximately 11.4 and there is obviously 1.2 then that is unaccounted for by those chart figures.

Mr. O'HARA. That 1,150 is the proposed excess limitation. It is \$700,000,000 in the present program and an additional \$450,000,000 proposed for the coming one.

Mr. FULTON. So that actually is 1,450?

Mr. O'HARA. It would be \$1,150,000,000 if the acquisition cost of the excess were added to the material charges.

Mr. FULTON. That is correct, but on the chart there it is \$11,450,000,000 total.

Mr. O'HARA. Correct. The acquisition cost of excess is excluded from the charges.

General SCOTT. I wanted to bring out the point that the largest item is aircraft and aeronautical equipment. The second largest item is tanks and combat vehicles. The third largest item is ammunition. The least item is small arms and machine guns.

I can give you that breakdown any way you want it, Mr. Vorys.

Mr. VORYS. Aircraft is tactical, I suppose, is it not?

General SCOTT. Correct. There are some trainers.

Mr. VORYS. Yes.

General SCOTT. And transport aircraft.

Mr. VORYS. Now, that would look as if it is not proposed that they go in very strongly for aircraft. Is that right?

General SCOTT. The European nations?

Mr. VORYS. Yes, sir.

General SCOTT. Yes, sir. They go in very strong for it.

Mr. VORYS. What would be their proposed amount?

(Discussion off the record.)

Mr. VORYS. Have you there how much aircraft they are to have in dollars?

General SCOTT. I hesitate to answer that question. I understand there is considerable study now going on with the air chiefs of staff of the NATO countries, arriving at air contributions by countries and aircraft production authorization programs.

(Discussion off the record.)

Mr. VORYS. Annual production you mean?

General SCOTT. No. That is full production.

Mr. VORYS. You mean that is what they have got to do?

General SCOTT. That is what they are planning to do by 1954.

Mr. HALABY. Could I comment on that, General Scott?

General SCOTT. Yes.

Mr. HALABY. You were asking for production of aircraft in comparison with this end-item delivery, were you not, Mr. Vorys?

Mr. VORYS. I thought at some time or other we were going to get a figure of what we would put up, and figuring it the best way you can

in dollars, what the European nations would put up. I thought maybe we were going to have that at some time or other, are we not?

(Discussion off the record.)

Mr. VORYS. What I thought was that since you had the total, that you are going to give us at some time, we might be able to get the aircraft figure now. If you do not have it, all right, but I thought if you had the totals you would know what went in to make up the totals, and we could just say aircraft.

(Discussion off the record.)

Mr. VORYS. Is that right?

General SCOTT. Yes, sir.

Mr. FULTON. You mean, give us the whole program over-all so that we see the whole pie and then show how those countries share in the various programs, divided as to years—1951 and 1952—in each of those categories, and then you have the whole over-all situation.

Mr. VORYS. Yes. If you do not have it, do not stop now, but go ahead.

Mr. HALABY. We will be giving you in the further ECA presentation figures concerning the categories of their production for fiscal 1950, 1951, and estimated for 1952.

Mr. VORYS. I thought if you put a comparable chart like this opposite ours, we would be able to see that the United States is going to do the lion's share of producing aircraft. However, when you would look down at small arms, and that is the smallest thing on there, you would see a pretty long line of small arms that Europe is producing, and that sort of thing. The two would roughly supplement each other in making a fully rounded program.

I would hope that is the way it would come out.

General SCOTT. That chart there gives you the breakdown of the major items of equipment in the proposed 1952 program. That is confined to the 1952 program and gives all countries, including titles II and III. It is broken down into various categories. There are vessels, aircraft, tanks, combat vehicles, small arms and machine guns, motortrucks, artillery and naval guns and ammunition, small-arms ammunition, and artillery and naval ammunition.

(Discussion off the record.)

General SCOTT. Those are small vessels.

Mr. VORYS. What kind of vessels would they be?

General SCOTT. I will ask the Navy to answer that question.

Commander HOFFMAN. They are mostly landing craft, sir. LCM-3's and LCVP's. They are used up the river in landing soldiers and to patrol river waters. That is the type of vessel that makes up the bulk of vessel aid for Indochina.

Mr. VORYS. Are those all excess, the kind you are talking about?

Commander HOFFMAN. No, sir. They are not.

Mr. VORYS. They are up to date?

Commander HOFFMAN. Yes, sir. They have been taking them out of service stocks, but I think the Navy may have to go into procurement of them in the future because they do not want to let our reserves of them get too low.

Mr. VORYS. And that same sort of thing would be useful in the Philippines, I suppose?

Commander HOFFMAN. Not necessarily, sir. It is a little different type of vessel than we envision for the Philippines.

General SCOTT. I might state these figures are constantly under revision and adjustment, as we get information from the various countries. When we find they can produce an item in the program, that item is eliminated.

Mr. CARNAHAN (presiding). Are there any further questions on this chart?

Mr. VORYS. This is probably the first, last, and only time we are going to look at this. I realize it is highly secret. Maybe you fellows have digested it already, but I was hoping we could study it for a few minutes. I do not want to detain the committee and I can do it separately.

Mr. CARNAHAN (presiding). I want to say that when we finish with the general we are going to adjourn until 2:30 this afternoon.

(Discussion off the record.)

General SCOTT. That is millions.

Mr. VORYS. Millions of rounds?

General SCOTT. Correct.

Mr. VORYS. Is not small arms ammunition the kind of thing they ought to get to producing? I do not mean the French particularly, but over there?

General SCOTT. That is correct. They should get more and more into it, but in order to get the forces equipped and combat-ready at this time, the MAAG indicated this ought to be produced in the United States.

I would say in general we should get out of that picture more and more as the Europeans get into it.

(Discussion off the record.)

General SCOTT. Yes, sir. The same thing applies. That applies to motortrucks too. We are cutting down more and more on trucks, but we have a very serious problem of standardization.

Mr. VORYS. In that stockpile item, is that going to be under General Eisenhower?

General SCOTT. I am glad you brought up stockpiling.

Mr. VORYS. It is quite an item.

General SCOTT. Yes. It is a very important item and I have failed to mention it. The country programs are all based on the forces that the countries have agreed to raise during the calendar year 1952. In other words, that is Ike's army.

This item is a stockpile. The amount of it runs about \$500,000,000, as I remember. That will be on the next chart. That stockpile is there for many purposes. We are trying to get the countries to make more commitments than they have accepted for 1952. There is pressure all the time to get them to accept more aircraft units and more army units and more naval units in order to try to meet the requirements.

We have arranged our program based on commitments, but we are trying to get them to increase those commitments.

(Discussion off the record.)

General SCOTT. Moreover, this is a general pool for meeting various purposes.

Mr. VORYS. Will you have warehouses?

General SCOTT. No, sir.

Mr. VORYS. Is that stockpile going to be in this country?

General SCOTT. In this country, but it really will not be a physical stockpile. This is a bookkeeping stockpile. It will not be stored separately from our own stocks, but can be collected in a short period of time. I would rather have somebody from the Army speak on that.

Mr. VORYS. Let me say that I visualized that, out at Fontainebleau there would be a lot of shanties, full of stockpiled equipment, and they would say, "If you European fellows speed up, just come and get it."

General SCOTT. No, sir.

Mr. VORYS. It is not that kind of a stockpile?

General SCOTT. Colonel Burgess can answer that. This should be off the record.

(Discussion off the record.)

Mr. VORYS. As I understand it, all of those items of equipment are exactly the same as we are producing for our own forces, with extremely small exceptions.

General SCOTT. They are all for the same types as for our own forces.

Mr. VORYS. I understood there were some exceptions in electronics, or communications, or something like that. Dollarwise, could you tell us what that would be?

General SCOTT. No; but I would like to have the Air Force speak on that point. The panels of the aircraft and certain instruments, of course, are undoubtedly different from theirs.

Mr. VORYS. The language panels and the markings are in meters and kilometers, and so forth.

General SCOTT. That is right. The aircraft are just the same, but it is just a question of different instruments.

Mr. VORYS. I have seen them turn over a boat, for instance, to the Italians, and the question was whether it was easier to teach the Italians enough English to read those things, or to change the labels. However, we have a stockpile which they are working on downstairs, which is contemplated, of \$60,000,000,000 of similar stuff programed for next year.

General SCOTT. For next year?

Mr. VORYS. The armed services appropriations. If they get what they are asking for it will be about \$60,000,000,000 worth of this same sort of stuff, which would be way above the billion that you have signed up as a bookkeeping transaction.

General SCOTT. You are talking about the stockpile in the services?

Mr. VORYS. Yes. I say we have a stockpiling of the kinds of ships, planes, tanks, and so forth, that we are producing, and that that is physically stuff that could be put into this program; is it not?

General SCOTT. Undoubtedly they have a real purpose for it themselves, that is, the services.

Mr. VORYS. Yes.

General SCOTT. This has a purpose also.

Mr. FULTON. This could be off the record.

(Discussion off the record.)

Mr. VORYS. I would like to ask you a question first as to appropriations.

As I understand it, the appropriations for our own defense materials are made to the Defense Department. Is that correct?

Mr. O'HARA. Yes, sir; and to the organizations within the Department. They made it to the Ordnance Department of the Army.

Mr. FULTON. Would that apply to the Department of State?

Mr. O'HARA. No.

Mr. VORYS. Now, as I understand it, while in the authorization act we say there is authorized to be appropriated to the President for MDAP so much money, it is actually appropriated to the Department of State.

Mr. O'HARA. No, sir. The money is appropriated to the President. The President has designated the Secretary of State to act for him in allocating the money. All the money for the mutual defense assistance program, therefore, comes by allocation to the Department of Defense from the State Department, and that makes the difference from the money you referred to previously, which is appropriated for our own Defense Department.

Mr. VORYS. That is right. Now, as to materials. As I understand it, the defense appropriation for our own forces that is being worked on downstairs now contains a proposal for \$34,000,000,000 of hard goods. Is that correct?

Mr. O'HARA. That is approximately correct.

Chairman RICHARDS. \$34,000,000,000 of what?

Mr. VORYS. Of durable goods, or hard goods. There is a lot there for troop pay, and all kinds of things like that, but \$34,000,000,000 of it is for hard goods.

There are \$5,794,200,000 of the present authorization—the MDAP appropriation authorization—that is to go into hard goods. Is that correct?

Mr. O'HARA. That is proposed in this.

Mr. VORYS. Yes. That is the proposal.

Mr. O'HARA. Yes.

Mr. VORYS. That is not a secret figure, because it has been given out.

Mr. O'HARA. Yes.

Mr. VORYS. So that we are over \$40,000,000,000 in proposed hard goods. Then there is a request for \$500,000,000 additional for the reimbursable aid, which, if used, would be another addition to the hard goods.

Mr. O'HARA. That is correct, sir.

Mr. VORYS. Now, the United States was producing hard goods at the rate of \$34,000,000,000 for this year. We produced \$22,000,000,000 in 1944 at the peak of the war.

Has somebody figured out where in the world, with all the good will in the world, if we give you all the dollars you ask for, you are going to double substantially the hard-goods production of the United States in the coming year?

Mr. O'HARA. The amount that is requested for appropriation for military hard-goods production includes in it the expenditure basis because of the fact that it must include contract order time and contract lead time. In other words, our system of appropriation makes it difficult, incidentally, in comparing it with European production and European budget figures. Our system, as we appropriate funds, and as we account for funds, is on the basis of contracts and what is placed, and not on the basis of goods produced and delivered. The expenditure basis which is used generally in Europe is definitely related to deliveries and expenditure.

The military hard-goods production which is being contracted for, which includes, incidentally, a resurvey of all that which has previously been appropriated and not yet spent, whether it has been obligated or not, is being examined constantly and reexamined by the military departments who are drawing up what are known as production schedules, showing which plants and to what extent in each of those plants production is planned with the funds to be appropriated, and at what time deliveries will come from those plants, relating that to the tool situation in those plants, and the additional tools that would be provided, and to the basic plant capacity, and the time in which it can be achieved.

Now, all of those production requirements, those for the military departments, those for the mutual defense assistance grant-aid program, and those for reimbursable aid are included in the production schedules which the services are drawing up, and through the Munitions Board and the Defense Production Agency, are having a review for feasibility and the practicability of their realizing that production.

I would like to say on those that have been submitted there has been shown an ability in the United States to produce that justifies the rate of appropriation that was requested. That exercise was one of the things that determined the submission of the military budget this year. It was determined what could be produced before that budget was submitted.

Mr. VORYS. Well, perfectly obviously, you are not going to produce in fiscal 1952 any forty-odd billions of hard goods.

General SCOTT. That is right.

Mr. VORYS. That is one thing that is clear.

Mr. O'HARA. Correct.

Chairman RICHARDS. I want to ask a question there before you finish.

Mr. VORYS. Yes, sir. I have one more question.

Chairman RICHARDS. Go ahead and finish.

Mr. VORYS. I want to know whether you could give us the average lead time on the program down there or on this program?

Mr. O'HARA. Sir, it varies very widely. Generally speaking, there is a lead time beyond the fiscal year that averages somewhere in the neighborhood of 8 months. In other words, deliveries are provided for over-all on the whole field of hard goods, which includes some semisoft, that runs to an average of about 8 months beyond the end of the fiscal year.

In addition to that, however, there are special categories in which that lead time is much greater, especially in strategic aircraft and in many types of tactical aircraft, and in electronics and other things that require a considerable amount of subcontracting. Tanks run substantially over that period, but much lesser period of time than they had at an earlier date in our production schedule. That is generally the story.

Chairman RICHARDS. General, I want to ask you a question along a little different line. You have heard a number of witnesses testify and many questions asked.

What I want to know is this: I want to get your opinion with regard to the organizational question of this mutual-assistance bill we have here. There are military end items. There is economic aid for mili-

tary production. Then there is economic aid, as such, but about which I am not asking you.

You have legitimate economic aid and legitimate military aid. There is economic production—that is, aid that might help the economy, or it might help the military. Nobody can say whether it is military aid in itself, or whether it is economic aid in itself, or should be so designated.

What do you think about putting all the strictly military-aid items in the defense of the United States and let it be part of our production line, and let it be sent over there by the Joint Chiefs of Staff, or sent to General Eisenhower to distribute as he sees fit in the over-all plan. Then have an over-all administrator.

I am not asking you about point 4. I am not asking you to express an opinion about economic aid. But as to economic aid for military production and the aid that may be either economic or military in character, how about putting that under it too? There you will have everything except straight out-and-out military-end items. Do you not think such an organization could function effectively so far as the military features of this over-all program are concerned abroad?

General SCOTT. I do not think there is any question about the fact that the Department of Defense, if appropriated the funds directly, could carry out the military aspects of MDAP, that is, procure, store, move and distribute, and carry on the training programs that we now carry on. However, to me there is a very, very close relationship between the economic support, if it is going to be carried on properly, and the military end-item programs. They supplement or complement one another. They are very closely related. The more we can get Europe in production, the less our end-item program should be. The less Europe gets in production, the more our end-item program is going to be. So that any organizational system set up has to insure the coordination of the military end-item program and on the economic support of the military effort.

As you stated, there are several different kinds of economic support. One of them is direct support of the military effort. We are interested, of course, in that aspect of the economic support.

There are many other types that are necessary to the sound economy of the country. The economic support ties directly into the production program of the country for their armed forces, and what they produce affects what we ought to produce and what we produce affects what they ought to produce.

So I would say in considering the problem of reorganization that we have to remember there is a military aspect, an economic aspect, and a political aspect of the problem.

Two of those aspects require operating and administrative control. One is economic, and the other is military. I think there will always have to be these two operating agencies. I do not think you can combine them effectively. I do not think that a satisfactory job could be done if both were combined in one agency. There will be a loss of efficiency and effectiveness unless the military operation remains under the military, as it is now. Whatever organization we set up, whether we keep the present one, or whether a new agency be created such as the Mutual Security Agency, or whether you turn the money over to defense, coordination of the military and economic aspects is an essential function which must be performed.

Chairman RICHARDS. It all depends on coordination and cooperation between the departments of the Government. If you can get that now you can get it then under the new organization.

As to the handling of these programs in the House, the only difference between them is that you are going to make an estimate for end items and go before the Armed Services Committee and ask for it. The rest of it would then come to this committee under that plan.

General SCOTT. Yes, sir.

Chairman RICHARDS. You would ask for that; that would call for liaison and synchronization. The whole operation, as it is now, depends on that.

General SCOTT. Yes; but I think in the consideration of appropriations in future years you are going to have to consider them, that is the military and the economic, together. I do not see how you are going to separate them because they are really related.

As I said before, what is produced in a country in Europe affects what ought to be produced in the United States. They are complementary.

Chairman RICHARDS. Right there, one of the things that bothers me about that plan is this: Suppose Belgium decides it can produce a 75 gun, or a bazooka, or a machine gun, or a tank. Then it is decided that Belgium furnish these weapons to others. Now that is end-item stuff. Ultimately that is what we want them to do for their own troops anyway.

General SCOTT. That is correct.

Chairman RICHARDS. One phase of the program being so dependent on the other, where would you draw the line? As to whether that can be done, I have not made up my mind. Some of the members of this committee think it definitely can be done. I do not know.

I am not talking about economic aid. However, if we have to keep these programs separate without trampling on the Army, Navy, or Air Force, that raises a different problem. I do not care if it is the best job in the world from an administrative standpoint, you are bound to trample on somebody's toes, and you always dynamite some of their preconceived ideas as to what ought to be done.

What I want to do is get a military viewpoint on that. I gathered from what General Bradley and Mr. Acheson and General Marshall said that things are running along pretty well, and it might be better to leave well enough alone. We understand that. You never had a unified defense program down here because things were running along pretty well and we have been rather successful under the other methods. But, we have not been successful enough.

General SCOTT. I think the Department of Defense's view is that many different types of organization could do this job. Which one is the most effective is the point you are bringing up. That is, how can we give the Government the most efficient service.

Chairman RICHARDS. That is right.

General SCOTT. You can turn the military funds over to the Defense Department. You can appropriate the funds direct to Defense. We can implement the military programs and we can cooperate and coordinate with other agencies in order to do an effective job; or, as you mentioned, you can put the \$6.3 billion in the service budgets. I doubt the wisdom of the latter since Defense would have to organize

to handle the foreign military aid funds separately in order to attain our objectives in Europe and other areas.

A point I want to bring out is this: The need for coordinating military and economic programs. Let us take the 1953 programs. When we go to the countries we are going to say, "We want you to give us your deficiencies for the forces that you are going to have in being in 1953." They then come up with an equipment list based on the forces they say are going to be in being. This equipment deficiency list contains all the items that the country must have in order to make the forces in being in 1953 combat effective.

The MAAG reviews the list as does, also, the ECA mission. They should arrive at two lists. One list should be the items which they cannot produce themselves, or they cannot produce in time.

The second list is I call the indigenous production list—what the country can produce. But the country cannot produce these items without assistance from the United States in the way of raw materials, and machine tools, and so on.

The more we spend on the economic side, the less we spend on the military.

Chairman RICHARDS. Of course, you always have a right to turn some money back to the Treasury of the United States that you did not need because you got them to do something over there; but, of course, that is not often done, is it?

General SCOTT. In our present situation the requirements are so far beyond what we are providing that it is not an issue.

Chairman RICHARDS. General, it is 1 o'clock, or a little after 1. We have to be back at 2:30.

Mrs. KELLY. Could I ask a question?

Chairman RICHARDS. Mrs. Kelly has not had an opportunity to ask a question. Mrs. Kelly.

Mrs. KELLY. This program has really just started. What I want to know is whether the military end items now in production are good enough at the present time so that they will not be declared in surplus or in excess next year, or in subsequent programs?

General SCOTT. Well, we do not declare anything excess until it is, in fact, excess as a result of improvements, or because of the fact that we have too much. Incidentally, I do not think there are very many in that category left.

Mrs. KELLY. Are there any?

General SCOTT. Well, you have some propeller driven aircraft that cannot be made available to other countries until they get jet aircraft. The impression might be that we generate excesses in order to make it available and replace some of the items of equipment in our own forces. We do not do that. It is a natural generation that comes through improvements.

Mrs. KELLY. In other words, you would still produce that item with the contracts out, even though we cannot use it?

General SCOTT. We do not produce an item that we do not use.

Mrs. KELLY. Maybe I used the incorrect term. If you have aircraft contracts outstanding under this 1951 program, and if under the 1952 program you do not want that type any more, would you permit the production of that aircraft so that you could send it to some other country?

General SCOTT. I would like to have Colonel Klein answer that question applying to aircraft, as he knows the details of it.

Mrs. KELLY. I just took aircraft as an example.

General SCOTT. It is a good example.

Colonel KLEIN. To answer your question, Mrs. Kelly, we are not producing any aircraft at the present time or any components or spare parts that we do not visualize an immediate need for as soon as it comes off the production line. It is all modern equipment that we are producing.

Now, the only obsolete aircraft we are providing is excess to our mobilization requirements. Those, you see, we are not producing. But when we do supply those aircraft to the various countries we are obliged to produce a certain amount of spare parts for them. If we do not have the spare parts in stock, we have to produce a certain portion of them. Those spare parts will be utilized and required as soon as they come off the production line. When it comes time to convert to modern aircraft—you see, we have the old, conventional type aircraft that are still useful in these countries that are not ready to take jet aircraft—but in years ahead there will be a conversion period and, if the program continues, we will have to provide jet aircraft.

Does that answer your question?

Mrs. KELLY. Yes, Colonel Klein, I thank you.

Chairman RICHARDS. The committee stands adjourned until 2:30 this afternoon.

(Whereupon, at 1:18 p. m., the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

The committee reconvened at 2:30 p. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen: We will continue the hearings by calling on the first witness this afternoon, Hon. George C. McGhee, Assistant Secretary of State for Near Eastern, South Asian, and African Affairs.

Mr. Secretary would you have a seat here? Do you have a written statement that you want to read?

STATEMENT OF HON. GEORGE C. MCGHEE, ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN, SOUTH ASIAN, AND AFRICAN AFFAIRS

Mr. MCGHEE. I have a written statement here, Mr. Chairman. I hate to take up your time by reading it.

Chairman RICHARDS. We have had a good many statements. If you care to touch on the high points and put the whole statement in the record, I am sure that will be all right. You may proceed as you wish.

Mr. MCGHEE. To save your time, Mr. Chairman, suppose I put this in the record, because it is rather lengthy.

Chairman RICHARDS. Without objection that will be done.

(The statement referred to is as follows:)

STATEMENT BY ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN, SOUTH ASIAN, AND AFRICAN AFFAIRS, MR. GEORGE C. McCHIEE, ON THE MUTUAL SECURITY PROGRAM

The Near East and Independent Africa

With your permission, Mr. Chairman, I should like to discuss the Near East and African area, which includes Greece, Turkey, Iran, Israel, and the Arab nations; and Libya, Ethiopia, and Liberia. We propose a program for grant economic assistance to these countries, indicated on the accompanying chart, and grant military assistance to certain of them.

Those of us appearing before you will be working as a team in presenting this program, and I should like to explain how the team will work. With your permission, I shall attempt to present the Executive's view on the region as a whole and the over-all rationale of the proposed military and economic programs. Special reference will be made to the economic programs for the Near East countries which have not hitherto received ECA assistance.

Admiral Duncan will discuss the military and strategic significance of the region, and he and his colleagues from the Department of Defense will be responsible for the justification in detail of the military program.

Mr. Foster and his colleagues in ECA have dealt with the economic program of assistance to Greece and Turkey and the relationships of these economic programs to the military programs in these countries. ECA has, of course, a long and successful record of operation in both countries.

Mr. Bennett, the Administrator of the Technical Cooperation Administration of the Department of State, will deal with those elements of the economic program that specifically pertain to the operations of his Administration, and will relate the programs of United Nations technical assistance to the United States bilateral programs.

I should also like to file at this time statements from our political, military, and economic representatives abroad.

The sums involved in the program are considerable, amounting to \$415 million for military assistance and \$125 million for economic assistance. The Department would not support a request of this magnitude were it not convinced that the stakes are large and a major effort imperative in terms of our own national security.

First, a word about the area as a whole. The chart shows the area, with the exception of Liberia, to represent contiguous territories at the world's crossroads. It is bounded on the north by Soviet Russia or satellite states, and we are all too familiar with the pressure that has been exerted from the north on the border states. Aside from its importance as a route for land, sea, and air transport, the region contains one-half the proven oil reserves of the world, and its present production of oil accounts for a very large proportion of the current requirements of the Eastern Hemisphere. If no substitute were found for these oil supplies—and it would be very difficult to find a substitute—the industries in Europe would grind to a halt and the economy of many countries in the Far East which are of concern to us would be seriously affected.

Russia has traditionally sought to expand toward the south. It is obviously not in our interest to permit such a Soviet challenge to win by default. This is a reason why we present an expanded program of aid for the Near East to the Congress.

With your consent, Mr. Chairman, I should like now to take up the case country by country, endeavoring to describe the general background of the present situation and the program which is submitted for the consideration of the Congress.

MILITARY AID

Greece

Aid to Greece, which has been extended since 1917, first through the Greek-Turkish-aid program and later through the ECA and MDAP, has paid very satisfactory dividends. Greece has preserved her independence, and is now contributing to the principle of collective security and to the strength of the defense of the free world. Greece provides an example of effective action by the agencies of the United States Government pursuing a common policy, clearly defined. The economic program for Greece has been considered in testimony covering title I of the proposed legislation. I should like to take this opportunity to endorse the accomplishments of the ECA Mission in Greece and ex-

press the conviction that progress in Greece fully justifies the continued support of the Congress.

The population of Turkey is about 20,000,000. Turkey's large armed forces are backed by a substantial reserve. The combat effectiveness of the Turks has been steadily improving as a result of intensive efforts of the Turks, aided by the United States. During the past 4 years we have assisted the Turks in obtaining modern equipment, and in providing extensive training facilities, designed to enable the Turks to make best use of the equipment. This policy is paying off. Turkey has made an important contribution in Korea, where the Turkish brigade has lived up to the high tradition of Turkish military history.

We still have far to go, however, before the full Turkish military potential will be realized. If this is to be achieved, we must continue to assist in expanding local production of arms; we must continue our training programs, and we must continue to furnish equipment to the extent that our resources permit and the Turks can effectively absorb it. Hence we propose to carry on the program launched in 1947.

MILITARY AND ECONOMIC ASSISTANCE

Iran

We are proposing both military and economic assistance to Iran. The economic program proposed will amount to \$24,050,000. The military figure I should like to discuss in executive session. The two elements of assistance are interrelated and we are convinced, vital in meeting the critical situation there.

On the military side, it had been hoped that, with the successful accomplishment of the Greek Army in ridding the country of guerrilla forces, the size of the military establishment could be reduced, with a resultant decrease in the need for United States aid and benefits to the economy of the country as a whole. Because of Korea and the general trend of the "cold war," however, such a course is no longer possible. Accordingly, we must seek substantial military aid for the Greeks to replace supplies and equipment which are becoming obsolescent and to enable the Greeks to maintain the strength of their military establishments. The Greek soldiers are tough, courageous, well-trained; they have proved their fighting qualities both in the defense of their homeland and in Korea.

Turkey

Turning to Turkey, we can also point to a creditable record of accomplishment. We have learned to regard the Turks as staunch allies, determined to resist aggression from the north. The Turkish economic program, like that of Greece, is considered with the European economic program. ECA can look back on solid accomplishment in the work which it has done to assist the Turks in the development of their resources. ECA aid, supplemented by loans from the Export-Import Bank and the International Bank, has enabled Turkey to expand her capital plant in many directions. Turkish economic assistance is closely related to requirements for the Turkish armed forces; over a third of the Turkish national budget is devoted to defense.

The situation in Iran has, of course, given all of us the greatest concern in recent months. While over a period of time Iranian oil and Iranian oil-refining capacity could be replaced in the world markets, loss of this industry and its products to Europe and to the Near and the Far East would compel radical, costly, and difficult adjustments in oil production and oil marketing throughout the world.

That is one reason for our special interest in Iran. A further reason is the impelling fact that Iran represents a tempting bait to Russia in its effort to forge a chain of satellites around the Soviet periphery. Iran's loss to the free world would jeopardize the security of the entire Middle East, which is itself the gateway to south Asia and Africa.

We have seen in Iran the eruptions of pent-up nationalism. Although the Communists did not precipitate the oil dispute, the expertly organized and highly vocal Communist organization, the Tudeh Party, is attempting to aggravate and capitalize upon it. In this atmosphere there has been a political reaction in Iran against the British oil interests which has made more difficult an agreed settlement of the oil problem. Iran is heavily dependent financially upon the exploitation of its oil resources. Failure to work out an agreement with the Anglo-Iranian Oil Co. has already seriously affected Iran's economy and retarded implementation of Iran's 7-year development program.

The present situation is, however, a reflection of the fundamental weakness of the social and political structure of Iran. The bulk of the Iranian people

are poor, undernourished, and illiterate. Only through an improvement in basic living conditions can the Iranian people be given the means and the incentive to build a strong nation. Only a strong Iran can in the long run survive as an independent state and maintain its national integrity. In climate and in natural resources, Iran has been compared to California. If Iran's living standards even moderately approached California's, Iran would be a powerful ally in the free world. We propose to help Iran make progress toward a better way of life.

Military assistance to Iran has double importance. It strengthens the government internally by contributing to stability and order, and contributes at the same time to the integrated defense of the Middle East. A moderate-sized Iranian army, with modern training and equipment, should serve to deter any aggressor, and to prevent Iran from falling by default to Soviet subversion. Through our current Mutual Defense Assistance Program, we are supplying equipment and training as quickly as the Iranian military establishment can effectively absorb it. As the Iranians learn our weapons and techniques, they should be able to utilize larger quantities of modern equipment to advantage.

What we also propose, and believe to be as essential as military aid in the situation, is a concurrent threefold attack on the Iranian economic difficulties. I would like to make it clear that what we propose is in no way related to the present oil dispute, but was planned before the oil controversy arose and was directed toward overcoming Iran's more fundamental problems. We need to strengthen Iran and its ties with the west by giving the Iranian people tangible evidence of our support through a modest program of grants. This program must be flexible and designed to bolster up those elements in the country who are working to improve the social and economic conditions of the mass of Iranian people. It must be directed at the town and village level.

The village development and rural improvement program would be carried out in selected localities by teams of American technicians, working side by side with Iranian technicians who are already available, in the fields of agriculture, irrigation, education, and health. Work of this nature has been carried on with great success by the Near East Foundation, in Iran and other countries of the Near East. The proposed program would expand these activities and would direct them specifically to making better use of existing land and water resources. It would be attuned to Iranian customs. It is proposed that a considerable sum be set aside in this specific project for the purchase of modern equipment for demonstration purposes. The program would also include vocational training and would provide teams from the United States Public Health Service to direct programs of public health and sanitation.

Most commentators on Iran have noted the appallingly unhygienic system of water supply in the towns and villages where water for domestic use is drawn from open streams running down the village streets. The effect on the health of the people of such an inadequate and unsanitary supply is obvious. The illustrative program of assistance for Iran provides for assistance in the installation of simple but sanitary water-supply systems in selected towns. This program should make an immediate impact on the population thus aided. Once they have been proven practical these projects will undoubtedly be emulated by the Iranians themselves in other places.

Another way in which it is proposed to assist the Iranians would be in the improvement of their system of highways through the facilities of the United States Public Roads Administration. The record of the Public Roads Administration in assisting Turkey in building and maintaining that road network has been an eminently satisfactory one. This experience can be extended to good advantage in Iran. Iranian production and distribution of needed supplies within the country suffers from inadequate local transport facilities.

These basic programs would be supplemented by technical services of American engineers in preparing specific plans for major development of water resources, both for irrigation purposes and for domestic use in certain of the larger towns. The program also provides for import and sale of limited amounts of needed goods, as was done under the ECA program heretofore conducted in Europe and the Far East. The funds accruing from sale of such importations would, by arrangement with the Iranian Government, become immediately available for financing certain local costs of the projects which I have just described. It is hoped that the proposed program would be administered by the ECA, with a modest-sized ECA mission.

THE ARAB STATES AND ISRAEL

For the Arab states and Israel, there is proposed a regional economic program, regionally administered, in addition to a program of military assistance for the Near East. This program breaks into three principal segments: First, aid rendered bilaterally to the Arab states; second, aid rendered bilaterally to Israel, and third, aid coordinated by the United Nations for the Arab refugees from Palestine. This latter program has three facets: it represents aid to the refugees themselves, whose plight is a serious source of instability in the Near East; aid to the Arab states into whose economies the refugees may be integrated; and aid to Israel, whose future in the Near East will be difficult until there is a reasonable settlement of the refugee problem.

Throughout the preparation of this program we have kept in mind three primary considerations: First, the legitimate aspirations of all the peoples of the area, Christian, Jews and Moslem, on an impartial basis; second, their feeling, frequently expressed, that the West has shown little or no interest in their welfare; and, third, the importance of the continued independence of their countries to the security and peace of the free world.

THE ARAB STATES

The Arab states, if they are to play their proper role in the defense of the Middle East and are not to be lost by default to Soviet subversion, must be strengthened politically, economically, and militarily.

The economic background in the Arab states was fully described in the brilliant report of the UN Survey Mission to the Middle East which was headed by Gordon Clapp of the Tennessee Valley Authority. His mission was charged with determining the economic possibilities of the Northern Arab states, with special emphasis on the prospects of absorbing the Arab refugees from Palestine into the economy of the area. The report of this survey mission points out that the refugees themselves are a manifestation of the basic problems of the Middle East; that peace and stability cannot be achieved in the region until the masses of its peoples are able to enjoy higher standards of living than they do at present; and that, while the path to higher standards is a long one, such higher standards could be achieved through the development of the natural resources of the area.

These resources consist, in the main, of remote and unused agricultural land and potential water resources. To benefit fully from the opportunities offered by their environment, the Arab peoples require assistance, primarily in the fields of public health, agricultural extension and engineering. With such assistance, they can march forward to a better way of life. Without such assistance, they will become victims of subversion, or, at the best, passive spectators in the present world conflict.

In considering assistance to the Arab world, distinction must be made between those countries whose financial resources appear adequate to finance development through their own funds and those countries whose resources are presently inadequate. While to all countries technical assistance may be offered as a useful tool to promote their development, a strong case can be made for grant financial aid to those countries presently lacking in capital resources. Our illustrative programs for the Arab states are therefore weighted heavily toward Syria, Jordan, Iraq, and Lebanon. In preparation of the program, consideration has been given to the resources available to the various countries from the IBRD and the Export-Import Bank, as well as from private financial institutions. Advantage has also been taken of the experience of the UN refugee program, and the investigations of the banks' and of our own departmental officers.

Existing tensions in the area cannot be relieved unless these countries can be assisted in their programs of economic development. The problem of the Palestine refugees cannot be solved unless there are more opportunities for settlement and useful employment in the region. It is clearly impossible for local governments to find work for refugees from another country now within their borders unless their own citizens are employed to equal advantage. The proposed programs of bilateral assistance, therefore, are essential for the furtherance of United States objectives in the Near East, and should be considered as part of an integrated program of assistance for the area.

In working out proposed programs of assistance, the problem has been approached project by project. Illustrative projects are summarized on statisti-

cal tables available to you. We have placed the greatest emphasis on the increased production of food, and secondly, on improvement of public health.

It is proposed that the projects would be administered in concert with the local governments concerned in such a manner as to insure accountability by Americans for every dollar of appropriated funds, but always with the purpose of relying on local officials to carry out approved projects which have received the necessary local support. This must be a program of self-help. It must be directed at the grass roots to help better the living conditions for the masses.

This program is not a cash hand-out to governments. It is felt, however, that more assistance should be given in the poorer countries of the region, than technical assistance alone. It is hoped to build on the experience of the past, but to point to the future through demonstration projects for rural improvement and resettlement. To succeed, funds are needed to provide supplies and equipment and to undertake minor construction projects, looking toward the development of unused agricultural resources. This is especially true of Syria and Jordan. Only through such development of local resources can the outstanding issues threatening the stability of the Near East, including the issue of the Arab refugees from Palestine, be resolved.

PALESTINE REFUGEE PROGRAM

One year ago, the Congress appropriated funds for a United Nations program for Palestine refugees, which was designed to create a more favorable political and economic climate for a future solution. On this basis, the United States participated in the 1951 program to the extent of a \$27,450,000 contribution.

The Department now considers that, with the passage of another year and the partial abatement of some of the political tensions in the area, it can present to Congress proposals which show definite promise of a conclusion to this problem, a principal deterrent to peace and stability in this strategic area.

Quite apart from humanitarian considerations, abandonment of the Palestine refugees to their fate would result in the most serious consequences to the security of the whole Middle East. One need only consider the impact of 880,000 people on relief rolls in relation to the population of the neighboring countries—Israel, 1,400,000; Jordan, less than 1,000,000; Lebanon, 1¼ million; Syria, 3,500,000. Discontinuance of aid to the refugees would mark the end to hope of peace in the area, and of any opportunity for constructive influence by the United States or the United Nations in the Near East.

More positively, assistance to the refugees is an affirmative act which cannot fail to benefit Israel on the one hand, which has acknowledged its debt of compensation but lacks the means to pay it, and the Arab States on the other, whose economies and social and political well-being would be strengthened by the addition of the refugee population if the refugees were absorbed and reintegrated into local economies.

Relief

Direct relief must be continued for a further period. A sum not to exceed \$20,000,000 has been authorized by the General Assembly in December 1950 for direct relief purposes for the fiscal year 1952. This is a maximum which cannot be exceeded by the agency without special authority from the General Assembly. Rising prices may make an upward revision of this total necessary. The intent of the General Assembly was to keep relief costs at the lowest practicable level in order to make the maximum amount available for the reintegration program. Presumably the agency will not seek more funds for relief unless substantial price rises make it impossible to stay within the stipulated limits.

Reintegration

In the light of changing attitudes in the Arab countries, the Palestine Refugee Agency has proposed, and the General Assembly has approved, a program of reintegrating refugees into the economies of near-eastern countries. The object of the reintegration program is to move as rapidly as possible toward the permanent reestablishment of refugees on a self-sustaining basis so they can be removed once and for all from dependence on the UN for direct relief or temporary employment.

The energies and resources of PRA will henceforth be directed to working out with interested governments specific projects which will remove refugees from the breadlines and provide continuing employment. For the most part this will

involve projects for settlement on new lands to be brought under cultivation. At least 60 percent of the refugees are farm people. In urban centers, where expanded or revitalized business or industrial activity is stimulated, housing projects already initiated will be extended. But no projects will be financed from the reintegration fund except when requested by an interested government, and then only under conditions that guarantee the reestablishment of a specified number of refugees, and their permanent separation from the relief rolls.

Reintegration, however, will be a slow process. In the words of the Agency's report to the General Assembly, it is "a major undertaking to reintegrate the majority of over three-quarters of a million refugees, which may ultimately entail the expenditure of several hundred million dollars over a period of years. It should, at the same time, be noted that all expenditures under this fund will hasten the day when international assistance can be terminated."

Costs

Estimates prepared by the Palestine Refugee Agency indicate that the minimum cost for such resettlement would average at least \$1,000 per family for the 150,000 families concerned. Under the circumstances, action by the United States to authorize a contribution of \$50 million available for direct contribution to the Agency itself or to projects coordinated with the Agency's work is necessary if this program is to make a start toward settlement of the refugee problem. In this undertaking, it is hoped that other members of the United Nations will shoulder their share of the burden. Records of the program to date indicate that the United States share of the cost has been about 55 percent. This percentage may rise in 1952 and subsequent years, but every effort will be made to attract other contributions. I believe that our interest in the program justifies bold action and that other interested countries will follow our lead. Even if they did not do so, United States interests should not suffer as a result of inaction by others.

Our interests called for a clear definition of intent to see the reintegration program through to a conclusion, provided local governments remain cooperative in seeking this accomplishment.

ISRAEL

Israel has requested assistance from the United States to balance its international accounts. The nation is not currently self-supporting, and it has depended on three principal sources of funds from abroad to meet its international obligations: Donations from private donors in the United States, release of its sterling balances, and the proceeds of its line of credit with the Export-Import Bank which amounts to \$135 million. In a note submitted to the Department on March 22, 1951, Israel requested a grant for fiscal year 1952 in the amount of \$150 million. This amount is part of a 3-year plan for the future development of the economy of Israel, which will involve the settlement of as many as 500,000 additional immigrants. In its explanation of the magnitude of the requested grant, the Government of Israel refers to its heavy burdens for financing its military forces and the obligations assumed by Israel to compensate the Arab refugees.

In view of the fact that the Mutual Security Program would make possible a measure of military assistance to Israel, and the immediate requirements of the UN program for the Arab refugees, the Department has analyzed the requirements of Israel on a basis different from that presented in the note from the Israeli Government. We have attempted an analysis of the Israeli balance of payments in order to determine a reasonable measure of grant-aid for Israel, designed to enable the new nation to consolidate its economic position in 1952. The best financial information available to us indicates that there will be a gap of approximately \$23 million which would be met by the projected aid program.

This program which would fill the gap, is designed on a project basis to supplement those projects financed by the Export-Import Bank. These new projects could have formed the basis for further bank credit if such credit were available to Israel, which it is not. The projects involve the supply of needed equipment to settle farmers on the land, and to extend the system of irrigation to increase agricultural output. The illustrative projects shown also include assistance to industry through expansion of electric power and improved port facilities. All

components of the program are designed to increase productive facilities, especially food production. All are aimed toward Israel's urgent need to increase her exports and decrease her imports if she is to become a viable state.

The administration of the economic program

A regional administration of the programs for the Arab states and Israel is proposed, with headquarters located in the area. It is hoped by the establishment of such an office to attract top administrative and technical talent to operate the program; scattering of independent country missions throughout the area could not attract such talent. Furthermore, the economic problem in the Arab states is a regional problem, incapable of solution if viewed from the standpoint of a single country. Through this regional office appropriate coordination would be assured with the UN activities in the area, in particular the Palestine refugee program. This pattern by no means conflicts with the general administrative proposals presented for the program as a whole, military and economic.

THE MILITARY PROGRAM

Total military grant aid proposed for Greece, Turkey, and Iran is estimated in the amount of \$415 million for fiscal year 1952. It is proposed also that up to 10 percent of this amount be available for military assistance to other near-eastern countries, i. e. to Israel and the Arab states. Such assistance could only be furnished following the finding by the President that such a course is essential in the security interests of the United States. Assistance can be granted only following the receipt of satisfactory evidence that the aid will increase the ability of the recipient country to defend itself, and that such self-defense will contribute to the preservation of peace and increase the security of the United States.

In all candor I should like to say that it is now the Department of State's view that the President may well find it necessary to utilize this authority, if it is granted in the very near future. Events in the Middle East are moving rapidly. The United States cannot afford to allow the forces of neutralism and anti-western sentiment to gain any further ground, nor to allow these forces to be captured and exploited by international communism.

The Middle East is an important pivotal area whose strategic importance was clearly demonstrated during the past two World Wars. The Soviet Union's intention of dominating the middle-eastern area is abundantly clear. This historic goal of Russian foreign policy was expressly stated in documents published relating to the negotiations between Nazi Germany and the Soviet Union in 1940. It is evident today in the efforts of the Soviet Union to play on the nationalist aspirations of peoples and to stir up animosity and hatred toward the free nations of the west.

We believe that it is in the United States interest to (a) preserve and strengthen the orientation of these nations toward the United States; (b) maximize the will of the governments and people in the Arab States and Israel to cooperate in resistance to the U. S. S. R. both now and in the event of war; (c) create political stability in depth for the benefit of Greece, Turkey, and Iran, and contribute to the stability of the area as a whole; (d) induce the countries to increase their indigenous defensive capabilities; (e) strengthen internal security; and (f) reduce area rivalries and tensions.

There has been an increasing belief, particularly in the Arab States, that the United States and other countries have no interest in helping those countries to prepare to defend themselves. This feeling is producing increasingly political disaffection. There are over 40,000,000 people in the Arab States and Israel. These people belong to the free world. Apart from economic and technical assistance, military assistance on a scale appropriate to their present capacity to make effective use of it would go far to prove that the United States does not lack interest in their continued independence and defense.

At the present time the armed forces of the near-eastern states, which total on paper over 200,000 men, are not in a position to do more than maintain internal security and offer token resistance to invasion by a modern army. Some of them, however, could, if properly equipped, participate usefully in defense of their territories and in protecting lines of communication and vital installations and facilities. Generally speaking, the equipment of these forces is old, inadequate, and heterogeneous, and the introduction of modern training methods

and a reasonable amount of up-to-date equipment is in most instances a condition precedent to their performance of any effective role in the defense of the near-eastern region.

In order to achieve our objectives, there should be initiated, where justified, a limited arms-supply program with early delivery of token quantities. Supervisory and technical personnel should also be furnished on request. General Scott is prepared to discuss this whole military question further.

Mr. McGHEE. The subject matter which I am to discuss is well known to your committee. I have discussed it a number of times before with you.

First, I would like to tell you about our method of presentation. We have here indicated on a map the area under discussion. Admiral Duncan is here representing Admiral Sherran. He will, following my presentation, discuss with you the strategic significance of this area. The details of the military testimony will be given by General Scott, who will discuss the specific programs of military assistance proposed for the countries of the area.

We have here representatives of ECA in the event their interests are involved. Subject to his return, Dr. Bennett, who is, as you know, in charge of the point 4 program in the Department of State, will discuss those aspects of the economic program in this area which affect his administration.

This group will act as a team in their presentation before you, as the other witnesses have.

Mr. Chairman, the amounts that are requested in connection with this program for the middle eastern area are sizable.

There is involved the amount of \$415 million for military aid and \$125 million for economic aid. This is over and above economic aid which has already been requested in connection with the European program for Greece and Turkey.

Chairman RICHARDS. What was the last figure?

Mr. McGHEE. \$125 million. Including the figures for Greece and Turkey, this total request aggregates in the order of \$900 million, almost a billion dollars. It is indeed, sir, a sizable request, and one which we would not request unless it were in the direct security interests of this country.

The programs which we propose, sir, have as the other side of the coin a deep humanitarian and altruistic aspect.

There is, however, basic to this program the security interest of this country, and we seek to justify every dollar on that ground.

Chairman RICHARDS. Have you any technical assistance figure?

Mr. McGHEE. The \$125 million, the economic portion of this program, which we seek to justify over and above Greek and Turkish economic aid, has a technical assistance component; in other words, a considerable portion of that \$125 million is for technical assistance.

That is thoroughly broken down, I believe, in figures submitted to your committee, showing which proportion of the \$125 million is for technical assistance, which is for the purchase of supplies and equipment, in some cases, in local currencies, in other cases supplies needed to implement the program.

This program goes beyond the point 4 approach to economic problems of the area.

Chairman RICHARDS. I do not think there is a figure in the record now on technical assistance.

Mr. McGHEE. I understand these figures are being submitted to the committee. Perhaps they have not yet been made available to you.

They indicate that of the total program some \$9,984,000 is for technical assistance in the form of United States experts going to this area; some \$3,151,000 as the cost of trainees and trainees coming to this country, and to institutions in other countries where they can be given training.

The remainder is for the purchase of services and material. The technical assistance portion is small dollarwise, but nevertheless is an important component of this program.

Mr. SMITH. Is that a lot of people, Mr. Secretary?

Mr. McGHEE. It is, Mr. Smith. This would involve some 800 technicians in this entire area. This area of all areas needs a very large technical assistance component if the material aid is to be rendered effective.

As you are aware, Western Europe and other advanced areas do not need so much emphasis on technical assistance.

May I proceed generally without going into the details of this statement? I do not have to outline the importance of this area. We have discussed that often in this committee before, and I am sure the committee is fully aware of it. There is nowhere in the world an area which has greater strategic significance.

The Middle East is the land bridge between three continents. It contains the Suez Canal which connects the Atlantic and Indian Oceans. Through this narrow belt of territory lying south of the Soviet Union must pass all the international airlines which traverse the area between Asia, Europe, and this country.

In addition, as you know, this area has a tremendous pool of oil in the Persian Gulf area, one-half of the oil reserves of the world. The Middle East is important, moreover, over and beyond itself. It is the cockpit, it is the approach, first of all, to the subcontinent of South Asia, to India and Pakistan, with their tremendous manpower and resources.

It is, and possibly more important, the means of access to the continent of Africa. Anyone who dominated the Middle East could easily have access to the riches of Africa. There could be no real resistance afforded in Africa itself.

Africa not only produces the manganese, chrome, copper, rubber, sisal, and industrial diamonds which we have long obtained there, but now uranium.

For the reasons which I have mentioned, the Soviet Union has long had designs on this area. One finds in the secret documents between the Soviets and Hitler in 1940 the clear indication that Russia desired as a sphere of influence in her deal with the Germans that area "lying south of Baku in the direction of the Persian Gulf," to quote the Russian note.

That means western Iran. Russia has always desired through the centuries, under the Czars and later under the Soviet rule, to come down and establish a sphere of influence in the area lying north of the Persian Gulf, and to have access to the Persian Gulf and the oil fields surrounding it.

That is why in the immediate postwar period pressure was put by Russia first on Iran and secondarily on Greece and Turkey, to probe this area for points of weakness to exploit.

Mr. Chairman, your committee is well aware of the action which this Government has taken in the postwar period to counter these Russian thrusts.

You are aware of the fact that we supported Iran in the Security Council. The Russians backed down. They removed their troops, which they had previously refused to do.

Azerbaijan was reoccupied by the Iranians and Iranian soil was freed of Russian influence. When Russia made her thrust at Greece through the guerrilla war, and the British found they could not cope with the problem any longer, this committee heard the presentations of the Executive setting forth the Greek-Turkish aid program, the Truman doctrine, which was our answer to the Soviet challenge in this part of the world.

Since 1947, when economic and military aid to Greece was initiated and military aid to Turkey, this country has expended some \$2 billion in aid to Greece and Turkey.

I contend, Mr. Chairman, that this money has been well spent. These two countries—rather than the weak points on the periphery of Russia, countries which could have been swallowed up and controlled by Russia unless we had reacted to the challenge—these countries have become strong points.

Mr. REECE. How is that divided?

Mr. McGHEE. The bulk of it has gone to Greece. Well over half. I would have to get for you the precise breakdown. We will give it to the committee.

(The material requested has been furnished for the executive session record.)

Greece, as you know, has required a much larger part of the economic assistance, and while she was fighting the guerrilla war, the larger share of the military assistance. More recently, the larger share of military assistance has gone to Turkey. Turkey has not required so much economic assistance because she did not have a war-devastated economy.

These two countries have been transformed from weak points on the periphery of Russia to the two strong points.

They have armies in being today that are among the greatest assets available to the free world. They could engage the enemy today if war came.

These countries support the principles of collective security in as steadfast a way as any countries in the world.

We have no occasion to worry about Greece and Turkey. They are willing to stand up on any occasion to be counted.

Mr. CHIPERFIELD. Do you mind an interruption? Do you feel Greece and Turkey should be in the NATO organization?

(Discussion off the record.)

Mr. REECE. I was about to make an observation concerning Turkey that I think is sometimes overlooked. At the conclusion of World War I Turkey, which had been dominated by a complete dictatorship for centuries, was a defeated and overrun country. Its currency was almost without value. There were few tangible material resources in Turkey. Turkey, without any aid from outside sources, pulled itself together and gradually evolved as a republic, sound and fine and got its finances in good shape without help from anybody.

I think that exceeds anything that has occurred in modern history, so far as a nation pulling itself up by its own bootstraps.

Mr. McGHEE. You are absolutely right. It was a heroic achievement. At the same time Ataturk laid the foundation for a democracy that emerged from a situation of complete domination by the Sultan.

Mr. REECE. It rose out of the ashes.

Mr. McGHEE. I would like to point out in this connection, because I believe it has a bearing on our request for assistance for the Arab refugees, that Turkey was greatly assisted in this period by the international assistance given to her and to Greece to effect their exchange of populations. I think that is, in a sense, representative of the problem in the Middle East. It was well that international assistance was available for that great number of refugees.

Mr. FULTON. Is your statement on Turkey the official position of the State Department?

(Discussion off the record.)

Chairman RICHARDS. Ladies and gentlemen, I think we can facilitate this matter by letting the Secretary finish his statement. Then every member will have an opportunity to ask questions.

Mr. McGHEE. I will try to make this brief. Otherwise, I will be taking longer than if I had read my statement.

Iran is a little different case. I am sure your committee is aware of the situation today in Iran. There is, unfortunately, not in Iran the unified spirit which exists in Greece and Turkey.

We propose for the third year to make a sizable investment in a program of military assistance to Iran. We wish to continue to give military equipment to Iran on as great a scale as we feel the Iranians can effectively absorb. Only last year, however, did we first propose extraordinary economic assistance to Iran.

The Iranians have had many problems, but not until recently did we feel that a basic problem was their lack of foreign exchange. This has been due to the oil revenues which they have received and which could have been larger in amount had they accepted the proposals made in 1949 by the Anglo-Iranian Oil Co.

We feel that the present oil situation in Iran, the present impasse between the Iranian Government and the British oil interests, should not deter us from our long-range objectives in Iran.

(Discussion off the record.)

Mr. ROOSEVELT. Mr. Chairman, can I make a procedural suggestion here?

Chairman RICHARDS. Mr. Roosevelt.

Mr. ROOSEVELT. I am sure as we go through a number of these countries, and in view of the recent event that is being announced by King Abdullah, and when the bill comes to the floor we will all be asked about it, so you will be asked about it now.

If you could give the current situation in Iranian oil, Trans-Jordan, as you go through would save a lot of time.

Chairman RICHARDS. Do you suggest—I want to follow the wishes of the committee in this matter—after the Secretary has made his initial statement on these individual countries that members be allowed to ask questions?

Mr. ROOSEVELT. I think it would be better to finish the whole thing, but bring in the current events problems as we go along.

Mr. McGHEE. Shall I assume that the current situation in Greece and Turkey are sufficiently well known so that they need not be covered separately?

As you know, the ECA has already justified the proposed economic programs in Greece and Turkey. We rely fully on the ECA. We consider the ECA accomplishments in Greece and Turkey to be among the outstanding achievements in their whole program.

The military assistance for Greece and Turkey will be discussed in more detail by Admiral Duncan and General Scott. So we come then to Iran.

I can report that the present situation in Iran is that Mr. Harriman is still in the midst of his talks with the Iranian Government, with the result as yet inclusive.

There was a report in the paper today which you may have noticed to the effect that the Iranians had agreed to receive a high-level British negotiator. I am not yet able to confirm this through official channels.

I suspect the report is a little optimistic. This, however, is an important objective of Mr. Harriman in his negotiations. We hope very much that this can come about.

(Discussion off the record.)

Mr. McGHEE. Mr. Chairman, I apologize for having taken so long.

Chairman RICHARDS. That is all right.

Mr. McGHEE. If there are questions, I would be glad to address myself to them.

Chairman RICHARDS. Go ahead to the next country. We will have some questions later.

Mr. McGHEE. We turn from Greece, Turkey, and Iran, which I often call the "shield" because they immediately underlie Russia, they protect the rest of the Middle East from direct Russian pressure, and in the event of war, they would be the ones attacked first. The countries underlying Greece, Turkey, and Iran are countries well known to all of you and particularly as countries which have tremendous problems.

The Near East, I think, is the subject of more discussion in this country than almost any other part of the world. It is an area of extreme interest to us for many reasons.

(Discussion off the record.)

Mr. McGHEE. Now, in addressing ourselves to the problems of this area and means by which they can be approached through assistance from this country, one finds many problems. Antiwesternism, neutralism and xenophobia are characteristic of at least some of the states of this area. One can analyze the causes of this. In many ways, I think that the roots of this antiwestern neutralism lie in a sharp reaction to the colonial era. These countries still feel that they are treated by the western countries, including to some extent our country, in a colonial way.

(Discussion off the record.)

Mr. McGHEE. As a consequence, we have addressed ourselves both in the military and economic field to overcoming this neutralism and building up this situation of military and economic strength.

(Discussion off the record.)

Mr. McGHEE. At the same time, we must address ourselves to the appalling problem of the Arab refugees which, as you know, is one

of the many relics of the Palestine hostilities. Over 880,000 refugees are living in tents and under deplorable conditions around the periphery of the State of Israel, with no hope up until now of settlement on any permanent basis. This is a problem which our Government has had to consider in the entire period since the Palestine hostilities. We have already given considerable assistance to alleviate this problem. Up to the present, however, we have not seen any clear way of assuring a conclusion of the problem in terms of getting these people settled so that they can maintain themselves and not continue to be the recipients of international charity.

For the first time we see a ray of hope for solution of the problem in the Arab States. They have agreed that they will permit resettlement on a large scale, if the United Nations will expand its existing relief program to include adequate funds for reintegration and certain other conditions are met. Sums are required which these States themselves cannot pay, to prepare land, and to build homes to make these people self-sufficient. Therefore, out of \$125 million requested for this area, including \$25 million for Iran, we are requesting some \$50 million for the Arab refugee problem. We feel that the solution of this problem is important not only to the Arab States but to Israel. Israel is committed to the principle of compensation to the refugees. As long as these Arabs exist in this unsettled state, they will be a threat not only to the peace of the area but to any hope of normal relations between Israel and the Arab States. This is important for all concerned, but particularly for Israel.

(Discussion off the record.)

Chairman RICHARDS. I want to ask one or two questions; then I am going around the table on the 5-minute rule.

Mr. Secretary, this bill is supposed to be a basic program for the security of the United States. Do you feel that equality of grants to the Arab States and Israel is calculated to serve the security of the United States?

(Discussion off the record.)

Mr. CHIPERFIELD. What was the figure that you gave for military aid in this area? I have \$412 million; is that right?

Mr. MCGHEE. No; Mr. Chiperfield. That figure is \$415 million.

Mr. CHIPERFIELD. I noticed that discrepancy and I just wondered about it.

(Discussion off the record.)

Mr. CHIPERFIELD. No further questions at this time.

Chairman RICHARDS. Dr. Morgan, we are under the 5-minute rule so we can give everybody a chance here.

Dr. MORGAN. Mr. Secretary, do you feel that the Communists did not precipitate the oil dispute in Iran?

(Discussion off the record.)

Dr. MORGAN. The Arab League was formed in 1945. Recently, in 1950, they had a collective security pact which was to be along military lines. What became of that security pact with the Arabs?

Mr. MCGHEE. It has never been ratified except by one country, Saudi Arabia. There is no evidence, however, that it will not be ratified by other countries and at that time it will, of course, have the effect of drawing them close together in military cooperation.

(Discussion off the record.)

Dr. MORGAN. Mr. Secretary, why did the Arab nations take a neutral stand in the UN? What is your opinion as to why they took a neutral stand in the Korean conflict?

Mr. MCGHEE. Dr. Morgan, some of the Arab States did not. Lebanon and Iraq voted for the resolution branding the Chinese Communists aggressors.

(Discussion off the record.)

Chairman RICHARDS. The time of the gentleman has expired. Mr. VORYS.

Mr. VORYS. I have been trying to get a breakdown on figures. I understand there are about 96,000,000 people involved in title II.

Mr. MCGHEE. Approximately.

Mr. VORYS. How many Jews are there in the area?

Mr. MCGHEE. The population of Israel is 1,400,000 of which approximately 1,250,000 are Jews. Of course, there are Jewish minorities in other countries but you refer to Jewish people in Israel.

Mr. VORYS. No; I was going to ask you how many Jews there are in the area and in the world and how many Moslems in the area and in the world.

Have you got that?

Mr. FULTON. Divided by saints and sinners?

Mr. MCGHEE. I will see how much of it we have and we will get the remainder.

I think there are 40,000,000 Moslems in the area and some 300,000,000 Moslem peoples in the world.

Mr. VORYS. And how many Jews in the area?

Mr. MCGHEE. One million two hundred and fifty thousand, plus those in the Arab States.

Mr. VORYS. That includes the Arabs, does it not?

Mr. JAVITS. In the Near East outside of Israel I suppose another 300,000, though emigration is going on to Israel all the time.

Chairman RICHARDS. You mean in this whole area?

Mr. ROOSEVELT. Eight hundred thousand in the northern part of Africa alone.

Chairman RICHARDS. Does the gentleman yield to the gentleman from New York?

Mr. VORYS. I yield to anybody that can give me the answer: How many Jews there are in the area and in the world and how many Moslems. We learned about Moslems.

Mr. MCGHEE. I am reminded that the Iranians are Moslems, too. If you wish to include Iran there are 60,000,000 Moslems in the Middle East out of the total in the world of 300,000,000. I will accept Mr. Javits' figure of 300,000 as being a reasonably accurate estimate of the Jews in the Arab States of the Middle East. The bulk of the Jewish people you refer to I believe are outside of this particular area, Mr. Roosevelt. They are in northwest Africa. I think the group in Egypt is around 80,000, probably 70,000 in Iran, 30,000 left in Iraq.

Mr. VORYS. What would happen with the Arab States and Israel, say, if we were to consider giving \$100 million for mutual national security—under mutual-aid pact based on ECA principles, and let those fellows divide it up? We would say "Out of the \$100 million you have to take care of those there."

Mr. MCGHEE. That is basically what we are seeking. As you know, the figures that are given as between the countries are illustra-

tive. There is a measure of freedom in subsequent allocations between countries.

Now, in many areas the figures are given as total and are not broken down. We felt that in this case it was necessary to break it down. We knew of the great interest that existed in this committee and elsewhere of the figures that would go to Israel. We knew of the interest in the figure which would go to the Arab States and to Iran.

(Discussion off the record.)

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. Mr. McGuire, let us talk about the area. Let us forget any one country. I think the area is more important to the United States than any individual country.

Mr. MCGUIRE. That is correct, sir.

Mr. RIBICOFF. What we are basically interested in, in this committee--we had a very interesting thesis put forward last night by Mr. Berle about the importance of this area for the long-range future.

Because of the importance of this area, do you think that \$100 million for this area is enough? Let us forget how we divide it up. Is that sufficient?

Mr. MCGUIRE. I do. I would like to explain why I say that. For the whole of the area we are discussing, for the Middle East as a whole, we are requesting some \$900 million.

To the \$100 million which you mention that we propose for economic assistance, there can be added up to \$40 million for military assistance, so that the total available in both types of assistance is \$140 million.

Mr. RIBICOFF. Now we come to the next question. What do you do? It is obvious that the Israelis want aid. They want it bad. We do not have to gloss that over. However, that is not true when you come to the Arab countries. We have had the incident of the Syrians saying they do not want any point 4 program in Syria. That was in the press recently. I understand that 200 families control Iraq and basically they are not interested in the program that would sort of lift up the peasants and the landless, to give them some land reform. What do you do? Do you take that money and throw it into the Red Sea or how are you going to get that money where it will help build up these Arab countries that do not want it?

Mr. MCGUIRE. It is a good point you raise because we have no desire to force our assistance on anyone. They must want it and be willing to cooperate in the utilization of it. It would not be effective in any other event.

I want to make one remark in answering your previous question before I address myself to this question.

When you consider the area in which this economic assistance of \$100 million and a good portion of the \$40 million will actually be spent, it is not the total area which Mr. Vorys has stated has some 95 millions of people. It is not the Middle East, the Arab world and Israel--which have some 40 millions of people. The bulk of the funds will be spent only in the State of Israel, Lebanon, Syria, and Jordan, which in the aggregate have only some seven millions of people. That is why I feel that this \$100 million in economic aid supplemented by such portion of the military aid as may be allocated, is adequate for that small number of people.

(Discussion off the record.)

Mr. RUTCOFF. Will \$50 million be enough to aid in absorbing the Arab refugees?

Mr. McGUIRE. The total absorption cost has been estimated at \$150 million.

Mr. RUTCOFF. If this will decrease and lower tensions, would it not be one of the best things we could do? If we are going to spend money effectively, let us talk about it.

Mr. McGUIRE. There is a limit to how much can be spent in a given year because rather large projects must be undertaken to settle 880,000 people, and the Arab States lack the plans and the capacity for carrying out these large projects. Therefore, we feel that \$50 million is all that can be spent the first year. If we could spend more, we would agree that it should be spent, because the sooner we can remove this tension, the better chances there are for peace. Moreover, the sooner the people can be made self-sustaining the sooner we can relieve ourselves of our share of the relief burden, which will cost some \$25 million a year for straight relief until the people can be settled.

You cannot prove that there is any final cure in this economic approach or that it will insure peace between the Arab States and Israel. I say that it will work in that direction. It will remove irritants which now stand in the way of peace, and of all the actions which are available to us at the present time this is the one most effective action we can take to bring about a condition which will make it possible to achieve peace.

Mr. ROOSEVELT. Will the gentleman yield a minute?

Mr. RUTCOFF. I have no more time.

Chairman RICHARDS. You have consumed your time and Mrs. Kelly's time, so Mrs. Kelly is out when we get down there, Mr. Roosevelt.

(Discussion off the record.)

Mrs. BOLTON. Syria also has a very good capacity for industrial increase and those who have been there know it is the most amazing place. In Aleppo we found their textile mills cleaner than many homes in this country. It is very interesting and a very fast moving into modern life country and should not be considered backward as most people are considering it. Anybody who has been out there knows that it is not that kind of country.

There was a sentence in the statement on this legislation that came up from the State Department which says: "There is no strong evidence of Soviet penetration in Israel." It would seem to me that the interpretation of such a statement would depend upon what you mean by "strong evidence" and what you mean by "substantial penetration." But when I was chairman of the Near East Committee in 1945-47, and was out in the area the Soviets had their pay-off station in Beirut; this center has now been moved into Israel, as you know.

Now, when the pay-off station is in a country, it would seem to indicate that this was rather convincing evidence of a certain amount and type of infiltration that had not existed there before. Suggesting an expansion that should be taken into account. I call your attention to it. I would like to learn something further about it merely so that we do not overlook, in our consideration of the whole area, whatever shifts of emphasis may be made. Nor should we overlook

such happenings as the fact that little things may have real bearing upon what the Kremlin is doing. For instance, one of the best Soviet agents, who was in Tehran in 1945 has been moved down to Ethiopia. That he is one of their best propagandists and never goes where they do not want something done and done well would seem to open up many questions of Kremlin designs on Africa. I hope that we shall have opportunity to go more fully into some of these matters.

I agree wholly with Mr. Ribicoff that everything that can be done for peace between the two groups is all-important to the peace of the world. That it can be done, especially from the outside, I am not so certain. I agree that all possible irritations should be removed. But there must be also a deep understanding of the psychology of the Arab countries. It must be clear to all who take part in any effort that the situation is extremely precarious particularly when there is great rivalry and no little enmity among the Arab states themselves.

I shall hope that before we are through with the consideration of this whole area in north Africa, Egypt, across to Liberia, that there may be consideration given to these deeper aspects of our policy in this great area.

Chairman RICHARDS. Mrs. Bolton, if you do not mind, we will go into that later. We will have unlimited questions as soon as this five-minute period is over.

Mr. Burleson.

Mr. BURLESON. You made reference, Mr. Secretary, to the difference in qualifications of personnel in Israel and most of the Arab nations. In applying technical aid, and technical assistance, I notice from these tables there is a difference between funds for the development of water resources in some of the nations. I understand water is all-important to most all of them.

Mr. McGHEE. That is correct.

Mr. BURLESON. If they do not have water, they are not going to have anything. I do not see anything any place for water resources for Libya, Iraq, Egypt, or Saudi Arabia. I believe there is something for Syria. Would you comment on that?

Mr. McGHEE. The Iraq Government is going to pay for their water-development program. They have reserved a \$12½ million loan from the International Bank for this purpose. The same is true in Egypt and Saudi Arabia. In Saudi Arabia, the Government has ample resources. Development of water requires considerable expenditures over and beyond technical assistance but the Saudi Government can pay for that.

Mr. BURLESON. Some of the oil companies have done considerable work in the development of those resources in Saudi Arabia?

Mr. McGHEE. That is correct. The Point 4 program also includes technical assistance for Saudi Arabia. However, we would expect the Government of Saudi Arabia to finance any large expenditures.

Mr. BURLESON. What do you mean by consumer goods? Syria, Jordan, and Iran, are scheduled for some \$9 million for consumer goods. What generally constitute these items?

Mr. McGHEE. This is an aspect of our assistance programs with which we have had considerable experience in southeast Asia. In the latter, for example, in order to obtain the local currencies required to

carry out projects for which dollar expenditures were to be made, such currency was obtained by bringing in needed consumer goods. This arises from the fact that the countries themselves just do not have the local currency available to make the necessary volume expenditure for labor, land, and other things required for the projects. That is why we have requested the authority to use some \$10 million out of the \$125 million in this request for consumer goods which will generate local currencies. If we were to limit our expenditures to dollars we would find that the government did not have the money to pay the local expenses and as a consequence the project would not get under way. At least in the initial stages of the program we felt it necessary to buy these needed consumer goods to get the local currency.

Mr. BURLERSON. What specifically are some examples of consumer goods?

Mr. McGHEE. Mr. Burler, anything that can be sold to the people. You would attempt to get nonluxury commodities which, in addition to producing local currency have a beneficial impact on the economy.

For example, if people needed clothes, then you might import clothes, not luxury-type clothes; you might buy work tools, if they needed tools and could pay for them. You would import hoes, plows, things of that nature and sell them to farmers. It would have a useful impact. By this process, local currency would be derived which could be used in getting the program started quickly.

Mr. BURLERSON. They would be things which by survey showed were needed—not things like refrigerators where no electricity was available or yo-yos or something of that sort.

Mr. McGHEE. That is correct, Mr. Burler. They would be needed commodities, which would produce immediate income for the building of a public road or a dam which ultimately will pay the economy but does not immediately produce local currency.

Mr. BURLERSON. Thank you very much.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. I want to associate myself, Mr. Chairman, with Mr. Ribicoff and Mrs. Bolton in their position regarding the necessity for making some move toward a reconciliation, if possible, in that area. I think it is so important.

(Discussion off the record.)

Mr. SMITH. To get out of the Middle East for just a moment, I would like to talk about Greece. What is the political situation in Greece? I raised that question because I have a great many Greeks in my district who have written me telling me that so far as political conditions are concerned, they are not good in Greece.

Mr. McGHEE. No. Probably they never were and never will be. The Greeks, you know, are highly political. Their governments are often unstable. They are the results of coalitions. The present Greek Government has cooperated extremely well with our Government. It is based on a coalition between the Liberal Party and the EPEK Party. As a coalition it has not been a strong Government, nevertheless, it has passed more effective legislation than in any other period since the Greek aid program was initiated in 1947, and very difficult legislation.

For example, legislation has been passed to force the Greek ship-owners to pay a large amount of taxes. The Government also had

to deal with labor problems on which it was difficult politically for the Government to take action, but the Government dealt decisively with these problems.

The present instabilities arise principally from the fact that elections will be held shortly in Greece, and everyone is thinking about those elections. There is an electoral law which is now being considered by the Parliament which will change the basis for the elections from the old proportional system to some compromise proportional system. This law will permit fewer political parties to get more votes. It is hoped in that way that one political party will emerge into a more predominant position so that there will be either majority rule by one party, or a stronger coalition, after these elections.

Mr. SMITH. Can you tell me what has been the increase, if any, in the standard of living of these Greek people since we have undertaken our program there? I think that is so important because I think it is directly related to the question of political stability or instability.

Mr. McGHEE. Surely. Mr. Smith, we did not seek greatly to raise the standard of living of the Greek people, but sought initially to restore the standards they previously enjoyed. Greece is different from the underdeveloped countries of the Near East in that she enjoyed a European standard of living. It was always on a precarious basis, but nevertheless a tolerable standard of living was possible with the earnings and remittances which she received. Her economy was devastated by the war.

We sought as our objective to restore it to its prewar levels. Unfortunately, it has not been possible for the Greeks to maintain such a standard without our support. However, it has been possible steadily to reduce the amount of aid which we never furnish to subsidize the Greek economy in order to achieve that prewar standard.

Mr. Porter, when he testified, indicated that last year ECA actually spent some \$30,000,000 less than had been budgeted, and that this year it is requesting \$38,000,000 less than that. As a consequence I would like to see any increase in standards beyond the prewar standards made up through reduction in our aid, rather than a further increase. If Greece could have security on the basis of her prewar standard of living, I believe the Greeks would have adequate incentives to play their full role in the free world.

(Discussion off the record)

CHAIRMAN RICHARDS. The gentleman's time has expired.

Mr. Hays.

Mr. HAYS. Thank you, Mr. Chairman.

Mr. McGhee, on some of the maps I notice Yemen does not appear. Is it completely autonomous?

Mr. McGHEE. Yes, it is, Mr. Hays. I will tell you why it is not clear. It is because the principal boundary is indeterminate. Its northern and southern boundaries are indicated here, but the boundary between Yemen and Saudi Arabia is undefined. Our Ambassador in Saudi Arabia, who is also Minister to Yemen, is visiting the Yemen right now. Yemen has a permanent Minister in Washington.

Mr. HAYS. Is Yemen a member of the United Nations?

Mr. McGHEE. Yes, sir.

Mr. VORYS. They sit next to us.

Mr. HAYS. Good. Then there is another country up in the north-east corner shown on some of the maps.

Mr. McGHEE. There is the independent sheikdom of Kuwait, which is a sheikdom whose foreign policy is controlled by the British Government.

Mr. HAYS. It is not autonomous?

Mr. McGHEE. Its foreign policy is conducted by Great Britain.

Mr. HAYS. In the northeast corner of Saudi Arabia.

Mr. McGHEE. Then there are several independent sheikdoms, such as Oman.

Mr. HAYS. Is Oman autonomous?

Mr. McGHEE. It is an independent sheikdom, but coming under the foreign policy control of the British Government.

Mr. HAYS. Is there any reason why it is not included in this list along with Yemen?

Mr. McGHEE. It is not a country with which we would normally have direct dealings. Our relations would be conducted through the British. The people there are actually nomadic to a considerable extent and do not have the needs of settled peoples. Some of these people are among the wealthiest in the world. The relatively small country of Kuwait has the biggest oil field in the world. Its income is so great that they ought to be assisting us, rather than us assisting them.

Mr. HAYS. I want to ask you about the possibility—getting back to the question asked by Mr. Ribicoff—the possibility of the great advances being made economically in Israel, making its impact on Arabic life. In other words, if the Arabs through trade participate in that economic advancement is it not likely to bring about alterations of attitude? What hope is there in that? Are there any trade barriers of a substantial character that would obstruct what I am speaking of?

Mr. McGHEE. No, Mr. Hays, and we greatly regret that there is not free intercourse between Israel and the Arab states, which would permit the Arab states to profit by the advances Israel has made.

Mr. HAYS. Then there are trade obstructions?

Mr. McGHEE. There is a complete trade impasse.

Mr. HAYS. They are not trading at all?

Mr. McGHEE. That is right. They have no trade relations. The only direct relationship is in the Mixed Armistice Commissions. We regret that greatly. We have pressed through the United Nations and outside for peace talks and for resumption of normal relations in the area. In the latter event we feel that the Arabs could benefit greatly from the increased technical knowledge of the Israelis.

Mr. HAYS. That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. Mr. Secretary, I would like to ask one or two questions in reference to the summary table that is included in this book of data in reference to the whole Near East. You have used the term of \$100,000,000 of aid that we are proposing to give. Now, in the fourth column the figures add up to \$76,000,000. You probably mentioned this, but I do not have it clearly in mind.

Mr. McGHEE. Yes, sir. I am sorry that is not clear. It is complicated.

That figure includes Iran. If you recall, we indicated \$25,000,000, actually \$24,050,000, out of the total of \$125,000,000 was for Iran, but since that will not be administered as a part of the Near East program I have spoken of the remaining \$100,000,000 separately. So if you subtract from your \$76,000,000, the amount for Iran, and add the \$50,000,000 which will be allocated to the refugee program which is not included because it will be spent, or at least coordinated, by the United Nations agency, the result is approximately \$100,000,000.

Mr. MERROW. Oh, yes. You take out Iran's \$24,000,000 and add \$50,000,000 for the refugees and come out with \$100,000,000.

Mr. McGHEE. Yes.

Mr. MERROW. You used the term \$140,000,000 as the grand total. Does that correspond to the 138 and does that last column include what it costs these governments to administer the aid or help to carry out the aid we are going to give?

Mr. McGHEE. No, sir. The \$140 million is a theoretical figure in that it takes in the \$100,000,000 economic figure, plus the \$40,000,000 figure, which the President could give in military aid to Israel and the Arab states, if it were found to be in the national interest. The figure you gave is the total estimated cost in both foreign and local currencies of making good these projects, of which the dollar component is as indicated here.

Mr. MERROW. I see. Thank you.

Mr. McGHEE. That includes the sum which the countries concerned would be expected to put up themselves.

Mr. MERROW. In other words, they get \$138,000,000 worth of good out of this by putting up their local currencies?

Mr. McGHEE. That is correct. The cost to us would be \$76,000,000. The cost to them would be \$62,000,000. As you see, the total value produced would be \$138,000,000.

Mr. MERROW. That \$460,000,000 to Saudi Arabia you indicated, I believe, in one remark that maybe that is not necessary.

Mr. McGHEE. It is \$460,000.

Mr. MERROW. \$460,000. Excuse me.

(Discussion off the record.)

Mr. MERROW. Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Roosevelt.

Mr. ROOSEVELT. Mr. Chairman, thank you.

Mr. Secretary, I want to congratulate you on the very clear and brilliant statement you gave us earlier. I think one of the objections that has been voiced by various people to this program in the Middle East and also in the Far East is that we are approaching it from a sort of piecemeal year-by-year thinking, and in that way we are failing to get the enthusiastic support and understanding of those people of our long-range hopes for them.

I am wondering whether any basic planning has been done to evolve, both from the standpoint of time and total funds, a long-range Middle East program? For example, one of the things that disturbs me is that I am afraid our technical aid and economic assistance is going to be mainly directed to raise the food production and improve roads and communications. However, apparently none of it except in a vague planning way—some of it will go to that, but none of it will go to develop the available resources, such as the irrigation and the hydroelectric development of the Euphrates.

If we could tell these people that that is in our plans 3 years from now, then I think we would really be hitting the jackpot propagandawise.

Now, that is a rather inclusive question. If you want to come to that later so that I will not waste all of my 5 minutes on you, I have two other procedural suggestions which I could make now.

One is along the same line. Could we not say we would authorize in this bill \$150,000,000 for the Arab refugee resettlement program, as is the figure presented by the United Nations, but this year, since they can only spend \$50,000,000, we are going to appropriate only \$50,000,000? We could tell them that so that they will realize we are doing the whole program for them, but since they can only spend \$50,000,000 this year, we will only appropriate that.

I do not know enough about the rules of the House to know whether that is possible.

(Discussion off the record.)

Chairman RICHARDS. The gentleman's time has expired. I am sure we will want to pursue that point in the general discussion in a few minutes. If you will just keep those questions in mind, Mr. McGhee. I want to call on Mr. Javits now.

Mr. JAVITS. Dr. Judd is ahead of me.

Mr. JUDD. I pass. I was out of the room when my turn came.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. I too want to thank you for your statement. I think, of course, as you told me and others quite properly that the two fundamental questions are the Arab refugees—and that is the nettling problem in the area—and the Iranian situation.

Do you feel that the main Communist danger in that area comes from the social status which exists in the Arab States? That is, the conditions which exist which do not seem to percolate wealth through to the mass of the people. Even though the Egyptians may have a high price for cotton or the sheikdoms may have fortunes in oil, it does not seem to shake down to the fellow on the ground. What do you think of that in terms of its being a fertile area for Communist exploitation?

Mr. MCGHEE. Mr. Javits, it is a fertile area, and I think the Arab refugees themselves are the most fertile ground which you have mentioned. Unquestionably the poorer classes in Egypt particularly are fertile ground, and probably those in Iraq. We have considerable evidence of that.

(Discussion off the record.)

Mr. JAVITS. Is it not a fact that the classic pattern communism is striving for is that when there is a revolution based on social causes, relatively few Communists can get hold of it?

Mr. MCGHEE. That is correct. But, as you know, if one excludes China from consideration as a special case, that has not taken place. All the countries which have been taken by Soviet communism to date have been taken in conjunction with Soviet force along the Czechoslovakian model. Therefore, since the near eastern states, aside from Greece, Turkey, and Iran, do not have a border with Russia, it seems unlikely that a situation could develop in which communism could come to power. I do not believe the Communists have that as their immediate objective.

(Discussion off the record.)

Mr. JAVITS. I have one other question. You said we were going to administer this aid in the Near East on an area basis. I think that is the real solution to many of our problems, in this aid.

Would you tell us in detail how you would do that?

Mr. MCGHEE. Yes, sir. We would hope to have a central administrator, probably at Beirut where the UN Refugee Agency is located. We would not necessarily have country missions in each country. In that way we could obtain much better technicians, who would be available to service the entire area. We could then work for cooperation between the countries and make our investments on an area basis to produce the best good for the area as a whole.

Mr. JAVITS. So if we cannot have a Near East Organization for Economic Cooperation, at least we can have a Near East Mission for Economic Cooperation?

Mr. MCGHEE. That is correct.

Mr. JAVITS. Thank you.

Chairman RICHARDS. The time of the gentleman has expired.

Mr. REECE.

Mr. REECE. Thank you, Mr. Chairman.

(Discussion off the record.)

Mr. RIBICOFF. I have a point of parliamentary inquiry.

Chairman RICHARDS. What is the point of parliamentary inquiry?

Mr. RIBICOFF. Will the Chair inform us of the approximate plans, in view of the proceedings on the floor, and how long we are going to continue here?

Chairman RICHARDS. What proceedings is the gentleman talking about?

Mr. RIBICOFF. The committee hearing as against the proceedings on the floor of the House and the potential vote.

Chairman RICHARDS. As an obedient servant of the committee, if the committee would like to adjourn, it can. We have a few more witnesses. I wanted to turn the Secretary over to the tender mercies of the committee for unlimited questions, with the sky the limit. If you do not want to question him, we will take up another matter.

Mr. ROOSEVELT. As a parliamentary inquiry also, what is the gentleman from Connecticut referring to in the potential vote?

Chairman RICHARDS. I noticed no teller bell has rung. When that happens we always inform the committee what it is about.

Mrs. BOLTON. There was a vote that went by one vote.

Mr. JAVITS. That is right. It was just a minute ago. I would like to inform the committee they are discussing now regulation W, and I might say to the chairman too that I think I and other members of the committee are worried about not being on the floor.

Chairman RICHARDS. I have been worried all week about it.

Mr. JAVITS. We are moving pretty fast there.

Chairman RICHARDS. Whatever the will of the committee is. If some members feel they have to go, or if you would like the Secretary to come back at some other time for further questioning, that will be all right.

Mrs. BOLTON. Is he not due back tomorrow morning, Mr. Chairman?

Chairman RICHARDS. The Secretary is slated to be here tomorrow morning.

Is it the wish of the committee that we suspend now and the Secretary will be back in the morning?

Mr. JUDD. Mr. Chairman, there were a couple of questions earlier, the answers to which were reserved. They were asked by Mr. Roosevelt.

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Chairman RICHARDS. We want to know if anyone wants to ask the Secretary any questions for the record.

Mrs. KELLY. Mr. Chairman, I have a question.

Chairman RICHARDS. Mrs. Kelly.

(Discussion off the record.)

Mr. ROOSEVELT. Will the gentlelady yield?

Mrs. KELLY. I yield.

(Discussion off the record.)

Mrs. KELLY. I have one more question, which is my last.

I have been shocked over the lack of interest in the continent of Africa. One of the witnesses the other day told us about a very small amount of point 4 technical assistance to that continent.

I realize you have covered northern Africa. So I had one of the staff prepare a statement for me. It shows there are about \$75,000,000 in private investments in Africa, which is a preliminary report, and a small amount of point 4 operations.

Due to the fact that today you said the Near East was neglected in the past, would it not be advisable at this time to inaugurate a point 4 program for us in Africa?

Mr. MCGHEE. Mrs. Kelly, Africa actually has benefited greatly from our assistance in recent years. Some \$300,000,000 has gone to Africa through the dependent overseas territories program of ECA. That sum probably would not appear in the figures you mentioned for the reason that it was given directly to the European administering countries concerned either as grants or loans; but actually there has been much more technical assistance available for Africa than could be absorbed. Some \$35,000,000, as I recall, was set aside for an African technical assistance program through the European administering countries.

Mrs. KELLY. That was through European countries, not United States point 4?

Mr. MCGHEE. In Africa, in their African territories. There is no question but that they benefited, but also the African people themselves benefited.

Mrs. KELLY. Did we benefit?

Mr. MCGHEE. Yes; because the programs were based to a considerable extent on the increased production of raw materials which we need, but Africa also benefited.

One of our problems arises from the fact that there has been so much assistance to the African possessions of the European countries that the independent countries, such as Ethiopia, Liberia, and Libya, feel they have been neglected. One of the reasons for our proposed \$4,000,000 program for these three independent countries is to compensate them, in a sense, for what they missed by not participating in the ECA program in the past.

I welcome your interest in Africa, but I believe you will find the ECA accomplishments in Africa very impressive. We believe this

\$4,000,000, together with ECA's continuing program, for dependent overseas territories, which is a part of the European program, will provide a good base for progress in Africa.

Mrs. KELLY. I have one more question. You mentioned the fact that the Israelis had a great deal of drive and capabilities in reaching their goal. Is it not more important to attempt to reward them than to reward the inertia of our European allies in the hope of creating good will?

Mr. MCGHEE. Mrs. Kelly, the principle of reward is not the basic principle in our foreign-aid programs. I am certain it enters in as one element but, of course, basic American security interests and objectives are the determining factors in our foreign aid programs. The element of reward, I would say, cannot be injected directly into the formulation of foreign policy. We feel we must stimulate these Arab peoples, we feel we must not accept their present attitude as being final.

Mrs. KELLY. Thank you.

Chairman RICHARDS. Dr. Judd.

(Discussion off the record.)

Mr. BURLESON (presiding). Is that all, Dr. Judd?

Mr. JUDD. Yes.

Mr. ROOSEVELT. Would you answer my questions now?

Mr. MCGHEE. Yes, sir.

Mr. Roosevelt raised the question of the goals. I am afraid we cannot be too clear on this question. I think we do have important goals with respect to the refugee program, which is half of the problem in the Near East states. There we would estimate 3 years to 5 years is required for the achievement of this goal. That estimate is based on the best available information, including a recent mission of the United Nations, which estimated it would require about \$150,000,000 over that period of time.

With respect to achievement of definite accomplishments in a given period elsewhere, I think you will agree that it becomes more difficult when you consider underdeveloped areas such as the Arab states. The area has very great development needs. It has limited capabilities for moving toward achieving those needs. We are in a situation where we can make any investment we choose, and it will be a worthwhile investment. We can make a small investment covering a year or two, and we will have achieved an advance in the standard of living which we seek, or we can make a larger investment over a 5-year period and achieve a larger advance.

We are not committed to a continuation of the program. We can determine later what our ultimate objective is. We should, however, in our own interest continue the program for a number of years.

In the case of Israel, I believe you would agree that it would also be very difficult to set a goal. You are dealing with the intangible factor of immigration. The objective of Israel itself is more complex than the goal of economic self-sufficiency of a static state in the light of this open-ended variable of immigration.

Mr. ROOSEVELT. One thing interested me, and I think it was Mr. Nathan last night who testified on the economics of this Israeli request and said they estimated that the cost, including the relief per capita refugee was \$250 for relief and another \$2,250, or a total of \$2,500 for resettlement of a refugee coming into Israel. Yet, if you divide

roughly a million Arab refugees, or 800,000, into \$150,000,000 for the settlement of Arab refugees, you are down to a \$150 per capita figure.

I do not know why it costs so much more to resettle a Jew than it does an Arab. I cannot figure that one out. I am afraid our \$150,000,000 figure is way too low.

Mr. McGHEE. The estimate for the settlement of Arab refugees is \$1,000 a family. The difference is the difference in standards of living between Jews and Arabs. The Jew is a European and, as a result, he desires to live in a modern home or apartment. His whole standard of living, his food and his clothes are all gaged to European standards. Most of the Arabs are used to living in a hut often made of mud, on low rations and with relatively simple clothing. As you know, the UN relief program feeds the Arab refugees at \$2 a month per person.

Mr. FULTON. The word has different meanings. The Jewish word "resettlement" means a different thing than the Arab resettlement. For instance, in Israel they follow through and give the refugees training and give them a job and a house,

Mr. ROOSEVELT. You must include all the industrial and agricultural capital that must go into it.

Mr. McGHEE. That is right.

Mr. FULTON. In addition, from Yemen they flew the refugees in, so that made the cost much higher. Israel had to do it because there were extended deadlines to be met.

Mr. McGHEE. I believe in Israel the per capita income is \$385 compared with \$50 in the Arab States. So the Jewish immigrants have to earn \$385, whereas the Arab refugees only have to earn \$50 to be on a basis similar to that of other Arabs. It is hoped there can be a moderate increase in living standards when the Arabs are resettled.

Mr. ROOSEVELT. I wanted to put that in the record because I know it is going to come up on the floor. Did you finish the other question?

(Discussion off the record.)

Mr. ROOSEVELT. Thank you. Now, the Haifa refinery is a very important question.

Mr. McGHEE. It is, indeed, particularly because of the shortage arising from the Abadan situation. As you know, only 30 percent of the capacity of the Haifa refinery is being utilized now, because the oil must come from Venezuela. It is a very long haul, and Venezuelan oil is dollar oil. The Iraqis will not permit the oil to come through the pipeline from Iraq, and the Egyptians will not permit it to come through the Suez Canal.

Mr. ROOSEVELT. Has there been any reduction of the Iraqi position?

(Discussion off the record.)

Mr. McGHEE. I would like to make the point, Mr. Roosevelt, that it would be an advantage if either an authorization for a continuing appropriation for the purpose of reintegration of the refugees, or some strong statement, could come from this committee. As you recall, the President's statement transmitting the request made note of the fact that this would be a continuing requirement. The Executive did not ask for an authorization beyond the 1 year, basically, I think, because that has not been an acceptable procedure in seeking funds

from the Congress. However, as you quite wisely pointed out, I feel certain that this was an advantage. If this committee, either through an authorization for an extended period or through some wording, could imply that this was a problem which we realized would take several years to accomplish, and would indicate that we would give continuing consideration to it, it would be of great assistance in achieving the political objective which we hope to achieve. It would help convince the Arab States that we intend to see this through, that it is our objective to help achieve settlement of the refugees.

Mr. ROOSEVELT. When we come to the consideration of the bill we will certainly try to accomplish that objective.

Mr. MCGHEE. Fine.

Mr. REECE. May I interject a question with reference to that refugee situation?

Is any effort being made to get private capital to come in and set up operations which would utilize these refugees after they are trained? In this country, if we have a serious unemployment area, we make a great effort to get somebody to come in and locate a factory there. Can you tell us to what extent it is feasible to encourage such a program over there?

Mr. MCGHEE. There has been a limited effort on the part of people with capital in that part of the world to utilize refugee labor. For example, a company in the Lebanon recently started a cotton project in the Jordan Valley, employing refugee labor.

Mr. REECE. Recently the General Shoe Corp., the head of which happens to be from Nashville, Tenn., located a factory in Israel.

Mr. MCGHEE. Yes, sir. However, there is only limited capital in the Arab countries in comparison with the need, so that anything they might do would be very small.

For example, the Bank of Syria and Lebanon has attempted with its resources to go forward with certain projects such as the Arab swamp drainage project. The possibilities of American capital being interested in going to the Near East are very small, in view of the prevailing conditions. Unfortunately, there is very little flow of American capital to the area, except from the oil industry. In the light of unsettled conditions in the area and the relatively undeveloped economics, which make it difficult for people to do business because they lack trained labor and other facilities necessary for a successful business operation, I doubt that much private capital will go to the area under present conditions.

The incentive to private capital in Israel is quite different in that the country has skilled labor and a government which is alive to the possibilities for selling the country's products not only in the Middle East, but elsewhere in the world.

Mr. ROOSEVELT. Is there any availability of World Bank funds for this kind of capital Mr. Reece is talking about?

Mr. MCGHEE. Yes, there is, particularly in Syria. The Syrians are now negotiating with the International Bank.

Mr. ROOSEVELT. I am talking of Lebanon, because I understand the Lebanese company, if it could purchase American machinery, for which it would require a certain amount of American dollars, is prepared to proceed with a small steel rolling mill in Lebanon. They have the local capital for plant facilities and the working capital, and so forth and so on.

I was wondering whether the World Bank is in a position to go into that matter.

Mr. MCGHEE. The World Bank at one time offered the Lebanese a small loan. I think the figure was \$1,000,000. I believe, they are still prepared to lend certain funds, and Lebanon may wish to use its bank credit for the development of the Titani River.

However, Lebanon, even if the capital were available, does not offer great possibilities for the settlement of these refugees. It is over-populated now, and the settlement of a large number of the refugees would disrupt the basis of the Lebanese state which, as you know, maintains a balance between the Moslem and Christian elements of the population.

Mr. ROOSEVELT. Have we covered the Haifa refinery?

Mr. MCGHEE. Yes. I indicated that Haifa would operate on Venezuelan crude in the event of a shut-down at Abadan, since the Iraqis do not appear to be willing to let oil come through the pipeline.

Mr. ROOSEVELT. Is the Haifa refinery owned by the Royal Dutch, or just whom?

Mr. MCGHEE. It is owned by a British company, Consolidated Refineries, Ltd.

Mr. BURLESON (presiding). Does anyone else have any questions?

Mr. FULTON. I have a few questions.

Mr. BURLESON (presiding). Mr. Fulton.

(Discussion off the record.)

Mr. BURLESON (presiding). Mrs. Bolton.

(Discussion off the record.)

Mrs. BOLTON. I am taking too much time, Mr. Chairman.

Mr. BURLESON (presiding). Do you wish to defer the other questions you have?

Mrs. BOLTON. There are various things I would like to know.

Mr. BURLESON (presiding). Perhaps you could submit those questions to the Secretary.

Mrs. BOLTON. For instance, the refugee population, and so forth.

Mr. MCGHEE. Do you want us to answer them now? If you would like to submit it now, we can give you the answers tomorrow.

Mrs. BOLTON. I shall appreciate having answers to these questions if I may submit them now.

Mr. BURLESON (presiding). Thank you, Mrs. Bolton. As I understand it the chairman intended to have the 7:30 meeting.

Mr. CRAWFORD. That is correct. There are two witnesses only—Congressman Meader and Mr. Frost of the Detroit Chamber of Commerce.

Mr. BURLESON (presiding). Mr. McGhee, I know that I can unreservedly speak for the entire committee in saying that not only do we always appreciate your appearance here, but we enjoy it. I know I have heard many of the others express themselves in that regard.

Mr. JUDD. I will join in that. I could not be here for the first part of his testimony but I heard several of the other Members on the floor report how informative it was. I will read it in the record.

Mr. MCGHEE. Thank you very much. It is a pleasure always to be here.

Mrs. BOLTON. We are all very much interested in the way in which you have approached your job and everything connected with

it. We admire your capacity to clarify it for us, because the Near East and Africa is a pretty big area.

Mr. BURLESON (presiding). I think we all have that feeling. It is regretted that because of activities on the floor of the House, it is difficult for all Members to be present continuously. That can't be helped. We are very conscious of that but circumstances do not always permit it, of course.

Mr. McQUEE. I am amazed at the knowledge this committee has. I can tell you very little, I am sure.

Mr. BURLESON (presiding). You know you are to be back tomorrow morning at 10 o'clock?

Mr. McQUEE. Surely.

(The following were submitted for inclusion in the record:)

MIDDLE EAST REFUGEE PROBLEMS

This material has been prepared by the Department of State responsive to an outline suggested by the staff of the House Foreign Affairs Committee.

1. ANALYSIS OF REFUGEE PROBLEM

A. There were 875,998 refugees on the rolls of the United Nations Relief and Works Agency for Palestine as of the end of June. These refugees are distributed as follows:

Lebanon.....	106, 753	Gaza.....	109, 789
Jordan.....	465, 450	Israel.....	23, 507
Syria.....	80, 499		

B. *Conditions of the refugee population.*—A team of experts from the World Health Organization recently made a survey of health conditions in the refugee population. They discovered that, generally speaking, the refugee population was in better condition than might be expected from the low diet level and lack of facilities from which many have suffered, particularly the two-thirds of the refugees not in camps. Disaffection and unrest is natural among those people, separated from their homes and generally unable to earn a livelihood.

C. *Attitude toward refugees in countries where they are located.*—Attitudes vary according to the country. Jordan, where half of the refugees are located, has granted to every refugee full citizenship rights if he wishes it. It will not be possible to resettle more than 150,000 to 200,000 of the 465,000 refugees within the limited terrain of Jordan; Lebanon is overpopulated in relation to its resources and will not be able to absorb more than a fraction of the 106,000 now there. Lebanon is anxious for a settlement of the refugee problem which will enable her to move the great majority of refugees to countries where resettlement is possible. Syria has been in conversation with the agency for some time on two pilot projects for resettlement. Changes of government have delayed these negotiations but recent conversations have showed continued willingness to go forward with resettlement. Egypt has declared its willingness to resettle 60,000 of the 200,000 refugees in the Gaza in lands which it is hoped to reclaim in the Sinai Peninsula. There is probably not any further opportunity for resettlement in Egypt and the remaining 150,000 refugees in the Gaza strip will have to be resettled in other countries. Syria's vacant areas offer the most promise; Iraq is a possibility.

D. *Attitude of the Israeli Government toward resettlement.*—The Israeli Government has consistently taken the line during the last 3 years that resettlement of the refugees in the Arab countries is the only practical solution for the problem. The Israelis are not willing to repatriate any substantial number of refugees and adduce two principal reasons: (1) their need for all available lands to resettle Jewish immigrants and (2) the internal security risk of a large and potentially hostile Arab population.

II. PROBLEMS OF RESETTLEMENT

A. *The number to be resettled.*—It is estimated that at least 60 percent of the refugee population have a rural background, and it may therefore be estimated that approximately 600,000 persons or 100,000 families will need to be resettled on the land.

B. *Where the refugees can be resettled.*—The availability of land and water is the key to resettlement. It has been estimated that probably not more than 200,000 can be resettled in Jordan; to a considerable extent resettlement in Jordan has accounted for the reduction in refugee rolls from its peak of 1,019,000 to the present figure of 876,000. Egypt, as mentioned above, is willing to take approximately 50,000 in the Sinai Peninsula, if surveys of water supplies, now under investigation, permit. Lebanon may accept 20,000 refugees of Lebanese ethnic origin. This leaves the great bulk of the refugees to be resettled in the one Arab country where there are both rain-fed lands and opportunities for irrigation—Syria. Both in the large Jezira area to the north and in the river valleys such as that of the Kabhur, these opportunities exist.

C. *Cost of settlement of the agricultural population.*—Costs of settling a family of five persons have been estimated in the range of from \$1,000 to \$2,500. This includes direct costs such as livestock, seed, agricultural implements, and simple housing in agricultural areas. Land costs have not been included since it is expected that the refugees will be settled on public domain and present waste lands. Ancillary costs such as roads, public buildings, services, and others are expected to be taken up in a general program of economic development as well as by the United Nations agency.

The spread in costs of \$1,000 to \$2,500 is explained by the difference between settling on rain-fed lands and on irrigated land. The much larger cost of the latter is due to the mechanical equipment necessary. Since the agency has not yet negotiated for specific tracts of land with any government, these cost figures are, of necessity, general in nature. Results of investigations presently being conducted in the Sinai Peninsula in cooperation with the Egyptian Government will develop firm figures for that project.

D. *Relocation of refugees to the land.*—It would be hoped that the great majority of the refugees can be resettled on the land as freeholders, so as not to perpetuate the feudal type of landholding so prevalent in the Near East. In cases where large tracts of land are rapidly coming under private ownership, a trend steadily increasing in the Jezira area of Syria, some form of tenancy may well be necessary. The PRA has in mind the desirability of improving the relative numbers of freeholders, but the agency must concentrate on the main point, reintegration; and the end of the need for relief.

E. *Settlement of others than farmers.*—The small professional and white-collar classes among the refugee populations have largely made themselves self-supporting and relatively little aid will be needed for them. In the case of skilled workers and merchants the agency has, in Jordan, set up a development bank which has already made loans to such classes of artisans as the mechanics, blacksmiths, and cobblers. Small shopkeepers will also be aided in this way. It is hoped to repeat the Jordan pattern in other countries.

F. *Israel's share of the cost is indeterminate.* The United Nations is endeavoring to appraise the value of the refugees' claims for compensation for their immovable property left in Israel. This will be a very substantial sum, probably beyond Israel's ability to pay within a reasonable period of time.

Resettlement costs of the United Nations, estimated at \$150,000,000 (over and above relief costs) are estimated on a basis of acquiring land free from local governments, and on a basis of a substantial rise in economic conditions fostered by development programs stemming from local funds, borrowings from abroad, and the proposed grant program of the United States. Relief costs will decline as refugees are resettled, but as a 5-year period is envisaged, total UN costs, including relief, may well aggregate \$225 million.

The refugees will not be welcomed as settlers unless there is a demand for labor generated by economic expansion.

G. The Israeli Government has indicated a willingness to entertain claims for real property abandoned by the Arabs. This subject is having the attention of the Palestine Conciliation Commission of the United Nations. Israel has based its case for a grant of \$150,000,000 for 1952 from the United States partly on its obligation to compensate the Arab refugees.

III. PROBLEMS OF THOSE WHO CANNOT BE RESETTLED

The goal of the United Nations agency has been to reduce the refugee problem to bounds within which it can be handled by the local governments. Until that day comes, there appears no alternative to measures for relief financed in large part by the international community.

The problem of refugee morale has been under constant study. Factors undermining their confidence can be summarized:

1. Lack of security for the future.
 - (a) Uncertainty of continued United Nations aid.
 - (b) Uncertainty of rights of asylum.
2. Dissatisfaction with the present:
 - (a) Poor material conditions.
 - (b) Homelessness.
 - (c) Statelessness.
 - (d) Increased belief that they are victims of social injustice.
 - (e) Failure of United Nations to carry out resolutions regarding their rights to repatriation.

These factors are manifest in nervous tensions verging on exasperation, creating constant danger of violent demonstrations. They lead to acceptance of Communist theories, which promise a way out.

They lead to a substantial fall in moral values both in the Christian and Moslem sectors of the refugee population.

IV. LONG-RANGE PLANS FOR RESETTLEMENT

Proposed programs of the United Nations involve as long as 5 years. They involve principally (1) use of lands in Sinai, which will require roads, wells, ditches, seeds, fertilizer, tools, and light industrial facilities to make them habitable, (2) the development of northern Syria where rain-fed lands may tend to reduce costs and (3) possibilities in the Tigris-Euphrates Valleys which are remote in time and can only follow extensive development by the Iraqis themselves.

V. POLITICAL IMPLICATIONS OF THE REFUGEE PROBLEM

A. Will Israel accept refugees? If so, under what conditions?—Israel has consistently maintained that for reasons of Jewish population pressure and of security, that she cannot accept any substantial number of refugees. The Israeli Government is not likely to change this attitude.

B. Will continuation of the refugee problem alter Arab-Israel relations?—The problem of continued bad relations between Israel and the Arab states can only be exacerbated by the continuation of the presence of more than three-quarter of a million refugees on Israel's borders. If the problem is allowed to continue, it will only alter relations between Israel and the Arab states for the worse.

C. Will United States aid of \$50,000,000 plus any sums contributed by other United Nations members provide anything more than relief?—The agency estimated that, as of October 1950 prices, relief would cost approximately \$20,000,000 during the current fiscal year. This figure, in view of rising price trends, will almost certainly have to be revised, perhaps to as much as \$25,000,000. A United States contribution of \$50,000,000 would be added to other pledges now totaling \$13,000,000. It is hoped, however, to receive substantially larger sums from other contributors, perhaps as much as \$20,000,000. For 1952, then, of a total of \$70,000,000 as much as \$45,000,000 might be spent on reintegration.

D. Progress of Communist penetration or antiwest attitude in refugee camps.—The Department of State has received continuing and increasing evidence that Communist agents are active among the refugee population. They have penetrated local political movements and have constantly played upon the desire of the refugees to return to their homes. They have constantly sought to identify the west and particularly the United States as the cause of refugees' troubles. It is perhaps surprising that they have not obtained even more successes since the Communists have made refugees their principal target in the Near East.

E. How will the United States security in the Middle East be improved by voting the \$50,000,000 proposed in this bill?—If the United Nations Relief and Works Agency can begin at once and proceed quickly with its program of reintegration of refugees into the economies of the near eastern countries, the greatest single source of unrest and antiwestern sentiment in this critical area will be in process of solution.

Peace between Israel and the Arab states cannot possibly be achieved until the problem of the Arab refugees is solved.

MEMORANDUM RE EXPORT-IMPORT BANK LOAN TO THE STATE OF ISRAEL IN THE AMOUNT OF \$135,000,000

This loan may be subdivided into six categories as follows:

Agriculture.....	\$70,000,000
Transportation.....	9,410,000
Housing and community facilities.....	25,000,000
Telecommunications.....	5,000,000
Ports (improvement and expansion).....	5,590,000
Industry.....	20,000,000
Total.....	135,000,000

The disbursements to date and the remaining balances with respect to each of these categories are as follows:

	Disbursements	Balance
Agriculture.....	\$35,088,606.07	\$34,911,393.93
Transportation.....	7,166,010.47	2,243,989.53
Housing and community facilities.....	18,567,762.32	6,432,237.68
Telecommunications.....	3,735,183.50	1,264,816.50
Ports (improvement and expansion).....	1,874,373.33	3,715,626.67
Industry.....	7,613,083.37	12,386,916.63
Total.....	71,035,019.15	63,974,980.85

The anticipated rate of disbursements with respect to the remaining balance per quarter for the remainder of the year 1951 and for the years 1952 and 1953 are as follows:

1951—Aug. 1-Oct. 1.....	\$8,000,000
Oct. 1-Jan. 1.....	10,000,000
1952—Jan. 1-Apr. 1.....	10,000,000
Apr. 1-July 1.....	10,000,000
July 1-Oct. 1.....	10,000,000
Oct. 1-Jan. 1.....	10,000,000
1953—Jan. 1-Apr. 1.....	6,000,000
Total.....	64,000,000

It is estimated that the full amount of the loan will be disbursed by the end of the first quarter 1953.

Agriculture, \$70,000,000

This section of the credit is subdivided as follows:

Diversified agriculture.....	\$36,000,000
Regional irrigation.....	20,000,000
Citriculture.....	8,500,000
Nitrogen fertilizer plant.....	5,500,000

Diversified agriculture.—In general, the materials, equipment, and services that are being financed under this subsection are as follows: Materials including steel, timber, and aluminum, agricultural machinery and implements, trucks, draught animals, and dairy cattle, tractors, land preparation equipment, plant protection equipment and harvesting equipment. There is also included in this sector pipe, pipe materials, and mechanical and electrical equipment for water supply. This irrigation equipment is being installed on the farms as opposed to the regional irrigation program described below.

Regional irrigation.—The equipment that is being purchased in connection with this program consists primarily of pipe, pipe materials, and mechanical and electrical equipment.

Citriculture.—In general, the equipment that is being financed for this program involves tractors, land preparation equipment, packing sheds and equipment, and harvesting equipment.

Fertilizer plant.—Equipment that is being purchased under this sector is the usual type of equipment necessary to construct a fertilizer plant.

Transportation, \$9,410,000

This section of the credit is divided as follows:

Busses, trucks, etc.....	\$6, 000, 000
Ships.....	734, 000
Railway equipment.....	800, 000
Aircraft.....	800, 000
Airport improvement.....	480, 804
Air maintenance base.....	595, 196

It is believed that the categories in general describe themselves and no further breakdown is necessary.

Housing and community facilities, \$25,000,000

The Housing and community facilities program may be subdivided as follows:

Housing materials.....	\$16, 400, 000
Machinery and equipment.....	5, 000, 000
Water supply and sewage disposal services.....	3, 600, 000

In general, materials, equipment, and services with respect to the subdivisions are as follows: Materials—lumber, steel, pipe, etc. Equipment: cement mixers, street building equipment, etc. Water supply and sewage disposal: Pipe, pumps, and other such equipment.

Telecommunications, \$5,000,000

This section is not subdivided and in general the equipment that is being financed is radio, telephone, and related equipment.

Port facilities, \$5,590,000

This section was not subdivided and the equipment and materials that are being financed relate to the improvement and expansion of the port of Haifa. In general they are: steel and other construction materials, cranes, fork-lift trucks, and other cargo-handling equipment.

Industry, \$20,000,000

This section of the credit is subdivided in that the bank has approved the use of approximately \$19,900,000 by 277 different industrial entities in Israel. There is a wide range of industries involved, including: Cement, textile, steel, wood-working, fertilizer, vegetable and fruit-processing and canning, and many others. The equipment that is being financed relates directly to the various entities receiving funds.

There still remains \$100,000 yet to be approved for use under this section of the credit.

Mr. BURLERSON (presiding). The committee will adjourn until 7:30 o'clock tonight.

(Whereupon, at 5:55 p. m., the committee adjourned until 7:30 p. m. the same day.)

(The following statements were submitted for inclusion in the record:)

STATEMENT OF ADMIRAL FORREST SHERMAN, UNITED STATES NAVY, ON THE PROPOSED MUTUAL SECURITY ACT OF 1951

Mr. Chairman, I welcome this opportunity to appear before you and submit my estimate of the strategic importance of the Eastern Mediterranean and Middle East. I consider that this has a direct bearing on the necessity for the proposed legislation which you are now considering. The purpose of this legislation is "to promote the foreign policy and provide for the defense and general welfare of the United States by furnishing assistance to friendly nations in the interests of international security." The legislation proposes a continuance and extension of military and economic assistance to this area, which I strongly endorse for the double purpose of increasing the ability of these countries to resist internal subversion and to strengthen them as highly necessary allies in a possible general war.

Today there is an uneasy peace in the Middle East, and the existence of destitute refugee hordes from Palestine produces a political and economic situation fraught with danger. Hunger, cold, lack of shelter, and lack of work lower the resistance of those who normally shun the ideology of the Kremlin. It cannot be

taken for granted that by itself, the religion of the refugees will reject communism. Outside help is necessary.

The creation and the maintenance of political and economic instability is a basic tactic of forces which oppose us. Those forces infiltrate—subvert, seeking to create conditions which will lead to political capitulation or to facile armed conquest.

Our interests are many in the countries bordering on the eastern Mediterranean and in other countries close by. We have a cultural and moral interest in the welfare of the many millions who inhabit the area. We need them as our friends. Concrete evidence of our cultural interest is found in the American institutions which have existed in the area for years. The American University in Beirut is an outstanding example. Twenty graduates or former students are members of the General Assembly of the United Nations. We have a financial interest in the Middle East which is well recognized. Funds appropriated by the Congress last year for relief work are evidence of our moral interest in the area.

It is to our advantage to strengthen existing bonds of friendship in the Middle East. These nations of the Middle East are sufficiently important to cause us to help improve their economic and political stature and strengthen their will to resist aggression. In my opinion, we should take all reasonable steps toward the creation and maintenance of political and economic stability in that general area. One essential requisite to this end continues to be the provision of that military equipment and technical military advice and training which will enable these nations to entertain a reasonable hope of successfully defending themselves.

But it is our military interest that I wish to emphasize. For centuries, the military importance of the Middle East has been the cause of war, and of political and economic pressure and penetration. I regard the strategic importance of the eastern Mediterranean and Middle East as almost equal to that of the North Atlantic Treaty area itself, as related to efforts to resist world-wide Communist encroachment. In that area lie tremendous oil resources which the free world requires now for its greatly expanded rearmament effort, and which would be essential for the effective prosecution of a general war. Conversely, these oil resources would be desperately needed by the Communists to wage successfully a prolonged general conflict.

In addition to these large resources of oil, the area possesses a high degree of strategic importance because of its geographical situation. This area involves three continents and controls critical land, sea, and air communications. If war should come, the free nations must be able to control these communications and deny them to the enemy. In addition, this area, under allied control, would provide the bases for offensive operations by which we could strike directly and quickly at the heart of the enemy.

Today, we plan to defend Western Europe in case of attack. The practicability of execution of such plans is increasing each day as the free nations augment their total military potential. As our strength in Western Europe increases, it becomes more practicable to plan for a defense of the Middle East which will insure, as a minimum, a continuous flow of oil to the Western World from that area and a denial of this oil to the enemy.

The critical communications of the Eastern Mediterranean and Middle East focus at two points, the Turkish Straits and Suez. Friendly control of the Turkish Straits would be an important factor toward insuring the continued use of the Mediterranean as a principal highway for allied combatant forces and commerce. As long as enemy naval forces cannot exit from the Black Sea, they cannot be effectively employed in the Mediterranean, nor can they render logistic support to such enemy land and air forces as might reach the shores of the Mediterranean. Retention of control of the Turkish Straits by our allies is necessary for the security of General Eisenhower's southern flank.

I believe that the importance of safeguarding the Suez Canal is so obvious that I would not be justified in taking the time of these committees with further discussion.

The internal and external security of each of the nations of this area is critically important to the security of the Western World.

I believe that it is clear that a strong and resolute Turkey, ready and able to successfully resist encroachments upon its sovereignty, is the key to a successful defense both of the Middle East and of the Mediterranean. The security of Greece is essential to the security of the Mediterranean. Both the Turks and the Greeks have proved themselves battle-worthy allies in Korea.

In Iran recent events indicate the dangers which face us in certain of these nations. Due to the unsettled and unstable conditions which prevail, and to the

shifting external pressures which may be applied. I consider that our plans for aid to this area should permit administrative flexibility to meet the situation of the moment. Should the probable enemy gain control of Iran, the security of Turkey would be jeopardized, the defense of the vital Straits area would be weakened, and even the Saudi Arabian oil fields would be placed in jeopardy. We should continue our aid to Iran in order to encourage that country to resist subversion and to develop forces for its defense.

Behind the Turkish-Iranian barrier lie the Arab States and Israel. There is the oil which is essential to Europe. There are the base areas required for protection of essential sea and air communications, and for support of combat operations to the north.

The Administration proposals regarding authorizations of funds for the countries of the area are set forth under title II of the legislation you are considering. The funds requested for military assistance to Greece, Turkey, and Iran are set forth under section 201. In order to give the desired administrative flexibility, which I referred to previously. It will be noted that section 202 would authorize the President to use not more than 10 percent of the funds to be authorized under section 201 for the purpose of granting military assistance to any other country of the Near East area. I recommend that the committee approve the proposals set forth under these two sections as measures necessary for the implementation of our national policy of furnishing assistance to friendly nations for increasing our collective security.

Under Public Law 329, Eighty-first Congress, and its amendments, over a quarter of a million measurement tons of military supplies and equipment have been shipped by the United States to Greece, Turkey, and Iran for the purpose of reequipping and modernizing their military forces. In addition, two destroyers, two submarines, one submarine rescue vessel, and four destroyer escorts have been delivered, and one submarine tender and three landing ships, medium, will soon be delivered. United States military personnel are maintained in the military assistance advisory groups stationed in these countries, to assist in training and in the proper use and maintenance of this equipment. As of the 1st of May 2,285 military students from title II countries have been trained or are in training in United States service schools both in the United States and abroad.

These deliveries of equipment and this provision of training advice should be continued, in my opinion. I believe that this has been and will continue to be an essential contribution to the military security of this area.

Major General Scott is present as the representative of the Office of the Secretary of Defense which deals with military assistance matters. He is eminently qualified to explain to the committee and discuss in detail the contents of the various matériel programs and the specific purposes for which they are intended. With your permission, Mr. Chairman, I propose to conclude my statement and permit General Scott to outline to the committee the general characteristics of the proposed programs, their estimated costs, and their specific purposes.

STATEMENT FROM AMBASSADOR JOHN E. PEURIFOY ON THE SITUATION IN GREECE

A Communist sword of Damocles has continued to hang over Greece since the withdrawal of the German occupation forces late in 1944. By 1946 Greece was in a desperate struggle at home to suppress Communist guerrillas directed and supplied from abroad. Against these guerrillas the Greek Government had but meager resources and inadequate arms to prosecute the fight. In answer to an appeal from the Greek Government, the President and the Congress acted in 1947 to give the Greeks assistance. Since that time Congress has yearly reaffirmed this policy by granting financial assistance to Greece to help mend her ravaged economy and to build up armed forces adequate to provide for her security. Although the guerrillas were driven from Greece by the end of 1949, a serious external threat has developed deriving from the increasing military potential of her Soviet-dominated northern neighbors.

Greece, as one of the countries of the free world bordering the Soviet-dominated region, is constantly under rigorous pressure. However, there is no sign of defeatism in this small nation. Through United States military aid, Greece is developing strong defenses against possible aggressive moves from behind the iron curtain. I can assure you that these defenses are in competent and stalwart hands. The moral fiber and fighting ability of these troops, according to our military experts, are among the best. Today Greece can guard her borders with

modern weapons instead of improvised ones. She is greatly appreciative of the United States Government's help in this respect. Greece has not only met the Communist threat at home courageously and with determination, but has co-operated closely with the Western powers to prevent the encroachment of international communism. In the forum of the United Nations, Greece has been an implacable foe of baleful Soviet moves. Within a week of the appeal by the United Nations Secretary-General on July 14, 1950, for military assistance to United Nations forces in Korea the Greek Government responded with an offer of an air force unit. Shortly thereafter, on September 1, the Greek Government volunteered an expeditionary force for service in Korea. Both the air force unit and the infantry battalion arrived in Korea in the fall of 1950. Since that time the Greek forces have demonstrated their mettle in valiant and aggressive action against Communist forces. On June 24 Greece was the first country to respond to the Secretary-General's appeal on June 22, 1951, for additional troops, with an offer to double her troop strength in Korea.

Our military investment in Greece is a sound one. Her accomplishments under this program have been intelligently developed under able leadership. Should the occasion demand the employment of the Greek armed forces, you may be assured that within her capability Greece may be relied upon fully to expend her best efforts to repel any invasion of her borders—whatever the numerical superiority of the invader may be. The morale of the Greek people is at a high level and they possess the determination to resist forcefully any threats which may be employed against Greece.

Continued military assistance to Greece is essential for the maintenance and repair of existing military items, to replace worn-out items, to supply the requirements of a trained reserve strength, and to continue the modernization of military equipment. The strength of the Greek armed forces could be mobilized to a sizable level with minimum delay provided the equipment and supplies requested are forthcoming.

I should like to point out certain facts concerning the efforts which Greece is making to help herself. During 1951 the Greek Government itself is spending almost half of its entire budget for defense purposes. This is a very considerable proportion, particularly for a nation of less than 8 million people with scant natural resources and a low standard of living. Greek industry is presently manufacturing all clothing items for the Greek Army, such as underwear, uniforms, as well as bedding and mattresses. This year it is hoped that a substantial part of its army boots and shoes will be manufactured locally. Moreover, it is hoped that Greek soldiers will have increasing amounts of local-made items necessary to repel any invader, including Greek-made ammunition, mines, and grenades. Local foodstuffs provide the Army with such basic elements of the Greek diet as tomato paste, olive oil, potatoes, and fresh vegetables.

The ravages of 10 years of German occupation and Communist aggression very seriously weakened the Greek economy. With American aid, basic facilities have been reconstructed. However, because of the necessity of eliminating the Communist-led guerrilla menace, Greece has not even had two full years to work at the rehabilitation and development of her economic structure. Greece has a large unfavorable balance of trade and many vital problems remain to be solved. Continuation of irrigation, land reclamation and improvement, and more efficient agricultural methods now underway will reduce the large requirements for the importation of food. Completion of the electric-power program will reduce imports of fuel and provide a basis for further productive expansion, particularly in light industry. Light industry will not only provide Greece with many of the items she must now import, it will also increase the products for export.

A vigorous program is underway to check inflation which has been accelerated by international price rises. Based on an economy which is not self-sufficient, the Greek financial structure itself is not sound, though measures are being taken to strengthen it. Continued economic assistance is therefore essential to help the Greeks along the road to a greater degree of self-sufficiency. It is also essential to insure, in the meantime, the subsistence necessary to help them carry their present heavy economic and military burden. Economic assistance to Greece is carefully integrated with the defense measures considered necessary to the security of the country. Not only is this true of industry, agriculture, and health, but also in the field of public works.

In the past year coalition governments composed of the Centrist Liberal and Democratic Socialist Parties have held office. Under these governments important progress has been made in both the economic and administrative fields. In the recently held municipal elections, the Communists and their fellow travelers

failed to show any increase in strength. Moreover the results confirmed the moderate political inclinations of the Greek people. It is notable that for the first time women participated in municipal elections. While political stability has increased over the past year, considerably more stability is desirable in the Government. The proportional representation system employed in Greece contributes substantially to the lack of adequate stability in the Government. Many Greeks recognize that an electoral system which would tend to decrease the number of political parties represented in the Government would provide a better basis suited for effective governmental action. It now seems probable that the Greeks may hold new elections in the coming months and a considerable opinion favors the use of a proportional system modified to strengthen the representation of the largest parties.

In summary, Greece is more than paying off the investment in her defense which the United States has made. She has repelled Communist aggression once; she is prepared to do it again. In spite of her small size and meager resources, she has one of the best armies in Europe. Her spirit is excellent, but in order that it remain so she must continue to have our help. The external threat has not abated; in fact, it is greater than ever. The security of Greece is vitally related to the security of the Mediterranean, which in turn is critical to the security of Western Europe and the United States. Greece is one of the most loyal and courageous of our allies. Her continued support is both in our interest and hers.

STATEMENT BY MAJ. GEN. ROBERT T. FREDERICK, UNITED STATES ARMY, CHIEF, JOINT UNITED STATES MILITARY AID GROUP TO GREECE ON GREEK MILITARY AID PROGRAM, 1952

Since 1947, when the first Assistance Act was approved by the Congress authorizing military assistance to Greece, Congress has yearly reiterated its expression of policy through annual appropriations to provide further military assistance to Greece.

Following the cessation of hostilities at the end of World War II, Greece—unlike the majority of Allied Nations—was required to expend, on a wartime basis, much of its economic resources and many lives in order to maintain its internal security. This situation has been alleviated through the generous gestures of the United States in providing assistance, both economic and military, to a war-torn nation.

Much has been accomplished in recent years to stabilize the Greek military establishment through reorganization, training, equipping, and the establishment of rigid supply discipline. Today the Greek armed forces are efficient and capably led. Field Marshal Papagos, who contributed substantially to the development of the efficiency of the armed forces, resigned on May 30. The direction of the armed forces was assumed by Lieutenant General Grigoropoulos in the capacity of Chief of Staff of National Defense. General Grigoropoulos has had an outstanding record in the Greek Army and the American military mission has every reason to believe that the high standards achieved will be maintained under his direction. The expenses of maintaining this establishment are a constant drain on the limited economy of the country, despite the liberal gestures of the United States in providing it with the minimum military equipment, supplies, and other limited assistance authorized.

Greece's efforts have been heralded generally among the free nations of the world on its remarkable accomplishments, and on its cooperative spirit toward the United Nations military efforts in Korea. Greece unstintingly, and with enthusiasm, dispatched an expeditionary force to Korea to aid the UN effort to uphold the principles of democracy and in curtailing territorial aggrandizement by nations who disregard the democratic concept of man's basic right to life, liberty, and freedom from oppression.

Unfortunately, the economic assistance program which was originally contemplated for Greece in 1947 has not been fully realized due to the necessity of giving first priority to the military effort in order to end the threat of Communist guerrillas within Greece. The military assistance program to the country has become increasingly important, and without abatement of communist pressure, further aid is essential to maintain Greece among those nations serving as a buttress against expansion of communist imperialism. The military and economic assistance programs are reviewed continuously to assure the common objective of preserving the integrity of the country. This has meant a revision

of plans on programed road construction, bridges, industry, harbors, and other related projects.

The principal features of the military-assistance program to Greece are as follows:

(1) A minimum modernization of the equipment of the Greek National Army, coupled with maximum training and essential maintenance. The scale of equipment being furnished is far below United States standards. A major deficiency does and will exist in field and antiaircraft artillery.

(2) The necessary modernization and replacement of worn-out naval equipment so that the Royal Hellenic Navy may more efficiently patrol Greek coastal waters, clear mines, and furnish sea transport and support to the Army.

(3) A reequipment of the Royal Hellenic Air Force, with logistic support therefore, to provide tactical units capable of supporting ground operations. This reequipment program was started in fiscal year 1951 and is proposed for continuation in fiscal year 1952 by the replacement of obsolescent major items of equipment.

(4) A training program at all echelons in all three services, both tactical and technical.

Provided the military program requirements for 1951 are supplied in accordance with present estimates, Greece's armed forces, including a limited reserve, may be considered exceptionally well trained, but provided only with a minimum amount of equipment. The trained military manpower reserve in Greece may be mobilized for total military effort, within a minimum period of time. Hence, it is essential, looking toward the eventuality of this requirement, that continued military assistance be given the country in sufficient quantities and types of material to insure maximum utilization of this manpower potential. The United States military mission in Greece, serving in daily concert with the responsible leaders in the Greek armed forces, are confident of the Greek abilities to utilize to the fullest extent all military aid granted. The items contained in the program are considered the minimum necessary to accomplish the objective mentioned.

To meet the requirements of its Armed Forces, Greece is striving to furnish not only the manpower involved, but the products of its soil and local industry. Much has been accomplished during the past year with ECA support to enlarge the number of military items which may be manufactured in the country. Moreover, it is planned during the next year with ECA assistance to further expand the list of self-help items.

In summary, Greece has willingly and forcefully contributed her maximum efforts toward the defeat of communism. It would be short-sighted not to fill the needs of this worthy nation in order to provide her the means of fully utilizing her military might in the event of need. Greece, if attacked, will give a glorifying account of every investment which the United States has made in her Military Establishment.

STATEMENT FROM AMBASSADOR J. B. BLANDFORD, JR., ON REFUGEE REINTEGRATION AND ECONOMIC DEVELOPMENT IN THE NEAR EAST

PROBLEM

There has been a major social and economic dislocation in the Near East.

Eight hundred and fifty thousand Arabs are on relief and living in camps, caves, and other temporary shelter.

Generally they are nonproductive. When they work they compete with local labor. They constitute an economic blight.

There is great human misery. They are bitter. They are idle. They are fertile soil for the constant Communist effort to exploit them.

They are a major obstacle to peace and stability in the Near East and to friendship of Near East with other free nations and with the United Nations.

They cost the international community \$25 million a year for food, shelter, and health and educational services.

ANALYSIS

There is adequate soil, water, and economic potential in the area to absorb these refugees if sufficient funds are available to exploit these resources.

The refugees still yearn for their old homes or alternatively demand compensation. The United Nations is taking steps to define the amount of Israel's obligation for compensation and devise some scheme for payment to refugees who will not be able to return or who do not wish to do so.

The Agency's principal task is one of moving refugees from the camps and ration lines to village homes and self-support. This move may be made without prejudice to refugee rights to compensation or claims for repatriation.

The new villages must be adjacent to jobs. The jobs may already exist in some measure in cities or on rain-fed lands ready for cultivation. The Agency can stimulate small enterprises in cities or undertake minor works to make undeveloped lands available. Possibly \$150 million might be spent through Agency channels on this phase of reintegration over a 3- to 5-year period.

At least half of the reintegration achievement is dependent upon an area program of economic development. Large water control projects are needed to irrigate new land for reintegration villages. Transportation projects are required for access to new areas. New industries must provide employment for many refugees who have urban skills. Effective bilateral grant aid and technical assistance could and should spark a program of development by these states themselves.

Cooperation of Near East governments is essential for speeding up social and economic development, and for repair of major economic dislocation. They will respond to a program of friendship and cooperation which has for its principal purpose the building up of social and economic strength in an Arab cultural pattern which promises to preserve the sovereignty of their nations and the dignity of their citizens. Such nations then become effective members of the free world and bring with them resources and strategic strength.

STATEMENT FROM RUSSELL H. DORR, CHIEF OF THE ECA MISSION TO TURKEY, IN SUPPORT OF THE MUTUAL SECURITY PROGRAM

JUSTIFICATION OF CONTINUED ECONOMIC AID TO TURKEY

Continued economic aid to Turkey is essential to the defense and freedom of the United States for five important reasons.

First: Turkey occupies a position of tremendous strategic importance.

Second: The Turkish armed forces are among the largest and strongest in being today on the side of the free world.

Third: Turkey serves as a bridge between Europe and Asia. While firmly oriented to the West, it has close ties with and a deep interest in its Middle-Eastern and Asian neighbors who look up to Turkey with admiration. In the ferment which presently prevails in Asia, Turkey presents an outstanding example of resolute devotion to the ideals of the free world. Communism has been unable to make any headway in Turkey, and Turkish success in building democratic institutions has been matched only by the stability and determination she has shown in facing the Russian threat. Our own position in the Middle East may well hinge on the continued active orientation of Turkey to the free world.

Fourth: Turkey is supplying many strategic raw materials for the rearmament of the United States and her allies, and with proper development of existing resources, could soon supply more.

Fifth: Turkey's economy is not strong enough by itself to maintain indefinitely the military strength and national resolution with which she faces the threat of aggression today. Outside help is essential until the permanent strengthening of her economy can be accomplished.

I propose to discuss the fourth and fifth of these points in detail.

Strategic raw materials and foodstuffs

Turkey is primarily an agricultural country, and her industry is relatively undeveloped. She is playing a useful part in supplying the United States and Europe with significant amounts of certain indispensable strategic raw materials like copper and chrome. (Production of these minerals can be more fully exploited given United States aid.) At the same time Turkey must continue—as she has in the recent past—to supply Europe with important quantities of cotton, oil seeds, and foodstuffs.

Development programs undertaken with United States assistance promise to provide this year for the use of the free world significant quantities of coking and steam coal, iron and iron ore, and if vigorously pursued, to provide considerably larger quantities next year and the year after. While quantities are not impres-

sive in comparison with United States production, they can contribute appreciably to the difficult European position.

In addition, Turkey has unexploited resources of manganese, sulfur, and lead, all urgently needed materials for rearmament.

To sustain the present level of military effort, the Turkish economy must have outside help

Without outside aid Turkey's economy will be unable to sustain the heavy burden of military preparedness against Communist aggression. The Turkish economy is comparatively undeveloped. Living standards of its people are painfully low. A few illustrative facts and figures will perhaps be of assistance in visualizing this.

Eighty percent of her 21,000,000 people live in mud-brick dwellings in isolated villages.

The daily food consumption of the average Turk is about 2,000 calories—the lowest in free Europe. Cheap bread grains dominate the diet. Meat consumption per person per year averages 39.6 pounds compared with 105 pounds for the United Kingdom.

The average Turk consumes 0.8 of a pound of wool per year, the lowest of any Marshall plan country except Austria. He is able to secure far less cotton goods than any Western European—4.6 pounds as opposed to the Italian's 6.8, the next lowest, and to the Frenchman's 10.4.

Seventy-five percent of the people in Turkey never see coal. Annual per capita consumption of this fuel in a country which has a winter climate comparable to that of the northern half of the United States is one quarter of a ton, only a fraction of the consumption of the European countries.

The average Turk has at his disposal one-twelfth the electric power available to the Netherlands.

Only 1 Turk in 2,000 has an automobile.

The tax burden is a heavy one. A modern income tax with a lower scale of exemptions and higher effective rates in the lower and middle brackets than those in the United States has recently been adopted. The principal Government revenues are derived, however, from sales taxes and from customs duties on imported necessities which are equivalent to sales taxes. These imports already fall heavily on the bulk of the people, and in the opinion of various United States financial experts who have studied the question, their present rates cannot be substantially increased.

This weak and undeveloped Turkish economy has, since World War II, been bearing a military burden which might have crushed a less resolute people. In order to be prepared to meet the Russian threat, Turkey has been devoting an average of 39.6 percent of her national budget to defense since 1945.

The yearly figures are as follows:

The proportion of national defense expenditures in the general budget

	Percent		Percent
1945.....	45.38	1949.....	38.95
1946.....	40.69	1950.....	36.71
1947.....	34.89	Postwar average.....	39.63
1948.....	41.28		

These figures are all the more impressive when it is realized that they include only very minor sums for the pay of her soldiers, sailors, and airmen. These men, who have demonstrated an unsurpassed fighting spirit, serve virtually without pay, receiving the equivalent of about 12 cents, I repeat, 12 cents, a month.

This heavy spending for defense and the magnificent fighting contribution made by the Turkish troops in Korea sharply underline Turkey's determination to standfast against aggression not only in her own country but wherever it appears. But large as her effort already has been she is willing, indeed eager, to do more. In agreement with the American Military Aid Mission she has developed and is now putting into effect a supplemental program which will substantially strengthen her armed forces both in numbers and in combat power.

Since 1947 United States policy has recognized the need for supporting the Turkish military effort. However, the assistance rendered has been exclusively in the form of equipment and training designed to modernize and increase the fighting power of the Turkish Army. As the military experts will testify, great accomplishments have been made in this field. But military aid has added to, not lightened, the economic burdens of Turkey. The introduction of modern

arms and transport and increases in the scale of training, which in the past have been and are now so usefully building up the strength of Turkey's Army, Navy, and Air Force, have also increased consumption of expendable items, and requirements of petroleum products and all kinds of supplies which cannot be produced within the country. As a result of these factors, Turkey's foreign exchange requirements to maintain her defense efforts have increased substantially above prewar needs.

In 1948 Turkey was included in the Marshall plan in recognition of the fact that her situation called for and justified economic as well as military aid. Since then she has received allotments of direct dollar aid of \$152.5 million and net indirect aid in the form of purchasing power in other participating countries equivalent to \$79.2 million. Of the direct aid, \$79.5 million has been in the form of grants and conditional aid and \$73 million as loans. However, the economic problem in Turkey, unlike that of most of the other Marshall plan countries, has not been that of putting a war-weakened economy back on its feet, but of creating new facilities and skills. This has implied (and still implies) a continuing effort and the undertaking of investment projects requiring several years to bring to fruition. The aim has been and is to avoid a mere program of temporary relief which would leave the country no better off a few years hence than it is now, and to concentrate on producing a permanent increase in production power. In this way Turkey with American aid should in a few years be much better able to stand on her own feet in a strong posture of defense. These investment projects are in the field of agriculture, fuel, electric power, strategic materials, roads and railroads. The bulk of them are already well under way and may be expected to show results within 12 months or less. Others may take a year or two longer.

During the decade before World War II, Turkey was able rather precariously to maintain an approximate balance in her trade with foreign countries by a very strict control of imports and at a cost of becoming heavily dependent upon the German economy. The postwar situation is radically different. Turkey's international debt obligations, incurred in part to secure the armaments which enabled her to maintain her independence during World War II, now impose an annual repayment burden of around \$20 million a year. As already noted, her military burdens have greatly increased, and the urgency of raising her productive power to an entirely new level to permit her independent support of these burdens has become clear.

Turkey has made substantial efforts to increase the volume of her exports. These have resulted in a 25-percent increase in tonnage and an approximate 30-percent increase in adjusted value since 1937-38. Necessary imports however have increased still faster and in 1950 were, in terms of tonnage, 161 percent of 1937-38, and in adjusted value 185 percent. For example, as compared with 1937-38, 1950 imports were 275 percent for machinery, 237 percent for petroleum, 224 percent for vehicles, 194 percent for wool, and 405 percent for timber.

A balance-of-payments deficit of some \$30 million with the dollar area and \$50 million with the sterling and Western European area must be anticipated over fiscal 1951-52. It is this combined deficit of \$80 million which needs to be covered by foreign assistance if Turkey is to make her contribution to the military and economic strength of the free world. For the fiscal year 1952 it appears therefore that an allocation of \$70 million is the minimum which will permit Turkey to maintain and increase her armed strength and supporting economy, even allowing for a net drawing of \$10 million from the aid pipeline. Of this, a little over half is required for direct support of Turkey's military effort and the balance for its indirect support through the carrying forward of a minimum economic development program and the purchase of a small amount of essential consumption items.

United States assistance has had and will have tremendously useful byproducts through the generation of counterpart funds. Of the local currency generated by United States grant aid during the fiscal year 1951 and that requested for 1952, it is planned that a major portion will be used for the direct support of the military effort over and above the very large effort which has already been maintained ever since 1948. These local currency proceeds will permit the undertaking of supplemental military programs which, in the opinion of the American Military Aid Mission, will make vital increases in the effectiveness of the direct military aid supplied to Turkey. The Turkish Government has eagerly accepted the desirability of these supplemental programs but has felt that unless these local currency proceeds could be made available, it would be impossible to undertake them without seriously endangering the country's financial stability.

The balance of these local currency funds are being, and would be used to finance the manufacture of the limited line of light armaments which can to a

certain extent be produced in Turkey; for increasing the production of such strategic materials as chrome, copper, and sulfur; for the care and resettlement of the 250,000 Turkish refugees from Bulgaria; for the development of production of food, fuel, and power, and the purchase of transportation equipment. These expenditures will strengthen Turkey's own economy and help to counter the threat to her financial integrity inherent in the world inflationary situation and the heavy military burdens which she is carrying. They will also increase the production and export of vital raw materials such as coal, steel, and cotton, and significantly augment the supplies available to the west.

Continued economic assistance to Turkey on the scale requested will (a) cover the additional foreign exchange requirements imposed by her military effort, (b) carry forward a program for a rapid increase of agricultural and basic and strategic material productions, (c) prevent the already low standard of living from dropping to a point where the defense effort and national capacity to resist might well be weakened. The United States will thus enable one of the staunchest allies of the free world to contribute with ever greater effectiveness to the cause to which she is dedicated.

NIGHT SESSION

The committee met in the House Foreign Affairs Committee room, the Capitol, at 7:30 p. m., Hon. Thomas S. Gordon (acting chairman) presiding.

Mr. GORDON (presiding). The committee will come to order.

We have Congressman Meader here. I understand you have a statement, or did you want to relate your views on this bill?

Mr. MEADER. I have a statement I would like to make.

Mr. GORDON. Would you like to read it or insert it in the record?

Mr. MEADER. I would like to read the statement if there is time.

Mr. GORDON. You may do so.

Mr. MANSFIELD. This committee is going to be up and down all the time because of the roll call on the Defense Production Act, and I understand you have a party from Detroit, the Chamber of Commerce, I believe?

Mr. MEADER. Yes.

Mr. MANSFIELD. I think you ought to keep that in mind.

Mr. MEADER. Fine. I have copies of the statement. I will be glad to summarize it briefly.

Mr. GORDON. Yes, that will be all right. I think it will be the pleasure of the committee to get the high lights of it.

Mr. MANSFIELD. The whole statement will be incorporated in the record.

Mr. GORDON. That is right.

Mr. MEADER. I would like also to incorporate the remarks that I made on April 23, 1951, on the floor of the House, which I did not seek to duplicate in the statement I prepared for this hearing.

Mr. GORDON. In addition to your statement, we can put your written statement in the record.

Mr. MEADER. That will be all right.

Mr. GORDON. Is that the pleasure of the committee?

There are no objections. It will be so ordered.

**STATEMENT OF HON. GEORGE MEADER, A REPRESENTATIVE IN
CONGRESS FROM THE STATE OF MICHIGAN**

Mr. MEADER. I wish to thank the committee for providing me this occasion to present my views on foreign economic aid.

I previously had written to each member of the committee, enclosing a copy of a bill I introduced on April 23, 1951, which was referred to this committee, and a reprint of the remarks I made on that occasion. I did this so that the committee could be familiar with the approach and suggestions I wish to offer with respect to the means whereby the American people can contribute to the development of underdeveloped areas.

I do not wish to repeat the arguments I have advanced in my speech, but I believe it might be useful to include those remarks in the record of this hearing. It is my position that our Government should do all it can to enable the American people, individually and through business organizations, to make a maximum contribution to the development of the natural resources of underdeveloped areas. This should be done in addition to, and in conjunction with, any financial aid provided to foreign governments or their nationals by the American Government out of public funds. It should be for the mutual benefit of the inhabitants of those areas and those providing the capital and know-how necessary to such development.

It is my conviction that the contribution of private capital to the development of the natural resources of underdeveloped areas has not been greater because foreign investments are attended by unnatural political and economic risks not encountered in investments within the United States. Our Government has failed to do many things it could do to encourage private investors in this country as well as investors in other free enterprise countries, to engage in the pioneering task of developing the underdeveloped areas.

I do not pose as one who is capable, without further extensive study, of suggesting the solution to this problem. It is for that reason that I have recommended that a bipartisan commission, composed of representatives of both the executive and legislative branches of the Government, and persons from private life, be established and be entrusted with the task of studying the artificial barriers now inhibiting the risk-taking, pioneering investment of capital and know-how in underdeveloped areas. I have proposed that this commission recommend to the President and to the Congress ways and means of eliminating or minimizing those artificial barriers.

It is extremely important that this committee, in its deliberations on foreign-aid programs, clarify its philosophy with respect to the balance between governmental expenditure and private investment. I would like to state the reasons why I believe the role of the private investor in the development of natural resources of underdeveloped areas and, perhaps, in areas not regarded as underdeveloped, should be accorded greater emphasis than it has in the past, and why this committee should give attention to ways and means whereby our Government can more effectively contribute to the climate in which investment of private capital in foreign areas would flourish. I would like to commence my argument in favor of this position by restating briefly certain basic propositions on which I do not think there should be any disagreement.

First: We should recognize that there is today a world philosophical contest. On the one side are those who advocate a system of government and a society based upon state ownership of all property and state control and direction of the processes of production and distribution which is espoused by Russian Communist totalitarianism. On the other are those who advocate private ownership of property and the management of the processes of production and distribution by the people themselves, subject to the control of natural economic laws. This philosophy limits governmental regulation and supervision to the objective of providing equality of opportunity to all citizens, and preventing overreaching and unfairness in trade practices. The United States of America, because of its history, its favorable position geographically, its good fortune in natural resources, and its successes in productive methods, is the outstanding exponent of this competitive free-enterprise system.

Second: This philosophical contest embraces both material and spiritual considerations. It has been referred to as a cold or ideological war and, by some, it has been called religious warfare.

Third: Our objective in this contest should be to demonstrate, both by argument and by performance, that a free economy is superior to an economy of enslavement, not only because the means of satisfying human wants can be extracted from the resources of nature more efficiently, but also because people in a free society enjoy spiritual values denied the slave citizens of the police state.

Fourth: The standard of living of the United States, with respect to the quantity and quality of goods and services for the satisfaction of human wants and the preservation of the human freedoms guaranteed in our Bill of Rights, is—and has been—a living demonstration of the superiority of the free enterprise system. But we have been so preoccupied with our own development that we have neglected actively to evangelize and export the principles and practices of our system to other parts of the world. This we must do if we are to succeed in the world-wide contest for the minds of men against the fanatical forces of communistic totalitarianism.

Fifth: It is important that the United States should develop an affirmative foreign policy capable of assuming the offensive in this ideological contest, which both our Government, the American people, and the governments and peoples of other free societies can promote with the crusading zeal which can proceed alone from a firm and abiding faith in the principles upon which our society is founded.

Sixth: This philosophical contest is basic and all-important to the future of civilization. It may last decades or even centuries, and must be won by the forces which favor a free society. Marvelous technological developments in transportation, communications and warfare have obliterated the natural defenses of a century ago, with the inevitable result that the world can no longer survive half slave and half free.

As is frequently the case, I doubt that among this group there should be any disagreement about the soundness of the general propositions I have stated. Disagreements are more likely to arise over ways and means than over objectives. There probably is not a single member of this committee who would take the position that the American people ought to be excluded from the task of developing

underdeveloped areas through the natural interchange of goods and services, and in risk-taking activities in mining, manufacturing, transportation, communication, and other similar enterprises. I do not believe there is a single member of this committee, and there probably is not anyone in the administration—either in the State Department or other agencies of the executive branch of the Government—who would openly discourage the investment of American capital in foreign areas.

The question really is: What should our Government do to encourage and assist individuals and business organizations in the investment of capital and know-how in underdeveloped areas?

It is precisely because I believe no comprehensive answer exists, either within or outside the Government, at this time, that I recommend the creation of a Commission to conduct a penetrating study of this problem.

This Commission should consider alternative ways and means of enlisting the energy and resources of free peoples everywhere and in mobilizing those resources on our side of this ideological contest.

This Commission should provide a factual foundation for any policies and programs it may recommend. It should consult and take testimony from individuals who, through study or experience, have acquired knowledge of the obstacles and hazards confronting investors in foreign areas, and who may have valuable suggestions on concrete and practical measures which could eliminate or minimize such hazards.

This Commission should acquire an exceptionally able staff capable of reviewing and appraising the successes and mistakes of the past, and forging out specific and workable recommendations. The staff and membership of the Commission should be composed of individuals who, although fervently devoted to the free-enterprise system, have sufficient breadth of character to oppose exploitation, imperialism, and private monopolies.

Any encouragement to investment of private capital in underdeveloped areas may be attacked as American imperialism and dollar diplomacy.

This is a subject which should require the most thoughtful and statesmanlike attention of the Commission. President Truman warned against this type of aid when he said in his inaugural address:

"The old imperialism—exploitation for profit—has no place in our plans. What we envisage is a program of development based on concepts of democratic fair dealing."

The Commission ought to study and develop specific workable methods whereby governments may:

1. Prohibit and prevent imperialistic exploitation and monopolistic, restrictive trade practices.

2. Encourage—possibly through incentives, the granting or withholding of assistance, or otherwise—fair and ethical dealing and equality of opportunity under free and open competition.

The best defense against an attack of false propaganda is first to be innocent of the charge and, second, to make your intentions so plain, both by pronouncement and performance, that the false propaganda will not convince anyone. There is no way to prevent false charges being made. Nor should we be hesitant to embark on this

bold new program simply because someone may seek to misconstrue our motives.

In contrast to the fear of being misunderstood for attempting a private enterprise program, let me suggest that a foreign government might well resent as an infringement upon its sovereignty any ownership by the United States Government of productive facilities or other property in that country, either by fee title or by way of liens.

A serious question of international law and policy is raised if one government engages in proprietary activities within the jurisdiction of another sovereignty. Such a condition is avoided, however, when such developments are owned by private citizens, because they become subject to the sovereignty and the laws of the place in which their activities are conducted.

It is appropriate here to point out and emphasize that I am not the one who originated the suggestion that private capital should play an important part in the development of the natural resources of underdeveloped areas. President Truman, in pointing out that suffering could be alleviated through greater production by means of modern scientific and industrial methods, obviously contemplated that the bulk of the work would be done by private capital when he said, "And, in cooperation with other nations, we should foster capital investment in areas needing development," and, again, when he said, "Guaranties to the investor must be balanced by guaranties in the interest of the people whose resources and whose labor go into these developments."

The only thing I have suggested which may be new is that a commission be created to blueprint this bold new program, to breathe life and specific meaning into a noble concept, and to shape that program in the mold of a free, competitive society.

I do not find fault with those who are skeptical of the likelihood that a commission will successfully attack the problem, that it can destroy or even whittle down the obstacles and barriers now holding back natural economic forces. There have been good commissions, bad commissions, and do-nothing commissions. No one can guarantee success beforehand.

But this committee is now contemplating a program of foreign aid in which it is recommended that \$8½ billion of public funds be expended in 1 year. Further programs of similar or, perhaps, greater proportions may be proposed in the years to come. No one can now guarantee that there is a ceiling on this program of fifty, seventy-five or a hundred billion dollars, or that it will ever end.

Surely, when we are dealing with proposals of this magnitude, it would be folly to withhold the comparatively paltry sums necessary to finance a study which might save billions of public funds through discovering that aid can be more effectively provided by the American people in profitable, wealth-producing, private undertakings.

The Hoover Commission cost approximately \$2 million. To refuse to spend \$2 million to save \$2 billion is being penny-wise, pound-foolish.

However, as I view it, the possible dollar economies in the employment of our industrial machine for the development of production and distribution in foreign areas are the least of the benefits to be expected if the commission should be successful.

The most important benefit is the proof to the world that freemen in a free economy can better extract from nature's abundance the products necessary for decent living than can a system of organized slavery false-labeled as a people's democracy.

The opening of new frontiers through this program might also help to restore some of the pioneering spirit we have lost in this country as our economy has become older and our West has become settled.

Consideration should be given, also, to the great possibilities for better understanding throughout the world which undoubtedly would result from the interchange directly between the peoples of this country and those of other parts of the world. There would be created ties and contacts which would tend to discourage the misunderstandings which lead to international conflict.

The growth of interests and investments in other lands likewise would tend to prevent rash actions which might disrupt those interests and investments by leading to unfriendly acts between countries. If contact between nations is only among their officials and bureaucrats, the advantage of contact between the citizens of those countries is largely lost.

There is, too, the value to all nations involved in the creation of new wealth. When private endeavor creates value where before there was only potential value, the tax base of the countries is broadened, which allows for either more and better government activity and service because of increased tax revenues, or a lessening of the tax burden on the entire economy.

Unless we have faith in our system of a society of freemen, how can we expect other peoples to accept it? Unless we believe in an economy which utilizes in the processes of production and distribution the energy, the imagination, the courage, the initiative and the industry of men and women who are spiritually and economically free, how can we expect successfully to advocate such a system in the ideological contest which the world faces? How can we hope to oppose the sinister spreading system of economic, political and religious bondage which promises security and a division of wealth to entice distressed human beings into organized slavery?

I say it is the responsibility of this Government and the responsibility of this committee to devise ways and means whereby the American people, in a voluntary, natural, businesslike way, can do their part in the development of the world's resources and thus constitute a potent force in the all-important clash between two opposing political and economic systems. It is because I am convinced of the importance of enlisting and harnessing this force in connection with our foreign aid programs that I have made the suggestion contained in H. R. 3798.

I hope this committee will give this proposal, and other proposals with a similar objective, its most careful and prayerful consideration.

I have sought the views of individuals and organizations throughout the country who seem to have experience or backgrounds which could contribute to the evaluation of my proposal for a study commission on the point 4 program. For the information of the committee, I have received responses from the following:

State Department correspondence:

Mr. Jack K. McFall, Assistant Secretary

Mr. Dean Rusk, Assistant Secretary

Mr. Nelson A. Rockefeller, Chairman, International Development Advisory Board

Committee on the Present Danger:

Mr. Tracy S. Voorhees, Washington, D. C.

Mr. W. L. Clayton, Houston, Tex.

Mr. Julius Ochs Adler, New York Times

Mr. W. W. Waymack, Adel, Iowa

Dean Paul H. Appleby, Maxwell Graduate School of Syracuse University

Mr. William Green, president, American Federation of Labor

Mr. Charles Weyand, executive assistant, Nash-Kelvinator Corp.

Mr. Fred A. Compton, vice president, Detroit Edison Co.

Mr. George L. Ridgeway, director of economic research, International Business Machines Corp.

Mr. Elliott V. Bell, McGraw-Hill Publishing Co., Inc.

Mr. Gunther R. Lessing, Walt Disney Productions, Burbank, Calif.

Mr. George Romney, vice president, Nash-Kelvinator, Detroit, Mich.

Mr. John S. Cokeman, president, Burroughs Adding Machine Co., Detroit, Mich.

Mr. Earl Bunting, managing director, National Association of Manufacturers, New York City

[Congressional Record]

AN AFFIRMATIVE AMERICAN FOREIGN POLICY

(Speech of Hon. George Meader, of Michigan, in the House of Representatives, Monday, April 23, 1951)

Mr. MEADER. Mr. Speaker, I have today introduced a bill to create a bipartisan Commission On Aid to Underdeveloped Areas. I propose this measure as a concrete step to advance the cause of self-government through free democratic principles and institutions. I hope this bill will receive the enthusiastic support of both Republican and Democratic Senators and Representatives.

Briefly described, the bill would establish a bipartisan Commission, patterned after the Hoover Commission, charged with the duty of studying and identifying the artificial barriers now inhibiting the natural economic forces, which would develop resources of the underdeveloped areas of the world, and recommending

to the President and to the Congress ways and means of eliminating or minimizing those artificial barriers.

If this Commission should succeed in its task, and if our Government, in concert with like-minded democratic governments, would proceed to apply the results of the Commission's study in actual practice, the forces of freedom and self-government could assume the offensive in the world-wide combat with the ideology of totalitarianism and slavery. Our Government, in leading this movement among the nations of the earth, would then supplant the negative, defensive policy of containment by a vital, kinetic, affirmative foreign policy.

I bespeak the support of my Democratic colleagues. This program is one upon which all Americans can, and should, agree. It transcends partisan tenets or considerations. It is founded upon the basic concepts of the freedom and dignity of individual man which are the very core of American democracy. Neither the Democratic Party nor the Republican Party has dared, or will dare, to abjure these basic, sacred principles.

But, for another reason my Democratic friends should assist in activating this program. Their leader, President Truman, in the address inaugurating his current term 2 years ago, espoused the objective which can be effectively achieved through the course I now advocate.

As a Republican, I can find no basis for quarrel with the objective, or with the phraseology in which it is expressed, in that passage of the inaugural address which advocated the development of underdeveloped areas. With the spirit and with the terms of that passage I am in complete and enthusiastic agreement. I regard that pronouncement as a remarkable expression of the redoubtable pioneering intrepidity which is the spirit and the heritage of the American Nation.

I would like to reread to you this passage. I invite each of you to test each phrase and the whole passage against his individual belief in our democratic society and its governmental pillars of freedom and self-expression. Tell me any part to which you cannot wholeheartedly subscribe. This passage reads as follows:

"Fourth, we must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas.

"More than half the people of the world are living in conditions approaching misery. Their food is inadequate. They are victims of disease. Their economic life is primitive and stagnant. Their poverty is a handicap and a threat, both to them and to more prosperous areas.

"For the first time in history, humanity possesses the knowledge and the skill to relieve the suffering of these people.

"The United States is preeminent among nations in the development of industrial and scientific techniques. The material resources which we can afford to use for the assistance of other peoples are limited. But our imponderable resources in technical knowledge are constantly growing and are inexhaustible.

"I believe that we should make available to peace-loving peoples the benefits of our store of technical knowledge in order to help them realize their aspirations for a better life. And, in cooperation with other nations, we should foster capital investment in areas needing development.

"Our aim should be to help the free peoples of the world, through their own efforts, to produce more food, more clothing, more materials for housing, and more mechanical power to lighten their burdens.

"We invite other countries to pool their technological resources in this undertaking. Their contributions will be warmly welcomed. This should be a cooperative enterprise in which all nations work together through the United Nations and its specialized agencies whenever practicable. It must be a world-wide effort for the achievement of peace, plenty, and freedom.

"With the cooperation of business, private capital, agriculture, and labor in this country, this program can greatly increase the industrial activity in other nations and can raise substantially their standards of living.

"Such new economic developments must be devised and controlled to benefit the peoples of the areas in which they are established. Guaranties to the investor must be balanced by guaranties in the interest of the people whose resources and whose labor go into these developments.

"The old imperialism—exploitation for foreign profit—has no place in our plans. What we envisage is a program of development based on the concepts of democratic fair dealing.

"All countries, including our own, will greatly benefit from a constructive program for the better use of the world's human and natural resources. Experi-

ence shows that our commerce with other countries expands as they progress industrially and economically.

"Greater production is the key to prosperity and peace. And the key to greater production is a wider and more vigorous application of modern scientific and technical knowledge.

"Only by helping the least fortunate of its members to help themselves can the human family achieve the decent, satisfying life that is the right of all people.

"Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors, but also against their ancient enemies—hunger, misery, and despair.

"On the basis of these four major courses of action we hope to help create the conditions that will lead eventually to personal freedom and happiness for all mankind.

"If we are to be successful in carrying out these policies, it is clear that we must have continued prosperity in this country and we must keep ourselves strong."

The bold new program described in the inaugural address which I have just read has, I believe, merits and advantages which were not brought out by the President. Nor have I seen the advantages I have in mind mentioned in the rather voluminous literature on the so-called point 4 program. I think it would be helpful to the consideration of the proposed legislation I have introduced to consider briefly what some of these advantages are.

As I interpret the inaugural address, the primary philosophy of the bold new program is humanitarian and philanthropic. It is based upon the proposition that the suffering, malnutrition, and misery in the world can be alleviated through the adoption of American techniques of production, and that the good will the people of this Nation hold toward the other peoples of the world ought to be expressed by doing what we can to alleviate misery. It also is suggested that, because marvelous developments in transportation have shrunk the world and brought us into closer contact with our neighbors, the improvement of their lot will redound to the benefit of our people.

I desire to associate myself with this philosophy. But beyond this mere humanitarian motive, the successful execution of this bold new program in the American spirit of free individual enterprise and initiative will have other far-reaching consequences of a beneficial nature.

I assert that, if the program is successful in the spirit in which it was conceived, it will minimize the causes and dangers of war, and it will promote stability in economic relationships between peoples in a world society based upon freedom of the individual and the proposition that governments are instituted for the benefit of the governed.

There is not time here to develop fully the advantages I have just stated. I think it is necessary only to suggest that, historically, the imperialistic aggressor has expanded his rule first against the weak and the unprepared. I think it is not inaccurate to say that the underdeveloped areas are vacuum areas into which the force of ambitious and ruthless power has a natural tendency to rush. To the extent that such vacuum areas are strengthened, become more independent, and develop national pride and consciousness, as well as a higher standard of living, to that extent will the dangers of their being overrun by a conqueror diminish.

The advantage to us of the establishment of an economy based upon individual enterprise in other parts of the world should likewise be apparent. The level of civilization, as we know it today, is directly dependent upon the extent to which there is specialization in production and exchange of goods and services. Exchange between a free economy and a controlled economy is difficult—one might say wholly impossible—without an adaptation of one system to the other in some form of compromise. For us in a free, competitive economy to deal with a totalitarian state proprietary economy would ultimately involve the establishment of a mechanism through which we could bargain on equal terms with a state monopoly.

An even greater advantage in the bold new program which I have not seen effectively expounded is that, if the aid to underdeveloped areas is carried out in the American spirit of enterprise, it will shift the offensive to the free democratic peoples in the ideological combat with totalitarianism. It will permit us and associated nations to demonstrate by performance the economic advantages of the free enterprise system. One ounce of action will outweigh tons of oratory and propaganda.

It is important that we should assume the offensive in the ideological combat with Communist totalitarianism. The weakness of our defensive policy of con-

tainment of Russian communism is that we can never win while we are on the defensive. It leaves the initiative in the hands of our opponent and requires us to be prepared to meet his next moves on a hundred fronts. No football team ever made a touchdown with the ball in the other team's possession.

Having stated my belief in the importance of the bold new program to aid underdeveloped areas in the American way, I would like to explain in somewhat greater detail the character of the Commission I propose to establish, and the reasons why I think that this task should be undertaken by a new Commission, rather than by any existing agency in the executive branch of the Government, or by a congressional committee or committees.

First of all, let me say the Commission would be a study commission, not an operating commission. It may be desirable later on to have a commission charged with certain responsibilities in carrying out any national program developed as a result of the study to be made. However, at this stage, it seems to me we first ought to find out what our policy should be and postpone until the completion of that task the creation of any agencies to carry it out. It is getting the cart before the horse to create an operating commission before we have decided what ought to be done.

Second. The Commission is a bipartisan commission. A program of this character cannot be successful unless it is enthusiastically supported by both political parties and by the people of the country who do not identify themselves with either political party.

Third. The Commission is provided with fact-finding powers. Unless a study is made which penetrates below the surface of emotional generalities, I have little faith that anything worth while will be accomplished. To be successful, we must get down to the bedrock of hard fact. Accordingly, the Commission I propose would have not only the subpoena power, but the right of call on the Government departments and agencies.

Furthermore, the hearings, the studies, and the reports of the Commission should, so far as possible, be conducted publicly so that the program, as it is developed, will be completely understood by the American people. Without such understanding, we would be likely to fail in securing the enthusiastic support of the people, without which the program as I visualize it could not be successful.

Fourth. The Commission would be freed from some of the standing limitations upon employment of staff personnel, and from some of the restrictions which might disqualify outstanding persons from serving on the Commission. This is necessary if we are to be able to call upon the best minds in the country for assistance in working out this program. Unless we enlist the most statesmanlike and most informed persons, the program has little chance of success. This point cannot be overemphasized.

Creating a Commission is only the first step. The caliber of the membership and staff of that Commission will determine the worth of the program that is produced.

I say it is conclusively established that no agency or department of the executive branch of the Government is capable of blueprinting this bold new program. The fact is that there has been no inhibition on such agencies and departments in the past from proposing and, indeed, from carrying into effect any of the steps which will be necessary if the underdeveloped areas are to be developed through the force of American initiative and enterprise.

A congressional committee might well conduct the study contemplated by the proposal I have made. However, I have seen no evidence of the development of the congressional investigative function to the point where we might expect that a congressional committee could successfully attack the problem here involved.

Congress has been, in my judgment, altogether too niggardly in the appropriation of funds for studies and investigations which would adequately inform it of the facts of a problem as a foundation for national policy.

Be that as it may, I believe there is another and, perhaps, more cogent reason for entrusting this task to a Commission in which private citizens would have representation.

The voluntary and enthusiastic support of our entire national economy is a prerequisite to the accomplishment of any significant progress toward the President's goal. The American people should have a part in formulating a program in which the vigor of their voluntary action will determine success or failure. I can think of no way in which they can participate directly except by the creation of a new commission on which the general public is represented.

Furthermore, the best minds that can be assembled, both in Government and in private life, will be needed to discover and to remove the underlying obstacles

now restraining the free operation of natural economic forces which can develop underdeveloped areas and create the abundance potentially existing in the world's natural resources.

I have prepared a tentative agenda of the problems which appear to me as the principal fields of inquiry in which the Commission ought to engage. There may be others equally as important which can be suggested by persons having a more intimate knowledge of international trade, of international investment, and international political problems than I possess. Furthermore, as the Commission engages in its studies, new problems may well develop.

This agenda is advanced, not as a comprehensive and complete one, but as a suggestion of the type of problem which ought to be solved, or the type of programs which ought to be considered and recommended.

The agenda is as follows:

First. Formulation of a plan to provide against expropriation of property of non-nationals without fair compensation, and a plan to eliminate double taxation.

Second. Facilitation of the exchange of currencies to permit conversion into dollars of capital and profits from capital invested in underdeveloped areas.

Third. Formulation of measures to promote and maintain free and equal opportunity for private business enterprises and to prevent monopolies and restrictive trade practices in international commerce.

Fourth. Correlation of the work of existing programs and agencies with the same or similar purpose, such as: The European Recovery Program, the Export-Import Bank, the International Bank and Monetary Fund, United Nations agencies and other international organizations, and scientific, educational, and cultural exchange programs.

Fifth. Formulation of projects and enterprises for private capital in mining, agriculture, transportation, finance, communications, etc., most likely to aid particular underdeveloped areas and to be profitable ventures for those undertaking them; means for providing a continuing informational service of facts and statistics useful to prospective investors.

Sixth. Formulation of self-liquidating international public works projects, to be jointly financed and managed, calculated to aid international trade and commerce. An international commission proposed the construction of the inter-American highway in central America on such a basis, but its plan has not been followed.

The Point 4 proposal will be significant only if it utilizes natural economic forces in developing backward areas for the mutual benefit of the occupants of such areas and those supplying the energy, enterprise, capital, and know-how making such development possible.

Government aid for this program, on a purely charitable basis, would be likely to be temporary and superficial. Government investment in speculative foreign enterprises would be contrary to our traditions and out of harmony with our free-enterprise system. Expanded trade and commerce between citizens would increase wealth and broaden the base of Government revenue while Government investment could be financed only through further taxation of an already overburdened national economy. Private enterprise can do this type of job better than Government bureaucracy.

It follows that the bulk of such development activity must be borne by private citizens and private capital, with the role of governments confined to the prevention of overreaching and discrimination; to the creation of an atmosphere favorable to the investment of private capital; and, in appropriate cases, the encouragement of worth-while projects by loans or subsidies or by participating directly or indirectly in self-liquidating international public works.

The greatest merit in the President's proposal lies in the possibility of proving to the world by performance, instead of mere abstract reasoning, that the way of life based upon the dignity of the individual and the utilization of the natural desire of the free man to improve his lot is sounder than a system of state-planned control of slave-citizens and state ownership and direction of the processes of production and distribution. In this light, Point 4 takes the offensive in the ideological battle with communism. It becomes a positive program.

Just as the United States miraculously outstripped state-controlled economies in war production in World War II by calling upon the immense store of energy and initiative residing in a free people, we can demonstrate the superiority of the free enterprise system over state-ownership and management in developing the world's natural resources for the benefit of its people.

It follows that the success of the Point 4 program will depend upon the enthusiasm of the American people in the same way that their patriotic and aroused

performance in World War II made our victory possible. A plan evolved in the secret recesses of Government bureaus, no matter how ably designed or how skillfully propagandized, will not serve to enlist widespread confidence and support of the people in a program from the formulation of which they have been excluded.

The problems requiring solution before the Point 4 program can enjoy any substantial measure of success are difficult and basic. They have defied solution thus far in history. They will not be solved unless we bring to bear upon them our ablest minds both in public and private life. They will not be solved unless, in a spirit of open-mindedness and absence of personal special interest, we seek the true, basic facts and shed any unsound past concepts and positions. Agencies clothed in the errors of the past would be unlikely to discover their own unsound commitments. They would be less likely to discard them if discovered.

The scope of the subject matter is so broad as to exceed the jurisdiction of any one executive department or bureau. Legislation and appropriations may be required. The voluntary and enthusiastic cooperation of all segments of industry, finance, agriculture, and our general national economy will be essential.

It is doubtful that an informal committee drawn exclusively from the bureaus and departments, with no statutory standing, would possess the power and the prestige necessary to the formulation of a "bold new program" and the enlistment of public support in its execution. Past performance of committees of executive agencies supports this conclusion.

Public hearings of the Commission, properly prepared and conducted, would provide great impetus to the program in educating the American public in the advantages and characteristics of the program, in taking advantage of a democratic forum for the presentation of conflicting views on objectives and methods; in generating confidence in the program as the result of the assurance that it is being developed openly and with the full participation of the public; and in allaying any possible fears of the rest of the world that the program is one of imperialistic domination and exploitation, which so frequently have characterized foreign economic operations in the past.

The foregoing seem to be the foremost considerations indicating the establishment of a commission as the most logical and practical method of translating a noble concept into a specific policy and program.

Of course, the creation of a commission with adequate power would be no more than a starting point. The caliber of the members of the Commission and the caliber of its staff would determine the quality of the performance in discharging the difficult task entrusted in it. It must be assumed that the appointive authorities would select able and patriotic individuals to serve in an enterprise of this magnitude.

Whatever we may think of the specific recommendations of the Hoover Commission, it should be universally conceded that that Commission and its task forces have forthrightly dug beneath the surface of the problems of the organization of the executive branch of the Government and have made basic and courageous recommendations in spite of vested interests in the status quo. No executive agency, or committee of agencies, could have acted with equal independence, speed, and incisiveness.

If formulas can be found which will stimulate the investment of private capital in backward areas and eliminate many of the political obstacles and risks now restraining the export of capital, we will find that a major step has been taken toward the creation of that flexible but stable economic and political order among all nations which will permit the search for material and spiritual happiness by free citizens in an atmosphere of free enterprise.

We will find that the causes of wars have been effectively minimized and that the general level of civilization has been substantially advanced through permitting the natural economic forces of specialization and exchange to work, free from artificial restriction.

Having outlined the nature and purpose of the proposal I have made, I think it will be helpful if I warn against certain misunderstandings which might conceivably arise. I will do this by saying what this program is not.

First, This program is not a substitute for any existing national policy. It is a new program, and, while it may make unnecessary certain existing agencies, it should be considered on its own merits and not as a replacement of any existing programs.

At this point it would be appropriate to analyze and comment upon the present so-called Point 4 program which has been in existence for the past 2 years and concerning which plans for expansion are under consideration.

The Point 4 program, as actually administered, has involved the expenditure of public funds on the order of \$33,000,000 for the past fiscal year. It has amounted to little more than a technical-assistance program, aiding other governments in bettering the lot of their citizens through improved sanitation and public-health services and agricultural methods.

If the money is efficiently and economically expended, it undoubtedly will have some benefit to the countries which are the recipients of this American generosity. However, it seems to me, aid programs of this character, financed by the American taxpayer and managed by the Federal bureaus, can accomplish only a very small fraction of what can be done in achieving the development of underdeveloped areas, thus raising living standards through employing the uniquely successful American principles and techniques of the free-enterprise system.

This program can in no sense be regarded as in conflict with our immediate need to defend ourselves against Communist military aggression. When we have strengthened the weak spots in the world and affiliated them with the free-enterprise system, we will have rendered our own defense stronger and less burdensome. Until that time we must press forward with sound programs for our defense with all the vigor and intelligence we possess.

To summarize, it is my view that the Government should seek to create the climate in which private enterprise can do the job of developing natural resources; that Government should police the activities of individuals and corporations so as to prevent overreaching, exploitation and monopolistic, restrictive trade practices and so as to insure equality and fair dealing in free and open competition; that Government, in providing statistical and scientific information, and possibly financial assistance, to all on equal terms, can assist and encourage the flow of private capital into the work of developing natural resources and other fields of manufacturing and trade; that Government can appropriately promote self-liquidating international public works as aids to production and commerce. The Government should not engage in proprietary undertakings nor make extensive grants or loans of public funds in private economic activities either to foreign governments or their nationals.

Let us reaffirm our faith in the economic and political philosophy upon which this Republic was founded. Let us believe that the liberation of the forces of the human soul which conquered our own wilderness and harnessed the forces of nature for the benefit of ourselves and our posterity can likewise be employed for the benefit of peoples who, only now, are emerging from the shackles of feudalism and slavery. Let us act in that faith. With humility, and anxious to absorb the many advantages of the cultures of the peoples whose material lot is less pleasant than ours, let us offer to contribute the pioneering, courageous, enterprising spirit which is our inheritance. But let it be the voluntary and spontaneous contribution of the American people in a self-sustaining, mutually beneficial economic movement. Let us not admit decadence and impotence in the free-enterprise system through engaging in state-owned, tax-supported proprietary activities reminiscent of the totalitarian socialism we abhor.

Mr. Speaker, I ask unanimous consent that there may be printed in the Record at this point the bill I have introduced providing for the establishment of a Commission on Aid to Underdeveloped Foreign Areas.

The SPEAKER pro tempore (Mr. Priest). Is there objection to the request of the gentleman from Michigan?

There was no objection.

The matter referred to follows:

"A BILL For the establishment of a Commission on Aid to Underdeveloped Foreign Areas

"Be it enacted, etc.—

"ESTABLISHMENT OF COMMISSION ON AID TO UNDERDEVELOPED FOREIGN AREAS

"SECTION 1. To assist in carrying out the purposes of the act for International Development, approved June 5, 1950, there is hereby established a bipartisan commission to be known as the Commission on Aid to Underdeveloped Foreign Areas (in this act referred to as the 'Commission').

"MEMBERSHIP OF THE COMMISSION

"SEC. 2. (a) Number and appointment: The Commission shall be composed of 14 members as follows:

"(1) Ten appointed by the President of the United States, four from the executive branch of the Government and six from private life;

- "(2) Two Members of the Senate appointed by the Vice President; and
- "(3) Two Members of the House of Representatives appointed by the Speaker.
- "(b) Political affiliation: Of each class of members, not more than one-half shall be from each of the two major political parties.
- "(c) Vacancies: Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

"ORGANIZATION OF THE COMMISSION

"SEC. 3. The Commission shall elect a chairman and a Vice Chairman from among its members.

"QUORUM

"SEC. 4. Eight members of the Commission shall constitute a quorum.

"COMPENSATION OF MEMBERS OF THE COMMISSION

"SEC. 5. (a) Members of Congress: Members of Congress who are members of the Commission shall serve without compensation in addition to that received for their services as Members of Congress; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

"(b) Members from the executive branch: The members of the Commission who are in the executive branch of the Government shall each receive the compensation which he would receive if he were not a member of the Commission, plus such additional compensation, if any, as is necessary to make his aggregate salary \$12,600; and they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

"(c) Members from private life: The members from private life shall each receive \$50 per diem when engaged in the performance of duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

"STAFF OF THE COMMISSION

"SEC. 6. The Commission shall have the power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of the civil service laws and the Classification Act of 1949, as amended.

"CERTAIN LAWS INAPPLICABLE TO COMMISSION AND ITS STAFF

"SEC. 7. The service of any person as a member of the Commission, the service of any other person with the Commission, and the employment of any person by the Commission, shall not be considered as service or employment bringing such person within the provisions of sections 281, 283, or 284 of title 18 of the United States Code, or of any other Federal law imposing restrictions, requirements, or penalties in relation to the employment of persons, the performance of services, or the payment or receipt of compensation in connection with any claim, proceeding, or matter involving the United States.

"EXPENSES OF THE COMMISSION

"SEC. 8. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this act.

"DUTIES OF THE COMMISSION

"SEC. 9. (a) Investigation: The Commission shall study and investigate the problem of aiding underdeveloped foreign areas and shall formulate and recommend to the President and the Congress specific programs for carrying out the purposes of the Act for International Development.

"(b) Reports: The Commission shall report to the President and to the Congress from time to time the results of its study and investigation, together with such recommendations as it deems advisable.

"POWERS OF THE COMMISSION

"Sec. 10. (a) Committees: The Commission may create such committees of its members with such powers and duties as may be delegated thereto.

"(b) Hearings and sessions: The Commission, or any committee thereof, may, for the purpose of carrying out the provisions of this act, hold such hearings and sit and act at such times and places, and take such testimony, as the Commission or such committee may deem advisable. Any member of the Commission may administer oaths or affirmations to witnesses appearing before the Commission or before any committee thereof.

"(c) Obtaining official data: The Commission, or any committee thereof, is authorized to secure directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics for the purposes of this act; and each such department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized and directed to furnish such information, suggestion, estimates, and statistics directly to the Commission, or any committee thereof, upon request made by the Chairman or Vice Chairman of the Commission or of the committee concerned.

"(d) Subpena power: The Commission, or any committee thereof, shall have power to require by subpena or otherwise the attendance of witnesses and the production of books, papers, and documents; to administer oaths; to take testimony; to have printing and binding done; and to make such expenditures as it deems advisable within the amount appropriated therefor. Subpenas shall be issued under the signature of the Chairman or Vice Chairman of the Commission or committee and shall be served by any person designated by them. The provisions of sections 102 to 104, inclusive, of the Revised Statutes (U. S. C., title 2, secs. 192-194) shall apply in the case of any failure of any witness to comply with any subpena or to testify when summoned under authority of this section."

Mr. SMITH of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. MEADER. I am glad to yield to the gentleman from Wisconsin.

Mr. SMITH of Wisconsin. Mr. Speaker, I want to say to the gentleman from Michigan that he has made a most comprehensive statement on the Point 4 program. I have been somewhat concerned about the approach we have been making to the program, because it had seemed to me that we were getting too much government into this picture, and I was much impressed by the gentleman's statements regarding the point where private initiative should enter. I think there are those who today are sponsoring the Point 4 program who feel that all of these investments should be made by the Government; that it is purely a Government operation; that at no time is there any place for the private profit motive to enter, that all of that is beside the point. I have been led to believe that the program as it is now constituted would result in the imposition of state socialism upon these backward areas. Now, if we can develop a program through such a commission as the gentleman suggests, I for one would like to associate myself with the gentleman in that movement. I am just wondering if the gentleman feels that we have already passed the point in view of our present studies where this might need a little more assistance and where the Congress of the United States ought to have something to say about the program. I am afraid we are having nothing to say about it except to appropriate the money.

Mr. MEADER. I appreciate especially the observations of the gentleman from Wisconsin, a valuable member of the Foreign Affairs Committee of the House. I would only say in reply to the question as to whether it is too late, that it is never too late to begin a program if it is a good one. Secondly, I appreciate particularly his expression of interest in this particular bill because the bill, I understand, has already been referred to the Foreign Affairs Committee of the House. If there is to be some difference of opinion about the approach between those who believe the private enterprise system can contribute substantially, or as I would put it, would perform the great bulk of the job of developing underdeveloped areas, and those, as the gentleman suggests, who believe it ought to be done by Government under some semisocialistic undertaking through grants of public funds, I think it would be very appropriate for those having different opinions to thresh out this question of basic policy before the committee of which the gentleman is a member. I hope he will be able to obtain hearings on the bill which has been referred to his committee.

Mr. SMITH of Wisconsin. I will be glad to try to make that effort.

Mr. MEADER. I thank the gentleman.

Mr. MEADER. I think I can present my suggestion briefly and extemporaneously so that the committee can understand what my objective is.

Mr. GORDON. Very well, Mr. Meader. You may proceed.

Mr. MEADER. The purpose of the bill that I introduced on April 23, as I explained it at the time, and as I amplified it in the statement which has been accepted in the record, is to enlist the aid of private enterprise in this country in the job of developing the natural resources of the underdeveloped areas of the world.

I said in the statement at the time I introduced the bill, and again repeat it, that I find President Truman's point 4 program a noble objective. I find nothing in that passage of his inaugural address to which I can take any exception whatever.

Incorporated in that passage is the idea that American methods, mass-production methods, and other techniques which have so successfully developed the natural resources of the American Continent, can very well be employed in the development of the natural resources in the underdeveloped areas of the world. I think free enterprise is embodied in the concept of the point 4 program.

Up to the present time, no great effort has been made on the part of our Government to encourage that activity of private enterprise and the contribution of private capital to the purpose of developing the natural resources of the underdeveloped areas. I believe much more could be done than has been done so that the development of the natural resources of the underdeveloped areas could be carried on through commercial activities by the people themselves as distinguished from Government donations on a government-to-government level, or by donations from our Government directly to nationals of other governments.

When I listened to the President's inaugural address I was impressed with the rather unusual picture the Chief of State of the leading Nation of the world advancing this proposal seriously as a national policy. I thought to myself as I listened to his address that he probably did not have the slightest concept of how to go about accomplishing that objective.

It then occurred to me that the next step in a program of this magnitude would be to attack the problem of what ought to be done. It seemed to me that the logical way to attack it would be to assemble the best minds that could be found, both in the executive branch of the Government, the legislative branch of the Government, and especially outstanding men from private enterprise, and to train those minds on this problem of how to go about developing the underdeveloped areas of the world in the American way, not to ape the totalitarian system, with which we are in ideological combat. It seemed to me that if you could get together a group of men like that, that you could attack some of the hazards that now confront the American businessmen, or the businessmen of any other country, who are willing to risk their capital and take their own chances in developing the natural resources of other parts of the world in the same way that our pioneer forefathers developed this country.

Some of these hazards are pretty well recognized: confiscation of property without fair compensation, double taxation, the instability of currency exchange, restrictive cartel monopolies which prevent

free and open competition. There are other similar hazards and obstacles to foreign investments.

It is my thought that this problem should be attacked. If it is successfully attacked, then the natural flow of economic forces will develop the undeveloped areas of the world by utilizing their natural resources far more successfully, far more economically, and far more usefully, from a number of points of view, than our Government can do it, regardless of the amount of money that the American people put up through their Government.

I would like to say that I don't see this as an either/or proposition. I believe there are some areas in which Government grants to other governments are perfectly appropriate. I think particularly where it comes to assisting a foreign government in governing a little better is one instance where government-to-government aid is applicable. Such activities as public sanitation, education, agricultural extension services could well be pursued on a mutual cooperative basis between our Government and the governments of the undeveloped countries in the world. Of course, some governments have hired administrative expert assistance at their expense, such as the Millspaugh mission to Iran.

But when it comes to developing mines, or constructing transportation facilities, or power developments, or establishing manufacturing concerns there, it seems to me, are the appropriate areas into which private enterprise should enter. I believe the American industrial system has much to contribute to the undeveloped areas of the world on a cooperative basis between those who are willing to invest their funds, their know-how, and their leadership from this country, or any other country of the world, and inhabitants of the area where those natural resources exist. I believe the commission I propose could minimize or eliminate some of the hazards which presently confront such investors.

What are the returns to be obtained if that result should be achieved? First of all, we will have demonstrated by performance that a free society can utilize and develop natural resources far better than totalitarian regimes could possibly do it under organized slavery, and that is what I regard communism to be. We don't have to do it by propaganda alone. Simply by effective performance of the mechanical task of utilizing the resources for the happiness of the people who reside there can we demonstrate the superiority of free enterprise over totalitarianism. It seems to me it is important we make that demonstration because I believe we are in a long-range contest of political and economic philosophies.

Some of us heard our contest with communism described the other day as religious warfare. I believe it is important that the principles of our society be accepted elsewhere in the world. Not just for the benefit of the people who live there, but, in part, because in international commerce it is necessary that we trade with the same type of economy that we have here. In trading with totalitarian economies, free economies would have to develop some kind of combinations in order to put themselves in a competitive bargaining position with a state monopoly.

I think the matter of cost also ought to be considered. This program now before this committee is a rather sizable program, even for

1 year. I do not think there is anyone who can guarantee how many years it will last, or whether it will ever end. If it is possible to expand the foreign investment of private enterprise, such expansion can substitute in part for what might otherwise have to be done at the expense of the taxpayers. We will then not only be cutting down the tax burden but at the same time we will be broadening the tax base. When private investment develops resources it creates wealth where there was nothing except potential wealth existing theretofore. This broadened tax base could either provide additional revenue to improve the services of Government, or it could be used to reduce the current tax burden.

I feel very strongly about this matter, but I am not sure that I haven't taken as much time as if I had read the statement which I had prepared. I came here primarily for the purpose of answering questions. I sent to each of the members of the committee, a few days ago, a reprint of the speech I made on April 23, 1951. I also asked to have everyone furnished with a copy of the statement I prepared for this occasion with the thought that I could save the committee's time by letting the committee members know in advance of my views and my proposal.

Mr. GORDON (presiding). I am more than sure that everybody appreciates your appearing here tonight, and I want to thank you for your statement.

I understand that you have with you tonight Mr. Frost, from the Detroit Board of Commerce, whom you would like to introduce to the committee.

Are there any questions from the members of Mr. Meader?

Mr. MANSFIELD. I would like to commend Mr. Meader not only for his enthusiasm but also the great amount of study that he has put into this. I notice he has spoken about this several times on the floor. I am sure that I for one and the rest of the committee will give a great deal of consideration when it comes to our study of the point 4 in the bill.

Mr. MEADER. Thank you, gentlemen.

Mr. CHIPERFIELD. I have not had the chance to study this bill as I should have, but I had some occasion to go into it pretty carefully today, and I have also read your statement very carefully and I can tell you have been doing a great deal of thinking on this matter, and, like the rest of us, you are very much worried about this problem.

Do you think it would be a good idea for this bill of yours to have it as an amendment to the pending act, or is it your purpose to have it considered separately?

Mr. MEADER. I do not think it is unrelated, although I haven't seen the act on which you are working.

Mr. CHIPERFIELD. I do not mean the act, but the pending foreign-aid proposal.

Mr. MEADER. That is a question of procedure. I do not believe I should comment on the proper parliamentary procedure without studying the question more intensively.

Chairman RICHARDS. We all appreciate your coming in, and appreciate your viewpoint, and assure you it will be given consideration.

Mr. SMITH. I am somewhat familiar with Mr. Meader's views on this matter, and was present on the floor when he first made his presentation. I want to compliment him again, as I did at that time,

on his novel approach, and I think we are all interested in the point 4 program if we can develop it without bolstering socialistic economies.

On page 2 of your statement you say, in paragraph 3, that—

Our objective in this contest should be to demonstrate, both by argument and by performance, that a free economy is superior to an economy of enslavement, not only because the means of satisfying human wants can be extracted from the resources of nature more efficiently, but also because people in a free society enjoy spiritual values denied the slave citizens of the police state.

I think that is a powerful statement, and it seems to me that we in this country have demonstrated that very principle, and as we look about Europe we find that in both England and France, and some of the other countries, they are bedeviled by the fact that there is too much socialism, that the incentives have been removed from a free society. Once you remove the incentives you just become the slaves of the state.

I will be glad to join with you in any way that I possibly can in attempting to incorporate your ideas either in the bill which we now have before us, or by separate legislation.

Do I understand you have a bill pending in our committee?

Mr. MEADER. Yes; House Resolution 3708.

Incidentally, I submitted this proposal to a great many people and invited their comment. I have here correspondence analyzing and commenting on my proposal, as is shown at the end of my prepared statement. I want to call attention to the correspondence with the State Department. Also I have made insertions in the Congressional Record of correspondence on H. R. 3708. I am not sure whether you want that incorporated in the record of this committee.

I have, for example, the comments of Mr. Nelson A. Rockefeller, Chairman of the International Development Advisory Board; Mr. W. L. Clayton, former Under Secretary of State in charge of economic affairs, and former Assistant Secretary of Commerce; Mr. W. W. Waymack, a former member of the United States Atomic Energy Commission; Mr. Julius Ochs Adler, vice president and treasurer of the New York Times, and a good many comments from other outstanding men in public life, in the field of political science, and in the business world. I think perhaps their comments might be of interest to the committee.

Mr. GORDON. What is the pleasure of the committee? Is there any objection to inserting it?

Mr. RICHARDS. I move we incorporate it in the record.

Mr. GORDON. It will be so done.

(The material referred to is as follows:)

DEPARTMENT OF STATE,
Washington, June 1, 1951.

MY DEAR MR. MEADER: The Department of State is gratified to note your interest in the point 4 program, as evidenced by your introduction of a bill to create a Commission on Aid to Underdeveloped Areas, to which you refer in your letter of May 18, 1951, to the Secretary. Your appraisal of the point 4 program as a positive and constructive element of foreign policy, with great psychological appeal to the masses of people in the underdeveloped areas, coincides with the Department's views.

As you pointed out in your speech in the House on April 23, 1951, the point 4 program of technical cooperation is now in operation, under the Act for International Development approved by the Congress in 1950. This program is being carried out by the Technical Cooperation Administration in the Department of State, under the direction of Dr. Henry G. Bennett as Administrator.

A good beginning has been made under this program, with an appropriation for fiscal year 1951 of \$31,500,000, which became available September 8, 1951.

In approximately 9 months, point 4 general agreements have been concluded with 26 countries, about 375 American technicians are at work on more than 100 projects in 31 countries, and about 250 technical trainees from other countries are receiving training in the United States.

It is worth noting that, in keeping with the provision of the Act for International Development requiring that other participating countries pay a fair share of the cost, the aggregate contributions of the countries receiving this kind of aid are three times the contribution of the United States.

The distinguishing characteristic of the program now being operated by the Technical Cooperation Administration is that it is a program of aided self-help designed to assist the people of underdeveloped countries to increase their productivity and improve their living conditions largely through their own efforts. Eighty to eighty-five percent of the people of these countries live on farms or in rural villages; they have a rural economy, usually in a rather primitive state.

The first essential for improving the lot of these people is an increase in food production, and the best way to do this is by improving their primitive tools and techniques by simple means—substituting scythes for sickles and steel plows for wooden ones, persuading farmers to plant better seeds, to use fertilizers and better cultivation practices, better harvesting methods, better preservation and storage of crops. At the same time, the people need to be shown how to practice elementary sanitation and to combat preventable disease. They need assistance in learning to read and write and to improve the schools for their children.

These are the primary, everyday problems of the overwhelming majority of the people of the underdeveloped areas. They are problems that do not require large amounts of money, of goods or equipment for solution. They require a grass-roots approach, such as the Agricultural Extension Service, the Public Health Service, and the public-school system have used in our own country with signal success. Those who have worked on the problems of underdeveloped countries believe these are the methods best suited to do a job that certainly needs to be done. These are the methods that call for the minimum contribution from the United States and the maximum contribution of the people we want to help.

Only when the great majority of people in these countries who live on the land are able to produce enough food to eat, and a surplus to feed their fellow countrymen, will there be labor available to man the industries the underdeveloped countries want. The increased production of agricultural commodities in itself will stimulate industrial development, through the processing of grains, fibers, leather, and other products. This is the way for these people to create more real wealth, which will enable them to accumulate capital to speed up their own economic development.

One of the main goals of technical cooperation is to help create conditions in the underdeveloped countries that will attract and make profitable private capital investment. At the same time, the United States Government is endeavoring to use other means, such as trade treaties, that will assure fair treatment of American investors abroad.

I have discussed the present program at some length because it is the Department's opinion that this program is sound and will yield excellent results at relatively small cost. It needs to be strengthened and expanded, which we hope can be done as a result of a moderate increase in appropriations for the program.

You are doubtless familiar with the fact that, pursuant to the Act for International Development, the President has appointed a nonpartisan group of representative citizens to serve as the International Development Advisory Board, under the chairmanship of Mr. Nelson A. Rockefeller. This Board, whose function it is to advise the President and the Administrator on board policy matters concerning point 4, recently issued a report to the President on the subject, entitled "Partners in Progress."

I believe you will find that this Board is fulfilling many of the functions you contemplate for the Commission proposed in your bill.

Because of your manifest interest in point 4, I believe you would find it well worth your while to discuss the present program with Dr. Bennett, who can give you more detailed information both as to the objectives and the operations of his organization. I am therefore asking Dr. Bennett to call you in the near future.

The Department would welcome action by the Congress which would further support and strengthen the existing mechanisms for making the point 4 program a powerful arm of American foreign policy and a bulwark of the free world.

Sincerely yours,

JACK K. McFALL,
Assistant Secretary
(For the Secretary of State).

JUNE 2, 1951

HON. JACK K. MCFALL
*Assistant Secretary of State,
Department of State, Washington, D. C.*

DEAR MR. MCFALL: Thank you for your three-page letter of June 1, in response to my letter of May 18 requesting comments on my bill to create a Commission on Aid to Underdeveloped Areas.

In general, I am aware of the technical assistance program engaged in to contribute toward accomplishing the objective announced in point 4 of President Truman's inaugural address. I have discussed the matter with Mr. Samuel Hayes of the point 4 staff and have familiarized myself with a great deal of the literature on the subject.

I note your reference to "Partners in progress" and the work of the International Development Advisory Board under Mr. Nelson Rockefeller. The enclosed copy of my letter to Mr. Rockefeller, dated May 28, in response to his letter of May 24, a copy of which is also enclosed, indicates my doubt that the International Development Advisory Board has solved the underlying problems which, in my judgment, must be solved before any appreciable contribution to the development of underdeveloped areas can be made in the American free enterprise spirit by private investors.

I am not certain whether you concur that a fact-finding commission might penetrate more deeply than past efforts into the obstacles and hazards which I believe we all recognize are presently restraining natural economic forces from developing the resources of underdeveloped areas. However, your final paragraph endorses congressional action to support and strengthen efforts to accomplish the point 4 objective, and might be construed as expressing general sympathy with the objective of my bill, although it could hardly be interpreted as a specific approval of the method I have suggested.

If there are any flaws in my proposal, I think it would be most helpful to the Congress for the State Department and its expert technical staff to point them out early in congressional consideration of this subject. I might say that, with this purpose in mind, I have circulated the reprint of my remarks, which was sent to you, rather widely among governmental and private circles of clear-thinking public officials and citizens who, because of their background, ought to be a position to provide constructive criticism of the idea I have advanced.

Of the replies so far received, I think it would be fair to say that none have strenuously objected to the fact-finding commission idea, though some have had less confidence in its efficacy than others. The response has been almost universal in approving the encouragement of private—as opposed to governmental—contribution to the task of developing underdeveloped areas, and the establishment of a positive—rather than a negative—program in the ideological combat with totalitarianism has been enthusiastically endorsed.

I have supplied the foregoing information in the hope that the Department of State may see fit to particularize its comments on my proposal.

Sincerely,

GEORGE MEADER.

DEPARTMENT OF STATE,
Washington, June 11, 1951.

HON. GEORGE MEADER,
House of Representatives.

MY DEAR MR. MEADER: Thank you for your letter of May 21 asking for comments on the bill you introduced in the House of Representatives to create a commission on aid to underdeveloped areas. I shall not make a detailed reply since I associate myself with the letter sent you on June 1, from Assistant Secretary McFall on behalf of the Secretary. I would, however, referring to your speech in the House of Representatives on April 23, add my hope to yours that our aid programs will minimize the causes of war and improve economic relations between peoples in a world system based upon freedom of the individual and the proposition that governments are constituted for the benefit of the governed.

I hope you have had an opportunity to discuss with Dr. Bennett, Administrator of the Technical Cooperation Administration in the Department of State, the objectives and operations of his organization and other related matters of interest to you both.

Sincerely yours,

DEAN RUSK,
Assistant Secretary of State.

AN AFFIRMATIVE FOREIGN POLICY

INTERNATIONAL DEVELOPMENT ADVISORY BOARD,

May 24, 1951.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I was very much interested in reading a copy of the bill H. R. 3798 which you have introduced to stimulate the study of aid for underdeveloped areas. Your remarks in the House at the time followed in so many ways the thinking of the International Development Advisory Board that I am taking the liberty of sending you the enclosed copy of a summary of the report which our Board made to the President in March. If you do have time to go over it, I should certainly appreciate any comments you might have.

Sincerely,

NELSON A. ROCKEFELLER.

MAY 28, 1951.

NELSON A. ROCKEFELLER,
Chairman, International Development Advisory Board,
New York, N. Y.

DEAR MR. ROCKEFELLER: Thank you for your letter of May 24, 1951, in which you comment upon my bill, H. R. 3798, and the remarks I made on the floor of the House at the time of its introduction.

I also thank you for sending me a copy of your board's report, entitled "Partners in Progress." As a matter of fact, I had obtained a copy of this report from the White House as soon as I saw it announced in the papers, and I had read it with considerable interest. In addition, I had previously familiarized myself with the Gray report. I have also read the President's message on the proposed military-economic aid program submitted to the Congress last Thursday.

The question, it seems to me, is primarily one of emphasis. Both the statement in point 4 of the inaugural message and Partners in Progress recognize that private enterprise should play an important role in the development of underdeveloped areas. The President's message of last Thursday has far less reference to the role of private enterprise than previous official statements dealing with the point 4 program. I hope this does not indicate a trend in official thinking in the direction of government assumption of the major responsibility for development of underdeveloped areas on a grant basis—to the exclusion, for all practical purposes, of the role of the private investor.

The objective of my bill, of course is primarily to attack the difficult economic and political bottlenecks and roadblocks which have held back natural economic forces which could develop the underdeveloped areas in the same way the natural resources on the North American continent have been developed.

Partners in Progress recognizes that private enterprise has a primary function in the first area of operation discussed in that report; namely, production and distribution. I do not believe the report purports to claim that the basic problems which have been preventing greater contribution to the development of underdeveloped areas through private investment have been solved.

It is to contribute to such solution that I recommend the creation of a Commission on Aid to Underdeveloped Areas.

Sincerely,

GEORGE MEADER.

INTERNATIONAL DEVELOPMENT ADVISORY BOARD,
New York, N. Y., June 12, 1951.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: Thank you for your letter of May 28. I regret that my absence from the city on speaking engagements as well as a trip to Venezuela prevented an earlier reply.

I agree completely that it is of prime importance to release those economic forces which could develop the underdeveloped areas, and every effort to stimulate the productive influence of private investment is certainly to be desired. For this reason, I welcome particularly your efforts to bring about a better understanding of the part that private enterprise can and should play in this field.

With best wishes,

Sincerely,

NELSON A. ROCKEFELLER.

LET US EXPORT INDEPENDENCE

Mr. MEADER. Mr. Speaker, two events make it appropriate to call to the attention of the Congress the proposal I made April 23, 1951, to create a Commission on Aid to Underdeveloped Areas.

Tomorrow we commemorate the one hundred and seventy-fifth anniversary of the establishment of a Government of limited powers and residuary sovereignty in the people themselves. This free economic system has enabled the American people to extract from the resources of nature an abundance heretofore unknown to civilization.

Currently, the House Foreign Affairs Committee is holding hearings on foreign military and economic aid, involving a proposed annual expenditure of \$8,500,000,000 by our Government.

My bill aims at making available to less fortunate regions and peoples the free political and economic system which, in 175 years, has proved so beneficial to the American people.

It proposes to clear the way for aid to be provided by the American people themselves in the American tradition. It is founded upon the faith that American know-how, American capital, and American good will will be exported to underdeveloped areas, without expense to our Government, if we can break down barriers now inhibiting the operation of natural economic forces.

The Commission to be created by this bill would be delegated the difficult task of finding out why private enterprise is not now pioneering in the development of the natural resources of underdeveloped areas for the mutual benefit of the inhabitants of those areas, and those who contribute the enterprise, risk taking capital, and know-how necessary to the development of the resources.

The adoption of this program would be a restatement of the faith of those who founded our system in the capacity of the people themselves to work out their own destiny and own livelihoods if only they are free from the tyrannical yoke of a despotic central government.

Now that the House of Representatives, through its Foreign Affairs Committee, is giving serious consideration to a \$4-billion dollar proposal for 1 year's aid to foreign governments and their citizens, it is timely that we should inquire to what extent economic assistance is being provided through the voluntary activity of our citizens, and whether or not our Government can help create a climate in which such assistance can be increased.

I do not propose to develop at this time the reasons why I believe this effort should be made. A brief summary of those reasons is contained in the remarks I made on the floor of the House on April 23, 1951.

Mr. Speaker, I propose to read only three paragraphs from those remarks to describe the nature and objective of this bill. I quote:

"Mr. Speaker, I have today introduced a bill to create a bipartisan commission on aid to underdeveloped areas. I propose this measure as a concrete step to advance the cause of self-government through free democratic principles and institutions. I hope this bill will receive the enthusiastic support of both Republican and Democratic Senators and Representatives.

"Briefly described, the bill would establish a bipartisan Commission, patterned after the Hoover Commission, charged with the duty of studying and identifying the artificial barriers now inhibiting the natural economic forces, which would develop resources of the underdeveloped areas of the world, and recommending to the President and to the Congress ways and means of eliminating or minimizing those artificial barriers.

"If this Commission should succeed in its task, and if our Government, in concert with like-minded democratic governments, would proceed to apply the results of the Commission's study in actual practice, the forces of freedom and self-government could assume the offensive in the world-wide combat with the ideology of totalitarianism and slavery. Our Government, in leading this movement among the nations of the earth, would then supplant the negative, defensive policy of containment by a vital, kinetic, affirmative foreign policy."

I wish to bring to the attention of the House some of the comments made on my proposal by certain outstanding citizens in Government, in labor organizations, in the field of political science, and in business. As soon as the reprints of my remarks of April 23, 1951, on the point 4 program were available, I circulated them widely among persons who, in my judgment, could contribute constructive thinking to the problem of aid to underdeveloped areas.

Out of more than 200 replies, all but a very few endorsed my proposal enthusiastically. I will read a few representative comments.

First let me read a letter from the committee on the present danger by Tracy S. Voorhees, attorney, former Under Secretary of the Army and War Department Food Administrator for occupied areas:

COMMITTEE ON THE PRESENT DANGER,
Washington, D. C., May 17, 1951.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I have read with great interest your letter of May 11 and its attachment.

As you will note in the statement of objectives to which you refer, the committee on the present danger is working for "A national policy of averting world war III by confronting the aggressors with a strong free world." The Communist aggression in Korea clearly revealed that the free world was far from strong in a military sense. For that reason, we have urged as a matter of paramount importance that defense forces adequate to deter or repel aggression be built up in the United States and allied nations at the earliest practicable date. We are fully aware, however, that the economic strength of the free world is not only an essential component of military strength but is also the first line of defense against Communist subversion from within. The committee now has under consideration a detailed study of this aspect of the problem and will make a public statement of its conclusions in the near future.

My own convictions are substantially in harmony with those expressed in the reprint of your speech. Specifically, I would agree that a properly conceived program of economic development in the underdeveloped areas would "minimize the causes and dangers of war," that the bulk of the undertaking must be financed with private capital, and that the efforts which we have made to date are most inadequate to achieve the goals we seek in those areas. I should also like to suggest two additional points: First, that we should go forward with the present plans for these areas, however inadequate they may be, to the extent consistent with our broad objectives, while working out on a bipartisan basis a more broadly conceived and affirmative policy; and second, that the development of these areas is of vital importance to the permanent welfare of the industrialized countries, particularly Western Europe and Japan, and will require the fullest practicable use of their resources. We have effectively stimulated mutual aid in the administration of the recovery program in Europe and are now embarked on a joint enterprise with other North Atlantic Treaty countries for the defense of Europe, the success of which will depend in large measure on the efforts of our European partners to help themselves and to help each other. In my opinion, we should seek in the administration of our aid programs and in other ways to promote a similar cooperative effort for the development of the underdeveloped areas.

Thank you for bringing your excellent speech to my attention:

Sincerely yours,

TRACY S. VOORHEES.

Next is a letter from W. L. Clayton, of Anderson, Clayton & Co., Houston, Tex., former Under Secretary of State in charge of economic affairs and former Assistant Secretary of Commerce. On May 25, 1951, Mr. Clayton wrote to me as follows:

ANDERSON, CLAYTON & CO., INC.,
Houston, May 25, 1951.

Hon. GEORGE MEADER,
House Office Building, Washington, D. C.

DEAR MR. MEADER: On my return home I find your letter of May 10, with enclosure, which I have read with much interest.

I heartily agree regarding the necessity of aiding underdeveloped countries to develop their resources. You may be interested in reading the enclosed copy of a radio address I made on April 1, a portion of which has to do with this very question.

Mr. Tracy Voorhees has sent me a copy of his letter to you of May 17 with which I fully agree.

With best wishes,

Sincerely yours,

W. L. CLAYTON.

Mr. Julius Ochs Adler, also a member of the Committee on the Present Danger, vice president and treasurer of the New York Times, and former civilian aide to the Secretary of War, wrote me on May 25, 1951, as follows:

THE NEW YORK TIMES,
May 25, 1951.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: Absence in Europe has prevented an earlier acknowledgment of your letter of May 9 enclosing copy of your remarks regarding point 4 before the House of Representatives.

In the interim I also found copy of a letter from Mr. Tracy S. Voorhees, vice chairman of the Committee on the Present Danger, to you acknowledging a similar communication. Mr. Voorhees has expressed exactly my own feeling in regard to your most excellent speech.

With appreciation of your thought in affording me the opportunity of reading it,
Yours sincerely,

JULIUS OCHS ADLER.

The next letter I should like to read is one from Mr. W. W. Waymack, a newspaperman, former member of the United States Atomic Energy Commission, former chairman, Economic Policy Committee and National Resources Planning Board, former special adviser to the Department of State and member of the National War Labor Board, and consultant for the Food Administration. On May 19, 1951, Mr. Waymack wrote me as follows:

ADEL, IOWA, May 19, 1951.

DEAR CONGRESSMAN MEADER: Thank you for the reprint of your speech on the floor of the House of Representatives April 23, sent to me as a member of the Committee on the Present Danger.

I, as a citizen, see great merit in your proposal. I have always liked the idea and the device of the objective fact-finding commission. I have been impressed by the excellent use which nations of the British Commonwealth have made of this approach to complex problems through the decades. I agree with your judgment that we have often handicapped ourselves in this country by not making more use of it. I certainly think that we need better understanding of all the realities involved in trying to give effective and acceptable assistance to underdeveloped countries. I agree that it is essential for us to move faster and more boldly in this undertaking, both for the humanitarian reason that you mention and also, very practically, in order to make genuine promise to peoples for whose urgent problems answers must be found. I agree that it would be extremely valuable to ourselves to fix upon a great constructive goal—a concrete, affirmative program for a better world. I consider this not in the least visionary, but a challenge that is forced upon us in our own interest by the state of the world.

I could go on and point out difficulties in this or any other approach. I could raise warnings as to things to beware of. Any other person who tries to be thoughtful could do that, too, and many could do it better. But difficulties and dangers are inherent in any tackling of the world's major tasks. I confine myself therefore to the central idea and simply say that I consider it immeasurably important for America to put itself in the position of obviously wanting and intending to lead vigorously in helping to solve the problems of great masses of peoples who, first, have a right to solution, and who, second, otherwise are all too likely to drift into "the other camp," with its glittering promises and ready-made formulas.

I should personally find the commission approach very acceptable. A commission set up for the purpose would have to consist of wise men, exceptionally capable of discerning, exposing and facing all the real problems objectively.

Sincerely,

W. W. WAYMACK.

AN AFFIRMATIVE FOREIGN POLICY

Extension of remarks of Hon. George Meader, of Michigan, in the House of Representatives, Thursday, July 12, 1951

MR. MEADER. Mr. Speaker, recently I listened with interest to a former Communist who had been converted to the philosophy of a free economy. He described our ideological contest with the totalitarian Soviet system as religious warfare. He described the Communists as religious fanatics burning with crusading zeal for the cause in which they intensely, though mistakenly, believed. He cautioned that the free world could not combat an idea, however erroneous, with a vacuum.

In House Resolution 3798, I sought to contribute to the development of an affirmative foreign policy through demonstrating to the peoples of the world by performance that free enterprise is a superior economic system to totalitarianism.

Very thoughtful comment and constructive criticism is contained in correspondence with Dr. Paul H. Appleby, who is dean of the Maxwell Graduate School of Citizenship and Public Affairs, Syracuse University; former Assistant Director, United States Bureau of the Budget; former Under Secretary of Agriculture; former Special Assistant to Lend-Lease Administrator; and member of International Food Missions.

For the benefit of the Congress in its current consideration of the proposed foreign-aid program, I am inserting this correspondence in the Record:

SYRACUSE UNIVERSITY,
Syracuse, N. Y., May 25, 1951.

DEAR MR. MEADER: I acknowledge with hearty thanks your letter of May 17 and the enclosed reprint from the CONGRESSIONAL RECORD.

In general terms I applaud heartily your purposes and nearly all of your remarks. I think the general point you make is indisputably valid and the dramatization through some such device as your proposed commission would be a thoroughly constructive step. I think you are to be congratulated on your insight and on your freedom from damaging partisan bias.

I have qualms about one part of your enunciation of agenda points. It seems to me that some of your phrases and some of your paragraphs could be interpreted—without unfairness, even if not correctly—as a certain kind of "imperialistic" drive on behalf of American-type capitalism. At least, your language does not overtly, I think, recognize adequately the many variations in economic structures characteristic of modern societies outside of the Iron curtain area, and the insistence of these nations on building in their own terms and not in terms that we find quite satisfactory in the United States. The nationalization of oil or the eviction of foreign ownership of an oil industry, has become a considerable problem internationally just now and illustrates the difficulties I had in mind. Actually, the foreign ownership of important industries in Yugoslavia, in Iran, in Iraq, in Mexico, in India, and in China has been an important aspect of the problem of world order, and if I read your proposal correctly it is predicated rather too sharply on an assumption of great increase in investment of the very kind that has proved offensive in the past. In many parts of the world and in case of certain kinds of investments, it seems to me that a realistic and cooperative approach to the problem of cooperation and world order will of necessity dictate a good deal of help directly to governments and directly through and from our own Government. I don't believe that the issue is wholly an either/or one, but any adequate general approach to the problem you are addressing, it seems to me, ought to include in its terms of reference possibilities for both governmental expenditure and investment and private investment.

With your more fundamental position, I think as already indicated, that there can be no quarrel at all. In one way it may be said that the modern world problem is a problem of raising the standard of living in the rest of the world at a rate commensurate with our own capacity for economic betterment. The United States is in the position of the family of privilege described long ago by Carlyle: that family declined interest in the needs for sanitation and health provision in the city at the foot of the mountain on which the family resided and when the plague came it did not stop at the foot of the mountain. The United States by its very economic preeminence has more at stake than any other society in the business of achieving a kind of world well-being which will bulwark our own attainments and values.

With congratulations on your statesmanlike point of view, and with hearty good wishes, I am

Sincerely yours,

PAUL H. APPLEBY.

JUNE 1, 1951.

Dr. PAUL H. APPLERY,
Dean Maxwell Graduate School,
Syracuse University, Syracuse, N. Y.

DEAR DEAN APPLERY: Thank you for your thoughtful comments of May 25, 1951, on my proposal to establish a commission on aid to underdeveloped foreign areas.

You have put your finger on the point most likely to be attacked by those unfriendly to the idea. I sought to make clearly, briefly, as did the President in his message—that it is a responsibility of governments to prevent Imperialistic exploitation. I envisage as one of the most important and difficult tasks of the commission the development of workable and enforceable means to prevent such abuses of the free enterprise system. The Sherman and Clayton Acts, other antitrust legislation, and the efforts of the Federal Trade Commission and the Department of Justice leave much to be desired in maintaining equality of economic opportunity within the United States. Cartels and monopolies abroad are not regarded in the same light as are restrictive trade practices and agreements here. Evolution of an acceptable policy and workable means of enforcing it would not be easy. I don't pretend to know the solution. Perhaps, an able commission, after careful study, would not find it. I attempted to do no more than state an objective in the passages I have underlined in red on the enclosed reprint.

I recognize, also, that the statements in my speech might be interpreted to be an expression of pride in all things American, and an intention to make over all peoples into our images. Actually, I hold no such views. Religions, traditions, social customs and practices, as such, to the extent they do not impair an individual's right to make his livelihood in a free, competitive economy, need not be affected in any way. Any modification required by changed economic conditions would very likely be slow, depending upon education and acceptance of more modern concepts. This is a vast subject, but I would not pretend that religion and customs have no bearing on the economic plight of the underdeveloped areas. Nor do I advocate that they be "Americanized," except that I think they should have "free"—as contrasted to "totalitarian"—economies if the point 4 objective is to be attained. I sought, at least, to hint at this attitude near the end of the third column on page 3.

I agree that the problem is not either Government grant-in-aid or private investment, but a judicious and balanced combination of both. Your reference to Carlyle's episode is apt—but I would counter that the greatest favor we can do for the underdeveloped peoples is to help them establish for themselves a system where the dynamic forces of individual free man are unleashed in the economic development of the natural resources of the areas they inhabit.

Sincerely,

GEORGE MEADER.

SYRACUSE UNIVERSITY,
Syracuse, N. Y., June 7, 1951.

Mr. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: It was a real satisfaction to get your letter of June 1. While I had made my comment not on any assumption that your own thinking had missed anything that I might point out, but rather in terms of how others might interpret what you had in mind, the time you took in writing your letter was well spent as far as I am concerned. It reinforces my earlier judgment that you are pursuing with exceptional understanding an undertaking of great potentialities. You have my heartiest best wishes.

Sincerely yours,

PAUL H. APPLERY.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., June 7, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I herewith acknowledge receipt of your letter dated June 5 with copy of H. R. 3798 which you introduced in the House of Representatives on April 23 and which applies for the creation of a Commission on Aid to

Underdeveloped Areas, together with copy of an address which you delivered in the House of Representatives on April 23.

I welcomed the reference you made in your letter to the article published in the April May issue of Labor's Monthly Survey entitled "The Road Ahead to a Free World," and to those you made regarding the measure which you have sponsored and which you introduced into the Congress of the United States.

I am sure I will be pleased to comply with your request to give your measure very thoughtful and careful consideration. I feel sure we can extend to it our official support. Your bill deals with a subject which has been occupying the attention of the administrators of our Government and many American citizens as well.

With all good wishes, I beg to remain

Very truly yours,

WILLIAM GREEN,
President, American Federation of Labor.

NARR-KHEVINATOR CORP.,
Detroit, June 28, 1951.

Hon. GEORGE MEADER,
Congressional Office Building, Washington, D. C.

DEAR CONGRESSMAN MEADER: We believe that prior to taking any tangible steps for the implementation of the point 4 program, Congress should pass the Meader bill for the establishment of a bipartisan commission to investigate and report on ways and means to remove barriers to overseas private investments.

By increasing foreign investments on a business basis with appropriate guarantees against expropriation and with assurance of conversion into dollars of annual returns on such investments, the American taxpayers might well be relieved of a heavy financial burden inherent in the government-to-government formula of foreign aid.

We congratulate you for your constructive contribution to the point 4 program as proposed in the Meader bill.

Our best wishes for your success in securing passage of your proposal.

Sincerely yours,

C. W. WEYAND,
Executive Assistant.

THE DETROIT EDISON CO.,
Detroit, Mich., July 10, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I was very happy to receive a copy of your speech on American foreign policy which Mr. Durbin was kind enough to give me. I note with particular interest the positive and concrete approach that you have taken to the problems of overseas development. Particularly outstanding is the effort which you have exerted to place emphasis on the part of private enterprises in implementing the objectives of our foreign economic policy. The Detroit Board of Commerce has given considerable publicity on the major developments many firms have already made in expanding their overseas manufacturing facilities. However, our ability here in the United States to do the job can best be shown by intelligent and positive action.

Let me compliment you for the wonderful progress that you have made in this direction and in furthering those outstanding objectives of your thinking.

Sincerely,

FRED A. COMPTON.

INTERNATIONAL BUSINESS MACHINES CORP.,
New York, N. Y., July 12, 1951.

The Honorable GEORGE MEADER,
The House of Representatives, Washington, D. C.

DEAR MR. MEADER: In Mr. Watson's absence, I am writing to acknowledge and thank you for your letter enclosing a reprint of your statement of April 23 in Congress, introducing a bill to create a Commission on Aid to Underdeveloped Areas.

You have presented a very comprehensive program for eliminating the barriers to the development of the natural resources of the underdeveloped areas of the world. I am sure that this interesting approach to the point 4 program would comprise an effective means for combatting the influence of communism by improving the economic and social conditions of the peoples of these areas. You are to be congratulated on your efforts and I wish you continued success in all your endeavors.

Very truly yours,

GEORGE L. RIDGEWAY,
Director of Economic Research.

McGraw-Hill Publishing Co., Inc.
New York, N. Y., May 31, 1951.

CONGRESSMAN GEORGE MEADER,
Congress of the United States,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MEADER: Thank you for sending me a copy of your speech in the House on April 23, calling for the creation of a Commission on Aid to Underdeveloped Areas.

It seems to me exceedingly important that the point 4 program now getting under way should have focused upon it some intense thinking. Point 4 over the years could become as big and persuasive as the Marshall plan. It makes sense that we know what direction it is taking in its infancy, and we should certainly insist, as you point out, that these overseas programs be keyed to private initiative, not to paternalistic government, operating on a world-wide scale.

Cordially yours,

ELLIOTT V. BELL.

I now want to read a letter from Mr. Gunther H. Lessing, chairman of the Society of Independent Motion Picture Producers, vice president of the Motion Picture Industry Council, and vice president of the Walt Disney Productions, of Burbank, Calif. On June 20, 1951, he wrote me as follows:

WALT DISNEY PRODUCTIONS,
Burbank, Calif., June 20, 1951.

HON. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR SIR: I desire to thank you for your letter of June 6 last addressed to me with which was enclosed your speech before the House of Representatives delivered Monday, April 23, 1951. I read this address with a great deal of interest and favor your bill. A great deal may be accomplished in furtherance of development based on the concept of democratic fair dealing, free enterprise, and the dignity of the individual. Or, as expressed at a recent committee hearing at the meeting of the United States National Commission for UNESCO, "have people talk to people." I might add, "inspire people to know people better."

Perhaps it may not be inappropriate to ask you how UNESCO and the National Commission for UNESCO might not dovetail into the objectives of your bill.

Respectfully yours,

GUNTHER H. LESSING,
Chairman of the Society of Independent Motion Picture Producers; Vice
President, Motion Picture Industry Council; Vice President, Walt Disney
Productions.

NASH-KELVINATOR CORP.,
Detroit, June 8, 1951.

HON. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR GEORGE: I am a bit late in acknowledging yours of May 14 and the reason is that time for reading is exceedingly rare these days what with civilian production controls and defense programs.

I wanted to read your speech and bill so that I could comment intelligently. I am greatly impressed with your approach; in fact, I think it is the sound method of promoting the point 4 program, and furthermore, I agree with you as to the great potential of that program.

In the fall of 1947, when I returned from a meeting of the International Labor Organization, I made some statements about the international situation that

resulted in Senator Vandenberg requesting me to testify before the Senate Foreign Relations Committee on the Marshall program.

Attached is a copy of my statement at that time. I have marked the portions that bear particularly on your basic viewpoint that point 4 should be carried out primarily through the stimulation of private investment and the application of the ideas and methods that have produced unparalleled abundance in America.

Thanks for the invitation to drop in and discuss this when I am in Washington. I don't know when I will be there, but you may be sure that I will take advantage of your welcome invitation.

Sincerely yours,

GEORGE ROMNEY,
Vice President.

BURROUGHS ADDING MACHINE CO.,
Detroit, Mich., May 28, 1951.

HON. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I was very glad to have the copy of your speech on American foreign policy which Mr. Durbin gave me, and to note the positive approach you have taken to the problems of overseas development. Particularly, I welcome your efforts to focus attention on the part of private enterprise in implementing the objectives of our foreign economic policy.

As you no doubt are well aware, much has been done along these lines by Detroit industry; and our board of commerce has sought to make known, through its weekly organ, the important steps many firms have already taken in expanding their manufacturing facilities abroad and in exporting their know-how. Only last week, New York representatives of the United States Council of the International Chamber of Commerce and Detroit business leaders met here to discuss these questions.

To me, these are hopeful signs. They indicate a growing awareness of the urgency of the task. They are evidence that private enterprise is attacking the problem at its roots. Much remains to be done in educating the business world to the need for action. Our ability to do the job can be proved in only one way—by action. At the same time, we can properly expect Government to take prompt steps in providing tax incentives, in negotiating treaties to removal of discriminatory legislation, and in impressing tactfully upon governments abroad their obligation to contribute to the climate of confidence and stability upon which investment depends.

You were kind enough to ask for my views. These brief remarks are enough to indicate how close they are to your own.

Let me thank you again for your thought in sending the copy of your speech; and, further, let me congratulate you for what you are doing in promoting the significant objectives defined therein.

Sincerely yours,

JOHN S. COLEMAN, President.

NATIONAL ASSOCIATION OF MANUFACTURERS,
New York, N. Y., May 29, 1951.

The Honorable GEORGE MEADER,
United States House of Representatives, Washington, D. C.

DEAR MR. MEADER: I have read with the greatest interest your speech in the House of Representatives on April 23 in connection with aid to the underdeveloped areas of the world. I was particularly heartened by your expression of opinion that the job is primarily one for private initiative and enterprise.

The association, as you know, evinced an early interest in the point 4 program. Shortly after President Truman's announcement in his inaugural address, January 1949, a delegation from the association called upon him to pledge cooperation in its development. In March 1949, under our consultative status with the Economic and Social Council of the United Nations, we submitted to the Secretary-General a study entitled, "Capital Export Potentialities After 1952." In May 1949 the association addressed a study, *The Bold New Plan: A Program for Underdeveloped Areas*, to the United States Government, in which recommendations were made which, if carried out, we felt, would assure a successful program. I enclose a copy of an excerpt from this study for your information which outlines

the measures which the United States Government might take or sponsor in carrying out the program.

The association has consistently pointed out that primary responsibility for economic development in other areas rests upon private initiative. This fundamental assumption must be emphasized and reemphasized. Reliance on any other hope will lead to disappointment and disillusion.

Many thanks for having sent me a copy of your speech. I enclose a list of our international relations committee and advisory group who, I am certain, will be most interested in your remarks.

Sincerely yours,

EARL BUNTING,
Managing Director.

THE PROCTER & GAMBLE CO.,
Cincinnati, Ohio, June 28, 1951.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: This replies to your letter of June 13.

I am very much in sympathy with your view that if the point 4 program is to be carried out, greater emphasis should be placed on carrying out important phases of it through private enterprise channels rather than through Government channels.

I believe that the Commission which you have sponsored would help to do this, therefore, the Commission would seem to be a good thing.

In my judgment, not only should as much as possible of the point 4 program be carried out through private enterprise channels, but also attention should be given to getting more small-business men interested in projects which would contribute to the economic development in other countries.

Unfortunately, small-business men in America do not have the same facilities for finding business opportunities in other countries which large businesses have. If our Government could find the means of helping small-business men in the United States to find business opportunities in other countries, I believe that that in itself would make considerable contribution to the point 4 program.

Sincerely yours,

WALTER L. LINGLE, Jr.
Vice President.

TRUST TERRITORY OF THE PACIFIC ISLANDS,
OFFICE OF THE HIGH COMMISSIONER,
June 28, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

MY DEAR REPRESENTATIVE MEADER: Thank you for sending me a copy of your fine speech.

If a commission could be set up with the problem of thinking through the possibilities of point four some great mistakes would be avoided in developing a sentimental and statesmanlike idea into an actuality. Therefore, your commission idea has great merit.

There is some phase of point 4 in practically everything we have to do in the administration of the trustee islands, but there is hardly a place for us under the projected organization should it ever become law. Our people are so few, and so widely scattered, and so limited in economic possibilities, that any thought of a quick return is out of the question. I am going to keep your talk very close to me because it contains much which we may on a very, very small scale translate into action.

Thanks again for writing.

Most sincerely yours,

ELBERT D. THOMAS,
High Commissioner.

TUNNELL & TUNNELL,
Georgetown, Del., June 11, 1951.

HON. GEORGE MEADER,
House Office Building, Washington, D. C.

DEAR GEORGE: Your letter of June 11 has just been received. I have gone over, rather carefully, your bill and your speech. I think your ideas are good and hope that it might be possible for you to get this bill through in some form. I think possibly, if I had any suggestion to make, it would be with reference to a report of the Commission either to the President or to the President and to both Houses of Congress. It might be well to consider whether it would be desirable to have a provision that such a report should be made within a specified time.

I knew of your being a Member of Congress and have, at different times, thought of writing you. I don't believe I have done so. We are pretty busy here at this time and perhaps I may be forgiven for being a little lax in my social practices. However, I often think of you and wish you the greatest success in your congressional activities.

Thanking you for your thoughtfulness, I remain,
Very sincerely yours,

TUNNELL & TUNNELL,
JAMES M. TUNNELL.

ESSEX, CONN., June 18, 1951.

HON. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I was tremendously interested in your bill to create a Commission on Aid to Underdeveloped Areas. This proposed commission is one of the most imaginative and constructive proposals that has developed in many months, and I wish you the best of good luck with it.

I agree with you that our biggest need right now is to develop a more positive approach to world affairs. A vigorous rearmament program is absolutely essential. But certainly we cannot expect to solve the problems of the future with atom bombs, tanks, and B-36's.

A strong military defense will hopefully deter Soviet aggression and give us the time and elbowroom in which to tackle the basic problems on which the future of the world must depend. But right now as I see it we are in danger of confusing a military policy with a foreign policy itself.

I have made many speeches on this general subject in the last 60 days to many different kinds of audiences, and I have been deeply impressed with the interest. I believe that the people are willing to go much further in support of positive programs than they have been asked to go so far. And this goes for all groups regardless of their economic status or their attitudes or ideas on domestic policy.

I am enclosing an article which I wrote for the New York Times recently which covers this subject. Also a pamphlet, Atom Bombs Are Not Enough, which includes a speech which I gave recently in New York. As you will see my own ideas are very close to your own.

If there is ever the slightest thing I can do to help you push some of these concepts forward I hope that you will call on me.

With my best wishes,
Sincerely,

CHESTER BOWLES.

NEW YORK, N. Y., July 3, 1951.

The Honorable GEORGE MEADER,
Congress of the United States, House of Representatives,
Washington, D. C.

DEAR MR. CONGRESSMAN: Please accept my thanks for your June 14 letter enclosing your address before the House when introducing your bill to create a Commission on Aid to Underdeveloped Areas.

While I thoroughly agree with your repeated emphasis on the fact that the development of the natural resources of underdeveloped areas must largely be accomplished by private enterprise, I am somewhat fearful that a Commission such as you suggest would find it difficult to make an adequate investigation of this situation, which, in effect, would necessarily have to comprehend a survey of the entire world economy and the economics of each area. In this connec-

tion, I respectfully urge your perusal of my testimony given to the Foreign Affairs Committee of the House on October 6, 1949.

Incidentally, I doubt that any commission could get very far in convincing the rest of the world to go along the path of individual endeavor such as made this Nation great, when we are, ourselves, departing so rapidly and largely from this sound principle. In other words, the first step must be the setting of a good example by the United States.

With assurances of my high esteem, I am,

Faithfully yours,

SPRUILLE BRADEN.

MAVERICK, PUTNAM & PUTNAM,
San Antonio, Tex., June 26, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: As a Democrat and former Member of Congress I am glad to endorse your bill to create a Commission on Aid to Underdeveloped Areas. There isn't the slightest doubt that your belief of a positive foreign policy, "rather than the negative policy" in reference to communism, is the best. Of course, we should have strong preparedness and always be willing to go to war if absolutely essential. The point 4 program and all positive measures should be greatly expanded, and, as you say in your speech, "we must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."

As Chairman of the Smaller War Plants Corporation I established the technical advisory service for all small businesses, or any business for that matter, and during World War II it was a huge success. I suggested it internationally also, and it met with enthusiastic international response from all nations.

As you intimate, the voluminous literature of the point 4 program has not spelled out very much, and, as you say, the American people must be for it and the ablest minds must work for it.

In writing you this I am not criticizing my own party, nor praising the Republican—I am only writing to compliment and congratulate you on your excellent move, and I assure you that if there is anything I can do I will do so.

With best wishes, I am

Sincerely yours,

MAURY MAVERICK.

(Written in longhand as a postscript:)

Your idea will save millions of lives, will benefit the whole world and help your own district, too.

M.

THE AMERICAN POLITICAL SCIENCE REVIEW,
OFFICE OF THE MANAGING EDITOR,
DUKE UNIVERSITY,
Durham, N. C., June 2, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR REPRESENTATIVE MEADER: I was pleased to receive a day or two ago, your letter of May 17 and the enclosed extracts of your speech from the CONGRESSIONAL RECORD. I have discussed the proposal which you made with certain of my colleagues and we were favorably impressed with the details of your plan.

If your bill should be passed, I would be most happy to make one or two suggestions regarding membership of technical personnel on it. I particularly feel that the American Political Science Association has some members who would be of great assistance to such a Commission.

Sincerely yours,

TAYLOR COLE.

YALE UNIVERSITY SCHOOL OF LAW,
New Haven, Conn., June 19, 1951.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I want to congratulate you on taking the initiative in introducing a bill to create a commission on aid to underdeveloped areas.

I think the time is more than ripe to bring all of our experience to bear on this problem.

By giving aid to underdeveloped areas, I am sure you are right in foreseeing that we can make an effective demonstration of our basic policy objectives, and show in a constructive way what we can offer the world.

Very truly yours,

HAROLD D. LASSWELL.

THE UNIVERSITY OF THE STATE OF NEW YORK,
THE STATE EDUCATION DEPARTMENT,
Albany, June 8, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MEADER: I have had the pleasure of reading your speech in the CONGRESSIONAL RECORD on April 23, 1951. It seems to me that our Government has already been following an affirmative foreign policy through its point 4 program, which is designed to affect favorably the long-range interest of the United States through teaching other people how to help themselves. I grant that the program is to be carried out through Federal funds under the leadership chiefly of the Department of State. Be that as it may, teaching people how to use machinery, how to industrialize their own economies is in itself an excellent program. It will help to raise the standard of living, reduce the effectiveness of subversive groups in the countries concerned and increase the trade of those countries with ourselves.

You see I am entirely in accord with the point 4 program as I understand it. I am equally in accord with the proposals which make for a dynamic policy which makes it possible for private capital in this country to undertake long-range economic programs in those countries where raising the standard of living will have substantially the same effect as the point 4 program is designed to secure. The advantage of such a program is that it will obviously increase the opportunities for investment and trade abroad, secure the interest in foreign countries in the development of their own economies, I trust, on a private enterprise basis. At any rate, it should have the effect of preventing the development of cartel controls and of Government bargaining, both of which are so restrictive of international trade.

I am frankly in favor of your proposal and trust that a commission on aid to underdeveloped areas may be established and that the findings will be such that they can be put into effect.

Sincerely yours,

ALBERT B. COREY.

UNIVERSITY OF MICHIGAN,
DEPARTMENT OF POLITICAL SCIENCE,
Ann Arbor.

The Honorable GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR GEORGE: I have found the time to look over your address on foreign policy somewhat more carefully and I congratulate you on a very careful presentation, logically and clearly done. I believe you have convinced me that we need a commission similar to the one you propose. While I was reading your speech, I was called from Washington and asked to testify before the Senate Committee on Expenditures which is having hearings on the Hoover Commission proposal to study this question. I think therefore there is considerable interest in the matter and maybe we can get somewhere with a good proposal. I don't have the time now to go over all of the details of your bill in this letter, but on the principal point I am, I believe, now convinced that we need a study independent of the agencies now handling overseas affairs although their participation and testimony would, of course, be essential. I am a little worried that we could not get a commission of high caliber and between ourselves, I was never very enthusi-

astic about the congressional contingent on the Hoover Commission. With the exception of CLARENCE BROWN, who worked hard and conscientiously, the others were pretty much a total loss. The work on any such commission, if it is to be done, will be done by public members and any prestige which attaches to their recommendations necessarily arises from the quality of the membership.

Cordially yours,

JAMES K. POLLOCK.

YALE UNIVERSITY LAW SCHOOL,
New Haven, Conn., June 13, 1951.

HON. GEORGE MEADER,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MEADER: I have your letter of June 9 and your enclosed speech on the Commission To Aid Underdeveloped Areas. I think that your proposal is a grand one and wish you success on it. I agree that we should be much more aggressively formulating a positive policy along the lines you indicate. When you formulate another version of the proposed agenda it might win friends to include a number of points on how to ease the impact of such a program on the recipient countries.

With thanks and good wishes,
Sincerely yours,

MYRES S. McDOUGAL.

THE COURIER-JOURNAL,
THE LOUISVILLE TIMES,
Louisville, Ky., May 15, 1951.

HON. GEORGE MEADER,
House of Representatives, Congress of the United States,
Washington, D. C.

DEAR CONGRESSMAN MEADER: Thanks for your letter of May 10. I have read with interest the speech which you delivered before the House of Representatives on an affirmative American foreign policy. I thoroughly agree with you that this country would be wise to develop and encourage the concept of the point 4 program. I have long had the feeling that our foreign policy is too negative and based too much on trying to nullify the effects of various Soviet actions. The sort of program you suggest would put us out front with an aggressive idea for improving world conditions. I hope that your proposal will arouse support from other Members of Congress, and I will watch with interest the developments that may occur.

Yours sincerely,

BARRY BINGHAM.

JOSEPH AND STEWART ALSOP,
Washington, D. C., May 14, 1951.

Representative GEORGE MEADER,
Congress of the United States, Washington, D. C.

DEAR MR. MEADER: Thank you for sending me the statement you made on the floor of the House about underdeveloped areas. I found it extremely interesting, and I heartily agree with many of the points you made.

Yours sincerely,

STEWART ALSOP.

NEW YORK, N. Y., June 1, 1951.

The Honorable GEORGE MEADER,
Congress of the United States, House of Representatives,
Washington, D. C.

DEAR MR. MEADER: I have now had an opportunity to study your speech of Monday, April 23, and hasten to say to you that in my opinion it is an example of the type of statesmanship which so seldom is reported in the press and, unfortunately, even less frequently on the radio. You have made a brilliant analysis

of one of the major problems confronting us and you have proposed an eminently practical solution. Thank you for giving me an opportunity of reading it.

Sincerely yours,

ED MURROW.

[Citizen Patriot of Jackson, Mich.]

REPRESENTATIVE MEADER'S PLAN

The proposal of Representative George Meader, of the Second (Jackson) District, that private industries be given a major role in the development of backward countries throughout the world merits serious consideration.

Representative Meader would create a bipartisan commission (modeled on the Hoover plan group) to study the whole problem of aid to underdeveloped nations. His plan differs from the so-called point 4 program of President Truman in that the President urges a Government-financed, Government-run set-up. Meader would have his commission draw up a master plan, then give to American business the job of building factories or developing mineral and farm land where needed.

Native workmen would be trained, native capital would undoubtedly participate and new leadership would be generated that would spearhead self-operated programs in the individual countries.

There are three primary advantages in Mr. Meader's plan over President Truman's point 4 program in its present form. First, it would eliminate the semi-socialistic aspects of point 4. Second, it would build up and reinforce the concept of free enterprise in nations that we must depend on in our ideological struggles against communism. And third, it would be financed largely with private capital instead of tax dollars.

A fourth advantage—one that might ultimately be the key one—is that Meader would replace the too-often-fussy planning of bureaucrats with the hard-headed common sense of practical businessmen, men who would have to make the projects succeed or lose their jobs.

The greatest handicap that Meader's plan would face, as we see it—aside from the fact that it is offered by a minority party member—is the twofold job of erasing the widespread antipathy in other lands against foreign capital and "exploitation" and eliminating the fear among American businessmen that they would build up a successful enterprise only to have it seized by the government on some pretext or other.

He offers programs to solve these problems; whether they would succeed remains speculative, although there is every reason to hope so.

Although chances of Representative Meader's plan being adopted by the Democratic majority at this time are slight, that does not mean it should be pigeonholed and forgotten. Development of all countries in the world to a point where the people are prosperous, happy, and self-sufficient is one of man's most challenging dreams. Many feel it is the greatest hope for eventual world peace—certainly, if the have-nots are eliminated one major cause for war will have gone by the boards.

The principal opposition to any such suggestion usually comes from those who say the people Representative Meader and President Truman seek to aid are largely incapable of helping themselves. They assert that any money we spent would just be poured down a rat hole.

It's all too easy for us to forget that there was a time when the United States was nothing but undeveloped land. Foreign capital financed the *Mayflower*, the Virginia Colony, Pennsylvania, Maryland, and all the rest.

Our Nation didn't grow and evolve in a day; in the process it had a full share of help. It's well to note, too, that practically all of this foreign capital came from private investors.

The Meader program is well worth keeping alive and supporting to the fullest extent. Its objectives may be far distant, but they form a goal that is worth working and waiting for.

[Detroit Free Press of Tuesday, July 17, 1961]

A BILL TO GET FACTS ON POINT 4

Rising water, bringing fire in its wake, has visited dire disaster on Kansas City. It could have been prevented. With adequate flood control the whole tragic, desolating horror would have been avoided.

Flood control costs billions. So does elimination of erosion and dust bowls, reforestation, slum clearance, adequate hospitals and institutions for the insane, and all the other vast works which must be done before America will be secure against vicissitudes.

Until it is so, any talk of the United States setting out to remake the world—as President Truman does when he speaks of his point 4—is fatuous, puerile nonsense. Before we undertake to provide each Hottentot with a daily quart of pasteurized milk, our own house must be set in order.

That is why his Capitol Hill colleagues should give earnest consideration to a bill introduced by Representative George Meader, a new Member of Michigan's Republican delegation in Congress.

WOULD SHOW ADVANTAGE OF AMERICAN WAY

Meader concurs with the President that large portions of the earth's surface need what Mr. Truman referred to in his inaugural address as "the benefits of our scientific advances and the industrial progress available for the improvement and growth of undeveloped areas."

He agrees also that the President was right when he said that "their poverty is a handicap and a threat both to them and to more prosperous areas."

Where Meader stops is at the administration demand that billions of dollars in American tax money be used as the magic wand with which it aspires to transform blighted regions into Edens.

Before the necessity for doing that is accepted the Michigan Congressman would find out exactly why the workings of private enterprise rather than exported socialism can't be made to do the job. Very pertinently he said:

"Just as the United States miraculously outstripped state-controlled economies in war production in World War II by calling upon the immense store of energy and initiative residing in a free people, we can demonstrate the superiority of the free enterprise system over state ownership and management in developing the world's natural resources for the benefit of its people."

NOBODY HAS BOTHERED TO DISCOVER THE TRUTH

Admittedly there are hindrances to that. A major one is the political uncertainties which makes private capital hesitant to undertake ventures abroad.

That is exactly where Meader's bill comes in. It would create a nonpartisan, nonpolitical body modeled on the Hoover Commission to explore existing barriers to the exercise of American initiative in lands where Mr. Truman would activate his hit-the-taxpayers point 4.

It is the obvious beginning point. Until the bars to private initiation of our "scientific advances and industrial progress" in undeveloped areas are precisely known they cannot be removed.

And until we know to what extent they can be done away with neither Mr. Truman nor anyone else can vouch for the validity of his point 4 concept or any part of it. Yet until Meader introduced his measure no one, Mr. Truman least of all, ever bothered to find out whether there was even partial justification for the point 4 idea.

That is why we say Meader's colleagues ought to give his bill their serious attention.

[Democrat and Chronicle, Rochester, N. Y., for July 8, 1951]

POINT 4 DANGERS

Enthusiasts for the point 4 principle of lavishing American technical and financial assistance in backward countries to help raise their standards of living, have been cooled off a bit by recent evidence of ill will toward America in parts of the world where they had expected to launch their experiments. While this ill will is largely manufactured by propaganda of Communist origin, it is nonetheless a barrier to large-scale aid programs, at least for the present.

Representative George Meader, of Michigan, aims to get around this barrier by introducing a bill to set up a commission to survey the point 4 program with a special view to carrying it on through the private enterprise system, and less through the Federal Government. His idea, apparently, is that point 4 would be an irresistible temptation to the Government planners and spenders, unless checked by level-headed businessmen.

The question that occurs to us is whether private enterprise will warm up to the project after seeing what has happened to foreign investments in China, Iran, and other places where our capital has ventured. It does not take much to change legitimate investments into the charge of exploitation. American money invested in large-scale foreign projects becomes imperialism when it begins to return a profit. Wise and sympathetic management may evade this danger, as our oil interests have done thus far in the Arabian region, but it seems doubtful that any large-scale foreign program can safely be projected on this basis.

First-hand observers have advised that we extend our help only after requests from foreign governments for definitely specified projects. If, even with the best intentions, we try to force our help, whether of techniques or of money, we are likely to run into difficulties.

(Saginaw (Mich.) News of April 25, 1961)

HANDLING OF POINT 4 CAN BE DONE SENSIBLY

Representative George Meader, Michigan Republican from Ann Arbor, has proposed a bipartisan commission to study and investigate the problem of aiding underdeveloped areas under President Truman's point 4 program and to formulate plans and recommendations from time to time. It would be a continuing commission, composed of 10 members named by the President, six from private life and four from the executive branch of the Government, two Senators named by the Vice President, and two Representatives named by the Speaker of the House. In each category, not more than half could be from the same political party.

Representative Meader would apply point 4 money in the traditional American way—to help the peoples of the underdeveloped areas to help themselves, rather than to try to do it for them. He makes a strong argument for such treatment of point 4 funds:

"Let us reaffirm our faith in the economic and political philosophy upon which this Republic was founded. Let us believe that the liberation of the forces of the human soul which conquered our own wilderness and harnessed the forces of nature for the benefit of ourselves and our posterity can likewise be employed for the benefit of peoples who only now are emerging from the shackles of feudalism and slavery. Let us act in that faith. With humility and anxious to absorb the many advantages of the culture of the peoples whose material lot is less pleasant than ours, let us offer to contribute the pioneering, courageous, enterprising spirit which is our inheritance. But let it be the voluntary and spontaneous contribution of the American people in a self-sustaining, mutually beneficial economic movement. Let us not admit decadence and impotence in the free-enterprise system through engaging in state-owned, tax-supported, proprietary activities reminiscent of the totalitarian socialism we abhor."

Representative Meader's plan calls for the creation of conditions in the underdeveloped areas that will attract private investment, not merely the hand-out of American public money, at the expense of American taxpayers. It is opposed to the practice of making loans to foreign governments, which tend to put those governments into private business, in competition with private businessmen, and to drive away private investments.

Willis H. Hall, secretary of the Detroit Board of Commerce, pointed up the danger in loans to foreign governments when, on his return from a trip to South America, he urged the United States to sell more machinery to South American countries. He quoted President Peron of Argentina as saying that the United States is giving too much money to foreign governments. Peron was quoted as saying: "When this is done, the money is used mainly for political purposes." Dictator Juan Peron certainly should know what he is talking about when he talks of this matter.

Administration reaction to Representative Meader's proposal will be interesting to watch. If the administration is sincerely anxious to help underdeveloped areas, it is difficult to figure a better way.

But if the administration is more anxious just to spend American money, keeping control of that money for use where it feels it will do the most political good, and promoting socialistic development in those areas, rather than the American enterprise system, it will hardly show any interest in a bipartisan commission.

If that is the administrator's idea of point four, it will prefer to turn its administration over to Dean Acheson, as President Truman recently announced his intention of doing.

(Nashville Banner, July 7, 1951)

FREE ENTERPRISE FOR POINT 4

A new and affirmative approach toward a more practical point 4 program for aid to underdeveloped countries has been suggested by Representative GEORGE MEADER of Michigan. The proposal, which he already has introduced in the form of a bill, would attempt to shift the free democratic peoples onto the offensive in their ideological combat with totalitarianism by carrying out all aid in the American spirit of free enterprise.

Such an approach, if adopted, would be a vast improvement over the present Truman plan which amounts to little more than a technical-assistance program and which threatens to become a rat-hole into which increasing billions will be poured with little or no results. Several countries even have rejected assistance offered them on the present terms either because they didn't like its charitable nature or because they suspected our State Department of wanting to introduce social reforms inimical to their interests.

MEADER points out that the current aid programs which are financed by the American taxpayer and managed by Federal bureaus can accomplish only a very small fraction of what can be done through employing the uniquely successful American principles and techniques of the free-enterprise system. He thinks the Government's role should be one of seeking to create the climate in which private enterprise can do the job of developing natural resources; that it should form a plan to provide against expropriation of property of nonnationals without fair compensation; that it should prevent overreaching, exploitation, and monopolistic trade practices to insure free and open competition, but that it should not engage in proprietary undertakings nor make extensive grants of public funds.

Congress should reaffirm its faith in the economic and political philosophy upon which this Nation was founded and give the bill its early attention. Only stupidity and folly are behind the present policy of admitting decadence of the free-enterprise system through engaging in state-owned, tax-supported activities which resemble so closely totalitarian socialism. The positive point 4 program advocated by Congressman MEADER will represent a voluntary and spontaneous contribution of the American people to a self-sustaining and mutually beneficial economic movement.

(Saginaw (Mich.) News of June 21, 1951)

POINT 4 APPLICATION

For a freshman member of the minority party, Representative GEORGE MEADER, of the Second Michigan District, is attracting more than a little attention in Washington and laying the foundation for some constructive legislation in the future, if the ranks of the Fair Deal spenders are further reduced.

His latest contribution is a bill to create a study commission to survey the point 4 program for helping underdeveloped and underprivileged areas of the world, with the view of doing it more through the private enterprise system, less through Federal Government hand-outs all over the globe.

With the present complexion of Congress, it is not likely Representative MEADER will get very far immediately with this bill.

But with growing dissatisfaction over the administration's attempts to hide point 4 money in both military and economic aid for foreign nations, there is a chance some of the principles of the bill may be felt before final action is taken on the \$8,500,000,000 which President Truman has asked for his omnibus foreign aid purposes.

Development of underdeveloped areas of the world has never been opposed by private enterprise in this country. In many instances, it isn't too popular with the people of the underdeveloped areas themselves, who like their own old-fashioned methods of doing things and are skeptical of new ideas brought from abroad.

In those countries which really desire improvement in their agriculture, their industry, their health, and their utilization of natural resources and which provide the proper political climate in which foreign investments can flourish, the job can be done better by private enterprise methods than by Government agencies whose principal interest is perpetuating their own jobs and spending Uncle Sam's money.

FRIENDS MEETING OF WASHINGTON,
Washington, D. C., June 6, 1951.

The Honorable GEORGE MEADER,
House Office Building, Washington, D. C.

DEAR MR. MEADER: Thank you for your letter of May 29, enclosing a reprint of the statement which you made on the floor of the House when you introduced a bill to create a Commission on Aid to Underdeveloped Areas.

I wish to commend you on the bill which you have introduced and on the statement which you made supporting the bill. It seems to me that your plan offers an opportunity for real statesmanship in bipartisan foreign policy at a highly constructive level.

The idea of bipartisanship in the Commission which you propose is a good one, and I should like to see that similar idea extended to insure that aid would be given to underdeveloped areas of the world, without regard to political considerations. I am aware that it may be more difficult to secure approval for such a program, if the aid offered by our Government is free of political attachments, but it will fall in its humanitarian and constructive purpose unless it can be offered freely to all areas where there is need.

Sincerely yours,

HERBERT M. HADLEY,
Meeting Secretary.

COUNTY OF LOS ANGELES,
BOARD OF SUPERVISORS,
Los Angeles, June 10, 1951.

Congressman GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MEADER: While I have not had time to study and analyze in detail your April 23 speech and the accompanying bill, it seems to me your principle is thoroughly sound. I hope you will press persistently for enactment.

I returned from a study tour of Jordan and Israel last month and I am convinced that, in Jordan, for example, where technical guidance is needed, great strides could be made in large-scale irrigation with the help your Commission could provide. And such development would have a far-reaching effect to stabilize the potentially explosive Near East and Middle East. Many other examples in other parts of the world could be cited.

Very cordially,

JOHN ANTON FORD.

NEW YORK, N. Y., June 12, 1951.

Representative GEORGE MEADER,
Congress of the United States,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN MEADER: I was very happy to receive your letter telling about your introduction of a bill in the House of Representatives to create a commission to aid underdeveloped areas. May I congratulate you upon this approach to a positive foreign policy for the United States. I agree with you so heartily that this is a far more effective way of containing communism than all the coercive legislation that could possibly be passed.

It seems to me that we have so much to give in technical ability and creative imagination in this country that it is important we make the world realize what America can do and what it really is and means to her citizens.

I wish you good luck with your suggestion.

Sincerely yours,

Mrs. HENRY G. (AGNES) LEACH.

LITTLE, LESOURD, PALMER & SCOTT,
Seattle, Wash., May 29, 1951.

Hon. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I acknowledge receipt of your letter of May 21, enclosing reprint of the statement you made on the floor of the House in connection with your bill to create a commission on aid to underdeveloped areas. I have read your

remarks and the bill with genuine interest. I think definitely that it is a step in the right direction. To what extent, if any, it overlaps or differs in basic policy from the recent report of the committee headed by Nelson Rockefeller I have not been able to determine from a cursory reading of both your statement and the latter committee's report.

There is no doubt in my mind that something along this line is badly needed, and I certainly am happy to give it my support in principle.

I have recently returned from a round-the-world trip and over a period of the last 20 years, have traveled extensively in foreign countries. I agree 100 percent that we need a foreign policy which is essentially positive, rather than negative. Mere containment is not enough.

Please let me know if there is anything I can do to help. I have many friends in both the Senate and the House, and will be glad to do whatever I can.

Sincerely yours,

HERBERT S. LITTLE.

PHILADELPHIA, May 24, 1951.

HON. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR MR. MEADER: I wish to acknowledge your letter of May 21 together with the copy of your speech on an affirmative American foreign policy as appeared in the CONGRESSIONAL RECORD. Your suggestion of creating a bipartisan Commission on Aid to Underdeveloped Areas under the point 4 program is splendid. You have prepared a fine argument on its behalf and I certainly wish you success in your efforts.

On Monday I am flying to Europe by TWA for a month, otherwise it would be a pleasure to call on you and discuss your ideas. After my return I may possibly have an opportunity to do this.

With very best wishes, I remain,

Sincerely yours,

MICHAEL FRANCIS DOYLE.

LOS ANGELES, CALIF., July 5, 1951.

HON. GEORGE MEADER,
House of Representatives, Washington, D. C.

DEAR SIR: I have reviewed your bill to create a Commission on Aid to Underdeveloped Areas and the underlying principle of your bill is much better than the underlying principles of the present law providing aid to underdeveloped areas.

My observation in foreign countries where ECA has been in existence is that the funds have been used in the main to develop Government-owned industries and other semisocialistic institutions such as cooperatives, etc., and nothing has been done to foster private competitive enterprise in these countries. The net result of the operations to date has been to strengthen cartels and other such institutions which are inimical to the private competitive enterprise system and it has done much to hold back the economic development of Europe.

A program designed to aid the private competitive enterprise system in foreign countries and by the same token aid underdeveloped areas would go a long way toward accomplishing what these funds should accomplish. Your bill is in the right direction.

Very truly yours,

E. S. HARTWICK.

NEW YORK, July 12, 1951.

HON. GEORGE MEADER,
*Congress of the United States, House of Representatives,
Washington, D. C.*

DEAR CONGRESSMAN MEADER: I have read your April 23 statement which you were kind enough to send me with a request for comment.

My personal reaction is that you are on solid ground. There has been a considerable succession of official reports laying out plans and programs for development of so-called underdeveloped areas abroad. All of these, I believe, have mentioned "obstacles and hazards presently inhibiting the development of the natural resources of underdeveloped areas through the efforts of private citizens

and companies and the investment of private capital." Then they go on to use the existence of these obstacles and hazards as a proof that government grants and loans are necessary, and come out with the conclusion that some large sum must be put up by the American taxpayer each year to bring about development. There is a cart before the horse aspect to it, and the unfortunate result is that attention is distracted from the fundamental task of relieving obstacles and hazards, and focused upon getting some more money out of the Congress. I like what you have to say about penetrating below the surface of emotional generalities and getting down to the bedrock of hard facts. If your commission could do this, in a fair and objective manner, it could make a real and lasting contribution to world economic development.

Sincerely yours,

MORRIS O. JOHNSON.

DRESSER INDUSTRIES, INC.,
Dallas, Tex., June 6, 1951.

HON. GEORGE MEADER,
*Congress of the United States, House of Representatives,
Washington, D. C.*

DEAR MR. MEADER: Thank you for your thoughtfulness in sending me a copy of your speech and of the bill which you have introduced for the establishment of a Commission on Aid to Underdeveloped Foreign Areas.

Since the companies in the Dresser Industries group have widespread interests abroad, and because I agree in principle with both your remarks and the content of the bill, I have read both with considerable interest and care. The program you outline is, indeed, a conservative one and, if properly implemented, could be a significant factor in a return to normalcy. By way of comment, it has occurred to me that to the agenda of the Commission might be added the task of considering and recommending ways and means of continuing and expanding the interchange between countries of scientific, production, and management personnel of private industry. This could in part be financed by contributions from the participating countries and in part by private industry.

Also, it seems to me to be desirable, at the very outset, to invite and vigorously seek the participation and cooperation of governments other than our own. In other words, I believe that the Commission you propose might well be not only bipartisan but multinational.

Again, thank you for your kindness in sending me this literature and I will follow the progress of the bill with great interest.

Yours very truly,

H. N. MALLON, *President.*

MR. CHIPERFIELD. I wish to thank you for a very fine statement. I also read your speech in the Congressional Record and found it very interesting. Certainly we ought to have private enterprise and private business get interested in programs of this kind, and I again thank you for coming here and giving us the benefit of your views.

MR. MERROW. I want to compliment you on what you have had to say about the possibility of developing these countries so that there could be a greater investment of private enterprise.

On page 4 of your statement you have two points, the first of which is:

Prohibit and prevent imperialistic exploitation and monopolistic, restrictive trade practices—

being one of the things that the commission ought to study and develop specific workable methods whereby the governments may do those things; and your second point is to—

encourage—possibly through incentives, the granting or withholding of assistance, or otherwise—fair and ethical dealing and equality of opportunity under free and open competition.

Do I take it from that second point that you would tie the assistance that we might give to these countries to the manner in which

they change conditions so that free enterprise would be encouraged to go into those countries?

Mr. MEADER. That was not what I had in mind, Mr. Merrow. What I had in mind was incentive legislation, which is a field of legislation not very extensively explored. I recall, years ago, attending a hearing at which Senator Vandenberg and Senator Herring were considering incentive legislation and was impressed that there were great possibilities in that field which have been overlooked.

What I had in mind was, for example, the possibility of an agreement between the United States and an underdeveloped area where certain standards might be set up assuring fair and ethical dealing and equality of opportunity which might favor those desiring to invest in those countries, providing they lived up to those standards.

For example, it might be determined as a matter of policy that combinations of foreign and local capital should be encouraged or that restrictive trade practices should be discouraged. To accomplish these purposes a favored position might be created for those investors who observed standards set up by intergovernmental agreement designed to accomplish those objectives. My idea was not that we would promise something to some foreign government in case they did certain things. What I was thinking about was the investment and the investors. I believe our objectives might be accomplished through incentive legislation, because I think that is a field that deserves investigation.

Mr. MERROW. It seems to me the extent of the incentive would depend upon the extent to which the country set up means to encourage private capital investment.

Mr. GORDON (presiding). Before we go downstairs to answer the roll call, there will be somebody right back, and we will have Mr. Frost, as our next witness.

Mr. MEADER. I would like to present him, if I might.

Mr. GORDON Yes, if you will, please.

Mr. MEADER. I would like to present Mr. Richard B. Frost, who is with the Detroit Board of Commerce.

I learned, after my bill (H. R. 3798) had been introduced, and after I had contacted the executive director of the Detroit Board of Commerce, that they had been engaging in quite an extensive program of encouraging the investment of United States firms, and particularly firms in Detroit, in underdeveloped areas and other areas of the world, and were very much interested in this program. They have obtained some very interesting results from the study which they made; Mr. Frost is fully familiar with that program.

Mr. GORDON. I am more than sure that the members will be pleased to hear his statement.

Mr. A. A. RIBICOFF (presiding). Mr. Frost, will you proceed.

STATEMENT OF RICHARD B. FROST ON BEHALF OF THE DETROIT BOARD OF COMMERCE

Mr. FROST. The Detroit Board of Commerce, hereinafter known as "we," representing the many vast and diversified industries and businesses operating within the Detroit area whose connections and investments are extended throughout the entire world, has been concerned for the past several years with the current postwar problems

as manifested in the instability of the world's currencies, dollar shortages, periodically recurring international economic crises, the Communist threat to the world peace and security and the efforts and attempts by this Nation in finding a solution or solutions that will end or alleviate the present world problems.

The Detroit area is the center of mass production and the world's largest producer of the industrial products destined for world markets. Members of this organization export over \$1,250,000,000 in products each year to the markets of the world. This represents over 10 percent of the entire United States yearly exports. Detroit is likewise a major consumer of raw materials and products produced throughout the world. Over 300 imported items are needed for the production of a single automobile.

While the economy of the United States and, to some extent, the world, is dependent upon the strength and continued high employment of the mass-production industries, the economic well-being of these industries, the city of Detroit and the State of Michigan is dependent upon a high level of international trade and a relatively free and competitive access to the world's markets. Over 800 Michigan firms are engaged in some form of world trade and hundreds of other Detroit and Michigan firms and industries, not actively engaged in exporting or importing, utilize raw materials from abroad or fabricate for firms exporting the finished product. It has been estimated that one out of every seven employees in the Detroit area is employed as a direct result of world trade. Retail and wholesale merchants depend upon the continued high purchasing power of these workers.

The administration has asked Congress for \$4 billion for foreign aid this year. If Congress accepts the administration's request, Michigan will be expected to pay \$407,150,000, or \$64.60 per person and \$160.30 per taxpayer.

We of Detroit and Michigan fully appreciate the tremendous stake we have in world trade and affairs and in the attempted solutions to the current post and prewar problems now plaguing the world's commerce, the world economy, and the peace and security of this Nation.

On January 20, 1949, President Harry S. Truman first enunciated an idea for a new foreign aid program designed to aid the development of the backward and underdeveloped nations of the world. "Fourth, we must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas." As a result of the intense interest of the members of the Detroit Board of Commerce in world conditions and foreign aid programs, and as a result of the vast experience of the businessmen and industrialists of this organization in the field of international trade and investments, we respectfully request all interested in the so-called point 4 program to review the following comments and suggestions representing the views of the board of directors of the Detroit Board of Commerce.

1. We are completely in sympathy with the proposal of the President to assist in every practical way possible the development of the less developed areas of the world. Communism is not defeated by words but by deeds. We must improve the lot of the peoples of the world where standards of living are below normal. We recognize that the point 4 program derives its primary importance from the national

interests in the United States, as, therefore, an implement of national defense.

We further realize as the various regions of the world prosper and progress, they will in turn become an ever increasing market for American products in proportion as their resources are developed, purchasing power increased and standards of living improved. Thus a twofold benefit will accrue to both the less developed areas and to business and industry in the United States. A high level of international trade means peace and prosperity for all.

American industry has been developed to a high standard of production. We have plants capable of great production which must be operated to their normal capacity in order to employ American labor to the fullest extent and to make available their products to the various areas of the world in need of these goods for their own development and use. To have continued prosperity in the United States, it is necessary to seek sales in the export field. Many of the world's markets are near their peaks while others have not or have just begun to indicate their potentialities. In many cases they require power, water, and transportation, and so forth, before they will be desirable or of potential value to American labor and industry. If properly developed, the greatest markets of the world, hitherto virtually untouched, will rapidly become markets for American industry.

The average citizen of Cuba purchased American goods to the amount of \$98 per person per year, according to the Department of Commerce, 1947. It is estimated that 2 million people in the western area, where electricity, power, and roads are available, buy 90 percent of the imports from the United States, while the people in the undeveloped area are buying approximately 10 percent.

In 1947 exports to Cuba totaled \$491,000,000. The average purchase per person per year in the prosperous area is approximately \$220. There are some 2 million people in the prosperous area so they account for \$440,000,000 of the \$491,000,000. If the purchasing power of the 3 million people in the backward areas were raised to the same level as those in the developed area, exports from the United States to Cuba would increase \$631,000,000, or to a total export per year of \$1,170,000,000. It would seem apparent that in improving and developing the backward areas of Cuba the United States exports would increase \$698,000,000 per year.

If this can be done in Cuba for the 5 million population it would be apparent that the 20,000,000 peoples of the Caribbean area, if given proper help for their development, would increase the amount of exports from the United States to approximately \$2½ billion.

We also realize that the political stability of such areas will be definitely served as their resources and their economy are developed. It follows, therefore, that it is in the interests of the United States to implement the President's program.

2. We believe that the point 4 program should be thought of as an extension to the less developed areas of the world of American technical know-how and investment, such as has been going on for years. Billions of dollars of American capital are now at work around the world, in many instances in cooperation with local capital, and is achieving the very results which the President is seeking.

We agree with the President that a new emphasis should be given to this type of cooperation between American know-how and capital

along with the skill and capital of overseas countries, with particular direction toward those areas that have vast underdeveloped potentialities and where the need for economic development is particularly great, and where raising standards of living will result in a stronger bulwark against the inroads of destructive political and economic ideologies.

3. We recognize that there is a sphere for Government action as well as for private enterprise. Only if the two go hand in hand, each to its appointed task, will the hopes and ambitions held for the point 4 program ever be realized.

In matters of health, port facilities, government, sanitation, education, and in other fields beyond the scope and authority of private enterprise, the United States Government has a tremendous field for action.

In working out programs for the development of basic services, such as agriculture, sanitation, and vocational training, we support the methods developed by the Institute of Inter-American Affairs, that is, "servicios" jointly staffed and largely locally financed.

4. We believe that there is also a semigovernmental field for action in which such organizations as the International Bank for Reconstruction and Development and the Export-Import Bank have and can continue to perform an important role in the development of the various areas of the world in need of their services.

We believe that the Export-Import Bank could further serve to implement the point 4 program in two ways:

(a) By direct loans to developments in underdeveloped countries where it would be difficult or impossible to obtain the loans from private sources and where American engineering firms can prove to the satisfaction of the bank's officials that such loans are of a productive nature and are a good business risk.

(b) By the encouragement of private American capital in overseas investments by means of the guaranty principle. That is, by freeing American foreign investments from the risks other than the ordinary everyday risks involved in domestic investments. By this we mean, (a) freedom from the unusual risk of inconvertible currencies, (b) freedom from the unusual risk of loss of investment in whole or in part on account of political contingencies such as confiscation, seizure, destruction, or forced abandonment due to the act of any government which prevents the further transaction of business.

5. We further believe that a special committee consisting of American businessmen, industrialists, and engineers should be organized to assist the Export-Import Bank in its work of implementing the point 4 program. The Export-Import Bank should not approve any specific projects under this program until a report on that project had been filed by this committee.

6. We are definitely opposed to any scheme for vast global spending on a Government level. We do not believe that the objectives of this program can be achieved merely by pump-priming the world economy with additional billions of taxpayers' money. While this was necessary during the immediate postwar years for the providing of funds for emergency relief for the war-torn nations of the world, such expenditures now would accomplish little in the way of permanent development or progress and could have a most serious adverse effect

upon the economy of this country which is already heavily burdened by taxation.

7. We believe the term "backward and underdeveloped" is wrong, for it connotes lack of progress. In many of these regions, to the contrary, there is great progress. It is only that this progress has but recently begun and the potentialities are so great. A hundred years ago the United States in comparison to other nations was likewise an underdeveloped area. There are, in fact, some areas in the United States today that could yet be classified as underdeveloped.

We would like to point out that many areas will never develop, both for economic, political, and geographical reasons. To attempt to force development would be a costly mistake and would inevitably result in failure.

8. We believe that this new program must be operated on a business level and not on a governmental level. Businessmen and industrialists in these countries generally have a more intimate knowledge of what is needed with regards to business and industry to bring about lasting improvement than do the governments.

We especially stress the need for help other than money. By this we mean the voluntary aid which could be given by American management in the way of technical help and know-how. It will be impossible for the United States Government to act as other than a clearing-house for industrial projects. Such projects must be handled on an industry-to-industry basis, the details to be worked out by industry itself.

Since industrial skills and modern technology are largely the possession and property of private enterprise, it is submitted that the only way these talents can be put to work effectively is to bring the American entrepreneur into direct contact with his counterparts in foreign countries.

9. We believe that the obstacle of double taxation which faces private United States capital when it ventures out of the United States must be ended. Every dollar of private capital that goes abroad decreases by an equivalent amount the need for Government loans and grants. This flow of private capital should be encouraged rather than discouraged as is the case at the present time.

10. We believe that some tax inducements might well be given to firms and individuals investing their capital abroad. For example, an arrangement might be worked out and authorized by Congress whereby, through appropriate treaties, both the United States and any country which is host to any United States foreign investment would consent to accelerated amortization, for domestic income-tax purposes, of the actual investment required. We have in mind the 5-year write-off of war plants, privately constructed, which was provided for in tax laws during World War II.

In addition to a 100-percent write-off for tax purposes of any approved foreign investment, within a maximum 5 years, we would also recommend the instantaneous write-off of any remaining balance in the event that, due to the outbreak of hostilities, in the host country, or in case of riot, revolution, administrative decree, or otherwise, the transaction of business becomes impractical.

11. We believe that there must be changes in the United States customs and tariff laws. If United States firms are to invest abroad,

they must import a vast amount of extraneous business material that always flows between the home office and subsidiary or branch plants. At the present time, outmoded United States customs regulations and laws restrict this flow of vital business material. The law must be changed so that this material may be imported freely into the United States.

Customs laws and tariffs in the United States must be made more conducive to the importation of goods from abroad. If we are to encourage production in the world, we are assuming a moral obligation to likewise open our doors to the purchase of this increased production. If we refuse to do this, then the entire program will falter and the world will again find itself involved in another major depression.

12. We believe that prior to taking any tangible steps for the implementation of the point 4 program, Congress should pass the Meader bill, which provides for the establishment of a bipartisan commission to investigate and report on ways and means that unreasonable barriers to overseas private investments may be removed.

If these barriers are discovered and removed, much of the need for Government assistance may be dissipated. We would like to stress that business and industry in many of the areas in question would welcome private United States cooperation and investment. These same groups in many cases would object to any industrial or business program worked out on a government-to-government level.

13. We believe that during the present emergency we can make a significant contribution to the less-developed areas by not overlooking their needs. Many of these regions are in the midst of great development programs. Their continued progress depends upon obtaining from this country the machinery and other requisites to expansion. We must make certain that these goods are available to sustain their economies and development by the granting of export priorities.

CONCLUSION

In conclusion, we support the principles voiced by President Truman's suggestions for a program to assist in the development of various areas of the world seeking and capable of sustaining such development. We respectfully urge all Americans to see that this program is worked out on a business level and not on a Government level, with exception of those instances in which only Government can render the aid needed. Only by so doing can the aspirations and hopes held for this program all over the world be realized without placing an undue and dangerous additional burden of taxation upon the American economy and the American taxpayer.

I would like to take a moment now to briefly expand on some of the points set forth in our statement of policy on the point 4 program. A few examples taken from the hard crucible of practical experience may prove of value to the members of this committee.

Business and industry in the city of Detroit and the State of Michigan are genuinely interested in the basic objectives underlying the point 4 idea. Since the President's inaugural address the program has been hailed and acclaimed, condemned, and debated, and numerous proposals and plans have been originated for the implementation of point 4.

Unique among those interested in the President's speech were the businessmen and industrialists of Detroit and the State of Michigan. Inspired by the leadership of internationally minded businessmen and industrialists such as John Coleman, president, Burroughs Adding Machine Co., Charles O'Connor, president, Reichhold Chemicals Corp., and a host of others, they formulated their own local point 4 program, now known as the Detroit plan.

There are many facets of the Detroit plan, but perhaps of primary importance has been the overseas tours. Each year 45 of Detroit's most important business and industrial leaders leave their busy desks for a 3 weeks to 1 month tour of a different area of the world. The sole object of these tours is to investigate and determine methods in which business and industry in this area can cooperate with their counterparts abroad by mutually pooling their capital, technical know-how, and management for the benefit of both areas. In Europe our group established three new plants and others are still in the stage of negotiating.

We have just returned from South America where we expect 8 to 12 new partnership arrangements between Detroit and South American industries. Whenever possible, these new manufacturing plants are established on a partnership basis with the parent plant in Detroit holding a minority interest of no more than 49 percent.

I would like to submit at this time the story of the Reichhold Chemicals Corp.'s foreign operations. I would like to insert this document in the record.

Chairman RICHARDS. I do not think we could place this in the record. How much of it do you want inserted?

Mr. FROST. Just these two pages here. Perhaps I can obtain copies and send them to the committee members.

Chairman RICHARDS. I would rather you do that because so far we have not inserted in the record any copies of periodicals.

Mr. ROOSEVELT. I received a copy of that this afternoon, and I believe it was submitted to other members.

Mr. FROST. Herein you will find the details of the Detroit program as carried out by one company and some of the unnecessary Government obstacles encountered. Reichhold Chemicals Corp. knows the problems to be encountered in overseas investment as it has in the past few years established 11 plants outside the continental limits of the United States.

A few months ago we outlined this program to business, political, and industrial leaders of six South American nations, so-called backward areas. They welcomed this plan wholeheartedly. In fact, both in person and in editorials in their newspapers they stated that what they wanted was private United States capital and technical knowledge to work in cooperation with that of their own land. This is the essence of the Detroit plan. They told us frankly that they hoped we would keep our Government at home.

As an example of some of the unnecessary problems business faces when it ventures abroad, I would like to call your attention to point 11 in our statement of policy. This is the point pertaining to the importation into the United States of technical material. You cannot build a plant abroad and efficiently operate that plant without a continuous flow of extraneous business material between the two

offices. At the present time, however, all such material is subject to import duties and the delays of clearing such matter through customs. The import duty on blueprints is 10 percent ad valorem. Does this mean 10 percent of the cost of printing the blueprint or 10 percent of the fee paid the engineers or architects? No one, including Washington, seems to be sure. Even with a reasonable interpretation of this duty, the importer will experience delays of from 2 to 3 days and up in clearing his blueprints through customs. Take the case of Detroit firms with branches across the river in Canada. Advertising layouts and specifications brought from the Windsor office to the Detroit office for a final O. K. by the advertising manager must pass through customs and duty must be paid though their stay in this country may be but a few hours.

These are all nuisances but they are great enough to deter at least one top engineering firm in Detroit from establishing offices in Europe and they now threaten a major plan by a Detroit concern which plan is in accordance with the very ideals of point 4 and has been acclaimed by ECA officials.

Allow me to cite but one additional case. The Nash-Kelvinator Corp. some time ago decided to produce a technical motion picture on the servicing and assembling of Kelvinators. This picture was to be distributed throughout the Spanish-speaking area of Latin America. Here was an excellent example of the exportation of technical know-how as advocated by the President. Since the picture was for distribution in the Spanish-speaking areas, Nash-Kelvinator arranged for production of the film in Mexico City in Spanish. This was accomplished and the film was distributed to Nash-Kelvinator dealers throughout Latin America. Naturally, the Detroit office wanted a copy of the film for their home office files. An additional copy was ordered and shipped to Detroit with an invoice covering the cost of printing the duplicate. The film was cleared through customs and then the fun started. Customs officials spent the better part of 3 days quizzing the heads of this great company on the entire operation relating to the production of this film in Mexico. Think of the loss in valuable executive time. Finally, customs decided that the dutiable value was the entire cost of filming down in Mexico. The Nash-Kelvinator Corp. paid duty on this basis. This, however, was not enough. The corporation was then fined several thousand dollars for making a false entry. That, gentlemen, gives you some idea of the problems private industry in the United States faces if they dare to venture abroad.

There are numerous other examples of Government-imposed impediments to private enterprise in its overseas operations.

If the hopes and ambitions held for point 4 are to be realized, the task must be largely accomplished by private funds and private industry. This will save the hard-pressed United States taxpayer additional taxes and create more friends for this country throughout the world than if the point 4 program becomes largely a Government-financed and operated proposition.

Private enterprise, however, can only fulfill its appointed task if it is freed from the shackles of needless and foolish Government obstacles. For this reason, we urge the adoption of the bill presented by the Honorable George Meader, H. R. 3978. It is the difference between exporting socialism or exporting free enterprise.

There is no problem of modern times more important to the American people nor more confusing than that involved in the ECA program. We, in Detroit, realize this perhaps more than any other area for our current complicated international economic problems stem, to a large extent, from the great industrial revolution that originated in Michigan during the early part of this century. Europe's problem today is not, as many would have us believe, primarily a postwar problem. The fundamental causes of the current international economic disturbances go far deeper than any postwar period and, if we are to find the solutions, we must seek out the basic causes.

There are those that call it the problem of the dollar shortage. This is tantamount to calling a coated tongue a disease. The world dollar shortage, exchange controls, export and import licensing, blocked currencies, and all are but symptoms of the basic disturbances that had their origins back in the early 1900's.

When Henry Ford first initiated the idea of mass production and as this new principle of producing wealth was developed and exploited by the great engineers of the United States, so did they also set the stage for many of Europe's present-day problems.

The manufacturers of Europe, as well as in other areas of the world, did not choose to accept the new philosophy that emanated from these shores. When confronted with the competition in their old markets by the new producers of the west, they chose rather to protect these markets by means of monopolies, cartels, international governmental agreements, and now, finally, by means of socialism. In India and in other areas of the British Empire, the English have, for example, taken numerous steps to prohibit the development of a trucking industry in the hope of thereby protecting the investments in British-owned railroads. This has, and continues to be, the traditional policy of many nations in Europe and throughout the world.

The results of such policies were inevitable. Productivity in these countries declined in relationship to productivity in this country. The wants and desires of their people, however, kept pace with the rest of the world. The only way these wants could be satisfied in the face of losing their markets in the world was by utilizing their overseas investments. In short, by living beyond their means. These trends were apparent long prior to World War II. The situation we find ourselves in today would have come about in time whether we had or had not a war during the 1940's.

This, then, was the problem Marshall plan aid faced. There was, to be sure, another problem, the relief of war-torn economies. With regard to relief, no one can quarrel. An excellent job was done. However, with regard to the second objective of the Marshall plan, namely, the rehabilitation and the industrial recovery of Europe, the problems have not been solved, and we do not feel that this portion of the ECA program has been as well handled as might have been the case. Within the framework of this basic objective, the elimination of trade barriers in Europe and the creation of a great European market was visualized. William Foster mentioned this in his testimony given before this committee but a few days ago. He stated, "Real progress has been made in the long-term job of unification." He did not mention in his speech, however, that European trade barriers today are higher than they were when ECA set up shop. Is this achieving unification? He did not mention that Belgium has a

serious unemployment problem today because the products of Belgium industry do not have access to European markets.

We have expended over \$11 billion in Europe for the purpose of raising European production to the point where exchange controls can be ended and at least a relatively free trade established.

During the past year our imports from Europe, plus our foreign-aid program, have been greater than our exports so that Europe has been accumulating gold and United States currency. Is Europe utilizing this improved condition in her currencies to achieve the objectives of the Marshall plan, the lowering of trade barriers, and the elimination of exchange controls?

On the contrary, Europe is now discussing and the United Nations Economic Commission has recommended, that Europe raise the value of its currencies in order to take advantage of our present defense program. By so doing, it is reasoned, they would increase the price of the raw materials and products we purchase from them while decreasing the price of those products they need from us. No thought is given to utilizing this current advantage by removing exchange and import controls and to allow for freer convertibility of their currencies. It now appears that the benefits of American generosity would be used as a weapon against the donor.

ECA officials mention the great recovery strides Europe has made. They can make a good case for this as Europe, when viewed from some statistics, has made great strides. However, the picture is not as bright as one would be led to believe. First, all ECA statistics are based upon the prewar year of 1938. That is at least all the statistics I have been able to obtain from the ECA office. 1938 was a depression year and in comparing statistics with this year even mediocre progress would appear relatively good.

Second, Europe's progress cannot be judged by European statistics alone. Her problem is her maladjustment with the United States. Her rate of progress must be greater than the United States, or at least as great, or else the same trend that has brought about her present difficulties is yet there and our ECA funds are but forestalling the inevitable day of reckoning.

If you view European progress from this standpoint, you may not feel that the progress has been so great or even great enough to justify the vast expenditures already made by this country.

A year ago we appeared before this committee to testify on the ECA program. There have been no significant changes in the past year to justify a change in our viewpoint. At this time I would like to read that statement of policy.

At this time I would like to submit for the record the statement of the policy on ECA. Since we are short of time, I won't take the time of reading it.

Mr. CARNAHAN (presiding). It will be inserted as part of your remarks, if there is no objection, and I hear none.

(The statement referred to is as follows:)

STATEMENT ON THE ECONOMIC COOPERATION ADMINISTRATION ACT ON BEHALF OF THE DETROIT BOARD OF COMMERCE, JULY 20, 1951

Three years ago, the Detroit Board of Commerce, representing over 6,000 members in the Detroit area, presented through the chairman of its world affairs committee, Roy W. Gifford, a brief dealing with the proposed European aid plan. This statement, prepared before the formation of ECA, consisted of 14 major

points. Inasmuch as ECA has now been in operation for 3 years, we felt that a careful study was in order by way of evaluating the progress made to date. At the time we presented our previous brief, we went on record as favoring a relief program, but expressed our concern as to the type of organization to be set up to handle this great sum of money.

We stressed the following points:

1. Concern as to whether or not we were taking on a permanent international relief burden or could we really bring about improvement in productivity and a resultant higher standard of living.

2. Although early statements had stressed the dual objectives of relief and industrial rehabilitation, we were afraid that relief would be pushed at the expense of betterment in industrial methods.

Let us quote one section from paragraph 3 of our original brief: "Only by the improvement in standards of living can the lasting benefits be obtained. To obtain a higher living standard, European manufacturers, farmers, miners, etc., must learn how to produce more per man-day."

3. We expressed concern as to whether or not the relief organization would be dominated too much by the State Department and at the expense of permanent aid to industry.

4. We were also concerned as to the use of the funds derived from the sale of our merchandise abroad which are now called counterpart funds.

5. We felt that recovery alone would never be sufficient to accomplish the desired end, and we favored the use of American management and technical skill or know-how by European firms on an industry-to-industry basis.

6. We felt that American industries should be encouraged to invest their funds abroad rather than limited, as seemed the intent at that time.

7. We favored the greatest possible use of experienced American businessmen both at home and abroad in obtaining the desired ends and stressed the point that insofar as industrial help was concerned, the proposed organization should be largely a clearinghouse in order to pass upon carefully prepared reports and suggestions by American businessmen for aid to foreign industry. These reports and suggestions should be made only at the request of foreign industry groups.

8. We also stressed the need for aid to higher education by the use of counterpart funds.

COMMENTS AND SUGGESTIONS

We do again endorse the aims of ECA and the general relief program and feel that under Mr. Hoffman, Mr. Harriman, and Mr. Foster an excellent job has been done insofar as temporary aid is concerned. Permanent industrial aid, has, however, lagged seriously and unless changes of thinking and organization take place quickly, we doubt very much the ability of the European nations to carry on after 1952 without continuing aid from this country. If the proper share of ECA and counterpart funds are used for permanent industrial aid, it will do more to promote private enterprise in those countries than could be done in any other way.

With 3 years' results of ECA activities and after extended study, we present the following comments and suggestions:

1. We are more concerned today regarding the trends in relief versus permanent industrial improvements than we were 3 years ago. Actual figures of expenditures or allocations to date as well as the type of organization now in existence in ECA, would indicate that political considerations make relief in the form of grants or gifts the No. 1 objective. Increased wealth can be produced only by greater and more efficient productivity. Without the increase in wealth-producing productivity, we can never expect higher living standards which are so necessary in these European countries today. Furthermore, without this increased productivity we are building a permanent relief program which will extend far beyond 1952.

2. We firmly believe that due largely to internal influences in ECA, plus pressure from governments abroad, the extension of capital or permanent aid to industry has been pushed into the background.

3. Although the original objective of ECA was based on a 50-50 percent basis, our feeling is that the industrial aid has fallen far behind. The industrial section of the ECA was late in being organized and other than the so-called Cripps plan, has accomplished little. We feel that ECA is governed too much in its activities by foreign governments, who are most anxious to get into their direct control as much of the money as possible. Businessmen and industrialists in these countries generally have a more intimate knowledge of what is needed to bring about lasting improvement than do the governments. Furthermore, direct loans to sound

industries will ultimately be repaid, whereas it is doubtful if any of our loans to governments will ever be repaid.

4. We feel that the proper use of counterpart funds has been seriously neglected. There seems to be a lack of organization for this work in the Washington office and too little thought and understanding regarding the possible use of these funds in Europe. In addition, the methods for the allocation of these funds seem extremely cumbersome. Every dollar of counterpart funds, if again put to work should make it easier on the American taxpayer. Reports as to the use of counterpart funds should be issued regularly by the ECA.

The utilization of the counterpart funds in the 17 different ECA countries should be on a wider and more imaginative scale. These funds represent the money European businessmen have paid in local currencies for the purchase of goods which the ECA paid the supplier an equivalent in dollars. The United States should have had complete control over the use of these funds. In accordance with the ECA Act, there is now dual control with the foreign governments. These funds should be utilized for the reestablishment and the promotion of multilateral trade, primarily in Europe and secondarily in other portions of the world where such trade would be beneficial to the reconstruction of Europe; for financing projects and making loans to European industries wherever such projects and loans would enhance European recovery; for meeting the expenses of ECA operations outside the United States; for the acquisition of strategic raw materials necessary for the United States defense; for the acquisition of raw materials and technical and industrial equipment for the production of raw materials necessary to the reconstruction of Europe; and for the improvement and expansion of educational facilities or any other productive project.

5. We especially stress the need for help other than money. By this we mean the voluntary aid which could be given by American management in the way of technical help and know-how. It will always be impossible for ECA to do other than act as a clearinghouse for industrial projects—they should be largely handled on an industry-to-industry basis, the details to be worked out by industry itself.

6. The ECA Act clearly shows that Congress fully realized the importance of a European industrial revival on a more efficient basis, when they specifically stated in the act that over a billion dollars of the first year's appropriations was to be for direct loans to industry. The ECA Administration diverted these loans to loans to foreign governments, apparently because no industrial planning had been made.

7. An analysis of ECA operations indicate that there are far too few experienced businessmen in top positions in the Administration. We realize they are sometimes difficult to obtain but, without experienced men, the results can never be obtained. This applies to ECA, both at home and abroad.

8. We feel that education is one field in which the ECA counterpart funds could be used to advantage. England, for example, has fewer students in its colleges and universities than does our State of Michigan and the students are drawn from, in most cases, the classes that are not interested in industry. This broader need for education extends to engineering, the professions, and agriculture.

9. We believe in the plans behind the organization of the Anglo-American Productivity Council and their intention to bring about the exchange of visits between British and American manufacturers, engineers, workers, etc. We do not believe that this in itself will accomplish the desired end as it is altogether too slow. We feel we must go beyond the visitation stage and bring about single industry-to-industry cooperation whereby American firms will individually work with English firms supplying our know-how management, and sales ideas.

We favor the extension of this general plan to the other ECA nations.

CONCLUSION

In conclusion, we feel that ECA, as now organized, is dominated too much by political considerations and would be better if it could be divided into two separate agencies with separate appropriations. If this is not possible, then ECA should be divided internally and the money appropriated should be definitely earmarked for general aid (political) and industrial aid.

The expenditures already made and those suggested for the next fiscal year constitute an extremely heavy burden of taxes on top of an already dangerous budget. Unless permanent benefits can be obtained, we are in danger of seriously weakening our own economy.

Mr. CARNAHAN (presiding). Are there any further questions to be asked at this time?

Mr. BATTLE. You mentioned on page 6 of your statement that Belgium has a serious unemployment problem today. Could you spread that out?

Mr. FROST. I cannot give you the exact figures now. A year ago I was in Belgium where I had the pleasure of spending an afternoon with Dr. Albert De Smael, who was Minister of Economics from 1945 to 1947, and this famous economist of Belgium blamed the Marshall plan for Belgium unemployment. He placed the blame on the Marshall plan for this reason: we had violated the original idea of the Marshall plan, namely, working out the program on a European basis rather than on a nation-to-nation basis.

Belgium cannot sell to France her surplus production which France needs because of exchange and other barriers. In the meantime we supply such countries as France with dollars to make the purchases from the United States. We have not freed the trade barriers.

Mr. CARNAHAN (presiding). We appreciate your testimony, and for the chairman and the other members who have not had an opportunity to be present during the entire presentation of your statement I apologize for not giving everyone here tonight a better audience, but we had a rather difficult time in keeping up the vote on the floor.

Mr. FROST. Thank you very much.

Mr. CARNAHAN (presiding). Do you have anything further, Mr. Meader?

Mr. MEADER. No.

Mr. CARNAHAN (presiding). Well, if there is no further business at this time we will adjourn until 10 o'clock tomorrow morning. The meeting is adjourned.

At 8:42 p. m. the committee adjourned until Saturday, July 21, 1951, at 10 a. m.

(The following was submitted for inclusion in the record:)

STATEMENT SUBMITTED BY THE CHAMBER OF COMMERCE OF THE UNITED STATES TO THE HOUSE FOREIGN AFFAIRS COMMITTEE IN SUPPORT OF THE PRINCIPLES OF THE MUTUAL SECURITY PROGRAM, JULY 20, 1951

The Chamber of Commerce of the United States supports the principles of the proposed Mutual Security Program.

The major source of international unrest, of fear, and of conflict is the aggressive program of militant Russian communism. Since the Kremlin seems to respect only force, Soviet leaders must be convinced that the United States, by word and action, will avoid both aggressions and the surrender of basic principles and vital interests.

They must be convinced, too, that the United States will develop not only its own means of defense, but, within the limits of its economic ability, will assist other nations to help themselves militarily as well as economically, provided that they are willing to work together to resist Soviet aggression and domination.

Therefore, the chamber endorses the program before you as means to that end. Military and economic assistance will strengthen the will and the capacity of our associates in the free world to work together in the interests of our collective security.

The views of the chamber might be summed up like this:

1. We must have a long-range, purposeful foreign policy free of uncertainty and political partisanship.
2. We must extend foreign military and economic aid, to the extent of our ability considering our own defense program, to offset world communism.
3. We believe that such aid should be limited to an expenditure of \$5 billion in this fiscal year.
4. Economic aid to Europe has accomplished its purpose.

5. Military aid under the North Atlantic Treaty now has become of immediate importance.
6. A principal condition to such aid should be a pledge that a recipient country will put its shoulder to the wheel.
7. Technical assistance to underdeveloped areas should be continued.
8. There should be a single, unified foreign economic assistance administration.

OUR BASIC PRINCIPLES

Members of the national chamber have long advocated the active participation of the United States in seeking international solutions to the many difficult problems that the free world has had to face since the defeat of the Axis Powers.

They approved a program of relief through UNRRA and subsequently through direct contributions to nations devastated by war. They supported economic and military assistance to Greece and Turkey; substantial credits to the United Kingdom; the Marshall plan; and they approved the action of the United States in entering into the Inter-American and the North Atlantic Pacts.

During the past few months, the chamber membership made a complete reexamination of the issues in the international economic, political, and social field. Strong reaffirmation of United States participation in world affairs resulted. (Policy statements are attached as appendix.)

The chamber took a position early this year calling for a \$7 billion cut in nondefense items in President Truman's January budget recommendations of \$71 billion. Specifically, the chamber said that foreign-aid expenditures estimated at approximately \$7 billion for 1952 should be reduced to \$5 billion—from the standpoint of the good health of the national economy.

The members in annual meeting on May 2, 1951, adopted a statement of policy calling for "an end to the frustration, uncertainty, and political partisanship indicated in our foreign policy insofar as the American people have been informed thereof." They urged development of a sound foreign policy without regard to partisan politics, which would protect and preserve the best interests of all people of the United States and of those other free peoples who will cooperate to preserve the fundamental principles upon which this Nation was founded.

THE NATURE OF ASSISTANCE

The proposed Mutual Security Program is an important part of foreign policy. It stems from legislation approved in the past by bipartisan votes. The major components of the proposed program are European economic assistance, aid to underdeveloped areas, and mutual-defense assistance—now to be fully oriented to the urgency of building up military defenses adequate to meet and repel aggressive Soviet communism whenever and however it strikes.

Military assistance and economic assistance are inseparably linked—the chief difference is whether we supply the final product or the material and equipment for producing it. At the moment, the United States must supply certain areas of the free world with military items, with technical training in their use, and with machine tools for defense production in recipient countries. Economic assistance by the United States, judiciously extended, must be continued at this crucial time.

MARSHALL PLAN

Emphasis for some time past has been on the economic recovery of Western Europe, which is fundamental to world recovery, and its achievement is essential to the survival of the forces of freedom. While the recovery of Marshall plan countries depended initially on a sustained flow of imports from the Western Hemisphere, the ultimate solution to their difficulties could only be found in a large increase in their agricultural and industrial production.

Without Marshall aid, countries with well-organized communist parties like Italy and France might easily have been swept into the Soviet camp.

The extent of recovery in Europe presents an inspiring contrast to the chaotic conditions after the war, when industrial and agricultural production was well below prewar levels, and the population was 15 million greater.

Some aspects of recovery are easily measurable: Industrial production is now 45 percent above the 1947 level and 40 percent above the prewar level. Agricultural production in all countries has shown a substantial increase in net output in spite of unfavorable weather conditions. Today agriculture is 9 percent above prewar levels and is steadily improving. Taking into account the rise in

population, however, output per head in 1950 was on the average still no more than it was in 1938.

By furnishing dollars for imports of particular commodities available only in the dollar area, Marshall aid made possible an increase of many times its own value in the gross national product of Western Europe, and led to a gradual reduction in her dollar deficit from \$8 billion in 1947 to \$1 billion in 1950.

Furthermore, reduction in trade barriers, brought about by progressive lifting of quantitative restrictions on imports among the Marshall plan countries, greatly facilitated intra-European trade. Marshall plan funds were used to assist the intra-European payments schemes which most recently have culminated in the European Payments Union.

Many of the objectives of the Marshall plan have been reached ahead of schedule and at less cost to the United States than had been thought would be necessary. This fact testifies to the efficient use made of Marshall aid and to the will and ability of Western European countries to cooperate in their common interests.

MILITARY AID

As European recovery has proceeded, and as world political conditions have changed, it has become clearly apparent that economic aid should be followed by military aid. This need has led to the North Atlantic Treaty, which pledges mutual defense of the member countries.

But here, as in the case of our economic-aid programs, we must feel reasonably assured that the treaty nations will put their shoulder to the wheel.

Secretary of Defense Marshall said recently that it seemed that not all of the NATO countries have done all they could.

General Eisenhower, who faces an enormously difficult task in Europe, said just the other day: "It is clearly necessary that we quickly develop maximum strength within free Europe itself. Our interests demand it * * *." In urging the European nations to unite in the common effort, he said, "It would be difficult indeed to overstate the benefits (of European unity) in these years of stress and tension, that would accrue to NATO if the free nations of Europe were truly a unit."

On the average, one-third of the budgets of the Marshall plan countries last year was spent on defense efforts and the ratio will be greater in the revised programs of 1951. This means, of course, that in all cases a smaller proportion of total output will be available for civilian purposes. Under the influence of increased taxes and higher prices, the standard of living, at best none too high, has already fallen. Any further reduction at this time might have a dangerous psychological as well as material effect, although reasonable austerity should be encouraged.

To meet these new problems, Europe should undertake some steps on its own volition.

To the maximum extent possible, there should be increased productivity, of course.

There should be strict governmental economies.

Balanced budgets should be the keynote.

Furthermore, selective shifts in investment from less productive activity would release resources without impeding fundamental economic growth.

Collective economic action should be vigorously sought in order to assure the most efficient use of western Europe's resources.

Care should be taken that European exports be reduced only as a last resort. It must be realized that in addition to rearmament production, the maintenance of European exports is vital. If this is not done, countries in other parts of the world, dependent on Europe for manufactured and capital goods, would turn to the United States as an alternative source of supply. This would intensify the inflationary pressures already at work in the United States economy. It would also reduce the earnings of the western European countries and thereby widen the balance of payments deficit and bring about the thing we hoped to correct.

Incentives for the pursuit of mutual security, reaching to the level of the individual, must be an integral part of the program. This includes most prominently the dissemination of factual information about the objectives and achievements of the program to peoples throughout the world.

UNDERDEVELOPED AREAS

The drain on resources by rearmament will have world-wide repercussions by affecting costs and by raising problems of priority in the allocation of resources. Different areas of the world present different problems.

Because of the strategic position and natural resources of the Near East and the Middle East in the world today, this area is one of the crucial directions of Soviet expansion. The strength and stability of all countries in this region is essential to American security.

The national chamber has long stressed the fact that private enterprise and private investment capital should form the cornerstone of any program undertaken by the United States for the economic advancement of underdeveloped areas.

The point 4 program, which contemplates technical assistance, has had strong humanitarian appeal everywhere because of its objective of bettering the lot of peoples of the underdeveloped countries. Because of its hope for economic improvement in these countries, it has been hailed by many as the positive answer to the false lures of communism.

Nevertheless, few elements in American foreign policy are less generally understood, and none is more valuable potentially. Certain broad aspects of it should be recognized and supported by every American.

A fact not fully realized is that 73 percent of the raw materials imported by the United States comes from underdeveloped countries, and that a 50 percent increase of these imports during the next 2 years will be necessitated by expansion of American industry to meet defense needs. Technologically backward peoples living under appalling conditions of poverty, disease and illiteracy cannot be expected to produce unaided these additional raw materials needed by the United States.

For example, technical and financial assistance to enable the peoples of south and southeastern Asia to become self-sustaining in food production is an alternative much to be preferred to successive grants of funds to relieve chronic starvation.

Programs of technical assistance in fields of public health, sanitation, education, fiscal affairs and government administration should be carried forward by our Government on a modest, carefully considered basis. They should be so conducted as to avoid any charge of either paternalism or imperialism, and should be restricted to countries where there is a genuine willingness to cooperate to the full extent of their own abilities.

The proposed Mutual Security Program contemplates grants of funds for capital as well as technical assistance. The chamber believes that local funds should be used as much as possible to carry out approved projects. When outside financial assistance is needed for essential capital goods, facilities of the International Bank and Export-Import Bank should be used. Private capital investment should be encouraged to bring needed dollars into the area. Aid should be contingent upon the completion with our Government of treaties and agreements to provide assurance of fair treatment for American private capital.

UNIFIED ADMINISTRATION

As early as November 1950, the chamber stressed the need for a single unified foreign economic assistance program—to be applicable on a flexible basis to any part of the free world as circumstances require, but under definite legislative prescription as to purpose, policies, and methods. We urge that foreign economic operations of the United States Government be surveyed with a view to their effective coordination to avoid duplication and waste.

The Mutual Security Program, as proposed, does not provide for unified administration of foreign economic activities. We believe that such a single, independent administering agency is vital to successfully carrying out the economic objectives of the Mutual Security Program; that the Department of State is primarily a policy-making department and should not be charged with operating functions of this type; and that United States foreign economic activities of varying types and degree will be such in the foreseeable future as to make the new agency imperative. Its operations should be within the over-all foreign policy of the United States, and its activities abroad should be closely coordinated with those of the Department of State.

The new agency should have both short and long-range responsibilities in the administration of United States foreign economic activities.

The Economic Cooperation Administration should complete its job on schedule in 1952. Activities of a continuing nature, carried on by that agency, such as technical and capital assistance to underdeveloped areas, should be transferred to the new agency as should the Technical Cooperation Administration, now under the Department of State, and all other point 4-type activities of our Government.

In addition, export and import controls, the responsibility for procurement of strategic materials from foreign countries, and United States participation in the international allocation of scarce materials and products should be brought into this agency. It should also act as the claimant for the essential requirements of friendly foreign countries.

CONCLUSION

In the foregoing, we have emphasized qualitative rather than quantitative evaluation of the proposed Mutual Security Program. The chamber has concluded that this program, with safeguards as noted, should be undertaken as an investment in mutual security and as insurance against the need for even greater defense expenditure by the United States if this course to mutual security were not pursued.

The proper ration of funds to be allotted to military and economic aid must be left to the wisdom of the Congress. However, the chamber urges that the importance of economic assistance to the objectives of mutual security not be underestimated. As stated earlier, however, the chamber believes that over-all expenditures for the program during 1952 should be no more than \$5 billion.

The chamber conceives as its duty to provide education and leadership which will stimulate intelligent consideration of the issues which are of such profound public interest and concern today. It is also the duty of the executive branch and the Congress to make known essential facts in order to have an informed public. This is a trust which cannot be ignored, and the benefits would be manifold.

At stake in the present situation is the survival of all for which democracy stands. The idea that we could, if we so desired, withdraw within our own border and remain safe and secure is attractive only because it represents the least immediate risk. Such a course is folly because, at best, it could only serve to postpone the inevitable day when the United States would also be consumed by the aggressive forces of Soviet power.

Our aim in whatever instruments of accomplishment we use should be balanced security for the free world, not rearmament as an end in itself.

Source: Compiled from official British and Israeli sources.

(Material requested by Mrs. Bolton:)

1. Was there any agreement by Israel to indemnify the loss of property as a result of the establishment of the State of Israel? There has been no formal agreement for

compensation, since there have been no negotiations between the parties concerned. There is enclosed a statement of Israeli Ambassador Abba Eban before the ADHOC Political Committee of the United Nations on November 7, 1950. In this statement Ambassador Eban formally stated the willingness of the Israeli Government to pay compensation for "abandoned lands" and to study the question with the appropriate United Nations authorities. A copy of this statement with the relevant statements underlined is attached.

2. *Copies of reports or observations General Riley has made on the armistice situation.* Copies of all recent public statements on the armistice situation are enclosed. It should be emphasized that these do not necessarily report the latest developments in this situation.

3. *Amplification of the answer to question on the acceptance by Israel of the partition boundaries in the General Assembly resolution of 1947.* The United States Government has consistently maintained that it is not the function of the United Nations to enforce a political solution in former Palestine. In this regard there is quoted a statement by Ambassador Austin for the Security Council on February 24, 1948.

"The Security Council is authorized to take forceful measures with respect to Palestine to remove a threat to international peace. The Charter of the United Nations does not empower the Security Council to enforce a political settlement whether it is pursuant to a recommendation of the General Assembly or of the Council itself.

"What this means is this: The Council under the Charter can take action to prevent aggression against Palestine from outside. The Council by these same powers can take action to prevent a threat to international peace and security from inside Palestine. But this action must be directed solely to the maintenance of international peace. The Council's action, in other words, is directed to keeping the peace and not to enforcing partition."

ISRAEL OFFICE OF INFORMATION,
November 7, 1950.

STATEMENT OF AMBASSADOR ABBA EBAN (ISRAEL) BEFORE THE AD HOC POLITICAL COMMITTEE OF THE UNITED NATIONS

Mr. Chairman, I wish to devote myself primarily to the prospects of the future' as illumined in the draft resolution before the Committee and in the Report of the United Nations Relief and Works Agency.

However, the speech which has just been made by the representative of Iraq compels me to introduce these reflections with a brief reiteration of the views which the Government and people of Israel hold with the utmost conviction on this problem as a whole.

The plight of the Arab refugees is the most tragic and grievous consequence of the armed violence which was launched against Israel nearly 3 years ago by the combined armies of all the neighboring Arab States. Yesterday the representative of Burma spoke in moving terms of the harsh fortunes of war; and indeed in modern warfare the sharpest impact of suffering inevitably falls upon civilian populations. Those who seek to determine political issues by the use of armed force, rather than by the method of pacific settlement and negotiation, thus incur a most heinous responsibility for a cumulative sequence of misery which overtakes all the populations embroiled in their war. Thus it has come about that the law and morality of our own generation have come to regard those who initiate armed conflict as being exclusively responsible for all the anguish and suffering which war brings in its train. With the terrible toll of our own dead and wounded still fresh in our memory, with flourishing villages laid waste and parts of ancient cities lying in complete ruins, with the refugee victims of this wanton invasion still standing before us with their misery unallayed, we could have wished that the authors and sponsors of that terrible war had shown more evidence of contrition and direct responsibility whenever this problem was discussed. I am profoundly astonished that a man could sit in his seat in 1947 and openly declare war and then sit in the same seat in 1950 and wash his hands clean of all the hideous consequences of that war. My delegation, for its part, does not entertain even a partial degree of doubt as to how the question of moral initiative and responsibility will be decided in the judgments of history.

However, at this stage, the international community is rightly preoccupied far more with the means and prospects of a constructive settlement, than with the just censure of those who let loose the savage war, of which this is one of the

most catastrophic results. Accordingly, it is to the future with its hopes of solution that my observations will be principally addressed.

Although it would be natural to expect those states whose action created this problem to bear the primary responsibility for its solution, we cannot doubt that the refugees constitute a regional problem, for the solution of which all the states in the area should devote their serious and responsible efforts. In the wider sense this is a problem of international dimensions. It has a bearing on the issues of world peace and security; and the means and resources necessary for its solution are clearly beyond the resources and capacities of the region directly involved.

These two themes of regional and international responsibility are convincingly expounded in the basic documents now before the Committee: The Report of the United Nations Conciliation Commission for Palestine; the Report of the Secretary-General on United Nations Relief for Palestine Refugees; and the Interim Report of the Director of the United Nations Relief and Works Agency for Palestine Refugees in the Near East.

I desire at this preliminary stage to express Israel's attitude on the main conclusions embodied in these three documents, insofar as they affect the refugee question.

The Report of the United Nations Conciliation Commission emphasizes the close relationship between the restoration of peace in the area of the Near East and a permanent settlement of the refugee problem. At no time has the General Assembly been unaware of the close interdependence between these two objectives. There is an erroneous impression in some quarters reflected in certain speeches this morning that the General Assembly adopted a resolution in 1948 calling for the unconditional return of the refugees to their homes and the payment of compensation to those not returning. It is vitally important to realize that the General Assembly has never adopted any resolution of that kind. What the General Assembly did in 1948 was to adopt a resolution calling upon the parties involved in that conflict to negotiate a final settlement of all their outstanding differences. Indeed, the call for a peace settlement was the decisive and operative part of that resolution and marked the only direct request which the General Assembly then made to any of the Governments concerned. Within the framework of that resolution calling for a final settlement as part of it, and on the assumption that it would be heeded, the General Assembly went on to lay down the principles whereby it wished the refugee problem to be solved. There has never been any international sanction for the extravagant view that a comprehensive solution of the refugee problem could be carried out in complete isolation from the wider context of inter-State relations in the area. While the neighboring States glower at Israel with hostile eyes over a tense armistice frontier; while Israel grapples with the heavy security and economic complications created by Arab boycotts and blockades; while the quest for military security dominates all else, as it must and will so long as peace is refused--the Governments of the area are not likely to find easy avenues of cooperation in tasks of constructive regional development.

The vision conjured up yesterday by the representative of Syria of hundreds of thousands of refugees being able to cross the armistice frontier prior to the conclusion of peace, irrespective of Israel legislation, economic or security capacity and of liberating the United Nations from its tasks of relief, is not merely irresponsible in terms of fact; it seeks to give a rhetorical effect at the expense of misery and shattered illusion among the refugees themselves.

Just as the refugee problem itself is a consequence of a decision to launch war in 1948, so the failure to solve it is the result of a refusal to negotiate peace during the years which have elapsed. It may be said that the decision to launch war in 1948 and the refusal to negotiate a peace settlement ever since are the two acts of policy which are responsible for every one of the ills and tensions which prevail in the Near East area today. In many ways I regard the protracted refusal to conclude a peace settlement as an almost greater act of cruelty toward the refugees than the original decision to make war.

It is against this background that we have given earnest attention to the main recommendation of the Conciliation Commission's report. The final paragraph of that report summarizes the Commission's conclusions as follows:

"In conclusion, the Conciliation Commission considers that the present situation requires that the parties undertake the discussion of all questions outstanding between them. The Commission believes that the General Assembly should urge the parties to engage without delay in direct discussions, under the auspices of the United Nations and with its assistance, in order to arrive at a peaceful settlement. The Commission considers that, within the framework of these

negotiations, the refugee position should be given priority of consideration. The Commission does not doubt that the parties will be able to arrive, through procedures consistent with established international practice and the obligations of members of the United Nations, at peaceful relations which should prevail among them."

Furthermore, I am authorized to declare that Israel will respond wholeheartedly to each part of that recommendation.

We are willing to "engage without delay in direct discussions under the auspices of the United Nations and with its assistance in order to arrive at a peaceful settlement." We further agree that "within the framework of these negotiations the refugee problem should be given priority of consideration." We share the Conciliation Commission's confidence in the ability of the parties "to arrive, through procedures consistent with established international practice and the obligations of members of the United Nations, at peaceful relations which should prevail amongst them."

In the General Assembly's resolution of December 1948, in which the refugee problem is conceived as part of a program for the restoration of peace in the area, two avenues of possible solution are mentioned. The resolution speaks of a return to the previous homes of refugees desiring to do so, provided that such return is practicable, and provided that those returning are ready to live at peace under the aegis of the Government of Israel. I notice that those two provisos have seldom been quoted by those who invoked that resolution this morning. However, the resolution also envisages the possibility of refugees not returning, in which case compensation is to be paid. We have never concealed our belief that the interests of the refugees and of the Near Eastern region would be best served by a policy of integration which would secure the individual welfare of the refugees in the shelter of governments and amidst a population akin to them in national loyalty as well as in social, cultural, linguistic, and religious affinity. Moreover, as months and years passed without any agreement from the neighboring States to negotiate a peace settlement, the possibility of any substantial restoration of the conditions existing before the war steadily diminished in the eyes of all qualified observers. Life has not stood still. It has moved forward with headlong speed. A vacuum does not endure. It is therefore significant that the Conciliation Commission now expresses its conviction "that having the interests of the refugees themselves in mind, attention should also be devoted in future to the resettlement in Arab countries of nonreturning refugees, to their economic rehabilitation and to the payment of compensation, as also recommended by the above resolution."

My delegation has no doubt that this recommendation embodies the principles whereby a total solution of the problem may be approached. Attention to the problems of resettlement is required not only from the viewpoint of the refugees themselves, but also, in the interests of lasting peace and stability amongst the peoples of the Near East.

As an immediate practical measure the Conciliation Commission announces in paragraph 9 of its report that it has taken steps to establish a Committee of Experts which will study the question of compensation in all its aspects. The report goes on to say that "the Commission counts on the cooperation of the parties in the accomplishment of its task."

My Government has always believed that it would be difficult to implement the solution of any of these problems except by negotiations with the Arab States concerned except in the context of a general peace negotiation. However, in order to avoid a long standing procedural deadlock, we now declare our willingness to make contact with the appropriate United Nations organs for studying with them the question of compensation in all its aspects. It follows therefore that the cooperation invited in paragraph 9 of the Conciliation Commission's report will at this stage be forthcoming from my Government.

We have taken note of the Conciliation Commission's view, expressed in paragraph 10 of its report, that one of the factors affecting the desirability of repatriation is the degree to which such a process would be consistent with the best interests of the refugees themselves. Since disproportionate attention has been focussed this morning by Arab spokesmen upon the responsibility of the Government of Israel for the solution of a problem which was created by the volition of the Arab States and, indeed, arose after the deliberate attempt to destroy Israel by force, we are gratified to notice in the report of the Conciliation Commission a clear recommendation also for "the adoption of measures by the Arab States for assuring the full reintegration of nonreturning refugees."

The Conciliation Commission's report thus illuminates the way to a solution of this problem in the context of a final settlement. The reports of the Secretary-

General and of the United Nations Relief and Works Agency focus our attention on the urgent tasks of relief and reintegration. The necessity for continued relief is another consequence of the protracted refusal of the States concerned to seek a negotiated solution of this and all other outstanding problems. However, the necessity to maintain and develop both the relief program and the works projects remains urgent and inescapable on the highest and the most transcendental human grounds. My delegation therefore supports the proposal of the United Nations Relief and Works Agency contained in paragraph 65 of its report to the effect that there should be a "continuation of direct relief with special and appropriate provision for the current winter months." Similarly, we uphold the recommendation contained in paragraph 67 of the same report to the effect that: "the works program be continued but be gradually transformed into a program specifically directed toward improvement of the refugees' living conditions—current and future."

But when everything possible has been said and done on the level of relief and emergency employment, the central fact remains that the time has now come for the General Assembly to take practicable and realistic action looking toward a final and permanent settlement, under which these people will come to be regarded not as refugees but as potential workers and citizens of the region, contributing to its welfare and benefiting from its resources. Relief allocations, however essential, are mere palliatives. Works projects are of greater significance since they imply a stage of liberation from complete dependence; yet at their present rate and scale, as we have seen them working, they do not hold promise of effecting a radical solution. The major effort of the international community and of the parties concerned must surely be directed henceforward toward programs of rehabilitation involving the harmonious integration of the refugees into productive life. The fact that such projects in their full details may not be available now, the fact that they may be delayed through political circumstances to which reference has been made, should not induce us to delay the preparatory measures essential for their eventual realization. The Director and Advisory Board of the UNRWA point out in their report that it is quite certain that in any case the reintegration of refugees will require large funds, and that it is not too early now to accumulate some of the resources which will in due time be applied, not to transient relief, but to permanent development. My Government therefore gives its support to the recommendation contained in paragraph 69 of the Agency's report and embodied, I now notice, in the draft resolution, proposing "that the United Nations authorize contributions to a fund that will be available for projects of refugee reintegration, surveys and technical assistance connected therewith."

My Government has repeatedly stated and now reaffirms its willingness to pay fair compensation for abandoned lands. It considers it vital that any funds accruing from such compensation be credited to the refugee integration fund referred to in paragraph 69 of the Agency's report and in the operative paragraphs of the joint draft resolution. A collective method of compensation offers better hopes for a speedy and constructive solution than any attempt to resolve the problem on the basis of individual grants.

In agreeing to immediate discussions with international agencies on the problems of compensation and on the establishment of a reintegration fund, Israel will regard itself as taking part in the first and most urgent installment of discussions leading to a final settlement. It must be borne in mind that under that settlement Israel reserves its own claim with reference to the assets of its own citizens in Arab countries and with reference to the loss and damage suffered as a result of war and invasion.

It may be useful for me to summarize the views of my Government on a solution of the Arab refugee problem:

- (1) The most important step that can be taken toward the final solution of this problem would be for the General Assembly to act on the recommendation contained in paragraph 11 of the Conciliation Commission report urging the parties to engage without delay in direct discussions, within the framework of which the refugee problem should be given priority of consideration.

- (2) We support the recommendations of the UNRWA for the continuance of the relief programs and of the works projects as an indispensable interim measure until final integration is achieved.

- (3) We offer our cooperation to the Committee of Experts referred to in paragraph 9 of the Conciliation Commission's report.

- (4) We support the recommendation contained in paragraph 67 of the UNRWA report urging the creation of a reintegration fund to be applied to the permanent settlement of refugees and their integration into normal and productive life.

(5) We accept the principle that any funds which Israel agrees to defray for compensation be credited to the integration fund instead of being dissipated in individual payments.

(6) We attach the utmost importance to the clear movement of opinion discernible in the reports of the Conciliation Commission and the UNRWA. These bodies, after intimate and prolonged contact with the refugee problem, now urge all parties concerned to devote greater attention than before to the question of resettlement in the Arab countries of nonreturning refugees. Consideration is also given in these documents to the fundamental changes which have taken place in the life of the area during the past two years, and to the doubt whether the return of refugees to Israel is either practicable or conducive to the best interests of the refugees themselves. We consider that any new resolutions of the General Assembly should reflect the acknowledged realities and possibilities of today, as well as the authoritative opinions and estimates of the General Assembly's own qualified organs.

My delegation is convinced that if the General Assembly were to adopt a recommendation in which all these elements—all of which clearly occur in the authorized reports now before the Committee—were integrated into a unified pattern, a substantial step can be taken by the fifth regular session toward a final solution of this grave humanitarian problem which weighs so heavily on the life of the Near East.

[United Nations Security Council. General, 8/2157, 18 May 1951. Original: English-French]

RESOLUTION CONCERNING THE PALESTINE QUESTION ADOPTED AT THE 547TH MEETING OF THE SECURITY COUNCIL ON 18 MAY 1951

The Security Council,

Recalling its past resolutions of 15 July 1948, 11 August 1949, 17 November 1950 and 8 May 1951 relating to the General Armistice Agreements between Israel and the neighbouring Arab States and to the provisions contained therein concerning methods for maintaining the armistice and resolving disputes through the Mixed Armistice Commissions participated in by the parties to the General Armistice Agreements;

Noting the complaints of Syria and Israel to the Security Council, statement in the Council of the representatives of Syria and Israel, the reports to the Secretary-General of the United Nations by the Chief of Staff and the Acting Chief of Staff of the United Nations Truce Supervision Organization for Palestine and statements before the Council by the Chief of Staff of the United Nations Truce Supervision Organization for Palestine;

Noting that the Chief of Staff of the Truce Supervision Organization in a memorandum of 7 March 1951, and the Chairman of the Syrian-Israeli Mixed Armistice Commission on a number of occasions have requested the Israel Delegation to the Mixed Armistice Commission to ensure that the Palestine Land Development Company, Limited, is instructed to cease all operations in the demilitarized zone until such time as an agreement is arranged through the Chairman of the Mixed Armistice Commission for continuing this project, and,

Noting further that Article V of the General Armistice Agreement between Israel and Syria gives to the Chairman the responsibility for the general supervision of the demilitarized zone,

Endorses the requests of the Chief of Staff and the Chairman of the Mixed Armistice Commission on this matter and calls upon the Government of Israel to comply with them;

Declares that in order to promote the return of permanent peace in Palestine, it is essential that the Governments of Israel and Syria observe faithfully the General Armistice Agreement of 20 July 1949;

Notes that under Article VII, paragraph 8, of the Armistice Agreement, where interpretation of the meaning of a particular provision of the agreement, other than the preamble and Articles I and II, is at issue, the Mixed Armistice Commission's interpretation shall prevail;

Calls upon the Governments of Israel and Syria to bring before the Mixed Armistice Commission or its Chairman, whichever has the pertinent responsibility under the Armistice Agreement, their complaints and to abide by the decisions resulting therefrom;

Considers that it is inconsistent with the objectives and intent of the Armistice Agreement to refuse to participate in meetings of the Mixed Armistice Commission or to fail to respect requests of the Chairman of the Mixed Armistice Commission

as they relate to his obligations under Article V and calls upon the parties to be represented at all meetings called by the Chairman of the Commission and to respect such requests;

Calls upon the parties to give effect to the following excerpt cited by the Chief of Staff of the Truce Supervision Organization at the 542nd meeting of the Security Council on 25 April 1951, as being from the summary record of the Syria-Israel Armistice Conference of 3 July 1949, which was agreed to by the parties as an authoritative comment on Article V of the General Armistice Agreement between Israel and Syria:

"The question of civil administration in villages and settlements in the demilitarized zone is provided for, within the framework of an Armistice Agreement, in sub-paragraphs 5 (b) and 5 (f) of the draft article. Such civil administration, including policing, will be on a local basis, without raising general questions of administration, jurisdiction, citizenship, and sovereignty.

"Where Israeli civilians return to or remain in an Israeli village or settlement, the civil administration and policing of the village or settlement will be by Israelis. Similarly, where Arab civilians return to or remain in an Arab village, a local Arab administration and police unit will be authorized.

"As civilian life is gradually restored, administration will take shape on a local basis under the general supervision of the Chairman of the Mixed Armistice Commission.

"The Chairman of the Mixed Armistice Commission, in consultation and co-operation with the local communities, will be in a position to authorize all necessary arrangements for the restoration and protection of civilian life. He will not assume responsibility for direct administration of the zone."

Recalls to the Governments of Syria and Israel their obligations under Article 2, paragraph 4 of the Charter of the United Nations and their commitments under the Armistice Agreement not to resort to military force and finds that:

(a) Aerial action taken by the forces of the Government of Israel on 5 April 1951, and

(b) Any aggressive military action by either of the parties in or around the demilitarized zone, which further investigation by the Chief of Staff of the Truce Supervision Organization into the reports and complaints recently submitted to the Council may establish,

constitute a violation of the cease-fire provision provided in the Security Council resolution of 15 July 1948 and are inconsistent with the terms of the Armistice Agreement and the obligations assumed under the Charter;

Noting the complaint with regard to the evacuation of Arab residents from the demilitarized zone;

(a) Decides that Arab civilians who have been removed from the demilitarized zone by the Government of Israel should be permitted to return forthwith to their homes and that the Mixed Armistice Commission should supervise their return and rehabilitation in a manner to be determined by the Commission; and

(b) Holds that no action involving the transfer of persons across international frontiers, armistice lines or within the demilitarized zone should be undertaken without prior decision of the Chairman of the Mixed Armistice Commission.

Noting with concern the refusal on a number of occasions to permit observers and officials of the Truce Supervision Organization to enter localities and areas which were subjects of complaints in order to perform their legitimate functions,

Considers that the parties should permit such entry at all times whenever this is required, to enable the Truce Supervision Organization to fulfill its functions, and should render every facility which may be requested by the Chairman of the Mixed Armistice Commission for this purpose;

Reminds the parties of their obligations under the Charter of the United Nations to settle their international disputes by peaceful means in such manner that international peace and security are not endangered and expresses its concern at the failure of the Governments of Israel and Syria to achieve progress pursuant to their commitments under the Armistice Agreement to promote the return to permanent peace in Palestine;

Directs the Chief of Staff of the Truce Supervision Organization to take the necessary steps to give effect to this resolution for the purpose of restoring peace in the area and authorizes him to take such measures to restore peace in the area and to make such representations to the Governments of Israel and Syria as he may deem necessary;

Calls upon the Chief of Staff of the Truce Supervision Organization to report to the Security Council on compliance given to the present resolution;

Requests the Secretary-General to furnish such additional personnel and assistance as the Chief of Staff of the Truce Supervision Organization may request in carrying out the present resolution and the Council's resolutions of 8 May 1951 and 17 November 1950.

[United Nations Security Council. General, S/2173 29 May 1951. Original: English]

CABLEGRAM DATED 28 MAY 1951 FROM THE CHIEF OF STAFF OF THE TRUCE SUPERVISION ORGANIZATION ADDRESSED TO THE SECRETARY-GENERAL TRANSMITTING A REPORT TO THE SECURITY COUNCIL.

I have honour to submit for transmission to President Security Council interim report on steps taken to give effect to Security Council resolution of 18 May 1951.

1. Since my return to Palestine area on 16 May 1951 I have had a number of exploratory talks with Government officials of Israel and Syria and it is my understanding that both parties are anxious to resolve differences which have arisen in past few weeks. They appear willing to abide by provisions of Security Council resolution of 18 May 1951.

2. However, a difference of opinion does exist between parties relative to interpretation of "intent" of Security Council resolution in regard to paragraphs 3 and 4 of resolution which deal with operations of Palestine Land Development Company in Demilitarized Zone.

3. On one hand, Israel understands that point at issue is "safeguarding of legitimate rights and interests of Arab owners of land in Demilitarized Zone affected by Huleh drainage operations". Israel does not consider that Security Council envisaged indefinite suspension of work on project. Israel has made it clear that "in complying with Security Council's directions, it reserves fully what it holds to be Israel's inalienable right to bring Huleh drainage project to a successful close in interests of Israel and inhabitants of region".

4. On other hand, Syria holds view that its request to Security Council took in consideration not only interests of Arabs whose land was involved in drainage project but was also intended to prevent creation of military or political advantages in area. This is why Syria must maintain her point of view and make strongest reservations if Israel continues their work.

5. My views which have been expressed to officials of both governments in my talks are in general accord with those of Israel as regards "intent" of Security Council. I believe that at no time did members of Security Council entertain idea that Huleh project, as a project, was to be stopped indefinitely. However, Security Council resolution did endorse requests of Chief of Staff and Chairman of Mixed Armistice Commission to Israel delegate to MAC to "ensure that Palestine Land Development Company Limited is instructed to cease all operations in Demilitarized Zone until such time as an agreement is arranged through Chairman of MAC for continuing their project."

6. Due to an "oral misunderstanding", Government of Israel assumed that in our talks of 21 May 1951, I, acting in my capacity as Chairman of MAC, had given my approval for resumption of work on lands not under dispute within Demilitarized Zone after a 24 hour suspension of work.

7. Government of Israel in a communication addressed to me dated 22 May 1951, stated in part "in deference to Security Council decision and in order to facilitate task which has been placed upon you in bringing about such an agreement, Government of Israel has requested Palestine Land Development Company to suspend operations on land affected for necessary brief period as from tomorrow 23 May 1951. Scene of work will in meantime shift to lands which are unaffected by present dispute, where operations will begin on following morning".

8. Not being aware at time that paragraph quoted above was based on a misunderstanding, I replied that while I appreciated stand Israel had taken on stoppage of work on disputed Arab owned land, "I do feel that Israel was jeopardizing an orderly solution to problem by resuming work at this time in Demilitarized Zone". I urged Government of Israel to "instruct Palestine Land Development Company to desist from further operations in Demilitarized Zone until Chairman of MAC can arrange for a continuation of project".

9. I regret this misunderstanding because task of working out an orderly solution of problem has now been greatly complicated by fact that Government

¹ A few copies of this document were issued in which the word "defense" was employed on page 2, paragraph 7, line 2. This has now been corrected to read "deference".

of Israel saw fit to make public, simultaneously, its communication of 22 May 1951 addressed to Chief of Staff in which above paragraph appeared, and by fact that work on project was resumed at such short notice before I could make an attempt to clear up understanding.

10. In course of my talks, Syria also stressed urgency of return of Arabs, and Israel has expressed its willingness to permit return of those Arabs who desire to do so. Before this can be accomplished, I must of necessity have agreement of Government of Israel to allow United Nations Observers to interview Arabs of Demilitarized Zone, who are now in Israel, without Israel Army or Police officers being present in order to determine desires of these individuals. Such agreement has not been received to date.

11. Today 28 May 1951, I convened formal meeting of Syrian-Israel MAC. I reviewed Security Council's resolution of 18 May 1951 and indicated which of its clauses come under competence of MAC and which under Chairman. I also (a) have requested stoppage of all work in Demilitarized Zone pending consultation between United Nations Chairman and Director General Palestine Land Development Company; (b) discussed arrangements for early return to Demilitarized Zone of those Arabs, who had been evacuated during recent disturbances, if they wish to return; (c) suggested that United Nations Chairman correlate matters regarding policing of Demilitarized Zone in accordance with General Armistice Agreement and explanatory note quoted in Security Council resolution of 18 May 1951; (d) re-affirmed those matters which come under competence of MAC and those which come within competence of Chairman; (e) made proposals as to handling by MAC of numerous complaints submitted by both parties in recent months.

12. A further report on compliance given to Security Council resolution of 18 May 1951 will be made at later date.

(Signed) Major-General WILLIAM E. RILEY,
Chief of Staff,
United Nations Truce Supervision Organization for Palestine.

[United Nations Security Council. S/2155, 6 June 1951. Original: English. General distribution on 6 June 1951]

CABLEGRAM DATED 5 JUNE 1951 FROM THE CHIEF OF STAFF OF THE TRUCE SUPERVISION ORGANIZATION FOR PALESTINE ADDRESSED TO THE SECRETARY-GENERAL TRANSMITTING AN INTERIM REPORT TO THE SECURITY COUNCIL

I have the honour to submit for transmission to the President of the Security Council a further interim report¹ on steps taken to give effect to the Security Council resolution of 18 May 1951 (S/2157).

1. The Government of Israel, in accordance with the request of the Chief of Staff, stopped work in the demilitarized zone at 1630 local Israel time on 5 June 1951 pending an investigation by the Chairman of the status of areas of land upon which work had been in progress. Upon completion of this investigation, the Chairman will authorize the resumption of work on land ascertained by him not to be the subject of dispute.

2. Arrangements have been made with the Government of Israel for the Chairman of the Syrian-Israel Mixed Armistice Commission to interview Arabs who had recently been evacuated from the demilitarized zone to Shaab, in Israel.

3. Following completion of the interview referred to in paragraph 2, the Government of Israel has agreed that those Arabs who express their desire to return to the demilitarized zone will be permitted to do so.

4. The Chairman of the Syrian-Israel Mixed Armistice Commission is examining possible ways and means of reaching an agreement with the Arab landowners in the demilitarized zone whose lands are involved in the works project of the Palestine Land Development Company Limited, with a view to continuing the project.

5. Discussions are now in progress with regard to the general supervisory power of the Chairman of the Mixed Armistice Commission in accordance with Article 5 of the General Armistice Agreement (S/1353/Rev. 1) and the explanatory note reproduced in the ninth paragraph of the Security Council resolution of 18 May 1951.

Major-General WILLIAM E. RILEY,
Chief of Staff,
United Nations Truce Supervision Organization for Palestine.

¹ See document S/2173.

[United Nations Security Council. General. S/2213, 27 June 1951. Original: English]

CABLEGRAM DATED 26 JUNE 1951 FROM THE CHIEF OF STAFF OF THE TRUCE SUPERVISION ORGANIZATION ADDRESSED TO THE SECRETARY-GENERAL, TRANSMITTING A FURTHER INTERIM REPORT ON STEPS TAKEN TO GIVE EFFECT TO THE SECURITY COUNCIL RESOLUTION OF 18 MAY 1951 (S/2157)

I have the honour to submit for transmission to the President of the Security Council a further interim report on steps taken to give effect to the Security Council resolution of 18 May 1951 (S/2157).

1. On 23 May 1951 the Palestine Land Development Company ceased operation in connexion with the Huleh concession project on all Arab-owned land in the demilitarized zone, which land had been the subject of dispute since 12 February 1951.

2. The Chairman of the Syrian-Israel Mixed Armistice Commission then initiated an enquiry amongst Arabs whose lands lie along the Jordan River or contiguous thereto to determine if agreement were possible whereby acceptance of fair compensation or exchange of land within the demilitarized zone could be arranged to avoid jeopardizing restoration of normal civilian life.

3. The situation regarding the land in question may be summarized as follows:

(a) The land needed along the Jordan River for the proposed channel amounts to approximately 25 dunams, situated along the west and east banks in numerous small parcels for a distance of about three kilometres with 70 landowners involved.

(b) The land to be used during the period of construction of the embankments and to be eventually returned to the owners amounts to approximately 415 dunams, with 117 landowners involved.

(c) As there are many co-owners of lands in both groups mentioned in subparagraphs (a) and (b), the total number of landowners actually involved is 125.

4. The Chairman personally interviewed 28 Arabs who represented a total of 85 out of 125 Arab landowners. These 28, along with those they represented, appear from best evidence available to hold to 95 percent of the Arab land required for the proposed channel of the Jordan River, and to 90 percent of the Arab land in the demilitarized zone required for temporary use while the embankments are under construction.

5. This group unanimously rejected any proposal relative to rental, sale, or exchange of any or all of their lands for other lands within the demilitarized zone.

6. The rejection of the Chairman's proposals may result in indefinite suspension of the "Project" as a project unless the parties can resolve their differences. Attention is invited to difference of opinion that exists between the parties in this regard as reported in paragraphs 2, 3, 4 and 5 of document S/2173 dated 29 May 1951. Due to the adamant stand of both parties, it is quite apparent that a dangerous situation may develop if the Palestine Land Development Company should decide to resume work on Arab-owned lands in the demilitarized zone before agreement is reached.

7. At an informal meeting of the Mixed Armistice Commission on 20 June 1951, the Senior Israel delegate rejected a suggestion advanced by the Senior Syrian delegate whereby an agreement could be reached between the parties in regard to the project. The Israel delegate rejected the suggestion as too limited in scope. However, he also added that his Government was prepared to enter into discussions with Syria which might lead to settlement of all outstanding problems that presently face both Governments.

8. Due to disagreement as to scope of an agenda, it appears unlikely that a suitable solution can be arranged through the Mixed Armistice Commission. Therefore, recourse may be sought under article VIII, paragraph 3 of the General Armistice Agreement by either of parties. If this method fails, then recourse may be sought under paragraph 4 which states "If the conference provided for in paragraph 3 of this article does not result in an agreed solution of a point in dispute, either party may bring the matter before the Security Council of the United Nations for the relief sought, on the grounds that this Agreement had been concluded in pursuance of Security Council action toward the end of achieving peace in Palestine".

9. With reference to the action of the Chief of Staff in authorizing the Palestine Land Development Company to resume work on land not under dispute, the following information was used in arriving at his decision (attention is invited to section IV of document S/2049 for pertinent details). It is to be noted that Syria at that time, in addition to the objections advanced regarding the project

as a whole, also stated in paragraph 1 of section IV "The Syrian delegation further held that the work undertaken by the Israel authorities prevented many Arab residents of the demilitarized zone from resuming normal civilian life".

10. Paragraph 3, sub-paragraph A (b) of section IV of document S/2049 expresses my views on the question of the "Project" as a project. At no time, prior to submission of my memorandum, during the discussions that took place in the Security Council meetings which led to adoption of the resolution of 18 May 1951 (S/2157) was the question raised as to whether or not lands other than Arab-owned lands might be involved. Such a possibility was first raised on 18 or 19 May 1951. Not until I was in receipt of the Government of Israel's letter dated 22 May 1951, an excerpt of which is quoted in paragraph 7 of S/2173 was I officially aware that work in connexion with the project would be continued on other than Arab-owned land. Thus a new problem was introduced.

11. In accordance with the interpretation of article V of the General Armistice Agreement which is clearly enunciated in the explanatory note of 26 June 1949 (quoted in S/2157) the Chairman could not authorize the Palestine Land Development Company to continue its work on Arab-owned lands until such time as an agreement is arranged through the Chairman for continuing this project.

12. I invite attention to section IV, paragraph 2 of S/2049 in which the Chief of Staff made his interpretation of article V. Though not mentioned, his understanding of article V was based on the interpretation of this article as set forth in the explanatory note of 26 June 1949.

13. When it was learned that the Palestine Land Development Company could work on certain Israel lands without infringing on Arab land, the Chief of Staff then requested the Palestine Land Development Company again to stop all work on 5 June 1951 in the demilitarized zone in accordance with S/2157 until the Chairman had the opportunity to check as to whether lands on which work was resumed on 24 May could be considered as Arab-owned. This investigation was completed and as lands were not considered to be Arab-owned, permission was granted to the Palestine Land Development Company to proceed with work on 11 June 1951. This action was based on article V as interpreted by the final paragraph of the explanatory note of 26 June 1949.

GENERAL RILEY.

EXCERPTS FROM TRANSCRIPT OF SECURITY COUNCIL MEETING OF MAY 18, 1951,
CONCERNING THE PALESTINE QUESTION

Sir GLADWYN JEBB (United Kingdom). I do not know whether or not I am answering the question, but I should like to make a few remarks on the subject of the drainage system.

I must say I was very grateful to the representative of the Netherlands for raising the question of the interpretation to be given to paragraphs 3, 4 and 5 of the draft resolution which deal with the drainage scheme. I was particularly glad because it gives me an opportunity to explain in greater detail, and I think I may say on behalf of the sponsors of the joint draft resolution, the procedures which we think should be followed to resolve this dispute.

Members of the Council will recall that I did make some allusion to this matter in my brief statement on 16 May, and I should like to quote what I said then. What I said then was:

"Furthermore, should either of the two Governments feel that the provisions of the Armistice Agreement are unsatisfactory in any particular, and, as I have said, we are fully aware that the form of administration provided by the Agreement is by no means ideal, my Government considers them to be under an obligation to use the procedure defined in article VIII, paragraphs 3 and 4 of the Agreement. If I may illustrate this by a case in point, may I say that if the Government of Israel considers that the Agreement is defective insofar as it enables the land-owners of the area near Banat Yakub to hold up indefinitely the Palestine Land Development Company's Lake Huleh drainage project, their right course must be to put forward whatever amendments to the Agreement they consider necessary to a conference convoked by the Secretary-General under the provisions of this article, and if necessary to bring their proposals to the Security Council. If instead the Palestine Land Development Company proceeds with its operations and expropriates the land, having no authority to do so, the Company and the Israel authorities who control its operations must inevitably place themselves in the wrong in this matter."

That is what I said on a previous occasion.

The sponsors of this joint draft resolution are all agreed that the Lake Huleh drainage project would undoubtedly promote the general welfare of the area, and, on general grounds, therefore, they would like, as at present advised, to see it put into effect as soon as possible. On the other hand, we are conscious of the duty of the Truce Supervision Organization to safeguard the legitimate rights and interests of the Arab landowners. The first objective of the draft resolution is, therefore, to bring about the suspension of the drainage operations in the demilitarized zone to enable the Chief of Staff of the Truce Supervision Organization to use his good offices in an effort to bring about and negotiate a settlement between the owners of the affected land and the Palestine Land Development Company. If this effort to obtain a negotiated settlement fails, the sponsors of the draft resolution would then look to the parties to the dispute to use the machinery provided by the General Armistice Agreement to reach a settlement.

The Israel authorities would thus request the Chairman of the Mixed Armistice Commission to act under article V of this Agreement, and we could hope that he would be able to arrange matters in such a way as to enable the drainage project to go forward, while at the same time satisfying all reasonable claims by the owners of the lands affected by it. But it might be that the Mixed Armistice Commission would decide that the Chairman was not competent to arrange a settlement in default of the agreement of the Arab landowners concerned, and if that were the case, the sponsors of this resolution contemplate that the Government of Israel would make use, to which they are entitled, of the provisions of article VIII of the general Armistice Agreement and, if necessary, bring this matter before the Security Council under paragraph 4 of that article.

My colleagues and I are fully aware of the need to obtain a settlement of this question of the drainage operations as quickly as possible, and although we think that the machinery provided by the general Armistice Agreement, which both parties have pledged themselves to use, should be adopted, we do not believe that this need necessarily postpone a final decision for more than, at the most, a few weeks.

If I may summarize the intentions which the sponsors of this draft resolution had in mind in drafting paragraphs 3, 4 and 5, I should like to say that they hope that a negotiated settlement between the Palestine Land Development Company and the landowners might be quickly achieved, but that if in spite of the clearly expressed views of the Council to this effect no such negotiated settlement proved possible, then the procedures and the machinery provided by the general Armistice Agreement should be used in order to make a final settlement possible. I believe I may say on behalf of the sponsors of this draft resolution that if the Government of Israel did apply to the Council for relief, in accordance with the general Armistice Agreement, to enable it to acquire the land on suitable terms and to proceed with the drainage operations we should not—I speak for the sponsors—be unsympathetic to this approach; and it might well be that, as it could, the Security Council would then bestow upon General Riley the necessary authority to this end, provided, in his judgment, such action was desirable in the interest of the maintenance of international peace and security.

That is my endeavour to translate the view of the sponsors on that point.

Mr. Gross (United States of America). The representative of Israel referred in his statement to the apprehension of his Government that, as he said, the text of the draft resolution—I quote from his statement: "irrespective of the intention of its sponsors, confers a veto power upon the very interests which are implacably opposed to the drainage of the Huleh swamps. Since there will be no agreement, there will be no drainage."

That is a quotation from the statement made by the representative of Israel this afternoon. In associating the delegation of the United States with the statement made by Sir Gladwyn Jebb just now, I hope that the apprehension expressed by the representative of Israel will have been met. I should like to underline, on behalf of my delegation, the comment made on behalf of all the sponsors by Sir Gladwyn Jebb, that the sponsors of the resolution are all agreed that the Lake Huleh drainage project would undoubtedly promote the general welfare of the area and on general grounds they would like to see it put into effect as soon as possible.

BACKGROUND OF SECURITY COUNCIL RESOLUTION OF MAY 18, 1951, CONCERNING PALESTINE QUESTION

The four-power resolution sponsored by the United States, the United Kingdom, France and Turkey on the Palestine situation was adopted by the Security Council on May 18, 1951 by a vote of ten in favor, one against, and one abstention. It is important to note that this resolution was a United Nations action sponsored by four members of the Security Council and approved by a unanimous vote. It represents the considered judgment of the Council after detailed examination of the evidence submitted by the United Nations Truce Supervision Organization and after careful study of the statements of the representatives of the Governments of Syria and Israel.

Article Five of the Israel-Syrian Armistice Agreement of July 20, 1949 establishes a Demilitarized Zone from which the armed forces of both Syria and Israel are totally excluded and in which the United Nations Chairman of the Mixed Armistice Commission has certain special rights and responsibilities. These responsibilities include general supervision of the Demilitarized Zone and arrangements for the restoration and protection of normal civilian life both Arab and Israeli. Policing and administration in the area would be on a local basis without raising general questions of administration, jurisdiction, citizenship, and sovereignty. According to a letter of June 25, 1949, to the Governments of both Israel and Syria from Dr. Ralph Bunche, then Acting Mediator for Palestine, "The provision for the Demilitarized Zone in light of all circumstances is the most that can be reasonably expected in an Armistice Agreement by either party. Questions of permanent boundaries, territorial sovereignty, customs, trade relations, and the like must be dealt with in the ultimate peace settlement and not in the Armistice Agreement."

The immediate background of the present dispute is set forth in a report to the United Nations of March 12, 1951 from Major General William E. Riley, Chief of Staff of the United Nations Truce Supervision Organization, who is charged with the general supervision of the several Armistice Agreements between Israel and the neighboring Arab states. A copy of the section of the report on the operations of the Israel-Syrian Mixed Armistice Commission is enclosed.

In a memorandum to both Syria and Israel dated March 7, which is included in this report, General Riley gave as his opinion that the Syrians had no right to object to Israel operations in the Huleh Marsh area outside the Demilitarized Zone but "the Palestine Land Development Company should cease its operations in the Demilitarized Zone until such time as a mutual agreement is arranged through the Chairman between Syria and Israel for continuing this project." On March 10 the Chairman of the Mixed Armistice Commission requested the Israel authorities to cease operations in the Zone and on a number of subsequent occasions similar orders and requests were made by the Chairman of the Mixed Armistice Commission.

It is believed that the deterioration of security in the Demilitarized Zone after March 10 can be attributed to the fact that these requests of the United Nations Chairman went unheeded and to the ensuing inability of the Mixed Armistice Commission to deal with the issues at hand. From the middle of March to the beginning of May there were sporadic outbreaks of shooting in the Demilitarized Zone, the most serious occurring on April 4 and 5 and again at the beginning of May. On May 8 the Security Council adopted a resolution calling upon both parties to cease fire. Both governments accepted this resolution and the situation is reported generally peaceful in the area at the present time.

It is pointed out that the fundamental consideration of the four-power resolution is the strengthening of the Syrian-Israeli Mixed Armistice Commission and of the authority of the United Nations Chief of Staff in dealing with this particular situation in the Demilitarized Zone within the terms of the Armistice Agreement and with the machinery already established for that purpose. It was not the design of the sponsors of the resolution to bring about a permanent cessation of the drainage operations in the Huleh area which are, of course, dependent on the work in the Demilitarized Zone. On May 18, 1951, Sir Gladwyn Jebb, permanent United Nations representative of the United Kingdom, on behalf of the four sponsors, discussed this aspect of the resolution in the Security Council. A transcript of his remarks together with the immediately following statement of the United States representative in the Council are enclosed for your information. As of possible interest there is also enclosed a copy of the Security Council resolution of May 18, 1951.

It is hoped that the limited arrangements represented by the Armistice Agreements can be supplanted or expanded by additional agreements between Israel and the Arab states which will result in final peace settlements. Meanwhile, in default of more comprehensive settlements, these Armistice Agreements are the only, and therefore invaluable, instruments safeguarding peace in the area. As such they must be carefully preserved. It is the belief of the United States that it is only through scrupulous adherence by the parties to the Armistice Agreements and Security Council resolutions that a solid foundation can be laid for eventual permanent peace.

RESOLUTION ON THE PALESTINE QUESTION ADOPTED BY THE SECURITY COUNCIL
ON MAY 18, 1951

The Security Council,

Recalling its past resolutions of 15 July 1948, 11 August 1949, 17 November 1950 and 8 May 1951 relating to the armistice agreements between Israel and the neighboring Arab States and to the provisions contained therein concerning methods for maintaining the armistice and resolving disputes through the Mixed Armistice Commissions participated in by the parties to the Armistice Agreement:

Noting the complaints of Syria and Israel to the Security Council, statements in the Council of the representatives of Syria and Israel, the reports to the Secretary-General of the United Nations by the Chief of Staff and the Acting Chief of Staff of the United Nations Truce Supervision Organization for Palestine, and statements before the Council by the Chief of Staff of the United Nations Truce Supervision Organization for Palestine;

Noting that the Chief of Staff of the Truce Supervision Organization in a memorandum of 7 March 1951, and the Chairman of the Syrian-Israel Mixed Armistice Commission on a number of occasions have requested the Israel Delegation to the Mixed Armistice Commission to insure that the Palestine Land Development Company, Limited, is instructed to cease all operations in the demilitarized zone until such time as an agreement is arranged through the Chairman of the Mixed Armistice Commission for continuing this project, and,

Noting further that Article V of the General Armistice Agreement gives to the Chairman the responsibility for the general supervision of the demilitarized zone,

Endorses the requests of the Chief of Staff and the Chairman of the Mixed Armistice Commission on this matter and calls upon the Government of Israel to comply with them;

Declares that in order to promote the return of permanent peace in Palestine, is essential that the Governments of Israel and Syria observe faithfully the General Armistice Agreement of 20 July 1949;

Notes that under Article 7, paragraph 8, of the Armistice Agreement, where interpretation of the meaning of a particular provision of the agreement, other than the preamble and Articles I and II, is at issue, the Mixed Armistice Commission's interpretation shall prevail;

Considers that it is inconsistent with the objectives and intent of the Armistice Agreement to refuse to participate in meetings of the Mixed Armistice Commission or to fail to respect requests of the Chairman of the Mixed Armistice Commission as they relate to his obligations under Article V and calls upon the parties to be represented at all meetings called by the Chairman of the Commission and to respect such requests.

Calls upon the parties to give effect to the following excerpt cited by the Chief of Staff of the Truce Supervision Organization at the 542nd meeting of the Security Council on 25 April 1951, as being from the summary record of the Syria-Israel Armistice Conference of 3 July 1949, which was agreed to by the parties as an authoritative comment on Article V of the Syria-Israel Armistice Agreement:

"The question of civil administration in villages and settlements in the demilitarized zone is provided for, within the framework of an Armistice Agreement, in sub-paragraphs 5 (b) and 5 (f) of the draft article. Such civil administration, including policing, will be on a local basis, without raising general questions of administration, jurisdiction, citizenship, and sovereignty.

"Where Israeli civilians return to or remain in an Israeli village or settlement, the civil administration and policing of the village or settlement will be by Israelis. Similarly, where Arab civilians return to or remain in an Arab village, a local Arab administration and police unit will be authorized.

"As civilian life is gradually restored, administration will take shape on a local basis under the general supervision of the Chairman of the Mixed Armistice Commission.

"The Chairman of the Mixed Armistice Commission, in consultation and co-operation with the local communities, will be in a position to authorize all necessary arrangements for the restoration and protection of civilian life. He will not assume responsibility for direct administration of the zone."

Recalls to the Governments of Syria and Israel their obligations under Article II, paragraph 4 of the Charter of the United Nations and their commitments under the Armistice Agreement not to resort to military force and finds that: (A) Aerial action taken by the forces of the Government of Israel on 5 April 1951 and (B) any aggressive military action by either of the parties in or around the demilitarized zone, which further investigation by the Chief of Staff of the Truce Supervision Organization into the reports and complaints recently submitted to the Council may establish, constitute a violation of the cease-fire provision provided in the Security Council resolution of 15 July 1948 and are inconsistent with the terms of the Armistice Agreement and the obligations assumed under the Charter.

Noting the complaint with regard to the evacuation of Arab residents from the demilitarized zone: (A) decides that Arab civilians who have been removed from the demilitarized zone by the Government of Israel should be permitted to return forthwith to their homes and that the Mixed Armistice Commission should supervise their return and rehabilitation in a manner to be determined by the Commission; and (B) holds that no action involving the transfer of persons across international frontiers, armistice lines or within the demilitarized zone should be undertaken without prior decision of the Chairman of the Mixed Armistice Commission.

Noting with concern the refusal on a number of occasions to permit observers and officials of the Truce Supervision Organization to enter localities and areas which were subjects of complaints in order to perform their legitimate functions, considers that the parties should permit such entry at all times whenever this is required, to enable the Truce Supervision Organization to fulfil its functions, and should render every facility which may be requested by the Chairman of the Mixed Armistice Commission for this purpose.

Reminds the parties of their obligations under the Charter of the United Nations to settle their international disputes by peaceful means in such manner that international peace and security are not endangered and expresses its concern at the failure of the Governments of Israel and Syria to achieve progress pursuant to their commitments under the Armistice Agreement to promote the return to permanent peace in Palestine.

Directs the Chief of Staff of the Truce Supervision Organization to take the necessary steps to give effect to this resolution for the purpose of restoring peace in the area and authorizes him to take such measures to restore peace in the area and to make such representations to the Governments of Israel and Syria as he may deem necessary.

Calls upon the Chief of Staff of the Truce Supervision Organization to report to the Security Council on compliance given to this resolution.

Requests the Secretary-General to furnish such additional personnel and assistance as the Chief of Staff of the Truce Supervision Organization may request in carrying out this resolution and the Council's resolution of 8 May 1951 and 17 November 1950.

EXCERPT OF A REPORT DATED 12 MARCH 1951 FROM THE CHIEF OF STAFF OF THE TRUCE SUPERVISION ORGANIZATION TO THE SECRETARY GENERAL OF THE UNITED NATIONS ON THE STATUS OF THE OPERATIONS OF THE MIXED ARMISTICE COMMISSIONS

IV. SYRIAN-ISRAEL MIXED ARMISTICE COMMISSION

1. The main concern of the Syrian-Israel Mixed Armistice Commission has been the administration of demilitarized zones and the problems arising therefrom. The Israel project for straightening and deepening the bed of the Jordan River at the southern end of Lake Hula has led to complaints to the Syrian-Israel Mixed Armistice Commission by the Syrian delegation. The aim of this project is to lower the water level of Lake Hula and to dry the marshes north thereof. The Syrian delegation has contended that the carrying out of this project would remove a natural military obstacle, in contravention of article II, paragraph 1 of the Syrian-Israel General Armistice Agreement, which states:

"The principle that no military or political advantage should be gained under the truce ordered by the Security Council is recognized."

The Syrian delegation further held that the work undertaken by the Israel authorities prevented many Arab residents of the demilitarized zone from resuming normal civilian life.

2. Under the terms of article V of the Syrian-Israel General Armistice Agreement the Syrian delegation is required to address its complaint concerning the demilitarized zone to the United Nations Chairman, and likewise the United Nations Chairman can decide whether the work being carried out by the Israel authorities in the demilitarized zone could be permitted under the term of the General Armistice Agreement. The Syrian complaint was made to the Syrian-Israel Mixed Armistice Commission on 14 February 1951. The Israel delegation, however, raised no objection to the complaint being considered by the Commission. Instead, at the formal meeting of the Syrian-Israel Mixed Armistice Commission on 21 February 1951, both delegations agreed mutually to seek the opinion of the United Nations Chief of Staff on the question as to whether or not the work undertaken by the Israel authorities constituted a contravention of Article II (military advantage) of the General Armistice Agreement.

3. At the meeting of the Syrian-Israel Mixed Armistice Commission on 7 March 1951, the United Nations Chief of Staff submitted a memorandum to the Chairman of the Syrian-Israel Mixed Armistice Commission which was circulated to the delegations. In submitting the memorandum, the United Nations Chief of Staff took into consideration the fact that the Israel delegation had raised no objection to the Syrian complaint being discussed in the Syrian-Israel Mixed Armistice Commission. This memorandum read as follows:

"A. In accordance with the desires of both delegations of the Syrian-Israel Mixed Armistice Commission as expressed at the 58th meeting held on 21 February 1951, the views of the Chief of Staff are transmitted with respect to the Lake Hula Concession project now being undertaken.

"a. Military Advantage

It can be argued that in the draining of Lake Hula marshes, any military advantage which will accrue to one Party shall be equally enjoyed by the other Party. It should be pointed out that the terrain along the demarcation line and east of the international border between Syria and Palestine in the vicinity of the Hula marshes is in itself a natural obstacle to the movement of military forces. These topographical features and extremely high ground present a dominating military terrain feature from which the Syrians can control the ground which is now marsh land. The argument of Syria that in drawing up the Armistice Agreement a demilitarized zone was created where no natural obstacles existed, is not valid. Article V, paragraph 3, states in part:

"The Armistice Demarcation Line shall follow a line midway between the existing truce lines, as certified by the United Nations Truce Supervision Organization for the Israel and Syrian forces. Where the existing truce lines run along the international boundary between Syria and Palestine, the Armistice Demarcation Line shall follow the boundary line."

Article V, paragraph 5 (a) states in part:

"Where the Armistice Demarcation Line does not correspond to the international boundary between Syria and Palestine, the area between the Armistice Demarcation Line and the boundary, pending final territorial settlement between the Parties, shall be established as a Demilitarized Zone."

From these articles, it is conclusive that a demilitarized zone was created where the truce lines did not correspond to the international border between Syria and Palestine, and not in locations where no natural obstacles prevented the movement of armed forces.

It is concluded that:

- I. in draining Lake Hula, the Israelis will not enjoy any military advantages not equally applicable to the Syrians;
- II. the demilitarized zone was not created where natural obstacles to the movement of armed forces were non-existent.

"b. Civilian Works

In draining the Hula marshes, the Israelis are performing works of a civilian nature for the purpose of reclaiming land for cultivation. This work affects land in the territory under Israel control. Therefore, Syria cannot on any grounds offer an objection to this type of work,

any more than could Israel protest against projects of a similar nature being performed by Syria in territory under its control. It must be further pointed out that the draining of these marshes will be equally advantageous to Syria from a sanitary point of view. In completing this project, Israel will have contributed to the malaria control of the area.

"c. Construction of Dam

The construction of a dam at the south end of Lake Hula to lessen the flow into the Jordan River has resulted in a slight rise in the level of the lake with some flooding of Arab lands in the vicinity of Ein Tinna. While this flooding approximates that which would occur during a normal rainy season, nevertheless this water will not recede in due course. This flooding, therefore, is an obstacle in the return to normal civilian life of the inhabitants of the demilitarized zone. This is a violation of article V, paragraph 2, of the Armistice Agreement.

"d. Work Within the Demilitarized Zone

At the present time, Israelis are performing work within the central sector of the demilitarized zone preparatory to straightening and deepening the Jordan River. A road has been cut through Arab lands, against the will of land owners. The Israelis contend that they are exercising rights under a concession originally granted by the Imperial Ottoman Government in 1914 and transferred to the Palestine Land Development Company Limited in 1931. Whereas a Mandate Government Ordinance in 1938 gave undisturbed rights to the concessionaires in the areas known as the 'Unreserved Concession Area', it does not follow that these rights granted under the Mandate Government, which no longer exists, still hold good.

The demilitarized zone created by the Armistice Agreement was defined with a view toward separating the armed forces of both Parties while providing for the *gradual restoration of normal civilian life in the area of the demilitarized zone*. The Chairman of the Mixed Armistice Commission was charged with the responsibility of ensuring that the provisions of the Armistice Agreement with respect to the demilitarized zone were implemented. It follows that neither Party to the Armistice Agreement therefore enjoys rights of sovereignty within the demilitarized zone. Any laws, regulations or ordinances in force prior to the Armistice Agreement which affected any areas included in the demilitarized zone are null and void. Therefore, the concessionaires do not enjoy the right to expropriate lands or buildings, to occupy lands temporarily or to force the owners of lands to accept compensation. There is no law of expropriation within the demilitarized zone. Any occupancy of lands either temporary or permanent, without the full consent of the land owners is a hindrance to the restoration of normal civilian life in the demilitarized zone, and a violation of article V, paragraph 2, of the Armistice Agreement.

"B. Until such time as a mutual agreement is reached between the Governments of Syria and Israel, with respect to the work now being conducted in the demilitarized zone in connection with the drainage of the Lake Hula marshes, the Palestine Land Development Company or any successors are, in the opinion of the Chief of Staff, not justified in continuing such work.

"C. In the opinion of the Chief of Staff, the Palestine Land Development Company Limited should be instructed forthwith to cease all operations within the demilitarized zone, until such time as a mutual agreement is arranged through the Chairman between Syria and Israel for continuing this project.

(Sgd.) W. E. RILEY,
Major General, USMC."

Note: The United Nations Chief of Staff now believes that his memorandum should have stated that any laws, regulations or ordinances in force prior to the Armistice Agreement which affected any areas included in the demilitarized zone, "are held in abeyance", instead of "are null and void".

4. At the meeting of 7 March 1951, the Israel delegation contended that the Syrian-Israel Mixed Armistice Commission had invited the United Nations Chief of Staff to express an opinion whether the work being done by Israel was a contravention of article II of the General Armistice Agreement or not. It was not

In order for him to go outside the scope of the request as he had done in his memorandum. The Israel delegation charged the United Nations Chief of Staff with assuming prerogatives in the demilitarized zones which were not given to him under the General Armistice Agreement. The Israel delegation maintained that Israel was determined to uphold her sovereignty in the demilitarized zone except insofar as it was limited by the terms of the General Armistice Agreement.

6. The Syrian delegation stressed that it would have been improper for the United Nations Chief of Staff to express an opinion on one aspect of the problem only. He was within his rights to advise the Syrian-Israel Mixed Armistice Commission on all aspects of the problem. The Syrian delegation called on the Commission to vote on the Syrian delegation's complaint. However, it was mutually agreed to postpone the vote for twenty-four hours to permit the Israel delegation to study further the memorandum from the United Nations Chief of Staff and the position taken by the Syrian delegation.

6. Three hours before the time set for the meeting on 8 March 1951, the Chairman of the Syrian-Israel Mixed Armistice Commission received the following message from the Israel deputy Chief of Staff:

"I am instructed by my Government to inform you that, having heard the report of yesterday's meeting of the Syrian-Israel Mixed Armistice Commission, it considers that the questions raised and the memorandum submitted by General Riley calls for careful consideration. I have, therefore, instructed our delegation not to attend tonight's meeting of the Syrian-Israel Mixed Armistice Commission, which will have to be postponed."

The message added the Israel delegation would inform the Chairman of the date on which it could take part in a meeting of the Syrian-Israel Mixed Armistice Commission.

7. This message was communicated to the Syrian delegation which replied on the same day as follows:

"a. Since the meeting of the Syrian-Israel Mixed Armistice Commission set for 8 March 1951 was mutually agreed upon, the postponement requested by the Israel delegation constitutes a very dangerous precedent. This action gives the important problem under discussion a sense of gravity which might impede the smooth working of the Syrian-Israel Mixed Armistice Commission in the future.

"b. The Syrian delegation protests against the delay caused by the Israel delegation in the Syrian-Israel Mixed Armistice Commission taking a decision on the question of Lake Hula. The Syrian delegation requests the intervention of the United Nations Chief of Staff, Truce Supervision Organization, in order that the Israel work now in progress in the demilitarized zone be stopped immediately."

8. On 10 March 1951, the Chairman of the Syrian-Israel Mixed Armistice Commission requested the Israel delegation to ensure that instructions are issued in order that Israel works on Arab-owned lands in the demilitarized zone be stopped until action has been taken by the Syrian-Israel Mixed Armistice Commission. To date, the Israel authorities have ignored the request of the Chairman to cease work on this project within the demilitarized zone.

9. Paragraphs 1 to 8 refer to matters which occurred after the ninety-day period from 17 November to 17 February. These details are included in this report in view of the importance attached to the Lake Hula problem by the Israel and Syrian delegations.

W. E. RILEY,

Major General, U. S. Marine Corps,
United Nations Chief of Staff of the Truce Supervision Organization.

JERUSALEM, 19 March 1951.

THE MUTUAL SECURITY PROGRAM

SATURDAY, JULY 21, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding. Chairman RICHARDS. The committee will come to order, please.

Assistant Secretary of State McGhee will continue his testimony. Mr. McGhee, I want to apologize for not being here when you and the admiral finished yesterday, but you know what the situation was on the floor of the House at that time.

STATEMENT OF HON. GEORGE C. MCGHEE, ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN, SOUTH ASIAN, AND AFRICAN AFFAIRS

Mr. MCGHEE. Yes, sir.

Chairman RICHARDS. I believe we were continuing with the questioning. Are there any members who have further questions to ask of the Assistant Secretary? If so, do not hesitate to ask them. Mr. Smith.

(Off-the-record discussion between Mr. Smith and Mr. McGhee followed at this point. The following was submitted for inclusion in the record:)

Industry and labor projects for fiscal 1952 Arab States and Israel

(In thousands)

	United States cost	Local cost	Grand total
Egypt:			
Experts (7) and trainees (19) for social security administration.....	\$166	\$70	\$236
Experts (2) and trainees (8) for labor welfare.....	43	42	90
Experts (6) for surveys canning, citrus fruit and refrigeration industries, and grain silos.....	43	43	96
Total Egypt.....	262	160	422
Iraq:			
Experts (5), trainees (4), and testing equipment for tanneries, fruit canning, textiles, construction, and chemistry.....	150	100	250
Experts (4) and trainees (3) for social security, labor welfare, and village services.....	75	30	115
Total Iraq.....	225	130	365
Jordan:			
Experts (4) for industrial development staff of Ministry of Agriculture.....	43	32	80
Experts (3) and equipment for survey of phosphate fertilizer and ground phosphate rock production.....	100	100	200
Experts (3) and trainees (13) for social welfare.....	100	25	125
Total Jordan.....	243	157	406

Industry and labor projects for fiscal 1952 Arab States and Israel—Continued

(In thousands)

	United States cost	Local cost	Grand total
Lebanon: Experts (6), trainees (6), equipment for community development, including alum areas	\$115	\$25	\$140
Saudi Arabia			
Syria:			
Experts (10), trainees (15), and training material for social security administration	200	50	250
Experts (6), trainees (7), and cement plant (CAF basis)	2,500	2,000	4,500
Total Syria	2,700	2,050	4,750
Yemen			
Total Arab States	3,560	2,522	6,082
Israel:			
Experts (2) and trainees (4) for vocational training	41	26	70
Experts (2) and supplies for survey of bituminous limestone	74	26	100
50,000-kilowatt generating unit with auxiliary equipment and transmission lines	4,600	2,150	6,750
Experts (6), trainees (20), and training materials for social and community welfare programs	200	110	310
Total Israel	4,915	2,312	7,220
Total Israel and Arab States	8,475	4,834	13,312

Mr. SMITH. What I would like to get is what money we have advanced by way of loan or grant to Israel and to the Arab States.

Have we given anything to the Arab States at all?

Mr. MCGHEE. No, sir; only under the point 4 program.

Mr. SMITH. What does that amount to as of this day?

(The following information is supplied for the record in answer to Mr. Smith's question.)

Summary of point 4 authorizations in fiscal 1951 to near eastern and independent African countries

Arab States:	
Egypt	\$146,964
Iraq	28,551
Jordan	138,598
Lebanon	112,868
Saudi Arabia	97,300
Syria	88,140
Yemen	
Total Arab States	612,421
Israel	98,747
Iran	1,646,017
Independent Africa:	
Ethiopia and Eritrea	50,000
Liberia	838,820
Libya	166,850
Total Independent Africa	1,045,670
Regional projects	628,806
Grand total	4,031,661

Authorizations

EGYPT

[General agreement: May 5, 1951. TCO—Frederick Sacksted et]

Projects	Amount	Technicians	
		Authorized	In field
Rural improvement program—rural centers and related public services, request No. 1.....	\$12,722	3	2
Housing—building materials development, contract with Arthur D. Little, Inc.....	20,000	Contract
Agriculture.....	100	4	0
Training grants for 32 (mechanical engineering, 1; social services, 16; geological survey, 2; mining and metallurgy, 2; government accounting, 1; and agriculture 10).....	72,044	Trainees
Leader grants for 24.....	42,098
Total.....	146,964	7	2

IRAQ

[General agreement: Signed Apr. 10, 1951. TCO—Authorized]

Member development board—general economic development.....	\$9,190	1	1
Maternal and child health expert.....	4,771	1	0
Training grant in engineering.....	2,246
Leader grants for 4.....	12,349
Total.....	28,556	2	1

JORDAN

[General Agreement: Signed Feb. 27, 1951. TCO—None authorized]

Village water supply—contract (and equipment procurement) for survey and for cleaning, repairing, and building of cisterns and reservoirs.....	\$127,340	Contract
Central Government laboratory, establishment of and assignment of technicians to.....	(?)
Training grants for 2 in public health.....	8,258
Leader grant for 1.....	3,000
Total.....	138,598

LEBANON

[General agreement: Signed May 29, 1951. TCO—None authorized]

River valley development—Mission to investigate possibility and means of developing Litani River Basin, request No. 1.....	\$45,000	12	10
Agricultural development—Extension, education, production and marketing, request No. 3.....	11,000	8	0
Training grants in agriculture for 13, request No. 4.....	47,240	(10)
Training grants in civil aviation for 6, request No. 5.....	10,100	(10)
Leader grants for 3.....	8,928
Total.....	122,268	20	10

¹ Originally authorized \$130,000; reduced to \$12,722 as amount to be obligated by end of fiscal year.
² \$34,025 for laboratory and \$416 for technician authorized but not obligated by end of fiscal year, hence withdrawn.

³ Reduced in June from \$66,400.

⁴ Initial phase completed; all but 2 technicians returning United States end of June.

⁵ Reduced in June from \$78,750.

⁶ Trainees.

THE MUTUAL SECURITY PROGRAM

Authorizations—Continued

SAUDI ARABIA

(General agreement: Signed Jan. 17, 1951. TCO—None authorized)

Projects	Amount	Technicians	
		Authorized	In field
Ground water survey—country-wide.....	\$34,100	Contract	2
Supplemental aerial survey on water and agricultural potential.....	55,000		
Government finance—services of 3 advisers to Ministry of Finance on customs, budget and accounting, currency and coinage.....	(1)		
Leader grants for 2.....	6,200	5	0
Total.....	97,300	7	2

SYRIA

(General Agreement: Not signed. TCO—Authorized)

Rural improvement—contract with Near East Foundation.....	\$88,140		
---	----------	--	--

YEMEN

(General agreement: Under negotiation. TCO—None authorized)

None.

ISRAEL

(General Agreement: Signed Feb. 26, 1951. TCO—Authorized)

Contract with Unitarian Service Committee, Inc.: Health education.....	\$35,000	Contract	
One road construction expert, request No. 2.....	(7)		
Survey on development of potash, limestone, etc.....	4,950	Trainees	1
Training grants for 29 people.....	48,845		
Leader grants for 4.....	11,832		
Total.....	98,747	1	1

IRAN

(General agreement: None contemplated.⁸ TCO—Authorized; Jack Neale, acting (in Tehran))

Labor—Expert in apprenticeship training.....	\$12,500	Contract	1
Near East Foundation grant for rural development.....	297,000		
Road development.....	(10)	Contract	
Locust program.....	243,000		
Malaria campaign.....	310,000	Supplies	7
Rural improvement—Demonstration and training ¹¹	637,207		
Training grants for 19 (agriculture, 7; public health, 10; meteorology, 1; industry, 1).....	82,310	Trainees	
Leader grants for 20.....	64,000		
Total.....	1,648,017	28	8

⁸ Funds withdrawn.⁹ No funds required this fiscal year.¹⁰ Agriculture, 3; electrical engineer, 1; industrial training, 3; minerals and industry, 6; public health, 4; railroads, 1; recreation, 1; and shipping, 5 (total 29).¹¹ First project agreement signed Oct. 19, 1950.¹² Funds withdrawn.¹³ Personnel involved are authorized under "Rural Improvement project."¹⁴ Subproject authorizations issued to NEA (\$286,300), Department of Agriculture (\$60,000), USPHS (\$51,307), Brigham Young University (\$68,000), University of Utah (\$65,000), and Utah State Agricultural College (\$100,000).

ERITREA

(General agreement: Signed June 15, 1951. TCO—None contemplated)

Agricultural extension and demonstration—service grant (Eritrean-American Technical Assistance Service), \$50,000.

Authorizations—Continued

LIBERIA

General agreement: Signed Dec. 22, 1950 (also agreement on Joint Commission Dec. 22, 1950). TCO—Reed Hill (in Monrovia)

Projects	Amount	Technicians	
		Authorized	In field
A general economic development project for Liberia was approved; authorizations for components include the following:			
FSA:			
Public health mission	\$127,100	19	7
Regional research program on tropical diseases in conjunction with Liberian Institute of the American Foundation for Tropical Medicine, Inc.	50,000	3	2
Educational consultant	3,200	1	1
Education: Grant to Booker Washington Institute of Liberia, Inc.	40,000	Contract	
USDA: Agricultural program	44,000		
Coast and Geodetic Survey: Preliminary survey	1,500	13	3
Preliminary work on aerial mapping for proposed survey	1,000	(1)	Completed (1)
Housing: 2 technicians	(1)	2	0
Hydroelectric power and port development	(1)	2	0
Contract for aerial photography and mapping with Aero Survey Corp., Philadelphia	150,000	Contract	
Program operations, supplies, equipment, etc. (includes members of United States Economics Mission)	295,000		
Training grants for 12 in public health (4 in United States and 8 in Africa)	15,000	13	7
Leader grants for 4:	11,420	Trainees	
Total	838,820	54	20

LIBYA

(General agreement: Signed June 15, 1951. TCO—Authorized (Consul General Lynch, Acting))

Water Resources Survey in Tripolitania	\$4,100	1	1
Grant to Libyan-American Technical Assistant Service (Agricultural extension, demonstration, and training)	150,000
Leader grant for 1	2,750
Total	156,850	1	1

NEAR EAST REGIONAL PROJECTS

Federal Security—Public Health Service to review needs and arrange terms of contract with American University of Beirut	\$4,506	1	1
Contract for regional training program in public health, public administration, economics, and agriculture at American University of Beirut	624,000	Contract
Regional labor consultant	300	1
Total	628,806	2	1

¹¹ Work to be done in United States.

¹² Funds withdrawn in June.

Mr. McGHEE. Mr. Smith, previously we have made no United States loans to the Arab states except for a small Export-Import Bank loan to Egypt, \$7½ million, and a loan to Saudi Arabia. There was one loan to Saudi Arabia of \$15 million, I believe, which was completed and a new loan to Saudi Arabia which has yet to be drawn upon.

We have made loans aggregating \$135 million to Israel, of which \$85 million has so far been spent.

Mrs. BOLTON. You say the loan to Saudi Arabia is finished. Has it been paid back?

Mr. McGHEE. No; it has been drawn down, but not paid back.

Mrs. BOLTON. There is a self-liquidating process?

Mr. McGHEE. Yes. In that case the oil royalties were used as the collateral for the loan. That was not true of the second loan to Saudi Arabia.

Mrs. BOLTON. What is the second loan?

Mr. McGHEE. We have negotiated a new loan. It is a straight Export-Import Bank loan.

Mr. SMITH. Do I understand the \$135 million to Israel has been in the nature of a loan?

Mr. McGHEE. Yes, sir. It is a normal Export-Import Bank loan for agricultural and other development purposes.

Mr. Chairman, I have some data on the status of Export-Import Bank and International Bank for Reconstruction and Development loans which I should like to have placed in the record.

Chairman RICHARDS. Without objection, the material will be included in the record.

(The material referred to is as follows:)

Banks loans (July 1, 1946-Dec. 31, 1950) Near East and Independent Countries of Northern Africa

(Millions United States dollars)

	Net loaned ¹	Disbursed	Not yet disbursed	Principal outstanding on loans ²
Iran:				
Eximbank.....	23.0	0	23.0	0
IBRD.....	0	0	0	0
Iraq:				
Eximbank.....	0	0	0	0
IBRD.....	12.8	0	12.8	0
Israel:				
Eximbank.....	135	55.7	79.3	55.7
IBRD.....	0	0	0	0
Saudi Arabia:				
Eximbank.....	29	12.3	16.7	9.3
IBRD.....	0	0	0	0.0
Egypt:				
Eximbank.....	7.25	7.25	0	7.25
IBRD.....	0	0	0	0
Ethiopia:				
Eximbank.....	3	2.5	0.5	2.5
IBRD.....	7	0	7	0
Liberia:				
Eximbank.....	4	3.8	0.2	3.8
IBRD.....	0	0	0	0
Total Near East and independent countries of northern Africa:				
Eximbank.....	203.25	81.55	121.7	78.55
IBRD.....	12.8	0	12.8	0

¹ Net borrowed represents the amount of total credits authorized less the total amounts of the credits which were either canceled or were not used before the expiration date of availability.

² In reality, as soon as a loan becomes effective IBRD considers the total amount of the loan as "Loans Outstanding Held by the Bank" regardless of the undisbursed balance of the loan. However the figure used here is the total amount of the loan disbursed less any repayments on principal.

(Off the record discussion between Mr. Smith and Mr. McGhee followed at this point.)

Chairman RICHARDS. Are there other questions? Mr. Secretary, if there are any particular points that you think you should touch on, please do so. We will be glad to have you give us any additional information that you feel we should have before we get to the admiral.

(Discussion off the record.)

Chairman RICHARDS. Mr. Secretary, when Mr. Nathan was up here I asked that very question. He was talking about the great

number of refugees they had to absorb. How many has Israel had to absorb?

Mr. McGHEE. Mr. Chairman, the total number of Jewish people that have come to Israel, since the Balfour Declaration of 1917, is about 1,200,000. The total number that came last year is around 200,000.

Chairman RICHARDS. Could you class all those as refugees that could not be taken care of somewhere else?

Mr. McGHEE. This is, of course, a complicated question. Many of these people come from countries where they have lived for 1,000 or 2,000 years as a minority group. They may have received discriminatory treatment there from the majority groups. In the light of the Jewish aspirations this transfer to Israel is a desirable thing.

It is true, of course, that many of them have come from situations that have been relatively static for a number of years. In some cases there may not be the sense of urgency that existed and still exists in the case of refugees from Europe. I think the refugees from Eastern Europe have been considered to represent a particularly urgent case, because it has been felt that the doors were closing. The Jewish people, who were being discriminated against, were thought to have little time left during which they could get out.

Chairman RICHARDS. The sense of some of that testimony was that there was an obligation on somebody, possibly the United States, due to the fact that we followed the custom of having to contribute to them if they had been somewhere else.

I asked if you would not have to subtract from that obligation the displaced refugees who had to go somewhere else.

How many displaced were there?

Mr. McGHEE. There are 800,000 displaced persons who have entered Israel since World War II. The number of Arabs displaced is almost precisely the number of Jewish people who have entered Israel since the war.

Chairman RICHARDS. That is the group that we are contributing the \$50 million to in just 1 year?

Mr. McGHEE. That is correct. Of course, Mr. Chairman, we have contributed very generously to the IRO. We have also accepted into this country a large number of people of refugee status.

Mr. BURLISON. May I ask a question right there?

Chairman RICHARDS. Yes.

(Discussion off the record.)

Chairman RICHARDS. Are there any other questions?

Mrs. BOLTON. I have a number, Mr. Chairman.

Chairman RICHARDS. We will be delighted to have your questions.

Mrs. BOLTON. On the water situation, Mr. Secretary, which is so important to the life of the entire region. What is happening to the over-all major plan which the Israelis seem to take as a matter of course. What of the Tigris-Euphrates project. Can that not be expedited a little. And what of the Arab Development Co. which I think is in Palestine, is it not?

Mr. McGHEE. The Musa Alami project?

Mrs. BOLTON. Yes, Mr. Secretary. Over here we are always hearing that the Arabs do not know how to farm, when in reality they have farmed longer than the Israelis and are by nature agrarian, probably

having forgotten more than the Jews, especially those who have come in the last years, have ever known.

This particular project is wholly Arab. They are putting in their irrigation. They have a first cotton crop. They have tobacco, vegetables, fruit, and so forth.

The money for assistance to these courageous people should be found. The Arabs do not have an Arab constituency over here to send it millions of dollars.

Chairman RICHARDS. Will you yield for a question?

Mrs. BOLTON. Yes.

Chairman RICHARDS. I do not get it. You have been over there and I have not. Do you mean there is a dam project?

Mrs. BOLTON. Yes.

Chairman RICHARDS. You mean it will cut off the natural flow?

Mrs. BOLTON. Yes, Mr. Chairman. It is very simple for the Secretary to give us that because it has been in the plans of the Israelis for a great many years and the Zionist group.

The original plan, as I saw it laid out on a table like this in a raised map, would take the water of the Litani River up in Lebanon and take it down here.

Chairman RICHARDS. Will it do that, Mr. Secretary?

Mr. McGEHEE. Mr. Chairman, there was a plan devised by Mr. Hayes, who is one of our outstanding water experts, and elaborated on by Mr. Lowdermilk, one of our greatest conservationists, which involved a rationale of the use of the water of this entire area.

This plan was formulated in the period before partition, at which time I assume it was considered possible that cooperation could be achieved between the states of the area in the implementation of an over-all plan for the use of the water resources of the area.

The State of Israel does not extend to the Litani River, and there is no way in which Israel could utilize the waters of the Litani River except in agreement with Lebanon. I think the existence of the plan does not in any way indicate that Lebanon is in danger.

Lebanon is proceeding under point 4 with a Litani power survey. The Lebanese have made clear their wish to develop this river for the benefit of the Lebanese.

Mr. Hayes and Mr. Lowdermilk have also projected a very ambitious water development project for the Jordan Valley. It involves a cost of a quarter of a billion dollars. It involves cooperation on both sides, which would not now be possible. You could not get such cooperation between Jordan, Syria, and Israel.

I think you will have to consider that the Jordan River plan is in abeyance because of this political impasse.

The Ghab swamp project is different. No one questions the desirability of that project.

As for the Huleh incident, that is a complex matter under consideration by the United Nations. The Security Council's resolution did not look to stopping the project. The Council stated that the rights of the Arab landowners should be taken into consideration, and that the Chairman of the Mixed Armistice Commission should arrange suitable compensation for their land.

When the Chairman of the Armistice Commission can make suitable arrangements with the landowners, it is assumed that the

Israelis will continue the draining of the swamp, which will bring into cultivation about 15,000 acres.

Mrs. BOLTON. May I interrupt you at that point? There is a great deal of suspicion on the part of the Arabs, which may be justified or not, in the matter of that water.

They do not consider it simply "a matter of seven acres of land" as the Secretary does. It is a matter of a whole program and an attitude of mind.

Mr. MCGHEE. The Arabs feel that it will change the strategic character of the territory at the frontier and give the Israelis a military advantage.

Mrs. BOLTON. I am in complete agreement with you, and with everybody who is considering this difficult situation, that the matter of cooperation is one of the most important things that could possibly be worked out.

I confess I am not very optimistic about it. And I think any too great urge to force cooperation upon the Arabs might well start something that would be hard to control.

Mr. Secretary, how socialistic is the set-up in Israel? The farms that we saw out there are set up as purely communal, not Communist farms.

The elected committee arranges the work daily for everybody. Nobody does as he pleases. He does as he is told. When we were there the children were in one area; the grown people were in another, and so on. There was no money used at all. Is that being continued?

Mr. MCGHEE. Yes, indeed. The kibbutzim are being expanded in numbers.

Mrs. BOLTON. When we left this side we understood that this was to be a religious movement. When we got there we inquired about the temples and inquired about the rabbis, and there were not any.

We were told in words of one syllable that we should understand them better than that. It was purely a commercial venture.

Mr. MCGHEE. That is an economic-social basis.

Mrs. BOLTON. I think there has been a good deal of confusion in some of the minds of our church people in the matter.

Mr. MCGHEE. You raise the question of the Israeli Government. Mr. Ben Gurion's party is, I believe, roughly the equivalent of the Labor Party in England. I think there is a strong analogy between them.

Mr. Ben Gurion's party does not have a majority, but governs with a coalition.

Mrs. BOLTON. How much representation do the Revisionists have in the Government?

Mr. MCGHEE. I should know that. I do not, frankly. We will get the information for you.

Mrs. BOLTON. Would you do that?

Mr. MCGHEE. Yes.

(The following information is supplied for the record:)

REVISIONISTS IN THE ISRAELI GOVERNMENT

Revisionists in the Israeli Government.—In the last general election the Heruth Party, successors to the Revisionists, received a total of 49,000 votes, or 11.3 percent of the electorate and gained a total of 14 members who sit in the present parliament. It should be noted that new general elections will be held the last of this month.

In domestic policy the Heruth Party favors private enterprise and is generally classed on the extreme right. Militarily, they favor an expansion of Israel's present borders and they specifically include the present state of Jordan in their irredentist claims.

In the past Revisionist leaders have included in the prospective program a Jewish territory extending from the Mediterranean to the Euphrates.

Mrs. BOLTON. I would like to know also what is the status of the Revisionists?

Mr. VORYS. What are they?

Mrs. BOLTON. They are a group that came down into Palestine from Europe under Jabotinsky. They were really the Irgun and were violently against partition. Indeed, they have not accepted it and say they never will. They want everything from the Tigris to the Red Sea.

Mr. VORYS. Will the gentlewoman yield?

Mrs. BOLTON. Yes.

Mr. VORYS. Does the word "Revisionists" mean revision of the partition; is that it?

Mrs. BOLTON. I could not tell you.

Mr. McGHEE. I only know there is a group which has semi-imperialist views. It is a minority group.

Mrs. BOLTON. They are a violent group and they are a willful group at certain times. I have understood they have never been in the good graces of the Zionists over here. They were given no opportunities among the Zionists, and were shut off from contacts at every point.

I have some questions on the refugees, Mr. McGhee, which I thought perhaps I had better hand in to you so that we might have details on them and not attempt to go into it in this fashion.

Mrs. BOLTON. Thank you, Mr. Chairman, for your patience.

Chairman RICHARDS. Thank you, Mrs. Bolton. Are there any other questions?

(Discussion off the record.)

Chairman RICHARDS. Yes, but the difference is you have an area here that has been arrayed against the Christian area for hundreds and hundreds of years. So far as those people are concerned, they could easily shrug their shoulders and say "We have been going along this way for 2,000 years. We are going to go along and do the same." You cannot do there what we are doing in Europe, and we are not doing it in Europe.

Mr. VORYS. Could we do in that area what we are not doing for Europe?

Chairman RICHARDS. No.

Mr. VORYS. We do not have any obligation to go in there; no tradition or obligation.

Chairman RICHARDS. We have an obligation to protect the security of the United States, and that is the issue, as to whether or not we go there on that basis.

Mr. REECE. Do you not think, Mr. Chairman, that the failure of the free countries to show a united front probably has had far-reaching effects in the Far East? It would seem to me as if there is a very considerable probability that because England and the other countries showed a disposition to be easy with Red China, they gave Russia a justifiable basis for feeling that if the Communists moved into that conflict, that they might split us. I have serious doubts whether the Communists would have ever gotten into this thing in the Far East

if England and India, particularly, had stood up and toed the chalk line.

Chairman RICHARDS. I think you have something there.

Mr. McGHEE. Mr. Chairman, may I make a comment? I would like to comment on Mr. Vory's point about conditions of aid.

Experience in the Southeast Asian countries in the STEM programs, I think, has been that with countries who are so self-conscious about their newly won independence, you cannot exact all the conditions we were able to in Europe. Of course, Mr. Vorys said we did not exact it in Europe.

Mr. VORYS. Will the gentleman yield?

Mr. McGHEE. Yes, sir.

Mr. VORYS. That is certainly a dandy dilemma you bring up, that with regard to old countries they have such old rivalries and prejudices that you cannot exact any conditions there; but for new countries they are so self-conscious that we cannot do anything there either. So, therefore, all we can do is piddle our money and resources away and hope.

Go ahead.

Chairman RICHARDS. I want to state right here that this debate is mighty fine, and we are going to have some more of it later.

We have a witness with us, Admiral Duncan, who came up here and left his ship yesterday, and left it again this morning. We would like to hear him.

I do not want to string this testimony out too much. I thought this was winding up. We are enjoying the factual and very informative testimony of the Secretary.

Mr. McGHEE. May I finish this one point, Mr. Chairman? I believe Mr. Porter testified before your committee earlier that when he did not think the Greeks were complying with certain reasonable conditions he took away \$30,000,000. In my judgment the real way to get cooperation from the recipient country is to put in a good administrator and, if the conditions he thinks proper are not met, for him to hold up the money.

But, to insist on elaborate conditions in advance, with new States that are so sensitive, would work against the objectives we seek.

Chairman RICHARDS. I would like to make the statement that Mr. Vorys is a Yale man. I do not know anything worse, unless it is a Harvard man.

Mr. VORYS. Both Mr. McGhee and the chairman are mildly satisfactory witnesses on the Near East.

Chairman RICHARDS. I think we will call upon Admiral Duncan, who has been before us a few times. If you have any other statements to add, Mr. Secretary, without objection that may be done.

Mr. McGHEE. Thank you, Mr. Chairman. It is a pleasure to be before you.

Chairman RICHARDS. Admiral Duncan.

**STATEMENT OF ADMIRAL DONALD B. DUNCAN, DEPUTY CHIEF
NAVAL OPERATIONS (OPERATIONS)**

Admiral DUNCAN. Good morning, Mr. Chairman.

Chairman RICHARDS. How do you do, Admiral?

Ladies and gentlemen, the next witness is Admiral Donald B. Duncan, Deputy Chief of Naval Operations.

Admiral, have you a prepared statement that you would like to present or read for the record?

Admiral DUNCAN. Mr. Chairman, I have one that was prepared before Admiral Sherman left for Europe.

Chairman RICHARDS. You are substituting for Admiral Sherman?

Admiral DUNCAN. Yes. He asked me if I would present his statement to the committee, and he also asked me to say that he was very much disappointed about not being able to come up himself to be heard this week. I know the committee shares his disappointment, because from personal observation and contact the Admiral probably knows more about this area that you are considering than any of us.

With your permission, I will read his statement.

Chairman RICHARDS. You may proceed.

Admiral DUNCAN. I welcome this opportunity to appear before you and submit my estimate of the strategic importance of the Eastern Mediterranean and Middle East. I consider that this has a direct bearing on the necessity for the proposed legislation which you are now considering. The purpose of this legislation is "to promote the foreign policy and provide for the defense and general welfare of the United States by furnishing assistance to friendly nations in the interests of international security." The legislation proposes a continuance and extension of military and economic assistance to this area, which I strongly endorse for the double purpose of increasing the ability of these countries to resist internal subversion and to strengthen them as highly necessary allies in a possible general war.

The creation and the maintenance of political and economic instability is a basic tactic of forces which oppose us. Those forces infiltrate—subvert, seeking to create conditions which will lead to political capitulation or to facile armed conquest.

Our interests are many in the countries bordering on the eastern Mediterranean and in other countries close by. We have a cultural and moral interest in the welfare of the many millions who inhabit the area. We need them as our friends.

It is to our advantage to strengthen existing bonds of friendship in the Middle East. These nations of the Middle East are sufficiently important to cause us to help improve their economic and political stature and strengthen their will to resist aggression. In my opinion, we should take all reasonable steps toward the creation and maintenance of political and economic stability in that general area. One essential requisite to this end continues to be the provision of that military equipment and technical military advice and training which will enable these nations to entertain a reasonable hope of successfully defending themselves.

It is primarily our military interest that I wish to emphasize. The military importance of the Middle East has been testified to for centuries by the campaigns fought there. It has been, and is, the scene

of great political and economic pressures. It is the gateway to the riches of Southern Asia by land and by sea and the connecting link between east and west. I regard the strategic importance of the eastern Mediterranean and Middle East as comparable to that of the North Atlantic Treaty area itself, as related to efforts to resist world-wide Communist encroachment. In that area lie tremendous oil resources which the free world requires now for its greatly expanded rearmament effort, and which would be essential for the effective prosecution of a general war. Conversely, these oil resources would be a tremendous asset to the Communists in waging a prolonged general conflict.

In addition to these large resources of oil, the area possesses a high degree of strategic importance because of its geographical situation. This area involves three continents and controls critical land, sea, and air communications. If war should come, the free nations must be able to control these communications and deny them to the enemy.

Today, we plan to defend Western Europe in case of attack. The practicability of execution of such plans is increasing each day as the free nations augment their total military potential. As our strength and that of our allies in Western Europe increases, it becomes more practicable to plan for a defense of the Middle East which will insure, as a minimum, a continuous flow of oil to the Western World from that area and a denial of this resource to those hostile to us.

The critical sea communications of the eastern Mediterranean and Middle East extend westward through the Mediterranean to Western Europe and the Atlantic Ocean, and from the Turkish Straits and Southeastern Europe to Suez. Friendly control of the Turkish Straits would be an important factor toward insuring the continued use of the Mediterranean as a principal highway for allied combatant forces and commerce. As long as enemy naval forces cannot exit from the Black Sea, they cannot be effectively employed in the Mediterranean, nor can they render logistic support to such enemy land and air forces as might reach the shores of the Mediterranean. Retention of control of the Turkish Straits by our allies would be a great contribution to the security of General Eisenhower's southern flank.

I believe that the importance of safeguarding the Suez Canal is so obvious that I would not be justified in taking the time of this committee with further discussion.

The internal and external security of each of the nations of this area is critically important to the security of the Western World.

I believe that it is clear that a strong and resolute Turkey, ready and able to resist encroachments upon its sovereignty, is the key to a successful defense both of the Middle East and of the Mediterranean. The security of Greece is essential to the security of the Mediterranean and hence of north Africa. Both the Turks and the Greeks have proven themselves battle-worthy allies in Korea.

In Iran recent events indicate the dangers which face us in certain of these nations. Due to the unsettled and unstable conditions which prevail, and to the shifting external pressures which may be applied, I consider that our plans for aid to this area should permit administrative flexibility to meet the situation of the moment. Should the probable enemy gain control of Iran, the security of Turkey would be jeopardized, the defense of the vital straits area would be weakened, and even the Saudi Arabian oil fields would be placed in jeopardy. We

should continue our aid to Iran in order to encourage that country to resist subversion and to develop forces for its defense.

Behind the Turkish-Iranian barrier lie the Arab States and Israel. Through them flow a considerable part of the oil which is essential to Europe. There are base areas required for protection of essential sea and air communications, and for support of combat operations to the north.

The administration proposals regarding authorizations of funds for the countries of the area are set forth under title II of the legislation you are considering. The funds requested for military assistance to Greece, Turkey, and Iran are set forth under section 201. In order to give the desired administrative flexibility, which I referred to previously, it will be noted that section 202 would authorize the President to use not more than 10 percent of the funds to be authorized under section 201 for the purpose of granting military assistance to any other country of the Near East area. While these funds are not large, they will provide for essential training and much useful equipment. I recommend that the committee approve the proposals set forth under these two sections as measures necessary for the implementation of our national policy of furnishing assistance to friendly nations for increasing our collective security.

Under Public Law 329, Eighty-first Congress, and its amendments, over a quarter of a million measurement tons of military supplies and equipment have been shipped by the United States to Greece, Turkey, and Iran for the purpose of reequipping and modernizing their military forces. In addition, a number of badly needed combatant ships and aircraft have been provided and more are in the process of preparation for delivery. United States military personnel are maintained in the military assistance advisory groups stationed in these countries, to assist in training and in the proper use and maintenance of this equipment. As of the 1st of May, 2,285 military students from title II countries have been trained or are in training in United States service schools both in the United States and abroad.

In my opinion, these deliveries of equipment and this provision of training advice should be continued. I believe that this has been and will continue to be an essential contribution to the military security of this area and to that of the Western World.

Mr. Chairman, there are present other representatives and technical experts in this program who are available for detailed questioning. I myself will be glad to try to answer any of the questions that you or the members of your committee may have.

Chairman RICHARDS. Thank you very much, Admiral.

Will you state for the record why Admiral Sherman could not be here?

Admiral DUNCAN. Admiral Sherman is on a trip of about a week's duration to the European theater. I believe today he is in Naples for conferences with Admiral Carney. He has visited, as you know, in Spain and Paris and London.

Chairman RICHARDS. I will say for the information of the committee and the witness that we will proceed first under the 5-minute rule. Then we will have a period of unlimited questioning.

In my 5 minutes, I do not know who the man is responsible for handling this breakdown, but I would like to have a breakdown of the military students under title II—that is, the 2,285 students who

have been trained, or are now trained in the United States service schools.

Admiral DUNCAN. By countries?

Chairman RICHARDS. By countries. Can you give that now, please?

While that is being looked up, Admiral, what do you think about the importance of Spain in this program from a naval and military standpoint?

Admiral DUNCAN. From the military standpoint, I feel, and I think that view is generally shared by the military, that Spain is an important part of our picture of the defense of Europe. We favor the inclusion of Spain and association of Spain with the other countries who are involved in that effort. I think that is the general view.

It is important. It sticks out into the middle of the Atlantic area. It overlooks the gateway to the Mediterranean and is an important factor in the antisubmarine warfare. The necessity for that develops both in the Atlantic and in the Mediterranean.

Chairman RICHARDS. You said Spain was very important in the defense picture of Europe. Would you also say it was important with regard to North Africa and the Near East?

Admiral DUNCAN. Yes, sir. That is all a part of the general picture. We try to look on these things with a rather global view.

Chairman RICHARDS. Have you that breakdown, sir?

General SCOTT. Yes; I have.

Chairman RICHARDS. Will you please read it?

General SCOTT. It is rather detailed. Do you want to read it into the record?

Chairman RICHARDS. How many countries are involved?

General SCOTT. Greece, Turkey, and Iran. Three, Mr. Chairman.

Chairman RICHARDS. Will you read that for the record?

General SCOTT. This is for the 1950-51 program and the proposal for the 1952 program.

Chairman RICHARDS. All right.

General SCOTT. They are broken down between the zone of interior and overseas.

Chairman RICHARDS. I want to know just how many are in training (Discussion off the record.)

Chairman RICHARDS. Will you furnish a statement for the record showing the further breakdown as to Air Force, and so forth?

General SCOTT. I will do that.

(The material requested has been furnished for the executive session record.)

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. Admiral, there was a sentence you omitted from your statement that was contained in the one handed out. We are very happy to have you omit from your statement or shorten your statement, but I just wanted to read this and see whether it was omitted for brevity purposes or whether it is not so?

In addition, this area, under allied control, would provide the bases for offensive operations by which we could strike directly and quickly at the heart of the enemy.

Admiral DUNCAN. That was omitted because of this reason. This, I believe, should be off the record, Mr. Chairman.

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Admiral DUNCAN. Incidentally, I should have said this statement of Admiral Sherman's was left to me in a completed, but not edited form, and I took a few liberties with it myself yesterday. I think as printed by your committee it will appear in the form that I read.

Mr. VORYS. As you just gave it.

Admiral DUNCAN. Yes, sir.

Mr. VORYS. But the part of this area which would provide bases in Greece, Turkey, and Iran?

Admiral DUNCAN. Yes, sir; and possibly other areas in the Near East and Middle East. I am just speaking generally of the whole area.

Mr. VORYS. What I was wondering was of this 10 percent part, which countries would you contemplate might get any of this in the next year?

Admiral DUNCAN. Well, of course, that is dependent to some extent on the plans which are made by a Middle East command when that is set up. That would be a part of his operational plan as to where he puts his bases for defensive operations.

This is off the record.

(Discussion off the record.)

Chairman RICHARDS. The gentleman's time has expired. Mr. Hays.

Mr. HAYS. I would like to ask Mr. Vorys on what page was that deletion?

Mr. VORYS. Page 3.

Mr. HAYS. Beginning with what?

Mr. VORYS. The next to the last paragraph in the last sentence.

Mr. HAYS. That is all. Thank you.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Off the record for a minute.

(Discussion off the record.)

Chairman RICHARDS. The gentlewoman's time has expired.

Mrs. BOLTON. Off the record.

(Discussion off the record.)

Chairman RICHARDS. Mr. Lanham.

Mr. LANHAM. As a Harvard man, I "relents" as Andy would say, your comparison between the men of Yale and Harvard. Because I am a freshman on this committee I would not be capable of asking very many intelligent questions, so I am going to pass for this time.

Chairman RICHARDS. You stick around here a few weeks, Mr. Lanham, and you will be fully informed.

Mr. REECE. Do you think he ought to be an expert in 2 weeks?

Chairman RICHARDS. I do not know. It might take three. However, I do know the gentleman's facility for absorbing a lot of material in his work up here on the Hill. I am sure he is going to be above the average in that respect. I have known him for many years, and he is a hard worker and, even though a Harvard man, very intelligent.

Mr. Merrow.

Mr. MERROW. I pass.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. In your statement you referred to the strategic importance of this Middle East area and made reference to Turkey and Iran. It is of equal strategic importance to the Western European countries as to ourselves.

Admiral DUNCAN. That is right.

Mr. REECE. As you indicated, we are all in this situation together, and the responsibility of one is the responsibility of the other. I know it is discouraging when we see a situation come about where they do not recognize that equal responsibility.

As Mrs. Bolton said a while ago with reference to our furnishing arms, it is not only important what happens when an outbreak occurs, but it is equally important during the choosing-up time.

Does the feeling prevail that if there is pressure from communist sources, though exerted internally, but probably inspired from the outside, in Iran, that the Shah would ask for volunteer assistance from troops that might be available on some inoffensive basis, so as to enable him to resist the overthrow of his government? What is the feeling on that?

Admiral DUNCAN. I cannot say what would develop in that case, Mr. Reece, or whether the Shah would be inclined to ask for outside assistance. Those people have, from my limited observation, ways of settling their problems among themselves. I do not know whether they would ask for forces to come in there or not.

I believe British forces have been moved around in that area, and could be moved in quickly in case he asked for it to be done. I do not think that would be a decision that would have to be approved by all of the countries associated with Great Britain.

Mr. REECE. Based on your information you think it is more important that we maintain a stable government and have access to the oil by the free nations than it is to jeopardize our relationship over there by seeing to it that the contract between the British and Iran be maintained, that is, between Iran and the Anglo-Iranian Oil Co.?

Admiral DUNCAN. Of course, I am a little out of my field in answering the question.

Mr. REECE. You heard the question I asked yesterday on that line.

Admiral DUNCAN. You had the Assistant Secretary of State here for that, but for my money that would be a very fair statement.

Mr. REECE. That is all, Mr. Chairman.

Mr. MERROW. Mr. Chairman.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. If you have already answered or commented on this point, Admiral, I will get it from the record. Would you comment on how effective you think the Iranian fighting force might be in the event that there were an attempt to move in from the outside by a hostile power?

Admiral DUNCAN. I do not think there is any question but what they would have to have help. They have come quite a long way in setting up their military forces; but, when you compare them with what might come in there, of course, it is a very small effort indeed.

Mr. MERROW. It would be very difficult for them to hold for any length of time, I suppose?

Admiral DUNCAN. By themselves it would.

Mr. MERROW. Thank you. That is all.

Chairman RICHARDS. Are there any other questions?

Mr. VORYS. Yes.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. Admiral, as I understood it you said there was a possibility that if we had a Mediterranean command and they had a

plan and they had the authority, we might have small arms and bases in the Arab countries?

Admiral DUNCAN. No. My reference to small arms was in connection with the money which is proposed in this bill for use at the discretion of the President for Israel and the Arab States. As I understand it, if that were enacted we would utilize that money for the provision of small arms and light equipment, as well as the advice, and training, and so forth. As to the matter of bases—

Mr. VORYS. I did not mean bases. You said training?

Admiral DUNCAN. Training.

Mr. VORYS. That is what I want to get clear. You think some of this 10 percent of transfer might involve giving specifically, we will say, small arms to Israel, Jordan, and Syria, who have been at each other's throat?

Admiral DUNCAN. I think that would be involved. I think that is the plan. Perhaps General Scott and his assistants could give you more details about that. Of course, you mention their being at each other's throat. That is true. It is whose throat who gets ahold of, I guess, and it has been so a long time. But that getting at each other's throat is not confined to them alone.

However, the use of the equipment, and the use of the arms that are furnished to them, not only by us but by others as well, is all done subject to agreement and a full interchange of information between ourselves and, I believe, the French and the British.

In addition to the terms of the armistice over there we have some surveillance over those people. We have a United Nations party who is over there keeping an eye on it from their standpoint. To use the arms against each other, which are furnished for other purposes, would be a contravention of a great many very important and solemn agreements which we think are sufficient to prevent something like that from happening.

Again I defer to Mr. McGhee on that in that opinion.

Mr. VORYS. That is all, Mr. Chairman.

Chairman RICHARDS. Are there any other questions?

(No response.)

Chairman RICHARDS. Admiral, we appreciate your coming up very much.

Admiral DUNCAN. Thank you very much.

Chairman RICHARDS. I hope you will come up and see us again. The committee stands adjourned until 10 o'clock Monday morning next.

(Whereupon, at 11:55 a. m., the committee adjourned until 10 a. m. Monday, July 23, 1951.)

THE MUTUAL SECURITY PROGRAM

MONDAY, JULY 23, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. Mike Mansfield (acting chairman) presiding.

Mr. MANSFIELD (presiding). The committee will come to order. We have with us today Gen. William H. Arnold, Director, Joint American Military Mission for Assistance to Turkey, and Gen. Reuben Jenkins, former Chief of Joint United States Mission for Assistance to Greece.

General Arnold, will you and General Jenkins take these two seats?

General Arnold, if you will proceed with your statement, then I think we ought to hear General Jenkins afterwards, then let the witnesses be prepared to answer the questions of the committee.

Proceed in your own way, General.

STATEMENT OF GEN. WILLIAM H. ARNOLD, DIRECTOR, JOINT AMERICAN MILITARY MISSION FOR ASSISTANCE TO TURKEY

General ARNOLD. Mr. Chairman, I am honored to appear before your committee and to give you first-hand information pertaining to the status of the Military Assistance Aid Program in Turkey.

I am Maj. Gen. William H. Arnold, United States Army and I have been Chief of the Joint Military Mission for Aid to Turkey for the past year.

Ambassador Wadsworth, who is Chief of the Aid Mission to Turkey, and I collaborated in preparation of the statement which has already been submitted to the committee. I shall review this in your presence in order that you will have the opportunity to question me on any aspects of the subjects covered.

Our task has been and is to cooperate with the Turk defense establishment in its unflagging major effort to modernize and thereby to strengthen the Turkish armed forces—this to two primary ends: First, deterring aggression; and, second, if there be aggression, effective defense.

Our program has had and still has two major facets: equipment and training. In 4 years we have delivered substantial amounts of military equipment, from tanks, guns, aircraft, and submarines to medical supplies, radar, and jeeps.

And we have trained, directly, in newly organized Army, Navy and Air Force schools, over 25,000 officers and men in the use of that equipment.

Those trainees, too, have in turn passed on their new learning to many other thousands. In the equipment field, our motto has been "prompt delivery of those items which Turks can put to effective use"; in the training field, "teach Turks to teach other Turks."

The net result of this twofold program is that American military aid to Turkey has made a major balanced contribution toward modernizing and, consequently, materially strengthening the Turkish armed forces.

The prospect for the future is bright. There is no let-up in Turkish effort. Every million dollars spent in fiscal year 1952 will bring greater return, greater progress toward common-interest Turk-American objectives, than similar expenditures during earlier years. The program is, in short, dynamically productive. And our military mission is well organized for its important task.

Several Members of the Congress and representatives of the executive branch of the Government have visited Turkey during the past year. They have swelled the growing ranks of Americans who understand the strength that Turkey is capable of producing as an effective ally of western democracy.

Turkey, hard core of the old Ottoman Empire, is a relatively poor country. It is slightly larger than Texas. This year's census puts its population at 21,000,000. It is united, and its people are as one in their opposition both to the communistic infiltration and threat of Soviet domination.

Their determination to resist aggression is best illustrated by their own exertions. During the past several years, despite pressing need and desire for social improvements and economic development, the Turkish Government has consistently expended from 30 to 40 percent of its state budget for defense purposes.

This has been done to hold Turkey for the Turks and with no idea of external aggression. Although subjected to continuous and, at times, vicious Soviet pressures and propaganda, the Turks have not faltered or weakened in their spirit and determination. In fact, this solidarity of purpose against Soviet designs has increased, despite the fact that Turkey occupies a uniquely exposed position vis-à-vis the Soviets and their satellites. It has extensive common boundaries with the U. S. S. R. and Soviet-dominated Bulgaria.

Turkey has, too, by repeated actions, demonstrated her alinement with the principles of the United Nations and her friendship with the United States. The Turk contingent in Korea has again demonstrated dramatically the historic fighting ability of the race. Turkish representatives in the United Nations have consistently supported the principle of collective security. There has been no exception to their cooperation with the United States in the present world crisis.

I submit that these actions make the Turks conspicuously deserving of continued material, moral, and technical American assistance and support.

A sizable portion of ECA economic aid for fiscal year 1951 has been allotted to the support of projects contributing pointedly to the Turkish military effort and for which no provision has or can be made in the Turkish state budget without sacrifice of other more pressing current needs.

The amount, expressed as percentage of total military aid for end item equipment, is relatively small, but it serves a vital need which

could not otherwise be done. This action, too, I submit, points the increasing interrelationship of military and economic aid. The latter, I feel strongly, should be continued in the fiscal year 1952, because acceleration of the projects thus begun is vital to effective military preparedness.

The additional military equipment and materials and other items requested for the Turk armed forces in our over-all program have been carefully selected on the basis of minimum essential needs in order that Turkey can continue to present a major deterrent and obstacle to Soviet aggressive designs. There can be few, if any, other foreign positions of strength where wise expenditure of the American taxpayer's dollars can create so worthwhile a measure of security for the free world.

One point of general import I wish to add, though it may be self-evident. Those of us working with the Turks are ever mindful of the need for strength in Turkey and for strength in the United States. Within those premises, our recommendations reflect our best considered judgment.

As to the specific programs submitted by three service groups of Joint American Military Mission on Aid to Turkey for fiscal year 1952, we have assured ourselves that they are carefully pointed toward further implementation of long-range objectives in this area. On the country plane, they are designed, among other things, to assist Turkey in developing:

1. Better trained Army units, notably through intensified general training and the use of joint Turk-American field inspection-training teams.

2. Improved military transport, notably through adequate major item replacement and spare-parts system in the automotive maintenance field.

3. Increased ability of the manufacture of small arms ammunition, thus contributing toward the eventual standardization of small arms in Turkey and, at the same time, lessening the burden on the United States for the supply of ammunition therefor.

4. A strengthened Navy, notably through continued training courses and the supply of a submarine tender for its important submarine force and minimum adequate number of converted LS boats for antisubmarine patrol of critical areas.

5. A strengthened air force, notably through the supply of jet aircraft in consonance with prior and planned future programs of supply and training.

Gentlemen, I want to reiterate that I feel after working with the Turks for 1 year that Turkey is a very great point of strength. It is by far the greatest point of strength in the Middle East.

The Turk cooperates. The Turk regards the United States as his friend. He feels that there is an understanding that has developed between the two nations.

He is proud of that. The Turkish armed forces are relatively large for a population of 21,000,000.

Mr. MANSFIELD (presiding). You may go off the record.

(Discussion off the record.)

Mr. MERROW. Would you be willing to comment on how the total military assistance figure was arrived at, also, as to the equipment that we propose to give under it?

General ARNOLD. We keep under constant study in my headquarters the over-all needs of the Turkish forces within the approved program, that is, how far we have initially decided to go.

Each year certain things are produced or procured to fill up the gaps. Again, each year when we start planning for this, for fiscal year 1953 for example, we have to take somewhat of an arbitrary ceiling or figure on our own part, knowing it would be rather stupid for us to come in and ask you for \$4 billion for Turkey. We would not work it that way.

We try to get it to a figure that we feel is within reason. We get guidance from the Department here. We draw up a program in order or priority that fills in the gaps, or if something new is added we have to explain in great detail why that is essential.

Mr. GORDON (presiding). Off the record.

(Discussion off the record.)

Mr. VORYS. I understand that at the border there is a space 100 yards wide where it is kept covered with sand. They patrol it in the daytime but at night they have sand so they can see footprints.

They tell me that if there are footmarks showing that someone came into Turkey—the tribesmen who live there know everybody else—they pick them up and ship them back on the back of the train that goes back, I think, once a day. But they are no longer alive when they return them to Russia. Can you tell us about that?

General ARNOLD. I do not know about the particular instance you speak about. But I know that the Russian border on the eastern part of Turkey is ploughed and raked and that there are watch towers about every 100 yards.

Every time I or any of my people go up near the border there is a rushing to telephones and a rushing all over. I know they check for the footprints you are talking about as to the crossing of the frontier.

Mr. VORYS. This is off the record.

(Discussion off the record.)

Mr. GORDON (presiding). Proceed, General.

Mr. VORYS. I wondered if that description of the Turkish pay was in the record.

General ARNOLD. I would like to repeat that.

Mr. VORYS. I would hope it would be, about their pay, uniforms, and the rest of it.

General ARNOLD. I can give you a brief synopsis of that. I should state first that the Turkish Army is a conscript army. Every Turk by law is required to serve 2 years in the armed services, regardless of his status in life. So the rich man's son and the poor man's son serve side by side and sleep on the ground. There is no difference.

The pay is really nothing in the world but a token. It is 65 piastres, which translated to our money is about 21 cents for 1 month. They are furnished one uniform at a time, one summer uniform in the summer and one winter uniform in the winter, and one overcoat.

If the clothing is torn or becomes shabby, it is up to the individual himself to put the patches on and make the repairs and do his own laundry and everything of that general nature.

There is no help from the Government in that whatsoever. In other words, it is obligatory on the part of a Turkish citizen to serve his country for 2 years at his own expense, practically.

There is no complaint, no objection whatever. Everyone does it. It has been done that way for 600 years. When you reach the age of 18 you serve in the army for 2 years. It is a hard life but it makes good soldiers.

Mr. VORYS. You say the budget would be about \$125 million?

General ARNOLD. Yes, sir. You see, the whole Turkish budget would be less than \$500 million for the whole country, everything. There is 34 percent this year for the military of the about \$500 million. That is about \$150 million or \$160 million.

Mr. VORYS. Is the number of divisions they have an off-the-record figure?

General ARNOLD. It should be, sir. Although it has been published, I would not like to have it appear in the Congressional Record.

Mr. VORYS. We have to present this to the House, General—

General ARNOLD. I will withdraw that. I have no objection to stating the number of divisions. It is 19.

Mr. VORYS. Let me ask somebody this: Is the military amount that goes to Turkey going to be secret? Does anybody know about that?

Mr. VORYS. For \$125 million, plus our aid, 19 divisions are trained and ready?

General ARNOLD. That is right. They are getting better all the time.

Mr. VORYS. That is about the best bargain we have in this whole plan that I know of.

General ARNOLD. There is no question in my mind, and I want to repeat it again, that for your dollar investment you are getting more for your dollar in Turkey than in any other place, although my good friend General Jenkins may disagree with me.

I know dollar for dollar you are getting more in Turkey than you are any place else in the world.

Mr. VORYS. At this point could we ask General Scott what it costs to put an American division overseas?

General SCOTT. You are asking the equipment costs or the maintenance cost of a division overseas?

Mr. VORYS. If you say "costs," that is equipment, maintenance, the whole works.

(Discussion off the record.)

General SCOTT. I want to correct that figure.

Mr. VORYS. I thought it was a lot more than that.

General SCOTT. It may be more than that.

General ARNOLD. We can get the figures.

(Discussion off the record.)

Mr. VORYS. I was thinking that the figure had jumped from \$5,000 to \$10,000 a year per soldier in a division, and that that was the basis they were working on our own budget.

Could you get that figure for us and put it in here?

General SCOTT. As I understand it, you want the per capita cost for a soldier in an infantry division, for his maintenance, for his armament, for a year?

Mr. VORYS. Per capita and cost per division. That is a figure that is going to be quite significant in comparison.

(Discussion off the record.)

There is one other item I want to acquaint the committee with, and it will be off the record.

(Discussion off the record.)

Mrs. BOLTON. Are we on the 5-minute rule?

Mr. GORDON (presiding). I guess we were just carrying on.

Mrs. BOLTON. I suggest we go on the 5-minute rule.

Mr. GORDON (presiding). We may start on the 5-minute rule at this time. Dr. Eaton.

Mr. EATON. I have no questions.

Mr. GORDON (presiding). Mr. Carnahan.

Mr. CARNAHAN. General, in your statement you say that Turkey is a relatively poor country. I am wondering if they can develop their economy to the point where they can eventually support these 19 divisions?

General ARNOLD. No, sir; to be perfectly frank about it, sir, not in the foreseeable future, I would say. There are resources in Turkey of great moment. There is copper, iron, coal. There is chrome. There are tremendous resources. It is an agricultural country, sir. Its principal export will always be agricultural exports, wheat.

When I say "poor," it is undeveloped. They still use the wooden plow. Although there have been several millions of dollars spent on roads in the past 3 years, it is still very primitive. There are many areas in Turkey in which there is no way that you can get into them.

(Discussion off the record.)

General ARNOLD. They have made great strides in the last 28 years; 28 years ago the city of Ankara was a little village on a hill. Now it is a city of 280,000, everything having been built since Ataturk, a modern city.

Twenty-eight years ago the people wore fezzes; 28 years ago the women wore veils on their faces; there was a sketchy educational system. Now there is a fine university; there are hospitals and schools practically in every village. I would say that probably their degree of literacy has been raised from 15 percent to 35 or 40 percent.

They are making tremendous strides, and on their own. This has been accomplished mostly by Turkey lifting itself up by its own bootstraps.

Mr. CARNAHAN. They have raised their standard of living?

General ARNOLD. It is raised, but it will take a long time before it becomes satisfactory, sir.

Mr. CARNAHAN. Do you mean to imply that perhaps economic aid to Turkey may be a rather disheartening procedure?

General ARNOLD. No, sir. I do not think it is disheartening at all. I think the vision of the people who started this thing still exists. It is not, however, with the drive that Ataturk had, because you probably only have one Ataturk in 300 years.

There is the desire to become associated with the west; there is the desire to be spoken of not as Asiatics but as people of the west, a democracy. It is a burning desire in the Turkish heart.

Mr. CARNAHAN. Then I wonder if I got the impression that if Turkey remains strong militarily we are going to have to carry a right sizable part of the cost?

General ARNOLD. Yes, sir; but you would not have to carry as large an amount as is currently budgeted. As a matter of fact, I think if this amount is appropriated now, and an equal amount approximately were appropriated for 1953, you could very definitely see a lessening cost because the modernization program would have been practically completed, and then it would be a question of maintenance and replacement of the worn-out items, which would not be as expensive.

Mr. CARNAHAN. You do feel that the Turk can get in position to maintain this force, or largely maintain this force, after it is once well-established?

General ARNOLD. Not a force of 19 divisions; no, sir. I would like to qualify that, sir. They could do that at the sacrifice of other things that are so essential.

In other words, you cannot always put everything in the military and ever hope to get what we would like to have as a balanced proposition. They could do that if they keep on taking away from what they should do in the way of schools, hospitals, and things like that.

I do not think that is the way to work the proposition. I think you have to have a balanced economy. You want a Turkey which is not only a strong military power but one in which there is a gradual improvement in the standard of living and education of the people.

Mr. CARNAHAN. You do not believe you can build up the military force and maintain it unless you have an economy that will support it, unless the extra money is supplied from external sources?

General ARNOLD. That is right.

Mr. CARNAHAN. That is all, Mr. Gordon.

Mr. GORDON (presiding). Mr. Vorys.

Mr. VORYS. I guess that I have had mine.

Mr. GORDON (presiding). Mrs. Bolton.

Mrs. BOLTON. We are glad to have you with us, General. How long have you been associated with the 'Turks'?

General ARNOLD. One year.

Mrs. BOLTON. I am so interested in your enthusiasm, which I share completely although I have only been there twice for a short time, but it was a very exciting experience. There is a school outside of Ankara—I do not remember the name of it—where they have developed their own houses and the girls and boys go back to their own villages and build their own houses, and so on?

Mr. Mundt was very much interested in it believing it was something that could be used for our American Indians.

You spoke of their having built a great many roads. There were few in 1945.

General ARNOLD. None to speak of.

Mrs. BOLTON. Kemal Pasha Ataturk had the idea that he only wanted one road. That has gone out of their thinking, has it not?

General ARNOLD. The idea was to prevent an invasion. It used to take 18 hours to drive from Istanbul to Ankara, with 18 punctures and a broken axle or two; you can go there now in 8 hours.

Mrs. BOLTON. I will have to go back and look at it. To me the Turks are very wonderful people. I have known some of their women for many years; several having come to take nursing training.

Possibly I should ask this of Secretary McGhee. So little in your testimony has been about the economic phase of the program. It seems to me that what we really are doing for Turkey is largely military although such matters as the roads, plows and such are in the economic field. If we are doing what we can in their teaching programs, should that not be put to us in the bill as military assistance?

STATEMENT OF HON. GEORGE C. MCGHEE, ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN, SOUTH ASIAN, AND AFRICAN AFFAIRS

Mr. MCGHEE. Our presentation to you has dealt only with military assistance. The economic presentation was made by Mr. Porter for ECA. I think the figures themselves bear out what you say.

(Discussion off the record.)

Mrs. BOLTON. I have been unable to find anything which puts the emphasis on the military aid and am a little confused.

Mr. MCGHEE. Admiral Duncan stated a little on that.

Mrs. BOLTON. It has been so piecemeal, Mr. Secretary. I am in sympathy with doing everything we can militarily. I also agree with Mr. Carnahan that there must be something to back it up, to give the people a sense of improved living conditions.

The Turkish people have long accepted a very high percentage of tax, and everything else in proportion, to protect themselves from the Russians regardless of what it costs.

General ARNOLD. That is correct. Off the record.

Mr. GORDON (presiding). Off the record.

(Discussion off the record.)

Mr. GORDON (presiding). Mr. Battle.

Mr. BATTLE. General Arnold, it is good to see you, sir. You helped to entertain a small group from this committee, including myself, last fall. We were able to learn a great deal in a short period of time due to your able assistance, and the assistance of Mr. Wadsworth and our other representatives in Turkey. We appreciated it a lot.

If I remember correctly, you were telling me about the Turkish soldiers on maneuvers up on the Russian border who were staying in barracks without heat; am I correct in that? I was trying to recollect some of our conversation.

I was very much impressed with the determination, as you pointed out here today, of the Turks to defend their own country and to fight anywhere and everywhere necessary for self-preservation.

Do you remember telling me about the Turks being on maneuvers up on the Russian border living in barracks without any heat?

General ARNOLD. Heat, sir?

Mr. BATTLE. Yes.

General ARNOLD. That is correct, sir. They have no way of heating except by picking up small sticks, and what have you.

Mr. BATTLE. How cold does it get up there?

General ARNOLD. Twenty below, sir. That was one reason that in the Army program this year I had requested 50,000 sets of winter clothing, because in World War I 30,000 Turks froze to death fighting the Russians in that same area.

Mr. BATTLE. I remember you were talking about the possibility of some economic aid going for socks and clothes for the soldiers.

General ARNOLD. We have pretty well solved those problems now.

Mr. BATTLE. I also remember you telling me something about the way the Turkish Army was recruited and trained and then turned loose every year or two. That was a big problem—

General ARNOLD. Corrections are being made on that. A law has been passed which makes induction operative twice a year, which means that only one-fourth go out at one time, instead of half of them.

It is hoped that three inductions a year will be possible very shortly with another law, which will give smaller numbers of groups so that the units will not evaporate so often.

Inductions can be phased in different areas. Group centers are being started and can send recruits out so that units are always in a combat-ready position. We are working on that now.

Mr. BATTLE. I remember about a year ago we had some exchange students over here, and I had lunch with some of them. I happened to be sitting by a Turkish boy who seemed about 18 or 19 years old. He kept quizzing me about the Marshall plan. Finally when I was telling him about the altruistic motives behind it, he asked if the main reason for the Marshall plan was stopping Russia.

He then made a statement to the effect that Russia would not take Turkey as long as there was a man alive. After I visited there I understood that spirit better. I think they have more determination than any foreign country I have seen. Turkey seems to be an ally we can really count on. Thank you very much.

Mr. GORDON (presiding). Mr. Smith.

Mr. SMITH. I will pass for the time being.

Mr. GORDON (presiding). Mr. Lanham.

Mr. LANHAM. No questions.

Mr. GORDON (presiding). Mr. Merrow. Mr. Mansfield.

Mr. MANSFIELD. General, it is my understanding that the Turks are first-rate in their intelligence service, perhaps having one of the best intelligence services in the world, is that correct?

General ARNOLD. The best intelligence service in the world?

Mr. MANSFIELD. One of the best intelligence services in the world.

General ARNOLD. Sir, I would not know about that. They have never brought me much into their intelligence picture. I have no knowledge of that.

Mr. MANSFIELD. The question I was driving at—if you can answer it it should be off the record—is this——

Mr. GORDON (presiding). Off the record.

(Discussion off the record.)

Mr. GORDON (presiding). Are there any further questions?

Mrs. BOLTON. Sometime ago we were told that the Turks could hold about 2 months if Russia began to move in. Has that been increased considerably?

(Discussion off the record.)

Mr. SMITH. Is there any Black Sea activity, any pressure down toward Istanbul and the Straits?

General ARNOLD. Off the record.

Mr. GORDON (presiding). This will be off the record.

(Discussion off the record.)

Mr. EATON. What is the present population of Turkey?

General ARNOLD. Twenty-one million people.

Mr. MANSFIELD. I have one more question. Is the Turkish brigade in Korea a good cross section of the Turkish Army, or is it an elite brigade?

General ARNOLD. The Turks that went to Korea were not an elite brigade. The soldiers that went to Korea were conscript soldiers. The officers and noncommissioned officers were volunteers. That is all. That was the only situation. They were picked out as volunteers.

To give you an interesting sidelight on how patriotic the Turks are, when the call went out for volunteers to go to Korea as replacements, 30,000 volunteered for 1,800 vacancies. We went by one day and saw a barbed wire fence all around the area in which the 1,800 volunteers were training.

We asked why they had to put them inside the barbed wire, was it to keep them from getting away, and the Turk officials said, "No to keep the others out."

Mrs. BOLTON. May I ask another question?

Mr. GORDON (presiding). Mrs. Bolton.

Mrs. BOLTON. What about the women, do they work in the Army?

General ARNOLD. They are starting, Mrs. Bolton. We are trying to build up something in the way of two things, the Grey Ladies, and the other is the Red Crescent, which is similar to the Red Cross. There are full-fledged nurses, and what you call nurses' aides.

Mrs. BOLTON. The fact that Turkish women took off their veils when ordered to do so by Ataturk does not mean that they are all set to go in all of these things. They have had to get used to this very drastic change in their whole approach to life. I used to see the older ones on the street holding their veils together with their teeth, and when they saw a policeman they would drop them.

General ARNOLD. You see that in the country. It is a shawl sort of thing, and they hold it up. It is custom.

Mrs. BOLTON. The women naturally are not wholly accustomed to the change but they are adjusting to it rapidly.

General ARNOLD. It originates in the larger cities and permeates out.

Mrs. BOLTON. Do you know how many are in the parliament?

General ARNOLD. Yes, I do. I know there is one woman representative from Istanbul. I believe there are probably two more.

Mr. GORDON (presiding). Thank you very much, General.

Mr. VORYS. General, we learned that there were not only women but Christians and Jews in the Turkish parliament; is that still true?

General ARNOLD. Yes, sir.

Mr. GORDON (presiding). Thank you, General, for your testimony this morning.

We have also this morning General Jenkins. Do you have a statement, General?

STATEMENT OF GEN. REUBEN JENKINS, FORMER CHIEF OF JOINT UNITED STATES MISSION FOR ASSISTANCE TO GREECE

General JENKINS. I have no prepared statement, Mr. Chairman. It is my privilege to be here before you this morning. I would like to divide my statement in two parts. First, I would like to give you the broad picture on the record, and then give you a more detailed picture off the record, and then subject myself to cross-examination.

Mr. GORDON (presiding). General, please state for the record your experience and background.

General JENKINS. I am Maj. Gen. Reuben E. Jenkins, Department of the Army, formerly Chief of JUSMAG in Greece. Prior to that I was Deputy Chief of the Mission under Lieutenant General Van Fleet.

I joined the Greek mission in early April 1948, when the fortunes of the Greeks were at an extremely low ebb.

It was my privilege to witness a great change in the position of Greece during the 3 years and 1 month that I served there.

Our objective in Greece initially was to assist the Greeks in restoring internal security and order in the country, and bringing some sem-

blance of order out of the chaos which resulted from the bandit war, a war which was communistic inspired and Communist supported.

That war reached a very successful conclusion in the late summer and early fall of 1949, due to the wisdom of the Congress and the President, in my opinion, of giving that war-torn country aid, because I will state categorically without that assistance Greece today would be behind the iron curtain unwillingly.

General JENKINS. Since the restoration of order in the country, our principal task has been to revitalize the armed forces and bring them up to the highest possible capability within our power, both from a training point of view and from an equipment point of view, in order that they would be able to maintain this security that had been re-established, and to repel external aggression, particularly from the satellite border states.

In my opinion no mission, with all due respect to my good friend General Arnold, has had greater success. In my opinion that is not because of me personally, but because, frankly, I could have had little to do with it if I had not had good personnel to work for me and a good object to work with.

General Van Fleet and I could have accomplished little without those two things.

The armed forces of Greece today are in a most satisfactory state of training. The officer corps, particularly, has been revitalized and has at its head, and at the head of each of the three services, competent leadership and at all levels, down to the platoons in the army. The top leadership is quite capable and determined. The intermediate leadership, battalion and regiment, is learning fast and is courageous, as is the company and platoon leadership.

I might say that our failures in the 1948 campaigns—and I went through them—were not due to a lack of courage, but a lack of know-how in the Greek forces. They had no noncommissioned officer corps in their army and they had no trained leadership below the brigade level, or regimental level. It was a product of a short-term school thrown together hastily out of the chaos that resulted from the occupation.

The programs that we have provided to the Greek armed forces up to now have given the Greeks a very efficient army of nine divisions, reasonably well equipped. Those divisions are in being today.

(Discussion off the record.)

General JENKINS. They have also given the Greeks a small, but extremely efficient navy, with some obsolescent equipment, and some of the reasonably modern items of equipment.

They have produced in Greece a tactical air force that is as good as any I saw in Europe in World War II. That is, in the discharge of its mission in support of ground elements.

(Discussion off the record.)

General JENKINS. It is equipped with Spitfires, Hell Divers, AT-6's and some old British Austers. It has C-47's for transporting, of course, which is for the work-horse job, and there is no better for that kind of work in that country, in my opinion.

The programs for the Greeks are designed not only to give this ground force greater strength for peace, but also to give it the capability of further expansion for war by utilizing the trained manpower that is in Greece today.

(Discussion off the record.)

General JENKINS. When I say this manpower is trained I mean just that. This Greek is hardy. He is tougher than any soldier I have ever come in contact with. That does not exclude the German or the Jap, and I know them both. This man absorbs instruction quite readily, and he retains what he learns. His physical endurance is tremendous.

I have ridden a horse as fast as a horse can walk for two straight hours up the side of a mountain with four Greeks walking alongside this horse, and the horse would arrive at the top of the hill lathered, but these four Greeks would hardly be breathing hard.

Mr. VORSE. What shape were you in?

General JENKINS. We will take that up later, Mr. Congressman.

When I first joined the Greek Army I was astounded at what I saw. Due to the lack of training at the officer level, company and platoon, men did not know how to fight. They opened rifle fire at 2,000 yards. The officers thought that the support for a regiment consisted of two pieces of artillery. Ask one what he thought the situation was, or for an estimate of the situation, and a lieutenant or company commander would look at you with an expression which showed really that he had never even heard of such a thing before. They did not know how to deploy their units. They did not know how to take advantage of cover. They did not know how to crowd their fire.

But today those Greeks in training exercises will crowd their fire so closely that they will take their chance against artillery and mortar fire, even with Spitfires strafing the target, with the infantry within 125 or 150 yards of the target, because they say it will pay them dividends in the long run.

I have known one officer to be hit twice in a training exercise by mortar fire. The first time he refused to stop. The second time it stopped him. The division commander said it will pay us dividends in the long run.

That is an indication, I think, of the quality of courage of this Greek we are now supporting. If I tried that with American troops I would be court-martialed for exposing my troops to unnecessary danger in a training period. I say that in all seriousness.

The Greek himself is an individualist. He loves his little piece of ground, and he loves his little flock of goats and sheep, and he loves his family. He is definitely not a Communist. He is anything but that. But he is a dissident many times, because even a taxi driver or a shoeshine boy will tell you he can do a better job in government than the people who are there. That is almost universal.

Mr. EATON. Just like the Americans.

General JENKINS. The Greeks, we must remember, were loyal allies to us in World War I, and they were loyal allies to us in World War II.

(Discussion off the record.)

General JENKINS. Our investment in Greece, like the investment in Turkey, is an extremely good one.

(Discussion off the record.)

General JENKINS. As to the utilization of this equipment we have given them, I would like to tell you that during the 3 years I was there one of the principal tasks of our officers was to see whether or not this aid that we were furnishing them was being diverted to any purpose other than that for which it was intended. When I left

there there had not been one single case of an officer, or a soldier, or anybody connected with any of the armed forces, being suspected or accused of diverting any of this equipment to any purpose other than that for which it was intended.

Off the record.

(Discussion off the record.)

General JENKINS. Gentlemen, I appreciate your being patient with me in my off-the-cuff statements. I will try to answer your questions now. I would like to state that Congressman Battle paid us a visit in Greece to see these soldiers. He was present when we had our contingent ready to go to Korea, and was present at the ceremony when the United Nations flag was given to this command. I would also like to state that that was not a hand-picked unit. That was a volunteer unit. Units volunteered in a body. Only a few people shifted out of it for personal reasons. The bulk was completely volunteer, and I think that Congressman Battle thought that that was a fine-looking bunch of soldiers.

Mr. BATTLE. It was a very impressive ceremony, and also it was a fine-looking group of soldiers. We appreciated your courtesy and hospitality very much.

Mr. GORDON (presiding). Thank you, General Jenkins, for your interesting and strong statement.

What are the guerrilla activities at the present time? Is there very much of this activity in Greece?

General JENKINS. Guerrilla activity in Greece, Mr. Chairman, has been reduced to that which the ordinary police could handle since early 1950, in my opinion. There have been a few border raids from Bulgaria. There are about four groups, I think, that move back and forth across the border, and as the army goes out after them they go back to Bulgaria. But as to the rest of Greece, not in her history has she had as few bandits as she has today. Those she has are spotted out, two or three here, or there, or somewhere else, and they know who they are by name. It was a police action that remained when I left.

(Discussion off the record.)

Mr. GORDON (presiding). We are under the 5-minute questioning rule, General.

Mr. Chipperfield, have you any questions?

Mr. CHIPPERFIELD. No questions.

Mr. GORDON (presiding). Mr. Battle.

Mr. BATTLE. Mr. Chairman, thank you.

General, I am very much interested in your statement and I appreciate your appearance here this morning. I was wondering what has happened to the Greek children and if a good many of them have been returned or just what is their status.

General JENKINS. The great bulk of the Greek refugee children have been returned to their homes. There are a few that are definitely orphans that are still under the Queen's care. All Red newspapers to the contrary, Her Majesty is looking after those children in fine fashion.

Mr. BATTLE. Are you talking about the children captured by the Communists? Did not Yugoslavia have a lot of Greek children?

General JENKINS. No, sir. I am talking about those that were in the homes within Greece. There were a great number scattered throughout Greece.

Mr. BATTLE. Did Yugoslavia ever return the Greek children she had?

General JENKINS. She has returned quite a few of them. I think Mr. McGhee can give you the details on that.

Mr. MCGHEE. At one time it was estimated there were many thousand Greek children in Yugoslavia. However, when it was investigated quite objectively by the Swedish Red Cross it was found most of these children were of Slavic origin who had been living in Greece but who are now with their parents in Yugoslavia. They did find, I think, several hundred that were of Greek origin and whose parents are now in Greece; these are in the process of being returned.

I think this issue between Yugoslavia and Greece is on its way to being solved. These children were very well taken care of, as Ambassador Allen reported on a number of occasions.

The greatest number of the children were taken behind the iron curtain, and to my knowledge they have never been sent home; they constitute the real problem. It may be they are being trained for future guerrilla action.

Mr. BATTLE. What about the state of mind and health of those who were returned? Were they pretty well indoctrinated to communism, and so forth, or what condition were they in?

Mr. MCGHEE. I am told that in the Yugoslav camps most of the children were fairly thoroughly indoctrinated. A large percentage of the children in these camps were not of Greek ethnic origin.

Mr. BATTLE. That is all, Mr. Chairman.

Mr. GORDON (presiding). Mr. Vorys.

(Discussion off the record.)

Mr. VORYS. That is the air would come along later?

General SCOTT. Later than that. Yes, sir.

Mr. VORYS. That is all.

Mr. GORDON (presiding). Mr. Hays, do you have any questions?

Mr. HAYS. No questions.

Mr. GORDON (presiding). Mrs. Bolton?

Mrs. BOLTON. I realize that this question may seem to be in the political area, but I do not mean it that way. I want to ask quite from the military standpoint—and I would like very much if General Arnold would give us an answer on the same point—is it Greece's desire to be Western? General Arnold made quite a point of Turkey wanting to be western. Is that the Greek aspiration?

General JENKINS. I would say it is even stronger than that, Mrs. Bolton. She is Western.

Mrs. BOLTON. Then she would be deeply interested in becoming or in having either a bilateral agreement with the United States or some kind of an agreement with the United States, would she not?

General JENKINS. Unquestionably she would prefer to be, for example, a member of NATO. I think that is being discussed. That is personal view.

Mrs. BOLTON. Do you feel that would be of military importance?

(Discussion off the record.)

Mrs. BOLTON. I appreciate that very much. Thank you.

Mr. GORDON (presiding). Mr. Lanham, do you have any questions?

Mr. LANHAM. No questions.

Mr. GORDON (presiding). Mr. Smith?

Mr. SMITH. General, does Greece have any productive capacity at all in turning out military items?

General JENKINS. That has been very, very meager up until recently. First the greater part of the economic program originally had to be devoted largely to the civilian side, and particularly to the highway construction programs, that facilitated our operations. I might say here that without that ECA support in the highway and harbor and rail communication work that went on while these campaigns were being fought, we would have been hard put to do the job.

Mr. SMITH. In other words, the first job was one of rehabilitation more than anything else?

General JENKINS. Yes, sir. Since that time considerable progress has been made in the rehabilitation of some of the industries of Greece.

(Discussion off the record.)

Mr. SMITH. For all practical purposes then we are giving them the military end items that they need. Is that right?

General JENKINS. Not entirely, sir. There is a clothing factory there that makes clothing for the army.

Mr. SMITH. For the American forces?

General JENKINS. No, sir. For the Greek forces. The shoe program was passed to the Greeks for the making of their own shoes. When I left they had begun to develop the program for individual items of equipment, such as packs, and haversacks, webbing, belts, and things of that sort. I think Mr. Emery was over there recently and saw the items that had been produced as samples.

There was also a program being considered when I left for the manufacture of their mess gear and a lot of their own personal and individual equipment from metals. Mr. Emery can probably give you more information on that than I can, because he was there after I left and knows how far that program has progressed, but so far as self-help is concerned, I would say the Greek has made considerable progress in the last 12 months.

Mr. SMITH. What percent of the Greek national budget is going into the military?

General JENKINS. With the assistance of the ECA side I think that the total was sixty-something, was it not, George? About 62, I believe.

Mr. EMERY. I think it was around 50 percent.

(Discussion off the record.)

Mr. SMITH. What impact is that having on the general standard of living among the Greeks?

General JENKINS. Serious. A serious one.

Mr. SMITH. Has there been any appreciable improvement in the general standard of living since we have been there?

General JENKINS. Definitely, sir, in my opinion.

Mr. SMITH. To what degree, do you know?

General JENKINS. Well, when American aid first started, or a short time after, there were 750,000 refugees. Today there are none. They have all returned to their farms and their little houses have been rebuilt, and they are back on their own.

Mr. SMITH. You may not know it, or may not have this information, but I am wondering if somebody has it. Undoubtedly they do.

What is the per capita income in Greece today?

General JENKINS. I do not have that figure, Mr. Congressman.

Mr. SMITH. Can the ECA or somebody furnish that?

Mr. MCGHEE. We will get that for you, Mr. Smith.

It is \$185 per capita.

Mr. SMITH. I am wondering if we might also have it for Turkey?

Mr. MCGHEE. Yes, sir. The figure for Turkey is \$128 per capita.

Mr. SMITH. I expect there are no longer any British forces in Greece?

We have taken over that job almost completely.

General JENKINS. No armed forces. The British still have small naval and air missions, and a little larger army mission, and a "prison" mission.

Mr. SMITH. What is their purpose in remaining there? To protect British property?

General JENKINS. No, sir. They assist in the military program. They give assistance on technical matters, because a lot of the equipment we have there is of British origin. Their supply system, and depot system, and so forth, is based on the British pattern, and their entire general staff procedure is the British system, and some of their basic training of the soldiers, for example, is patterned after the British. A lot of the naval equipment is British. In the air, the Spitfires, of course, are all British.

Mr. SMITH. That is all. Thank you, Mr. Chairman.

Mr. GORDON (presiding). Are there any further questions?

Mr. HAYES. Mr. Chairman, might I ask a question or two?

Mr. GORDON (presiding). Yes.

Mr. HAYS. Off the record.

(Discussion off the record.)

Mr. HAYS. General, you made reference to the improvement in conditions there. What is their land tenure system? Is it productive of some of the things that Mr. Smith was speaking of in the economic advances and social improvement? Are you familiar with their land problem there?

General JENKINS. Not too familiar, sir. Only general. The ECA representatives can give you a very detailed answer on that, I think.

However, I would say that there has been considerable improvement in the productivity of the small amount of tillable land in Greece. I think I am qualified to state that categorically, because I lived there and traveled over the country for 3 years. The drainage programs are producing great numbers of acres in various places, such as in Thessaly and Western Macedonia, that before have been wasteland. I do not know the number of acres, but there has been tremendous improvement in that field.

Mr. HAYS. Much of the land they allowed to erode can be recaptured, you think?

General JENKINS. They had a land reclamation project going on that does just that. Yes, sir.

As to the details of it, I am not familiar with it.

Mr. HAYS. Would you care to express an opinion as to whether or not our information program, building sentiment into the Western World, has been satisfactory?

General JENKINS. I do not believe I am competent to answer that, Mr. Congressman, because, frankly, my position there was so confining that I did not have time to branch out into other fields. I can only give you a guess, which I do not think would be worth the time of this committee.

Mr. McGHEE. Mr. Chairman, may I comment on that?

Mr. GORDON (presiding). Yes.

Mr. McGHEE. I think I can answer a couple of Mr. Hays' questions.

There is no problem of land tenure, as such, in Greece. There is no such thing as absentee landlordism. Greece is a country of small landlords, who own their own land. In a typical community the largest landowner would own 50 acres, and the average under 15 acres.

On the question of the information program, I do not know how you might evaluate it on a technical basis. As far as the end product is concerned, however the Greeks, I think, almost to a man, know the extent to which we have assisted them. They are thoroughly oriented to the west. I do not believe there is any basic problem of winning over any important segment of the Greek people to the common cause of the free world.

Mr. HAYS. Thank you.

Mr. MERROW. Mr. Chairman.

Mr. GORDON (presiding). Yes, Mr. Merrow.

Mr. MERROW. I want to ask the gentleman a question concerning coordination.

Greece and Turkey constitute the southern front against Soviet encroachment on the Mediterranean. With 9 divisions in Greece and 19 in Turkey, we have 28 there now. Has there been any coordination of defense plans of those two countries as a front?

General JENKINS. I am not competent to speak on that because I have had no connection with the problem.

General ARNOLD. There have been conversations between the Greek and Turkish General Staffs.

(Discussion off the record.)

Mr. MERROW. You may want to answer this off the record, but if these two countries were brought into NATO then probably there would be coordination, would there not?

General ARNOLD. Undoubtedly.

Mr. McGHEE. That is a definite byproduct.

Mr. MERROW. Is that not necessary?

General ARNOLD. Not only necessary, but it would happen very quickly. You would have that coordination.

Mr. MERROW. That is all. Thank you.

Mr. GORDON (presiding). Are there any further questions?

(No response.)

Mr. GORDON (presiding). The committee will stand adjourned until 2:30 this afternoon.

I want to thank you, General, for your appearance here.

(Whereupon, at 12:10 p. m., the committee adjourned until 2:30 p. m. of the same day.)

AFTERNOON SESSION

(The committee reconvened at 2:30 p. m., Hon. James P. Richards (chairman) presiding.)

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen of the committee, we have with us this afternoon Assistant Secretary of State for Far Eastern Affairs, the Honorable Dean Rusk.

He has along with him Gen. H. J. Malony, Department of Defense Representative, Southeast Asia Policy Coordinating Committee, and

Mr. R. Allen Griffin, Director, Far East Program Division, Economic Cooperation Administration. These three men are going to give testimony on the economic, political, and military aspects of this problem.

Mr. Secretary, before you begin, how do you want to proceed? Will you give your testimony and then call on the others for certain features of it, or how will you proceed?

STATEMENT OF HON. DEAN RUSK, ASSISTANT SECRETARY OF STATE FOR FAR EASTERN AFFAIRS

Mr. Rusk. Mr. Chairman, if the committee is agreeable, I thought I would offer an introductory statement on the political side, and then if the committee wishes, Mr. Griffin and General Malony might make a brief statement on the economic and military side in extension of what I have said.

Chairman RICHARDS. That will be fine. Before you do that, Mr. Secretary, could you take about 15 minutes and bring us up to date on the Korean situation?

I think the committee would like to hear that.

Mr. Rusk. Thank you, Mr. Chairman.

Mr. GORDON. Is this to be on the record or off the record?

Chairman RICHARDS. What about that, Mr. Secretary? We can take it entirely off the record, if you desire.

Mr. Rusk. This can be off the record.

(Discussion off the record.)

Chairman RICHARDS. Have you a prepared statement, or do you want to talk informally?

Mr. Rusk. I do not have a text. Mr. Chairman and gentlemen of the committee, before making my opening remarks on title III, I should like to indicate very briefly the way in which we are organized in relation to the subject matter of title III.

There are five countries of south Asia included under this proposal, India, Pakistan, Ceylon, Afghanistan, and Nepal which are outside the area of my responsibility. What I have to say today will, however, affect and apply to those countries in general terms.

My own responsibility begins with Burma, and includes the countries to the south and east thereof, whereas Assistant Secretary George McGhee has responsibility for south Asia. He will be here this afternoon, if the committee wishes it, or in the morning, to answer questions on these five particular countries.

Our programs in Asia involve the closest possible integration of political, economic, and military factors. For almost a year now we have had a close working group made up of the Department of State, Department of Defense, and ECA.

Mr. Livingston Merchant, my Deputy; Mr. Allen Griffin, of ECA; and Gen. Harry Malony, of Defense, are the representatives on that group. The committee may wish to hear from these latter two gentlemen so that the three of us may together lay a basis for the questions which the committee may wish to ask in this field.

Further than that, the relief and rehabilitation of Korea has a number of special problems concerning the United Nations. Mr. Hall who is here has responsibility for that subject.

Our proposals under title III are for military aid in the sum of \$555 million and economic aid in the sum of \$375 million.

I have had a chance to go through the materials made available to the committee, the testimony of Secretary Acheson, Secretary Marshall, and the message of the President. I plan to repeat as little as possible of what has been said in those earlier materials.

The broad policy considerations are entirely familiar to the committee and I believe to the American people. That is particularly true anywhere here in the Far East, where this committee itself has played an active part in initiating policy over a number of years.

Perhaps my best contribution, therefore, might be to indicate some of the complicated factors that come into play in the effort to translate broad policy into action programs, and try to indicate why a nation which follows the broad policies we are following in Asia and the Pacific should carry out the programs we are proposing, in the face of the factual situation with which we are confronted in Asia at the present time.

I cannot promise for certain to be successful in the effort. I feel that I have an obligation to try to build a bridge between broad policy and specific programs.

First, we should remind ourselves and our friends in Asia of those aspects of our policy which are historical and fundamental, which would be our policy if there were no communism and if there were no Russian imperialism on the march in that part of the world.

Elements of this historical policy are familiar to all of us. We learn them as children in our schools and churches. They are things we take for granted. They are widely known here, and they are widely known and valid in Asia unless they are distorted by propaganda.

For decades we have had an active and vigorous interest in trade, a fruitful exchange of cultural values, a sympathetic interest in national freedoms, an interest in a rising standard of living, relief from diseases, and the hope of better things to come.

Why is this historical attitude so important? In the first place, we are laying a basis for relations with Asia for decades to come. We are now in the first years of the national independence of these new nations of Asia and the relationships we establish today will go far beyond the particular rivalries and contests of our own day. In other words, these new nations may be learning permanent attitudes toward the United States at the present time. Therefore, we need to take this long-range historical point of view.

Secondly, great changes occur in world power relationships; certain of these have occurred in our own generation. We are now in the process of bringing about another great power change by peaceful means, if we can, by strengthening the free world.

But 10 to 15 years from now, the most important necessity of our foreign policy may be that we have a right relationship established with the great peoples of Asia and that we need to have that in mind as we consider our present activities. In any event, these people in the Pacific and in Asia are unwilling to be merely a facet of our problem with the Soviet Union. They would not voluntarily become pawns and they believe that their relations with us are based upon intrinsic values. Asians expect us to consider them an important part in our program.

I have mentioned these historical factors because they have an important bearing not only upon what we do in Asia but also as to how we do it. Are we interested in this area only because of the Communist threat? Will we provide assistance only to those who act in a particular way to fit our own immediate political and strategic concepts? Those are important questions for us in terms of our ability to work out our relations with these people over the decades to come.

A minor example: We have been turning more and more attention in our programs in that part of the world to work in the villages and the paddy fields, working with the people of those countries. Now, we would not want them to believe that we are in the villages and in the paddy fields merely because the Communists are in the villages and in the paddy fields. For that to be our own attitude and for that to be their impression would rob our program of moral content and would render it futile as a practical matter.

We believe there is great strength and vitality in our historical approach to the peoples of the Pacific and of Asia and our program must reflect this fundamental attitude of the American people.

A second great factor which we must have in mind is the impact of Communist aggression in almost every corner of Asia by one means or another. The committee has had that fully set before it and I shall not attempt to describe it but you know it as well as I.

A basic fact is that communism is now waging war in Asia and with great power and resourcefulness. We must stop this aggression by peaceful means if we can, but stop it we must. By "we" we mean not only we Americans but every nation looking toward the kind of world set forth in the charter of the United Nations.

Now, what does Communist aggression mean in terms of our own action and our own policy? It means that we must build our own strength rapidly. It means also that we must project that strength into the western Pacific in support of peace. We have, during this past year, been projecting our strength into the far Pacific, not only in respect to Japan, but also in the Philippines, in southeast Asia, and in other areas economically, politically, and militarily. Insofar as we can by the means available to us, we must encourage other free nations to resolve any disputes which separate them, such as the Kashmir dispute, and to encourage them to organize for mutual protection against aggression, participating ourselves where possible and appropriate.

That brings up the issue of a Pacific Pact which has been of keen interest to this committee in the months past and to which I will return in a few moments.

This Communist aggression means we must recognize a greater urgency of time in developing our relations with the peoples of Asia. We must recognize the greater investment of resources and personnel than might be required if there were no Communist threat.

We must accept, regrettable as it might be, that there may well be a greater margin of error both among ourselves and among our friends in Asia. As we work under greater urgency, we will have to use people who are not as highly trained for work in the Far East as we should like to have, chiefly because they are not available; and we shall have to work with people in Asia whose own institutions have not developed to the point where they can make the most efficient and

effective use of the aid given. So some margin of error must be accepted which would not be there in normal times.

But we must also contest in every possible way the Communist effort to capture nationalist sentiment for the purpose of using this national desire as a means for enslaving the people under Communist domination. That we must fight at every point. Out of the development of our historical policies, and of the special urgency imposed upon us by Communist aggression, there is a broad action program toward Asia and the Pacific which has received general support despite the fact that the region has produced some of our sharpest controversies.

It is not for me to speak of bipartisan policy since I am not a spokesman for the two great parties, but I suggest that a broad program exists which has received considerable support. Our military and economic assistance programs which will be discussed in detail here are not fully understood except in relation to other aspects of American policy and action in this area.

If I may, Mr. Chairman, just state some of the principal points in that broad program of action and policy which has substantial support in the Government and in the country, I would suggest the following:

1. An increase of United States strength in the Pacific.
2. The prompt conclusion of a Japanese peace treaty, a treaty of reconciliation of the sort discussed so carefully by Mr. Dulles with the Members of the Congress.

3. A United States-Japan security arrangement providing for mutual security to these two great countries following a peace treaty.

4. A United States-Philippine mutual security commitment which is factual, based upon our historical association, which is also registered in agreement but which might usefully be registered in still further agreement if that appears to be agreeable to our two countries.

5. A United States-New Zealand-Australia security arrangement to draw those countries more fully into active partnership in the Pacific area.

6. Sympathetic encouragement to broader Pacific arrangements of a regional type.

7. Resistance to aggression in Korea.

8. The rehabilitation of a free Korea and pursuit of the goal of a unified and independent nation, to the maximum extent possible.

9. With respect to China, the nonrecognition of the Peiping regime; the continued recognition of the Nationalist Government; opposition to the seating of Peiping in the UN; and insistence upon settlement of the problem of Formosa by peaceful means and resistance to military exploitation of that island by our enemies against the free nations of the Pacific.

10. Friendly encouragement and support to new nations of Asia, not only those who have already attained full sovereign status such as India, Pakistan, Burma, and Ceylon, but also to others who are just now moving into a new status such as the Associated States of Indochina.

11. Economic and technical assistance programs for the purpose of providing the elementary and basic institutions, the institutional strength and technical know-how of those new nations so that they may set about carrying out their new responsibilities.

12. Military assistance programs where necessary to put these nations in a better position to maintain internal security, to deter aggression from the outside, and to contribute their part to such collective security efforts as may be required to meet this aggressive force with which we are confronted.

13. Lastly, an information and education program which will attempt to deny to the Communists the kind of sympathetic support which they have been able to win by appearing in Asia as an Asian preaching nationalism to such good propaganda effect.

Now, these are the broad elements of action and policy in the Far East which are a part of our over-all effort.

When we talk about the programs themselves, I understand the committee has before it a break-down by country and as between military and economic programs of these various—

Mr. CHIPERFIELD. Here is a break-down, country by country. Are these books available to members of the committee?

Mr. RUSK. We have a break-down of the \$555 million and \$375 million by countries and as between military and economic programs, respectively. Are those not in the hands of the committee?

Mr. VORYS. We have a one-sheet summary.

Mr. RUSK. I want to speak of that in a moment, please.

Mr. VORYS. I have been borrowing reports from our staff. We members have no break-down at all up to today beyond that summary sheet. At least, I have not.

Mr. RUSK. We will have for you as much of this information as we can furnish. I wanted to speak for the moment to the principal factors which determine the size of the programs.

The President in his message to Congress on this subject said that in all these areas of the world, larger amounts of United States assistance could be put to good use and would pay real dividends. Title III programs are comparatively small compared to other areas which are in the bill, and compared to the tremendous needs of the countries which are considered under title III.

Therefore, if the committee is willing, I should like to discuss just for a moment the factors which had the most bearing upon the determination of the size of the programs proposed under title III.

There are a number of factors which might be considered under the broad subject of the need in the recipient countries. There is first to be considered the desire of the country itself. We cannot assume that each of these countries wants a large program or wants to have a large American involvement in their own particular situation. They are in some respects new and sensitive nations. Their nationalistic feelings are running high. They are subject to propaganda based upon the residuum of the old colonial systems. Communist propaganda is extremely active in calling attention to the threat of American influence. Governments which have their own domestic problems to worry about and their own propaganda situation have, on one or two occasions, expressed some reluctance to undertake a heavy commitment with us in this field.

A second factor is that we are aiming, by and large, at eliminating bottlenecks and developing a basic, seed-corn type of operation rather than attempting to fill the gigantic consumer needs of these countries of large population. We do not have here a situation in which we are trying to rebuild a war-devastated industrial plant to bring it back

to a prewar condition. By and large these countries did not have large-scale industrial development. We are trying to take systems which are at the lowest level in standards of living and find means by which out of their own resources they can move rather quickly to some increase in their consumer standards.

That means therefore that we look for the assortment of bottlenecks such as are found in their taxation systems, transportation, port facilities, and civil service training, in order to mobilize as quickly as we can the resources which are available in these various countries for meeting their own needs. We have been reluctant to undertake commitments which would establish a pipeline between vast consumer needs in their part of the world and American production because that would create demands upon us which could not be fulfilled from the resources which are available to us.

A third factor is the institutional capacity of these various countries to use their own resources and to absorb them efficiently. That institutional factor has to do with not only trained personnel and individuals, but also governmental organizations. A country without an effective tax system, for example, presents us with a problem somewhat like that of a swamp: it is difficult to find a firm foundation on which to organize the public fiscal operation and effective governmental activity in the economic field.

We find in almost every country in this area need for greater training on the part of the government officials, on the part of their own businessmen, on the part of their organizations for collecting taxes and disbursing public money, and their organization of transport; right through the entire networks, the shortage of trained people is one of their most crying needs. Therefore, mere dollar aid alone will not necessarily provide a given result in the light of their institutional capacity to absorb.

A fourth factor relating to their needs is their balance-of-payments situation and their reserve position which determine the extent to which they can take care of some of their own most pressing needs themselves. That is somewhat illusory because by and large even those countries with a favorable balance of payments and favorable reserve position probably can maintain that only by importing far less than they need and by skimping on their capital investment for their future needs.

Another factor is the nature of the threat posed to the security and stability of the recipient country. We have to consider somewhat the priority of the threat. In the case of Formosa and Indochina the threat is direct and immediate and needs a maximum effort now if we are to help those countries defend themselves against attack. Other nations somewhat more removed or remote have more time in which they can build up their own resources and therefore the pressure on us for assistance is not quite so great.

Another factor is a political factor stemming from our own desire to establish a friendly relation with these various governments. Even where there may not be a pressing need clearly demonstrated as something we should meet on an economic basis, there still would be an important point to be gained if by a small aid program we could establish a friendly relationship between ourselves and that other government and put some of our people at their disposal for advice and assistance during these troublous times. We want to be in a posi-

tion to do that and to use the aid program itself as a vehicle for demonstrating that kind of an interest.

A further consideration is the ability on the part of the rest of us to meet the needs which we find in these various countries. One of the first questions is whether the burden is a reasonable burden to be carried by the United States. A number of other countries have important responsibilities in that part of the world—the French in Indochina, the British in Malaya—and we are not inclined to substitute ourselves for others in carrying these responsibilities.

Now, the general approach has been that our job is to provide necessary additions to the efforts of others if those additions are essential for the stabilization of the area. But we should not merely go in and put ourselves in place of others in carrying these loads.

A second factor is the availability of United States personnel. We have a very serious problem of recruitment for Americans for jobs out in this part of the world. Our technical assistance program is severely limited in that particular respect. It is probably the real bottleneck and provides the ceiling on our technical assistance capabilities.

That problem of recruitment is self-evident. We do not have many Americans who are thoroughly trained and qualified for that work in that part of the world, compared to our population and our present interest in that area. We are really understaffed as a nation and we are very glad to see that some of the private agencies, such as the American Council of Learned Societies and Social Science Research Council and others, are taking steps to increase the supply of Americans who have special training in that field. There is also the matter of willingness to serve under the conditions in the Far East these days. People cannot take their families with comfort into many areas. There is danger; there is discomfort; and with respect to some of these areas there is also an element of political controversy which has made posts in some of these areas unattractive.

The third factor is the availability of supplies, commodities, and equipment here in this country. During a period where demands are made upon our own industry for our own purposes to the extent now being made under our different programs, it would be illusory for us to promise large programs which require commodities and supplies and equipment which we cannot furnish when the time comes.

Another factor is the extent to which loans may carry some of the load in this direction, such as loans from the Export-Import Bank or the International Bank, or still further assistance from other sources: the United Nations technical assistance program, the plans developed by the British Commonwealth in the Colombo plan, or private activity through industry or through organizations of various sorts who are establishing contacts in this part of the world.

The programs are also related to the possibility of increasing self-help and mutual aid in the area. For example, if by association between southeast Asia and Japan it were possible for Japan to take on some of the functions which would otherwise fall upon us, it might be that we could stimulate that and thereby reduce our own burden to some extent.

A last factor is the inter-relationship between military and economic programs themselves. In certain cases, the military program requires economic support if the military program is to be effective. That is

particularly true in the case of Formosa. In the case of Indochina, the great military effort there requires economic support. In another situation, the economic program would not be effective unless there were a military program to increase the security of law and order in the particular countries involved. All of these factors and others which will come out in the course of the testimony have gone into our assessment of what it would be reasonable for the United States to attempt to undertake in these countries listed in title III during the fiscal year 1952.

There are two countries in the area which are not now included for either military or economic assistance. One of them is Malaya which we accept as a responsibility of the United Kingdom; the other is Japan.

We believe it is not now required that we come in for economic aid or assistance for Japan. The dollar purchases which have been made there in connection with the Korean war and the partial pay-as-you-go plan on which we are planning to operate in connection with our own Armed Forces in Japan have augmented their own remarkable industrial and commercial recovery so that their position does not require this particular kind of grant-aid at this time.

On the military side, the Department of Defense representative may have a comment to make on the prospect for that.

If I may comment off the record—

(Discussion off the record.)

Mr. Rusk. Mr. Chairman, those are the factors which have gone into the make-up of the program.

If the committee is willing, I think it might be helpful for Mr. Griffin and General Malony to indicate the factors which have been considered specifically with respect to their parts of the program and then if we can get into questions and make any analysis of the particular country programs which the committee would wish.

Mr. GORDON (presiding). I believe it would be best that General Malony and the other gentleman testify. Then we can begin our questioning.

You may proceed.

STATEMENT OF GEN. H. J. MALONY, DEPARTMENT OF DEFENSE REPRESENTATIVE, SOUTHEAST ASIA POLICY COORDINATING COMMITTEE

General MALONEY. I am General Malony of the Department of Defense.

Mr. Acheson in his testimony before this committee presented the basic reasons for military interests in this area, that is, the tremendous population, the resources of the area, and its geographical location with respect to communications between the Indian and the Pacific Oceans.

Our specific military objectives in this region may be stated as co-operation with the present free governments of the several countries in the area to assist in assuring that the forces of nationalism are associated with the rest of the free world instead of with Communism, and to assist in the development of sufficient military power where it is needed to maintain internal security and to discourage Communist military aggression.

Therefore, our general military mission is no different in southeast Asia than that in other areas and is to apply a program of preventing Communism from gaining the manpower, the resources, the raw materials and the creation of the industrial capacity essential to world domination.

We do not believe that military assistance in the provision of end items alone or in assisting in the training of the forces of these countries can by themselves bring about anything like a complete solution to the varied situations which confront these several countries.

Mr. MANSFIELD. May I interrupt? Which countries are you referring to?

General MALONY. I am referring to Burma, Thailand, Indochina, Formosa, the Philippines, and Indonesia.

Mr. GORDON (presiding). Proceed, General.

General MALONY. Such military assistance must, of course, be accompanied by political development and by economic measures tending to restore or to preserve the respective national economies.

In the absence of such military assistance, however, these countries may meet such military reverses as to prevent the effective application of other measures however necessary they may be.

With few exceptions, the governments of these countries are newly established as has been pointed out by Mr. Rusk, generally after a long period of military struggle or military occupation.

All of Asia, as has been shown, is on the crest of a wave of nationalism which supersedes all other aspirations of these countries and which cannot be reversed; and too often have these movements been taken over by Communist leadership and Communist propaganda which has had some success in disguising the real threat and in convincing Asian feeling that they should first deal with colonialism and later with Communism.

I think I should emphasize that in this area only are active hostilities in progress now, combat operations in Korea and Indochina and in the Philippines.

In the case of Indochina, the timely arrival of military assistance items last December was one of the principal factors in the successful defense of Tonkin.

I believe it may be useful, Mr. Chairman, to the committee for me to review very briefly the military situations in the various countries and later to elaborate on them if you require any such elaboration.

I will start with Thailand which is the recent scene of a disturbance in which a portion of the Navy captured and kidnaped the Prime Minister. Thailand has the oldest established independent government in southeast area; her friendship with the United States is traditional. Many of their influential leaders were educated here in the United States. She has furnished troops and some shipping and aircraft to the United Nations forces in Korea. Her stand with the rest of the free world has been staunch. The recent disturbance has been promptly and properly handled by the Government and so far as can be seen at this time, the Government rests more secure than before.

[Pointing to map:] Notice that she has a long eastern border contiguous with that of Indochina and that causes her to be very much concerned with the outcome of the war in Indochina and the success of the French and the associated states forces in action there.

Burma over on the other flank and next to India is primarily an area of British responsibility. Great Britain maintains a military mission there and is in touch with the military situation. The Burmese forces have been engaged for some time in clearing the main arteries of communication so that her commerce from the northern part of India may move to the seaboard.

We have a rather imposing map here that will show what the Burmese Government forces have been doing.

The areas in blue (indicating map) coming down from Mandalay to Rangoon on the east indicates a road and railroad which parallel the river. Those are very important means of communication without which—without their being open—of course, no commerce can move to port and the principal items of commerce do come from the north country, with the exception of rice which is in the southern and low areas.

The Burmese Government forces have had some success in this clearing. They are not large forces and have been pretty well strung out, as you see, along those lines of communication.

The areas which I have shown here in red are areas which are held by the dissidents. Unfortunately, the oil regions which are west of Mandalay and included roughly in the area shown by the brown line which drops from north-south, then turns west. Their pipelines are still in the hands of the dissidents.

There are several kinds of dissident troupes there. One that is threatening is the northern group of Chinese Communists, Communist-supported elements.

(Discussion off the record.)

General MALONY. Burma has not sought United States military assistance in 1952, nor do we have any program therefor or request for funds under the 1952 program.

(Discussion off the record.)

General MALONY. I will pass now to Indonesia. Indonesia is attempting to stabilize its recently appointed Government, and to restore her internal security which was very badly dislocated with the withdrawal of the Dutch. We have provided her with some items of constabulary equipment under the 1950 act but otherwise we have no program there, nor are we seeking any funds for a program there in this authorization, except for packing, handling and shipping of undelivered items under fiscal year 1950 appropriations and a small training program.

Mr. RUSK. You mean grant program. They are making purchases.

General MALONY. I should have made that clear, that I am referring to a grant program.

Mrs. BOLTON. They are purchasing

Mr. RUSK. Yes.

General MALONY. They are purchasing on a reimbursable basis certain items of police equipment.

As Mr. Rusk has indicated, we regard Malaya primarily as a British responsibility. The Government forces in Malaya have been engaged for some time in a struggle to put down the guerrilla units which are sapping local production and threatening internal security. We consider that the British are well able to meet the requirements there and we have no aid program, grant-aid program, for this area.

Mr. VORYS. Before you pass up Indonesia, tell us about Borneo. As I understand it, the north part, Sarawak, is still firmly British and the lower part is still in dispute as to whether it is Dutch or Indonesian. Is that the situation in Borneo?

Mr. RUSK. British North Borneo is still British. The rest of Borneo, that part formerly Dutch, is Indonesia. The area in dispute is western New Guinea, which did not pass to Indonesia automatically with the agreements on the transfer of sovereignty.

Mr. VORYS. Borneo is in with Indonesia?

Mr. RUSK. Partly in Indonesia.

Mr. MANSFIELD. Do you mean to say both Sarawak and North Borneo are independent of Indonesia, still in British control?

Mr. RUSK. Still a British colony.

Mr. MANSFIELD. The argument between the Dutch and the Indonesians has to do with that portion of New Guinea?

Mr. RUSK. That is correct; sir.

General MALONY. Formosa: at the present time the forces of Chiang Kai-shek are to be provided with sufficient equipment to be able, in conjunction with the United States Seventh Fleet, to repel successfully any attack which may be developed from the Chinese mainland. Her economy is being strained, of course, by the superimposition of the National forces of Chiang Kai-shek upon the population of Formosa. The Seventh Fleet has a mission of interposing in the event of a Communist Chinese attack on the mainland.

The Philippines by reason of the long United States occupation and our national policy to guarantee their defense from external aggression, bear a special relation to the United States. The armed forces of the Philippines are presently engaged in anti-Communist war against the Hukbalahap Party, the success of which will permit the application of other measures to restore and maintain her internal security.

I am sure you are all familiar with India and the Pakistan situation where they are involved principally in the settlement of problems which developed as a result of the partitioning of India.

Mr. MANSFIELD. General, will you give the committee some idea as to just how much the Huks outnumber the Filipinos?

General MALONY. I will be glad to do that. May I come back after I have completed this general thumbnail sketch?

Is that satisfactory to you, sir?

Mr. GORDON (presiding). All right, sir.

General MALONY. The Kashmir problem still remains unsettled and is potentially dangerous.

Indochina has been engaged with the Communist-led Viet Minh since December 1946. For the most part, the fighting has been localized in North Tonkin. At first the Viet Minh were poorly organized. They fought a guerrilla war. They quickly sought and maintained Communist assistance in equipment and training and the provision of military advisers.

In October last, the newly trained Viet Minh, fresh from training in the Chinese bases and using modern tactical formations and equipment with modern arms, captured two of the principal forts along the northeast frontier. These forts had been guarding the classic gateway of invasion to southeast Asia and so the road to Thailand and

Burma and India was thrown wide open. This presented a very real crisis indeed.

In addition to the loss of these important positions and the Tonkin frontier, French strength was likewise hard hit; they lost the greater part of five battalions of French troops. General Carpentier was relieved and his replacement arrived at a time when it seemed doubtful that the French would be able to resist successfully another attack against North Tonkin.

In December, Mr. Pleven, accompanied by a fairly large staff, came to this country and sought help in expediting the delivery of end items on the program and in expanding it. In the meantime, the Department of Defense acting with the Department of State had set up a military-assistance group under General Brink in Saigon and Brink immediately sought equipment and assistance from our headquarters in Tokyo. He was after such bread-and-butter items as barbed wire, napalm, ammunition, and from us he wanted more and faster deliveries of aircraft.

With the arrival of General de Lattre, who has replaced General Carpentier, the French troops responded quickly to the energetic measures which he proceeded to take and they became full of fight where their morale had prior to that time been considerably lowered.

By reason of the visit of Mr. Pleven here and the steps taken by all the departments to get the equipment which Pleven's staff considered to be the most necessary for the defense of Tonkin, we shipped out under forced draft, so to speak, a great deal of equipment and a lot of it was air.

On January 6, then, the Viet Minh struck again in force at the perimeter of the North Hanoi Delta to which the French had been confined after their catastrophic defeat in October. United States material was beginning to arrive in quantity and a lot of it was rushed from docks in the Haiphong area immediately up to combat. The Viet Minh were thrown back in this attack with heavy losses.

Last April the Viet Minh again attacked, this time along the river Day in the south side of the salient and again they were repulsed.

More recently now the fighting has spread to Annam and down south to Cochin China, and present indications are that we may have a period of calm here for awhile. I will tell you the present disposition but I would like to keep it off the record if I may.

(Discussion off the record.)

General MALONY. The French have borne the cost of this effort in Indochina, of course, and these figures are some measure of what it has cost them. You may gather from these figures announced on May 9, before the operation of the Key River, so they are well below the full and actual figures. They are from December 1946 to the first of 1951. The total losses among the French colonial troops have been announced as 28,927. The French troops themselves included in that figure amounted to 10,000. The actual figure was 9,925. Then in this fighting they have lost 2,608 noncommissioned officers and the officer losses were greater than all their military schools together turned out for the last year.

The cost of the war to the French to date has been about 750 billion francs which is \$2,142,000,000.

I have a remark or two on the program itself. This program on the military side rests, of course, on the proposition that the interests of

the United States are best served in assisting these independent nations of Asia to resist the enlargement of the vast Asian areas already under the Communist domination.

In extending military assistance to enable certain of these countries to stand firm as to their internal security and in turn resist Communist aggression and to increase the flow of the products of these regions which are necessary for us in both war and peace, to the friendly nations and correspondingly to deny them to the Communists.

I can give you an analysis of what we regard as the present intentions of the Communists in this area. They have made clear both by their actions and their propaganda that their intent is to bring Korea within the Communist orbit, to obtain Formosa, to bring about an all-Communist Indochina by armed actions, and to foment subversion in the other countries of the area and in the long run to control the Southeast Asian area.

So within the world-wide responsibilities which the United States has to shoulder and within the limitations of its resources, our military program undertakes to provide needed assistance so that the recipient countries may be given a chance so far as it is possible to do so by material means to establish and preserve their internal security and within certain limits to resist external aggression.

In submitting these programs, the United States has progressively moved toward creation and maintenance of end items for forces determined by the Joint Chiefs of Staff as adequate to meet the situation within the capacity of the respective countries to employ profitably and to remain effective.

We have considered the impact of this program upon the equipment of our own Armed Forces and we are seeking no funds which cannot be obligated constructively.

That is all I have, Mr. Chairman.

Mr. GORDON (presiding). Mr. Griffin, have you anything further?

STATEMENT OF R. ALLEN GRIFFIN, DIRECTOR, FAR EAST PROGRAM DIVISION, ECONOMIC COOPERATION ADMINISTRATION

Mr. GRIFFIN. Mr. Chairman, some of the economic ground has been covered, particularly by Mr. Rusk, and I want also to limit my remarks to the area with which I am familiar, which would exclude Korea for which ECA does not expect to have an obligation henceforth. I will also exclude south Asia—that is, Pakistan and India—although I wish to state that ECA was consulted during the formation of the programs for those countries by the State Department and most heartily concurs in the proposals that are being made.

I would like to make a few broad remarks to start with. One is the fact that in all of these countries of southeast Asia, including the Philippines and even Formosa, the average man is worse off today than he was before the war. That even applies to some extent in Thailand where the minimum of damage and disruption was caused.

There was not one of those countries that was not devastated during the war, as all were occupied by the Japanese. The Philippines received the major impact of that devastation and Burma was a very close second.

There has been great devastation in Indochina but that has been caused by the current civil war, very little of that having occurred during the World War.

I might also remark that during this entire period, until quite recently, nothing could be done for replacement of plant or anything to make up for the normal deterioration of plant. Also, there are only two of those countries in which people may normally go about the countryside without apprehension and fear. Those countries are Formosa and Thailand, although even in Thailand there is some dacoitism that takes place from time to time.

Formosa is the one country where you can go, on foot or on horseback, in perfect safety day or night. There is not a single guerrilla band operating in that country.

All of those countries that had colonial masters, such as in Formosa the Japanese, in Indonesia the Dutch, in Burma the British, lost most or practically all of the technical and expert personnel that had been more or less in charge of their administration and their economies. In Formosa, it was practically a clean sweep. In Burma it was practically a clean sweep of the British. In Indonesia there has been a constant exodus of the Dutch, with only a comparatively small number in relation to the previous large numbers that had been there remaining and useful to the Indonesian Government.

I think there is no part of the world where in general the effect of war, deterioration and devastation and of loss of people of experience, has had a greater impact than in this area that we are endeavoring to assist.

Our missions there are in three different stages—although Asia presents so many special problems in each country that I would say we are in somewhat of a different stage in every country. Of course, Formosa is one country in which we have gathered experience. The Formosa mission resulted from our China-aid program and was an extension and continuation of it. Therefore, it has really been in operation from the time we began to enlarge it in the spring of 1949. Prior to then, the major activity, of course, was on the mainland of China. A great deal of experience has been gathered there in the approach to the problem of the rural people. You are all familiar with the work of the Joint Commission on Rural Reconstruction which has been a model of western activity among oriental peoples.

The countries of southeast Asia have programs that resulted from a determination by the President to extend aid to them last spring. In the area of China section of the Foreign Economic Assistance Act of June, 1950, the southeast Asian countries were in line for aid programs, and missions have been constituted in those countries and are still in some categories being manned with the personnel required to operate them.

The Philippine program is entirely new. It originated by the President's determination, after Mr. Daniel Bell conducted his economic-survey mission there, to extend aid, provided the Government of the Philippines would undertake certain measures of self-help as an indication of readiness to accept aid.

That resulted in the Foster-Quirino agreement whereby President Quirino obligated himself to have certain legislation passed if possible by the Philippine Congress. Their Congress rose to the occasion, the legislation was passed in the spring of this year, and the initial phase

of the program got under way out of funds which were made available in January when the 3-percent transfer of ERP funds to the general area of China was authorized by Congress.

So we are in these various stages and we have different results, of course, to report. I think part of what I have said already speaks for the results in Formosa. In a most difficult situation there economically, it has been possible to maintain a comparatively stable economy and provide a satisfactory enough life to the peasants so that they have not been a threat to the internal security of the island.

In the Philippines, strange to say, although our program can be hardly said to be launched, the anticipation of the program, the fact that the Americans were again to do something extensively to help them—extensively in a moral way more even than in a physical way—seems to have resulted in a new breath of spirit in the country. It even affected the black-market rate of the peso which, I believe, at the present time is 2.3 pesos where only a few months ago it had been over 3 pesos to the dollar.

Now, our approach to the problems we have to face in southeast Asia is one that is generally the same in the southeast Asian countries. It is quite different in Formosa. In Formosa, as you realize, we are running an extremely large program for a small country. It has technical-assistance features, that is true, and a great deal of that technical assistance has been rendered by the Joint Commission on Rural Reconstruction. But it also has today our largest capital improvement program in the hopes that we will make that island self-supporting.

It also has a very extensive program in consumers' goods and industrial raw materials and fertilizer—goods essential for the maintenance of supply in the island. This is necessary for several reasons: First, because the Chinese Nationalist Government lacks the foreign exchange and the reserves to maintain what is necessary in the way of importation in an island that cannot support itself and also support a military force of over half a million people on the payroll; second, to prevent inflationary disaster.

While the situation is in many respects comparable to the situation in Greece, which has a somewhat similar population but, of course, was supporting a war, Formosa nevertheless has to support a Nationalist Government on top of its provincial government and an army, navy, air force and civilian war workers of approximately 600,000 people, as against the support that Greece has had to give to an army of approximately 150,000.

Therefore, we have endeavored last year, that is, in fiscal 1951, and this year in fiscal 1952, to increase our capital-investment program, so to speak, in Formosa, with the hope that increasing self-sufficiency will result.

In the other countries of southeast Asia our programs are based essentially on endeavoring to strengthen those governments in an administrative sense, to bring about some impact on government and on people that particularly will increase the loyalty of the peoples to their governments and their support of their governments, and to break certain economic bottlenecks.

Those bottlenecks exist to a greater or lesser degree within each of the countries. In tackling the job of breaking those bottlenecks

we emphasize the principle of jointness, which is the way we go at all the problems we seek to solve throughout that part of the world.

I can only state when we first entered Burma it was difficult for the Burmese to believe that our approach did not veil something that might be unsatisfactory to them. They were filled with the fear that a new type of colonialism might succeed the old type they had thrown out. They were extremely suspicious of us.

Our first approach in trying to break down that suspicion was the joint method of programming. The fact was we had nothing to hide. We entertained with them the prospect of jointly preparing ideas for aid within the limited means we expected to have available. This principle of jointness we have followed throughout.

In it also we have further explored and have come to realize very realistically the weaknesses that those governments have—the lack of technical assistance; the lack of bureaucracies that are trained in their work. It is quite a different matter to approach a European country on the basis of evolving a program and have experts produce for you a very well thought-out program, with all the blueprints in shape, and all the plans and statistics prepared. There is no such thing in southeast Asia.

The most competent bureaucracies are in Formosa and Thailand. In the other countries they are new; they are partial, and they are inexperienced. Many times you feel that a government minister probably has not a deputy who is adequate to backstop him in his work. This has meant that in evolving our program we have had to work with them right from the beginning.

In one of these countries I was present in the STEM office last fall when the Secretary General of the Planning Ministry came in. He was somewhat embarrassed, but at least he was frank. He stated it was impossible for his office to make out the proposals on the forms that we had submitted. He made the request to the mission chief that we furnish out of our own personnel the people to go to their offices and work with them on ideas that had generally been accepted and screened by them, and again screened by us, in order that the formal proposals might be sent out on the blanks provided in those pieces of paper we had.

We did that. Otherwise, that government would have been probably unable to submit a proposal to us.

In those countries the process of working out proposals for us has sometimes caused a great deal of delay due to inadequacies in their bureaucracies. The process is somewhat as follows: The Government sets up an administrative piece of machinery—a committee of some sort, like the Burma Economic Aid Committee—that will handle the applications from the ministries for aid programs. Meanwhile in those ministries, the Ministry of Health, for instance, and Ministry of Agriculture, and the Ministry of Industry and Commerce, our own STEM staff members will have had conversations and will have already given them a preliminary idea of the scope within which they must remain and the sorts of things that would in all probability be the most appealing.

In short, we do not like to have them think at an early time, and then be turned down later, that we would be interested in helping them to erect plants for the extraction of fissionable materials, or to build cyclotrons, as was wanted in one instance.

This preliminary work was done, and these ministries submitted their proposals to the committee that was formed for screening. Our STEM's work very closely with that committee, so that at the time the screening is accomplished by the committee the probability is that they will not be submitting to us projects we would turn down. We feel strongly that it is not desirable to permit, through a lack of interchange of intelligence between us, any ideas that would encourage them, or lead them in a mistaken way to submit proposals that were certainly doomed to be turned down.

So those proposals reach this committee, and the committee screens them, and those screened proposals go to our STEM for reconsideration and thorough study, preparatory to justifying the proposals to ECA in Washington. These proposals then come to our office here, and again they are screened as to practicality, and as to the justifications offered by the STEM's, and as to the materials that are required for the program—in short, everything possible in a positive way to promote the program. Where we find negative reasons that have to be considered where it might be impossible to see that request through, then we engage in correspondence, usually by cable, with the STEM, to endeavor to get an adjustment made in that proposal, so that in general it can go through in some satisfactory shape.

So this principle of jointness goes all the way through in our operations with those governments. Similarly, after projects are accepted it is not our purpose to have scores of Americans going out in the public health field, doing all the field work for the governments that are the recipients. On the contrary, while the people we send out there must be people who will work in their shirt sleeves—we do not want advisers, and those governments, by and large, do not want advisers: they want workers on our part, and we have to provide workers—nevertheless, the first work our people do is the training of the local people who must be the semitechnicians to help carry out the program.

Therefore, if we are going into a malaria program in one part of one country, or if we are going into a program to apply aureomycin to the eyes of the people who are suffering from trachoma, there is first a large training schedule of the local people, the indigenous people who have to be our right hands. Our people sally forth with them and actually get the work done. This will apply also in the field of agriculture, where we feel that our impact—and it is not only a temporary impact we are after, but it must have a permanent nature also—in extension work is through the training of the native people to carry on the extension work and to do it side by side with us, so that when the time comes that American aid is no longer available, this training will have been accomplished and this Government will have a going machine to carry on the work.

The idea, of course, in carrying this out, lies in our capacity to attain the thing we have striven for the most, which we call the village approach. It is one thing to bring aid and services to the rural areas and be ships that pass in the night. It is another thing to build up the government services. It is still another thing to build up a nucleus in each village which belongs to the team. That is our greatest desire to accomplish that throughout the villages of southeast Asia, in the Philippines, Thailand, Burma, and Indonesia.

The difficulty in the approach to mainland China had been that we had never had time to succeed. There had not been a JCRR early enough to do the village work among the Chinese on the scale that would have been necessary. Whatever had been done by missionary groups and by various private groups, and an occasional job by UNKRA, and a few of the little things done by ECA, was piecemeal, and only organized on a very minor scale.

It is our hope that by this village approach we will not only form in each locality the nucleus to continue the program, but in addition to that will give them a sense of belonging to something which is worth while.

Incidentally, that would mean in most Asiatic localities perhaps the first specific instance known in that locality of what we call civic spirit, and what is really unknown among Asians.

I want to mention, too, at this time the importance of counterpart itself in that part of the world, and how much those countries are doing about counterpart.

Here again it was a different proposition in many respects than in Europe, where we had broad supply programs that immediately furnished counterpart through sales proceeds. Actually, in short, the counterpart of the American dollar was raised by the rapid sale through commercial channels of the products which were imported from this country, and those sales proceeds accrued to the recipient government, to be used on projects and in various ways, according to agreement between that government and our missions in the field.

In Asia, or a number of countries of Asia at any rate, there is comparatively little in the way of sales proceeds in our programs. Of course, that is not so in the case of Formosa, in which there is a tremendous sales proceeds program, due to reasons I have already given to you, to maintain essential supplies and also to prevent an inflationary condition from again sweeping the Chinese off their feet.

In that connection I will say also that practically 50 percent of our program in Indochina is sales proceeds, because it would be impossible to get from the governments of the associated states the wherewithal otherwise to handle the programs we are operating. In short, Indochina is running up against a very serious deficit. It has only been given very recently the authority to levy and collect taxes. It has a military establishment to support. It would be impossible for it to furnish counterpart on the basis of commensurate value.

In the Philippines also we have a considerable sales proceeds program. In Burma we have a very small sales proceeds program.

Generally speaking, in Thailand and Indonesia we do not have a sales proceeds program; but in Indonesia we have the sales proceeds of the previous program that was handled through the Dutch, when the Dutch were operating there, to live upon. Therefore, in these other countries, the Governments must through tax resources and other budget resources to a great extent finance the local currency costs. Local currency costs are borne more heavily in that respect in this part of the world by some of those countries than they have been anywhere that ECA has operated before.

Incidentally, also, no programs there could succeed without a very extensive use of counterpart. Actually, what we need in the field there is local currency. We need local currency more than dollars, in a way.

We have asked in this legislation also that Congress make it possible, when in the judgment of the Administrator it is advisable, for dollars to be directly used to acquire local currency. I hope very much that it can be done.

If there were any period of interruption of commerce when our deliveries were retarded for awhile, and we could not have on hand, coming into the pipeline, the equipment and supplies we had ordered, we would like the privilege to have our programs continued by using dollars directly, if necessary, or as advances to those governments to be repaid later as our equipment comes in, in order that our program should not in any respect be retarded.

The results of our programs are as yet difficult to measure in southeast Asia countries. I mentioned the results, which you are well aware of, in Formosa, and an anticipation by the Filipinos of desirable results. But when it comes to Burma, Thailand, Indonesia, and Indochina, we can state certain things that are being done that we think are good and will be better, but it is yet too early to say the extent to which we have strengthened those governments, because we cannot put our finger on anything exact enough to boast about. We do believe that they are immensely encouraged by our presence. We think that their reaction to the thought, "Well, next month more technical assistance will come in, and the following month more will come in," does encourage them as they meet, or try to meet, some of the problems that are really piling up over their heads.

However, to give you an exact list of accomplishments we can point to and say, "These have made conditions materially better in these countries," would be impossible for us to do at this time, frankly. We hope that by the continuation of these programs throughout another year, when we next come before this body, we will be able to give the sort of evidence that makes you feel that the programs are highly justified in point of results already attained.

We are convinced that our work is essential to that part of the world. We are convinced also that given good men—and we try hard to get good men—and given a pipeline which is kept reasonably well filled—and we have at last gotten it reasonably well filled—that we can do a great deal in those countries not merely to halt communism but to give them forward-looking hopes, to help them present themselves as the great assets to the world that they are.

When one speculates on what that part of the world means to the entire world and how important it is to keep the balance of power in the world situation, I think that our program, modest though it is, can find its justification in probable results that can be in our opinion attained.

Chairman RICHARDS. I think the best way to proceed would be under the 5-minute rule first. The members will direct their questions to the members of the team, who will cover what they are inquiring about.

Mr. Chipersfield.

Mr. CHIPERFIELD. Mr. Secretary, when we considered the programs in the Near East and independent Africa, each member of the committee was given a summary of those programs by country and object, and also certain detailed proposals. Do you have a similar breakdown for the members of the committee?

Mr. RUSK. We have a breakdown, Mr. Chipperfield.

Mr. CHIPPERFIELD. It is in this book here—in the Near East.

Mr. GRIFFIN. We submitted to the staff a number of copies of the fiscal 1951 and fiscal 1952 programs.

Mr. CHIPPERFIELD. It is not so much that we can absorb the details and all that, but we want to know what you have.

Mr. RUSK. We are very anxious to get that information to you, sir.

Chairman RICHARDS. You want the 1952 program in the record, if it is not already in there.

Mr. CHIPPERFIELD. All we have so far is just the totals.

Mr. GRIFFIN. For instance, here is a fiscal 1952 breakdown by general projects. The first page is "All Southeast Asia" and then country by country follows.

Mr. SMITH. Will that go in the record?

Chairman RICHARDS. Is that what you are asking about?

Mr. CHIPPERFIELD. Yes. I want to get the breakdown so that we will know the nature of the programs.

Chairman RICHARDS. You have no objection to placing this in the record; have you?

Mr. GRIFFIN. We have none. This was marked "Restricted" only to keep it in that form until it is submitted to this committee.

Chairman RICHARDS. Without objection, this program copy will be placed in the record.

Mr. GRIFFIN. There are minor revisions we will have to give you.

Chairman RICHARDS. Please do that before you give it to us.

(The documents referred to are as follows:)

FISCAL YEAR 1951 PROGRAM

All southeast Asian countries: Summary table—Estimated dollar cost of program by country and major cost components

(Dollar costs, in thousands)

Country	Total dollar cost of program	Cost of supplies and equipment	Cost of services		
			Total	Technical assistance experts ¹	Trainees ²
Formosa.....	\$ 92,621	91,416	1,205	695	210
Philippines.....	15,000	13,973	1,025	1,025
Indochina.....	\$ 21,828	21,542	266	266
Burma.....	10,774	9,298	1,476	1,438	18
Indonesia.....	7,973	7,053	918	907	11
Thailand.....	8,676	8,054	822	765	57
All southeast Asian countries.....	157,072	151,340	5,732	5,436	296
Unallocated program costs.....	246	246	246
Total cost, southeast Asian programs.....	\$ 157,318	151,340	5,978	5,682	296

¹ Experts sent to country. Cost shown represents actual dollar obligations.

² Persons brought from country for training. Cost shown represents actual dollar obligations.

³ Net basis. Excludes funds released from previous year's obligations.

⁴ Includes total cost of contract with United States engineering firm.

⁵ Includes \$34,000 MDAP funds used for salaries and other dollar expenses of initial group of technicians sent to inaugurate health program.

⁶ Provides for an estimated 275 persons and covers additional services rendered under engineering contracts.

⁷ Provides for 73 persons.

⁸ Obligated under an agreement between ECA and the Federal Security Agency (U. S. Public Health Service).

TABLE 1.—*Formosa: Estimated dollar cost of program by major project category*
 (Dollar costs, in thousands)

Major project category	Total dollar cost	Cost of supplies and equipment	Cost of services		
			Total	Technical assistance experts ¹	Trainees ²
1. Emergency relief					
2. Public health	63	18	50	11	39
3. Agriculture, forestry, fisheries	334	180	184	100	54
4. Transportation, power, other public works	12,077	12,053	24		24
5. Handicraft and manufacturing, mining, other industry	1,704	1,659	45		45
6. General engineering advisory services	884		884	884	
7. Education	19		19		19
8. Public administration	29		29		29
9. Maintenance of essential supply ³	77,506	77,506

Mr. CHIPERFIELD. I would like to ask General Malony a question (Discussion off the record.)

Mr. CHIPERFIELD. I understand, sir.

Chairman RICHARDS. Will the gentleman yield before you are finished?

Mr. CHIPERFIELD. Yes.

Chairman RICHARDS. General, is it not a fact that the cost of the Indochinese operation by the French has just about cost them what our military aid has cost that we have furnished to the French today?

General MALONY. That we furnished the French?

Chairman RICHARDS. Yes. I think you said a few billion dollars.

General MALONY. Yes; close to \$2 billion.

Mr. COOLEY. I think it is approximately the same as economic aid that has been given France in the ECA program. That is the statement that has been made in the record from time to time, I believe.

Chairman RICHARDS. That is, the cost of the Indochina operation—

Mr. COOLEY. To France, has been approximately the same or the equivalent to the amount of ECA aid France has received.

Chairman RICHARDS. Yes; but it did not include the military aid?

Mr. COOLEY. That is my understanding.

Mr. CHIPERFIELD. I have no more questions at this time, Mr. Chairman.

General MALONY. May I make a statement off the record?

Chairman RICHARDS. Yes.

(Discussion off the record.)

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. No questions, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Mr. Rusk, is there some danger that if we project our military strength in the Pacific, that the Chinese Communists,

especially, have a very good argument that we are bent upon conquest and the setting up of a sphere of influence of the white man against the yellow man?

Mr. Rusk. I think, Mr. Smith, they will undoubtedly make that argument. They have made it persistently in the last 2- or 3-year period. We believe that that is an argument which we will have to face and refute, because the Chinese Communists are confessedly a part of a combination which itself is out to commit aggression, not only in its own immediate neighborhood, but ranging far beyond its immediate borders.

The WFTU plan for the conquest of Asia seems to be still uppermost in their minds. We have now no doubt they have Japan as a target, Korea as a target, and southeast Asia as a target. We do think that it will be possible to demonstrate to the great masses of the people of Asia that we were not the ones that invaded Korea; that we were not the ones who embarked on this program of aggression; that we are ready to work with the people of the area to maintain their own essential security.

It will give the Communists a propaganda point, but it is a point which they will use in any event, and we cannot afford to let our security suffer for that particular reason.

Mr. Smith. I suppose as the matter now stands, when you think of China in the hands of the Communists, that therein is the greatest concentration of Communists in the world today.

Mr. Rusk. That is the greatest concentration of people under Communist control. Yes, sir.

Mr. Smith. Now, we justify our action there on the grounds of morals. It is a moral approach. We think it is the right thing to do. Actually for those whom we are assisting, taking the people of Thailand, Indochina, and Burma, do they approach the matter on the same basis of moral standards that we have, or are we trying to impose our set of morals upon that part of Asia?

Mr. Rusk. I believe that we can come to a common ground with most of these peoples and the governments of Asia on the basis of the principles written into the Charter of the United Nations. That is a short-hand way of saying it.

I think if we could look at the preamble in articles 1 and 2 of the Charter, we would find there a number of broad propositions about the kind of world we thought we were moving toward at the end of World War II, which would be entirely agreeable to the people of Asia as well as to us, and which would, in fact, represent our basic common interests.

Mr. Smith. Are most of these countries in the United Nations?

Mr. Rusk. Yes, sir. Afghanistan, Pakistan, India, Burma, Thailand, Indonesia, the Philippines, and Formosa are all in the United Nations. The Associated States of Indochina, Ceylon, and Korea are not members of the United Nations, and Japan is not a member of the United Nations.

Mr. Smith. I have a question for the general. May I have your attention, General Malony?

General Malony. Yes, sir.

Mr. Smith. Would you say that the great drive that is going on there now in southeast Asia is one that is designed to get to the great natural resources of that area of the world, which are considerable?

Do you not think that that is the motive of the Communists in China especially today?

General MALONY. Of course, that would be one goal, surely. For instance, a blow down through Indochina dislocating the French would be a very short route to the tremendous rice-producing areas of Cochin China. Similarly, a blow against Burma would push them down into one of the largest rice-producing countries of southeast Asia. The same might be said of Thailand. I do not think that would be one of their principal military objectives, but I do think it would be a very important objective.

Mr. SMITH. In that whole area there is considerable tin, rubber, and oil?

General MALONY. That is right.

Mr. SMITH. Those are certainly natural resources they need for their industrial machine if they are going to continue this military expansion program.

General MALONY. That is true.

Mr. SMITH. That is all, Mr. Chairman.

Mr. RUSK. May I add a statement on that last point?

Mr. SMITH. Yes.

Mr. RUSK. Not only is the intrinsic worth of southeast Asia important as a possible target, but also the relation between southeast Asia and Japan is important. Japan is going to have a difficult problem at best in adapting itself to the new conditions in which it finds itself.

If southeast Asia falls under hostile control it is going to complicate the Japanese problem many times over with respect to the area as a source of raw materials and as a place for the markets they need.

Mr. GRIFFIN. May I add a statement there?

Chairman RICHARDS. Mr. Griffin.

Mr. GRIFFIN. To point up the importance of what Mr. Rusk said, in 1949 SCAP made its first barter arrangement with Thailand, and that has been continued since. I believe the first barter arrangement was for approximately \$25 million worth of materials. The second was in 1950 for \$45 million worth. I think 1951 will be for \$60 million worth.

In the case of Burma in 1950 it was, I believe, for around \$24 million worth of exchange between the two countries, and I believe the Burmese were able to transfer between \$16 and \$18 million worth back and forth; so already, even on a barter basis, they have come in there in a very important way; and we are opening an office in Japan ourselves in order to expedite procurement, particularly of materials that might be in short supply in this country.

Mr. SMITH. Thank you.

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. Mr. Secretary, a few days ago when Mr. Foster was before us we started discussion, without very much time to develop it, as to the difference in operation of ECA, that is, the so-called STEM programs, and point 4.

If I understand it correctly, point 4 is to operate in Afghanistan, Nepal, and Ceylon, and the remainder of southeast Asia, that is, India, Burma, Thailand, and others, come under ECA. Is that correct?

Mr. RUSK. That is correct. The general principle is that where the assistance is almost wholly technical assistance in character it would

be suitable for a point 4 operation. But where the program requires not only technical assistance, but with it very important other types of aid, then it is the ECA type of operation. It just happens in the area for which I am responsible that the plan is that it be entirely ECA; that is, from Burma around through the Pacific. That is because it would be a combined program of the sort that would require not only the furnishing of technicians for technical assistance, but the procurement of supplies and things of that sort. We and ECA have a very close working arrangement for that particular aspect of the matter.

Mr. BURLESON. Are we to understand that the objectives of the two programs are materially the same?

Mr. RUSK. The political and security objectives are the same. I think there would be differences in the emphasis and obviously some difference in the objective on the strictly economic side, because the broader programs would be in the form of economic assistance, rather than technical assistance.

Mr. BURLESON. The objectives of technical assistance—and this was also mentioned by Mr. Foster—are improvements in agriculture, health, transportation, and whatever may be determined necessary. That suggests to me a very permanent and a continuing program. But as I understand it, ECA is a temporary program. Maybe it is temporary for 20 years, but I understand it is temporary.

Mr. RUSK. Well, we look forward for some period of time to accomplishing a substantial program of assistance in southeast Asia and that part of the world. I would like to ask Mr. Griffin if he would care to comment on that.

Mr. BURLESON. Also comment, Mr. Griffin, on these two programs.

As I understand it, there is a shortage of technicians. Are these two programs going to be combined with one another to secure the qualified personnel for these tremendous undertakings which will continue on and on for a great period of time, or will they be competing for personnel, and so forth, to carry on the same type work?

Mr. CHIPERFIELD. Will the gentleman yield?

Mr. BURLESON. I yield.

Mr. CHIPERFIELD. I want to find out one thing. What do you mean by a "STEM" program?

Mr. GRIFFIN. I beg your pardon. I am very much at fault for not having mentioned it.

Mr. BURLESON. Mr. Foster gave us that STEM business up here the other day.

Mr. CHIPERFIELD. I was not present then.

Mr. GRIFFIN. It is one of our alphabetical tags, but it means "special technical and economic mission." In short, from the beginning of our programs in southeast Asia there was an emphasis on the technical assistance part of it.

Chairman RICHARDS. You said technical assistance?

Mr. GRIFFIN. Yes.

Mr. VORYS. Special technical. This is not just technical, but special technical.

Mr. GRIFFIN. A special mission.

Chairman RICHARDS. It is a kind of shotgun wedding between ECA and technical assistance, is it not?

Mr. GRIFFIN. It might be considered that, in that ECA had not in Europe embarked on programs in which technical assistance--important though it was--was so much the original and central point as it necessarily has to be in Asia. Here, as soon as we undertake a large agricultural program, in order to improve the production in these southeast Asian countries technical assistance is fundamental. For instance, in Japan, the average production per acre of rice is 3,300 pounds. In the United States, where we go at it on a broad scale with a lot of equipment but not as much attention to the details of intensiveness of production, we are now up to about 2,300 pounds of rice per acre. In the Philippines they grow a little less than 1,000 pounds of rice per acre. In India it is about the same. In Burma it is about 1,200 pounds of rice per acre. In Indonesia and Thailand it is about 1,400 pounds per acre. When we go there to improve the rice yield by various means the approach is not by bringing in the American production methods for rice but by improvement of seed, and selection of seed, and the use of fertilizers, and improvement of water control, and so forth.

Naturally, technical assistance goes hand in hand with that. We send out people from the beginning who are technical assistants to those countries. We get trainees from them as counterparts who go along in that and work with our technical assistants on the ground. We send for trainees who come to this country to pick up ideas from our extension work in this country as to how to take the extension work in rice multiplication, seed, and so forth back to that country. Therefore, it is in a sense very much point 4, and the same applies in the health operations. It is point 4, but souped up, I would say, by having a great deal of matériel to work with on the job. In short, an awful lot of on-the-job training is given by the methods we are employing in southeast Asia.

For instance, in another field, in the field of medicine, we have secured the services of Washington University of St. Louis to be affiliated with the medical college in Bangkok. It is not a case of sponsorship. Those countries do not want to be sponsored, but they are pleased to have an affiliation. Therefore, we made a contract with Washington University whereby they have sent a number of doctors and medical people in various phases of medical work and hospital work in Bangkok, and they are on the job now.

They are operating, and they are all people with their sleeves rolled up in the operating rooms and bacteriological work, and so forth.

We are now about to take up with the University of Pennsylvania the possibility of their becoming affiliated with the University of Rangoon. They will conduct--if that is satisfactory to the Burmese, and if we can make a suitable contract with the Medical College of the University of Pennsylvania--they will move in a team likewise into Rangoon. That is in addition to our public-health activities, which go out into the countryside, among the people, and give technical assistance.

We are training the Ministry of Health in Burma in how to enlarge its activities and be able to administer that.

Mr. BURLINSON. That is another thing. You mentioned health and agriculture. We have the WHO, the FAO and other UN agencies; there is point 4, there is ECA, and what else? There must surely be a common interest or common denominator in all these.

I would not say that all these agencies are working at cross-purposes, but it seems to me there would be a competitive proposition present in these activities. I do not know in the first place how much money we are spending. I would like to get it all racked up in one sack, where we can look at this thing. I would like to put it up on the grease rack and look under it. It seems to me there should be an answer to that.

The Colombo plan is another thing. It must be an influence in the picture at some place.

Mr. GRIFFIN. I think I can explain it.

Chairman RICHARDS. Let us get straightened out on this. Your time has expired, and Mr. Merrow is coming up next.

Mr. MERROW. John came in after me, and Mrs. Bolton.

Chairman RICHARDS. Mrs. Bolton will be next.

Mrs. BOLTON. Have these countries all asked for help?

Mr. RUSK. Would you describe the procedure by which these various committees have worked, Mr. Griffin.

Mr. GRIFFIN. This comes back to the matter of the origin of the programs and of the jointness which was worked out.

The President decided in the late winter of 1950 to explore the possibility of aid programs in southeast Asia. A survey mission with instructions to look into the need of point 4 types of technical assistance and of economic assistance combined was sent out there for that purpose. I happened to be asked to take the mission out.

Each country had been informed of what the purpose of the mission was through the embassies, and in all we were received with varying degrees of enthusiasm—a little too much enthusiasm. We explained the purpose of our mission. We held discussions with the governments and explained to them that a limited amount of this type of aid would be made available if they desired it. They had to express their desire for it before we could get together at all on possible projects.

Mrs. BOLTON. It was an original offer on our part to be the generous one?

Mr. GRIFFIN. It was an advance on our part. Yes. What had preceded that before I came into the picture, in the way of possible requests, I am really not fully informed on.

Mrs. BOLTON. It would seem to me that we could be very thoroughly criticized by our people at home when we are facing such heavy expenditures in this country, for going out and soliciting business for our generous gifts. That will be a little hard to sell.

Mr. SMITH. Will the gentlewoman yield?

Mrs. BOLTON. Yes.

Mr. SMITH. I would like to say for the record when we were considering the point 4 program I asked specifically whether this was going to be an invitation by the United States to do this for everybody, or whether it would come upon the initiative of the other countries. Now, we learn that this initiative was all on our part, and it points up exactly the point that Mrs. Bolton has made.

Mrs. BOLTON. Do not misunderstand me, Mr. Griffin. I feel we have a very real job to do in the world which includes giving a hand up to underdeveloped countries. To do this we must first of all insure an understanding of our purposes. I do not believe that we have any right to go out and try to change the character of the people.

I do not think that our particular methods are so universally good that they would be acceptable to all people and so should be spread across the world. The attitude we have that success is measured in money is not something that other countries should want to take on. Certainly it has been a very destructive factor in our own way of life.

Therefore, though keenly desirous of seeing the world a better place to live in, and knowing how much a general aid program will do to offset some of the features of communism, still I am troubled by the fact that we go out and ask for bids, so to speak. Perhaps that is putting it crudely and probably more dramatically than it is meant to be—but if we are going to do that we will have to be far more secure here in America.

When the point 4 was first thrown out at the world by the President there was a good deal of discussion in the committee and out as to there being any need for it at all. We were already giving technical aid. Many felt it a beautiful political gesture and we saw no necessity for these implications of competition. Possibly this is what Mr. Burleson was driving at. Here we have the Veterans' Administration wanting doctors, and so does the Army. The result is competition in a field of short supply. I do not want to hold the floor, however, for I think Mr. Rusk has something he wants to say.

Mr. Rusk. May I comment on that as I do not believe the initiative of the President in discussing point 4 or the mission undertaken by Mr. Griffin, as Mr. Griffin explained, provide a full explanation as to the nature of these requests put to us.

In these countries other than south Asia—and Mr. McGhee can speak for south Asia—we are now in the position of having requests from them, or demands from them, which go considerably beyond any program which we have in mind giving them, and in most cases you have countries in which we would stand in an aid relationship, in any event.

Aid to China goes back many years, into the war period. Korea involved an occupation responsibility and an attempt to work out a result there.

In the Philippines we had a special responsibility which went back historically for many decades. With the fighting that occurred in Indochina, we were involved with French initiative in seeking aid in that particular instance.

So I think it can be assumed that the recipient countries are anxious to get this assistance and are asking for much more than they are getting, and we are not in a position of saying we would like to give you some aid, can we find anyone who is willing to take it?

I think there are many countries who are very strongly seeking it for very important reasons.

Chairman RICHARDS. The time of the gentlewoman has expired.

Mr. Hays.

Mr. Hays. As I understand it, strictly speaking, the three countries mentioned by Mr. Burleson—Afghanistan, Nepal, and Ceylon—are the only three of this group that come administratively under point 4. Is that correct?

Mr. Rusk. That is correct. Yes, sir.

Mr. Hays. But similar work to point 4 is done in practically all of the other countries mentioned in title III?

Mr. Rusk. In all of the economic assistance program there will be some technical assistance as a part of the program. Yes, sir.

Mr. Hays. When we get into this problem of tying the program together administratively in a little different way perhaps than now, what difficulties will we run into? In other words, is the situation so different in these three countries from India, for example, that we should leave it as it is?

Mr. Rusk. I am not sure I am a suitable representative to go into this organizational question from the over-all point of view. I can only speak personally and from my own direct relationship to it.

We have found that the concentration in ECA of all the economic activities and operational programs in the part of the world for which I am responsible has worked very effectively. It relieves the policy sections of the State Department of the very burdensome day-by-day operating matters and management of the program. At the same time, it gives us an opportunity to work closely with them on the determination of policy.

Similarly, with the military programs we have had a very satisfactory arrangement with the Department of Defense, whereby after the policy is established and the nature of the program determined, the Department of Defense is the actual administrative agent in the field.

It may be that that is more simple for us in these countries than I have been working with than it might be in other situations, but I must say that we have had a very satisfactory relationship with both these agencies in this respect.

Mr. Hays. I forget which one of you dealt with the counterpart funds.

Mr. Rusk. Mr. Griffin.

Mr. Hays. And the disposition of them. Mr. Griffin?

Mr. Griffin. Yes, sir.

Mr. Hays. You say in India, for example, we are building up counterpart funds?

Mr. Griffin. No, sir. Not in India. It happens that the Government of India, as a result of the sales of food that will be made because of the food loan measure that Congress passed, will build up a large fund of sales proceeds, but it will not be a counterpart fund in our sense of the word because they will be able to handle it independently of American advice or consent, because it is a loan program rather than a grant program.

Mr. Hays. Does the disposition of these counterpart funds vary, or to what extent is there uniformity in the handling of them? I am not clear on that, Mr. Griffin.

Mr. Griffin. There is not uniformity in their derivation because, as I explained, some are derived one way, and some another. But in handling it it is uniform. Yes, sir.

The counterpart fund is the property of the government which receives the aid, just as it is in Europe. But the planning of the use of the counterpart fund is a matter of joint planning, and again a case where ECA gives its assent, or concurrence, or its participation in the use to which the government will put the counterpart fund.

Mr. Hays. Do not all of these working agreements under formal contracts with the country provide that American assent to disposition of funds should be required?

Mr. GRIFFIN. Yes, sir.

Mr. HAYS. And those are more or less uniform, are they not? I mean, there is a policy underlying the whole area of southeast Asia, is there not?

Mr. GRIFFIN. That is uniform. Yes, sir.

Mr. HAYS. We got into this to some extent in the India food legislation. Are we getting proper emphasis upon health do you think? This is a point 4 question, more or less, which deals with social and nutritional problems, but that is what I am getting at. Or, are we letting the emphasis upon capital structures, or grandiose schemes, prevail?

What assurance can we have that health and nutrition are being given consideration in these counterpart funds' use?

Mr. GRIFFIN. Well, sir, in each country where there is a bilateral agreement, which we have not got yet with India, because we do not have an ECA type of program yet in India—

Mr. HAYS. I did not understand you, sir. You say we have not?

Mr. GRIFFIN. Not in India. Because it is a loan program and is based on a loan agreement. The loan agreement does not set up a counterpart fund. But, wherever a grant operation is involved, there is a counterpart fund. It is provided for in the bilateral agreement and the terms under which it may be drawn upon, I believe, are identical in all of our bilateral agreements.

Chairman RICHARDS. The gentleman's time has expired.

Mr. VORYS, I believe we missed you.

Mr. VORYS. I will wait. I will come at the end of the line. I missed my turn.

Chairman RICHARDS. Mr. Merrow is next, I believe.

Mr. MERROW. The fundamental reason for this program, both military and economic, in this area, of course, is that we feel the integrity of these countries is essential to the security of the United States. That is the reason, is it not? You said that you could not give us evidence of very much progress being made during the last year. In other words, the ability of these countries to resist encroachment has not increased then within the past year or the past year and a half. Is that right?

Mr. GRIFFIN. No, sir. I did not say that. I said it is premature, though, for us to say that so much has been accomplished in these comparatively few months in which we have been launching our program. A great deal has been accomplished in this, that we have set up the government machinery in those countries to be able to cope with the programs.

I think that is a great deal when you start from scratch, but that is a piece of machinery. It is not the final accomplishment of an arrangement in which you can say, "Well, there are so many hundreds of square miles in which the peasantry have accepted these programs. It has been successful among them. It has improved the production of rice already by so much—maybe 1 percent, or whatever it is." We cannot say because we have not made the record yet. We have in Formosa.

Mr. MERROW. If we spend some \$555,000,000 for military assistance and \$375,000,000 for economic assistance, do you anticipate that the ability to resist in these various countries, providing there is a Communist assault, would be greatly increased?

Mr. RUSK. May I comment on that, because I believe the comment which Mr. Griffin made had to do with economic programs in certain countries, but it would not apply to the \$555,000,000 military-assistance program, nor to the military programs which have been in effect this past year, because there you do have specific army units in the Philippines, army battalions in Indochina, particular military operations directly supported in Indochina, and constabulary forces in Indonesia. These do reflect a very definite specific progress toward the security of the area.

On the economic side I would like to point out that it would be difficult for a responsible government official to say that with a certain number of millions of dollars in 1951, that you can register, say, in the case of Indonesia, a specific amount of progress, and we could not come to you here and say we guarantee you that this has been the result. That is difficult to do in the present state of these countries.

However, in the case of certain countries like the Philippines, you can register distinct economic and social progress, even within this first year or two of this new type of program.

I have a letter which has just come to me yesterday from the Governor of the Central Bank of the Philippines. I am not sure that we should put this in the record. I will confirm it later, Mr. Chairman, as to whether it would be appropriate to put it in the record.

Chairman RICHARDS. Who is the letter from?

Mr. RUSK. The Governor of the Central Bank of the Philippines. He points out that the cash resources of the Philippine Government have gone up rapidly. As compared with having only P12 million on hand at this time last year they have P75 million now. He points out that the total tax receipts for the first quarter of 1951 are 40 percent greater than for the corresponding period of 1950. He points out that whereas last year the Government owed the Central Bank of the Philippines P44 million for military requirements and the Philippine National Bank about 17 million for treasury warrants, and a loan of 22 million had to be secured from the International Monetary Fund to pay teachers' salaries, that today, notwithstanding the payment of P7 million on the United States loan, the Government owes the Central Bank only P6 million, and all outstanding treasury warrants have been paid, and the payments of teachers' salaries are up to date, and payment on the counterpart funds are being met.

In other words, there are specific examples that can be registered for the specific progress of this country. It is only on certain ones on the economic side that we cannot register that we have advanced from milepost 1 to milepost 2 accurately and certainly in such a way as to assure you that is the case this past year.

Chairman RICHARDS. I think that letter should go in the record.

Mr. RUSK. We will do our best to get that for you.

(The information requested is as follows:)

CENTRAL BANK OF THE PHILIPPINES,
Manila, July 9, 1951.

HON DEAN RUSK,
Assistant Secretary of State,
Washington 25, D. C.

DEAR MR. RUSK: I am taking this opportunity to thank you once again for the invaluable assistance you have rendered the Philippine Government last year by favorably endorsing its use of the United States funds which were on deposit with the Philippine National Bank. Thanks to this timely action, the Philippine

Government was able to weather a critical period and to make necessary adjustments for solving its short-run financial problems.

After the trying times it endured last year, the Philippine economy began looking up these last 8 months. There has been a marked improvement during the last quarter of 1950 and the first half of 1951.

The international reserves have risen from \$250 million in December 1949 to \$356.7 million in December 1950 to \$382.2 million as of June 1951. These gains in the reserves, the improvement in the trade position and the promise of ECA assistance enabled the Central Bank to recommend and the Government to adopt an import policy that was progressively liberalized covering many commodity imports. This import policy, the new tax measures passed, the intensification of tax collection, the greater control exercised over Government expenditures, the price control and antihoarding measures are the instruments that the Government has been using in its determined fight against inflation. Because of the deteriorating short-run prospects for Philippine exports and the rise of the level of commodity imports due to reconrol, a substantial portion of the gains made in the international reserves position will probably be lost. However, if the decline in the international reserves brings with it a reduction in the level of consumers' prices and improves the financial setting for vigorous economic development and the profitable use of United States aid, we would consider the effort well worth the cost. In any event, we are hoping that the decline in the international reserves will probably not be such as to compel an immediate reversal of the present import policy.

The actions of the Government in the recent past relating to its fiscal operations appear to assure that further inflation of the money supply due to back financing of budgetary deficits would be held in check. The cash resources of the Philippine Government including the P40 million unexpended balance of the United States loan amounted to P73.6 million as of June 30, 1951, compared to only P12.6 million on the same date last year. The total tax receipts for the first quarter of 1951 is about 40 percent greater than the total for the corresponding period in 1950. Compared to last year when the Government owed the Central Bank P44 million for budgetary requirements and the Philippine National Bank about P17 million for Treasury warrants cashed by its branches, when a loan of P22 million had to be secured from the International Monetary Fund to pay teachers' salaries which were in arrears and when a loan of the funds which the United States Government had on deposit with the Philippine National Bank which amounted to about P70 million had to be arranged in order that pressing requirements of the Government, especially of the armed forces, could be met—today, notwithstanding the payment of P7 million made recently on the United States loan, the Government owes the Central Bank about P6 million only for budgetary purposes, all outstanding Treasury warrants have been paid, payment of teachers' salaries is up to date, and, so far payments to the counterpart fund on Government account are being fully met. Of course, with the increase in tax receipts, special funds utilized for budgetary purposes that year, such as the gasoline tax fund, will have to be replaced in order that important public services, like the repair of roads, may be accomplished. If it were not for the fact that funds will have to be provided for essential public works (none was provided in fiscal year 1951) and for the ECA counterpart fund, and the further fact that the cost of maintaining peace and order is increasing due to price inflation, I believe the Government might be able to meet its financial requirements in fiscal year 1951-52.

With the solution of the short-run financial problems of the Government, thanks to the timely loan accommodations extended by the United States Government and the International Monetary Fund last year, and the approval by our Congress of a number of tax measures, this country, with ECA assistance, now has the opportunity to pull itself out of long-run fundamental economic difficulties. The achievement of this objective should not be difficult with the observance of sound monetary and fiscal policies and continued close cooperation between the Philippine Government and the ECA mission in this country.

With kindest regards, I am

Sincerely yours,

M. CUADERNO, Sr., Governor.

Chairman RICHARDS. Go ahead, Mr. Merrow. You have another minute.

Mr. MERROW. The Communists have elected to fight in the Far East. In a year or two suppose they elect to move into Indochina

or some other area. Then it is going to require a great deal more expenditure to stop them, is it not? I mean, if they come down into Indochina we will be in a full-scale military operation.

(Discussion off the record.)

Chairman RICHARDS. The gentleman's time has expired.

Mr. Zablocki.

Mr. ZABLOCKI. No questions.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. I think it ought to be brought out, Mr. Griffin, as far as this point 4 program is concerned, that in the part of the world which you are interested in the average life span is under 30 years. Those people have for centuries fallen prey to disease and pestilence. They are looking for a little bit in the way of security. All of that fits in with their new feeling of nationalism or their new reality of independence.

I think the program we have undertaken, as General Malony has said, is very important as far as our security in that part of the world is concerned. It is only a continuation of what we were doing for decades in Latin America, and I think it is the most important cornerstone in our entire foreign policy over the years.

Now, General Malony, you mentioned the fact that the casualties in Indochina since 1946 or 1947 have been something like 29,000 up to May 1 of this year. You meant to say, did you not, that that casualty list amounts to 29,000 dead?

General MALONY. Yes, sir.

Mr. MANSFIELD. And that the total casualty list would probably approximate something like 150,000 or more?

General MALONY. Yes. Roughly.

Mr. MANSFIELD. Is it not true, as far as the French Republic is concerned, that it would like nothing better than to pull out of French Indochina entirely?

General MALONY. Well, militarily, yes; politically I think the answer would be "No."

Am I right, Mr. Rusk?

Mr. RUSK. I do not think they want to pull out. I think they find this a very grievous burden at the present time.

Mr. MANSFIELD. Off the record.

(Discussion off the record.)

Chairman RICHARDS. The time of the gentleman has expired. I will come back to you, Mr. Mansfield.

Mr. Vorys.

Mr. VORYS. On Formosa you have by far the biggest item for all of this area for military. Now, obviously, that is more with what is there already, than what is merely enough to protect Formosa, is it not?

General MALONY. No, sir. I will have to go back a little and tell you how we arrived at that figure, if you would like it. We sent a board from Tokyo to inspect the defenses of Formosa and the Chinese Nationalist Army, and to make up the list of the deficiencies they required to put them in condition to make a successful defense of the island, with the Seventh Fleet in an interposition mission. On the basis of their report, which is minimal, I think we have arrived at the items that they were in short supply and which they needed for this

protection or this defense mission only, and it is the sum of the cost of those items that is represented there.

Mr. VORYS. Could I see the list?

General MALONY. I have a copy of the report here, I think, or a summary of it.

Mr. VORYS. While you are getting that, I want to come back to another question.

What is the legislative authority for ECA administering programs in all of these countries, including India? Is that because they are in the general area of China?

Mr. GRIFFIN. I do not know how India could be interpreted, but for the other countries it is because they are in the general area of China.

Mr. VORYS. If India is in the general area, then certainly Afghanistan and Nepal are in the same area. Is it proposed that you are going to have an ECA program with bilateral agreements with India?

Mr. GRIFFIN. Yes, sir.

Mr. VORYS. I know in the Indian program you have in this whole business 696 technicians, and I do not know where you are going to get that many. However, you have 379 trainees for India which are to cost \$1,895,000. Section VII of the India Relief Act provided for the interest on the loan to be payable for, "Studies, instruction, technical training and other activities in the United States for students, professors, or other academic persons and technicians."

Is your proposal here in addition to that?

Mr. GRIFFIN. Mr. Vorys, there are some gentlemen here from the Department who are more competent to answer that than I am.

Mr. BURLESON. Did you mention the over-all figure for India in the beginning? I believe it is \$65,000,000.

Mr. VORYS. Yes; \$65,000,000. And of this, \$1,895,000 is for training 379 Indians; and not to exceed \$5,000,000 of the interest on the debt under the India Aid Act, under section VII (a) is to be spent for what I said, that is, technical training of Indians.

Chairman RICHARDS. Just 1 minute. Who is the man you suggest should answer that question?

Mr. GRIFFIN. Mr. Loftus.

Mr. LOFTUS. I would be glad to give a partial answer to that now, or, if the committee preferred, maybe to wait until Mr. McGhee discusses the India program tomorrow.

Mr. VORYS. Mr. Chairman, I thought today we were going to take up title III: Asia and the Pacific. We find it is apparently parted in the middle.

What is the reason why we cannot have the answers to these questions, if not from anybody else, then from the Director of International Security and Assistance Affairs, who is supposed to be the over-all coordinator of all of this and, to quote the memorandum approved by the President, "in such matters will be exercising responsibilities for the Government as a whole"?

Who decided that you were going to have a title III that would involve a split between sections of ECA and the State Department? Who decided that?

Mr. LOFTUS. Mr. Chairman, it was stated at the outset Mr. McGhee would be subject to call this afternoon if he was needed; but, since he had not been scheduled to make a presentation on the committee's

schedule of your program is until tomorrow morning, he was not here. However, I would be glad to undertake to answer Mr. Vorys' question about the technicians in the India program.

Mrs. BOLTON. Will the gentleman yield for a moment on that?

When was India put into the Near East section of the Department of State?

Mr. MANSFIELD. It has been for years.

Mr. RUSK. Historically it has been.

Mrs. BOLTON. Always?

Mr. RUSK. Yes. India.

Mrs. BOLTON. The Far East, not the Near East.

Mr. RUSK. They had the Near East and African Affairs.

Mrs. BOLTON. Near East and Africa, but without India the first time.

Mr. VORYS. I have a more current question. In view of that, who decided to put India in Asia and the Pacific and have it set up so that we have to jump around between various sets of officials to find out the facts?

Mr. RUSK. Mr. Chairman, I very much regret the inconvenience that might be caused by this particular organization of the program. I am not myself familiar with why title III covered the exact range it did, although I thought it was because it was for the convenience of the committee in dealing with strictly the Middle East and Greek and Turkish aspects in title II, which had a different legislative background, whereas title III would be accomplished in a similar legislative background derived from the program for the general area of China.

If any of the representatives of the Director of International Security Affairs are present, perhaps they could help you.

Is Mr. Coolidge here?

Mr. COOLIDGE. Yes.

Mr. RUSK. Are you familiar with the background as to why title III is as it is?

Mr. COOLIDGE. It is my understanding because, as you say, it was being administered under the general area of China, which covers all of the periphery of the Chinese Nation, and, therefore, India.

Mr. VORYS. Is there any money being spent in India now under the general area of China formula?

(Discussion off the record.)

Mr. COOLEY. In answer to that question, if I may say so, there was approximately \$4,500,000 spent in connection with the milo program for India a year ago. That is the only general area of China money that has been spent in India. The current India money, you know, is under the legislation that became law last month.

Mr. VORYS. Would the milo program produce counterpart?

Mr. COOLEY. No, sir.

General MALONY. I have the list you asked for. I would like to ask that that not be included in the record.

Mr. VORYS. I do not want to delay the committee, but I would love to satisfy my curiosity about how India gets in this and who it was who decided that, Mr. Chairman.

Chairman RICHARDS. I will tell you what I will do. Will you submit that question? You want to know how India got into this, and who decided it that way?

Mr. VORYS. Yes.

Chairman RICHARDS. If nobody here can answer that and nobody has authority to answer that, we will get a man who can, and have him testify on that before we close these hearings.

Mr. VORYS. Fine.

Mr. RUSK. May I also add that Mr. McGhee would be anxious to be here.

Chairman RICHARDS. Mr. McGhee would also be. Suppose we do that.

Mr. VORYS. Fine.

Mr. RICHARDS. We have a gentleman here who says he can partly answer that question, but he did not make that decision.

You want to know who made that decision and I do not know if he could tell you who made the decision.

Mr. LOFTUS. The decision to put India back in the Asia-Pacific area.

Chairman RICHARDS. Yes.

Mr. LOFTUS. I think that would be better answered by the International Security Division. I know some of the background of that.

Chairman RICHARDS. Will you give that?

Mr. LOFTUS. I said before I could make a partial answer to Mr. Vorys' question about the India trainees. I think the point there is that that interest money does not become available until, I think, the first installment is December 31, 1952, and maybe June 30 of the following year. I believe it is June 30 of 1953. This particular fiscal-year program [fiscal year 1952] envisages certain particular projects where it was necessary to develop a good deal of competence for the Indian execution of the projects quickly, and more quickly than those interest funds proceeds would be available.

Chairman RICHARDS. It is entirely possible, though, the interest-fund proceeds would be in the field of general education anyway, and not have to do with a particular thing.

What about that, Mr. Vorys?

Mr. VORYS. The wording is as broad as the skies, but one would clearly cover the other. I thought the first interest payment was in December. Maybe I am wrong.

Chairman RICHARDS. The 5-minute period has expired now. Go ahead, gentlemen, and ask any questions you want to. I was hoping we could get through with these witnesses this afternoon.

Mrs. BOLTON. Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton will be first.

Mrs. BOLTON. In reference to what you said, Mr. Rusk—that China had the largest number of people under the control of the Kremlin—I want to ask you a question.

Mr. RUSK. Under Communist control.

Mrs. BOLTON. How certain are you of the control? That is, the control that is actually there in Sinkiang and in the far reaches of China?

Mr. RUSK. I put my answer in that form because the question had intimated that the Chinese were the largest number of Communists. I do not believe the Chinese are Communist to that extent. The most you could say was they were under Communist control.

Mrs. BOLTON. Then you and I are thinking in the same general direction.

Also, I would like to make this point: that these programs of assistance, of giving people more to eat, is of course very vital. However,

that is not the only reason why countries go Communist and why people go Communist. There is a great deal more than that involved. Some things that are taking place out in the Near East are of a nature which might very well drive some of these people away from the West, where they want to be, into a friendliness with the Communists.

So, I hope we will not let ourselves be too certain that the one thing we need to do is to give them food and an army. The willingness to fight in an army has to be there. The desire to stand against Communist ideas must be there, and those are the things that I think are of infinite importance. I hope they will not be forgotten.

Thank you, Mr. Chairman.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. I know these witnesses are to be here tomorrow morning. As I have to sign some mail and get something to eat before we return at 7:30, I will leave my questions until tomorrow.

Chairman RICHARDS. They were scheduled, but we were hoping we could finish this afternoon and they would not have to come back in the morning because we have some other witnesses.

If there are any other questions you want to ask these gentlemen, I wish you would ask them this afternoon.

Mr. MANSFIELD. All right. I will not pursue the Indochinese question further, but it goes a good deal beyond what you told us this afternoon, General. I will have to ask that my question and the answer be stricken from the record.

You mentioned something about an Afghanistan-Pakistan dispute. I have never heard of it before. Could you tell us something about that particular incident?

General MALONY. Do you want to speak on that, Mr. Rusk?

Mr. RUSK. There has been considerable controversy between Afghanistan and Pakistan over Pushtoonistan in the control of that area. I think, as a matter of fact, the committee has probably had a briefing from Mr. McGhee on that.

Chairman RICHARDS. I want to say, Mr. Mansfield, we intend to have Mr. McGhee back here on the question to which Mr. Vorys wanted an answer. That is in his area.

Mr. MANSFIELD. Yes.

Chairman RICHARDS. I believe Mr. Burleson wanted to follow up a question.

Mr. BURLESON. I did have a general question in connection with these four or five organizations.

Chairman RICHARDS. I would like to interpose there.

Mr. Secretary, why can you not put these activities together? I would like to know that.

Mr. BURLESON. That is the fundamental question.

Mr. RUSK. We have in mind that the way to put them together for a particular country is in the particular country. It is very hard to set up an organization, let us say, back here, that can tie together what our military is doing on the military side, and what we do in the matter of economic assistance, and what the United Nations is doing for technical assistance, and what the Commonwealth people are doing in the Colombo plan, and the things the governments themselves might do, or what private people or agencies might do, and have that coordinated from Washington on a world-wide basis. The

real place for one to coordinate these activities pertaining to a particular country is in the country itself.

One of the best things we can do in the way of technical assistance is to help them get competent people to help them lick that particular problem. For example, in the case of Indonesia one of the jobs which an American engineering company is doing there is giving them advice on the very problem of coordinating these activities which arise from various sources. So that country program approach, which has contributions from various sources, is the thing on which we should probably concentrate our attention. I do not think we should entirely throw that out the window as a basic approach because it is by that means we get other people helping to carry the burden. That is, not only other people in terms of other governments and other institutions outside this government, but also by which we can best get private capital invested and private agency activity in the way of technical assistance.

It is that country coordination that is the important thing.

As to how we best ought to sort out our own job here so that we as a government will act in the most coordinated and effective way is a little different from that. I was only commenting that from the point of view of the countries for which I had responsibility, that the planned approach that the ECA would do the economic work, and the Department of Defense would do the military work, is entirely satisfactory from our point of view.

Mr. BURLISON. But how about all these other organizations which come in? Take the United Nations activities, and the Colombo plan, and all these things which seemingly would have a common objective. If they are attempting to accomplish the same thing, why can they not be the same?

Mr. RUSK. They have the ability certainly to contribute to the common objective. Again take the case of Indonesia. There will undoubtedly be an Indonesian Government organization whose job it is to arrange for this kind of assistance from our side. Now, that can be advised by Americans who can be of inestimable value to them in trying to ascertain what part ought to be taken by what particular outside agency.

I should like to ask Mr. Griffin to comment on this, but I do not see how you could get a United States agency in Washington who could tie together such things as the Colombo approach, the United Nations approach, and the military, economic, and local contributions from these other countries themselves, because it is beyond our competence and beyond our responsibility to do so.

Mr. GRIFFIN. I would be very happy to talk on that if the chairman allows.

Mr. BURLISON. Incidentally, Mr. Chairman, an example of practical, or rather impractical if true, operation was brought to the attention of several members of this committee several months ago with certain individuals. It was brought to our attention that certain of our activities, either directly or otherwise, had sent tractors into some parts of India and southeast Asia. They were able to operate them for a while, but were unable to make repairs or run them with any considerable efficiency.

Now, historically these people have made their living with a wooden plow with a point at the end of it. That is, the more modern wooden

plow had a little steel point on the end of it. The average man in India was able to farm 4 acres annually with that plow. Now, with a \$2 moldboard—a very light affair that you could almost put in your pocket—it would increase their ability to farm by five times. In other words, they could farm 20 acres. Yet, someone had the idea of putting tractors out there.

Now, if that is true, on things of that sort, if there was one agency responsible, it's efficiency could be gaged and definitely determined. But with several agencies operating not only is it difficult to know the cost but it is difficult to measure the accomplishment.

Chairman RICHARDS. I know something about that moldboard plow. It is a good plow, but are you talking about a straight shovel in a moldboard?

Mr. BURLISON. This plow does not go deep enough, to ruin the land, about which Mr. Bromfield has warned in his books. It will not go that deep.

Chairman RICHARDS. It will cut the grass, though.

Mr. BURLISON. It will not do what Mr. Louis Bromfield was talking about, that is, ruining the land by turning up the subsoil. A water buffalo will not be pulling a deep running plow, as might be used with tractor power.

Mr. GRIFFIN. I believe I can answer the question Mr. Burleson brought up. In every country in which we operate, our first job of organization really is to begin the development of what we call the country program.

This calls for an analysis of all means that can be employed for the development of the country. It means an analysis of what they can do for themselves out of their own foreign exchange earnings; what are their potentialities as a borrower of money; to what extent could we expect that the International Bank might come in as it has in Thailand, and the Export-Import Bank as it has in Indonesia, where it will probably do more; who will come into Burma, and to what extent. Also, what is the United Nations' plan in that area? Does that country belong to the Colombo plan, and so forth.

That is done in the field and has to be done in the field. We considered at some length last fall what sort of coordination to have with the United Nations agencies which would be a practical thing. We decided it would be boondoggling to try to set up a coordinating branch of some kind back here, or in New York.

In other words, the coordination really had to be in the field. We can have conversations here but the work must be done there.

For instance, at the present time the ECA is contributing through the recipient governments to certain United Nations projects in these countries that, on the ground, we saw were good. They could spread their services if they got a little more equipment and help. So we backed them up instead of duplicating them.

For instance, in Burma we are doing livestock disease control through FAO. They had a little group there but they did not have enough money to get anywhere. However, they were good people and had the capabilities. So, we proceeded to provide some equipment and supplies for them so that they could extend their work.

We are also engaged in helping out in the cottage industries in Burma through United Nations operations there.

In Indochina, in malaria control, we are helping WHO conduct some of its operations. There is a lot of room for a number of malaria control measures in Indochina. We wish there were more agencies there to take over more areas of the country.

In Thailand we have numerous projects with the FAO, and with the International Bank we are in the port development business. We took on one part. We secured a dredge which, together with the dredge they own, is going to open up the port and open up the mouth of the river to permit ships of 10,000 tons to proceed up the river. The International Bank is loaning the money for the development of the interior port and the rail facilities going to the interior port.

In addition, we are helping UNESCO with some of its work in Thailand.

In Indonesia UNICEF is doing tuberculosis control work. We are assisting UNICEF in that work.

Another matter which we wanted very much to see a start made in in Indonesia and Burma right from the beginning, and yet we felt it should not be done under our flag, was a school for administrative training. That would have to run as a night school so that the young bureaucrats in their government could go there at night and learn how to get things off their desks, so to speak, and make decisions, and how administration should be set up in the offices there. Also, it would give them courses in economics.

Mr. Sumitro, who until recently was Minister of Trade and Industry, was spending 3 nights a week himself, personally, conducting night classes for young men in his Ministry, in just the most ordinary economics, in order to get them started. It was a burden he himself could not carry, but he had to do it. So we set out and were a number of months trying to get the right United Nations agency that would be willing to do this.

The reason for that was simple. We felt if we undertook, as an American agency, to set up such a school—in the very nature of the work that is done, there is a considerable degree of criticism of how things are being done. We did not want it said "Here is another bunch of people acting just like the Dutch acted before: telling us what to do and how to do it." Whereas, if that is done under United Nations auspices, even though most of the faculty was American, it would be an altogether different picture to them.

So the United Nations Technical Assistance Group has promised to put in the school. It is waiting now for the application from the Government of Indonesia.

These things are fundamentally done on the ground. As to the Colombo plan, no country in our area—except for the Indochina States, which have sat in on some meetings—is at present a member of the Colombo plan, or Commonwealth group in the area in which we are operating. Of course, if we go into India and Pakistan, those two countries are in the Colombo plan. There again it is a question of coordination with the plan. For instance, what the plan which the Department of State worked up for a program in India actually does is take up an area of work already planned to be part of this 6-year plan which we generally call the Colombo plan.

So, the coordination with these programs is complete wherever we feel they are wanted and useful programs, and we work with them in the field and we agree with the decision of our mission chief and his

technical advisers as to the coordination possibilities of the United Nations program being undertaken.

Chairman RICHARDS. Are there any other questions?

Mrs. BOLTON. Yes; Mr. Chairman.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. I would like to exonerate myself a little on this matter of what area India was in. It happens I was the one who went to the Secretary to discuss areas for possible subcommittees. Always in the Eightieth Congress and Eighty-first Congress India was considered part of the Far East, and not of the Near or Middle East.

Our set-up was done on the basis of the State Department's requests to this committee, so that we could be counseling with you people who represent the different areas.

Mr. BURLESON. You say that was done in the Eightieth Congress?

Mrs. BOLTON. Yes.

Mr. BURLESON. When we came in we did away with that.

Mrs. BOLTON. Yes.

Mr. BURLESON. It was done in the Eightieth Congress?

Mrs. BOLTON. You picked it up again in the Eighty-first Congress.

Mr. BURLESON. Oh, then it stayed there.

Mrs. BOLTON. You found something that was excellent which, after an interval which showed you its value, you had the good judgment to return to.

Chairman RICHARDS. Before these hearings are over we will try to get that mule in the proper stall.

Mr. VORYS. Can I ask Mr. Griffin if his assignment is coterminous with Mr. Rusk's? Do you have India in your bailiwick?

Mr. GRIFFIN. If Congress so allows; yes, sir.

Mr. RUSK. For 1952.

Mr. GRIFFIN. For fiscal 1952.

Mr. VORYS. Who got up the illustrative program for India for 1952?

Mr. GRIFFIN. The Department of State.

Mr. MANSFIELD. May I ask just one question? Mr. Griffin, was it just coincidence that you got the University of Pennsylvania Medical School interested in Burma?

Mr. GRIFFIN. No, sir; I do not know. I do not know if we have them yet, but it is contemplated.

Mr. MANSFIELD. The Secretary knows what I am getting at. It happens the chief surgeon in the Burma theater during World War II was Dr. Ravdin, who is the dean of the University of Pennsylvania Medical School, and who did extremely good work both in Burma and in the United States.

Mr. RUSK. Yes. They provided a hospital in World War II which did a splendid job.

Mr. MANSFIELD. A very good job and a very great doctor.

Mrs. BOLTON. All my life until 2 years ago, India was in the Far East. Then I suddenly discovered it had been added to the Near East. I am hoping this will give me opportunity to go out there some time.

Chairman RICHARDS. Thank you very much, gentlemen. The committee stands adjourned until 7:30 tonight.

(Whereupon, at 5:40 p. m., the committee adjourned until 7:30 p. m., the same day.)

(Prepared statement of Mr. Griffin is as follows:)

STATEMENT OF R. ALLEN GRIFFIN

BACKGROUND OF PROGRAMS

ECA programs are operating in six countries in the Far East at this time. They were initiated in three stages:

(1) The operation in China (Formosa) was originally derived from the Foreign Assistance Act of 1948.

(2) Programs in Burma, Indochina, Thailand, and Indonesia were instituted in 1950 as a result of funds made available by the China area aid provision of the Foreign Economic Assistance Act of 1950.

(3) The Philippine program is new, resulting from the recommendations of the economic survey mission to the Philippines published in October 1950. This led to the President's decision to propose to Congress an aid program for the Philippines if the Government of the Philippines would meet certain conditions prerequisite to basic economic improvement. The Foster-Quirino agreement resulted, and the Philippine Government substantially met its provisions. Funds to initiate a program before the end of fiscal 1951 had been made available in January this year by the transfer of 3 percent of ERP funds to the "general area of China."

Title III also includes programs proposed by the Department of State for India, Pakistan, and certain other countries of south Asia, in which ECA fully concurs. This presentation, however, will be limited only to the countries in which ECA programs are presently operation.

AIMS OF PROGRAMS

The United States economic aid programs in southeast Asia are essential tools of United States foreign policy. The freedom and independence of the countries of southeast Asia are vital to the United States for many reasons: economic, military, and political. The United States seeks to win the confidence of the countries of that area and to so strengthen them that they will be able to maintain their independence, develop their resources, and resist internal and external pressures. Today, most of the countries of that area are too weak internally to stand without outside support. Four of them are newly independent, with little experience in self-government. All find it difficult to perform the government services and create the institutions that are necessary in a modern state if the needs of the people are to be met in reasonable degree and a foundation for economic development is to be provided.

Several of the governments of southeast Asia were not certain of the motives of the United States in proffering aid. They were tempted to believe that acceptance of United States aid might result in domination.

Our problem therefore—and likewise our aim—was to build strength and earn confidence simultaneously—to win confidence by the way in which we extend aid.

No modern, self-governing state—and especially no state with a democratic form of government—can maintain itself and develop its resources unless it performs a minimum of public services in the fields of health, agriculture, education, and technical training, transport and communications, industry, and over-all economic planning and prospecting. The countries of southeast Asia, though richly endowed with natural resources, are acutely deficient in these public services and in the technicians, equipment, procedures, and institutions for carrying them on. The very first step in any program of economic development designed to increase production and standards of living must therefore be the organization and maintenance of self-sustaining public services.

Accordingly, during these first several months of operations in southeast Asia, ECA has tried first and foremost to help the governments establish or improve essential services and institutions, create planning agencies, initiate surveys and pilot projects—and thus to lay a foundation for economic development.

It was no accident that this was also the appropriate way to go about earning the confidence of governments—for these were and are the problems with which the governments of the area are overwhelmingly concerned.

HOW WE HAVE GONE ABOUT CARRYING ON PROGRAMS

The first step in initiating aid programs was the negotiating of bilateral agreements; the second was the establishment of a special technical and economic mission (STEM) in each country—for the aid program in each country is built

brick by brick out of the recommendations of the mission. The mission's recommendations in turn are arrived at as a result of joint study and consideration between it and the government.

The countries of southeast Asia established governmental machinery to work with the STEM's in the development of aid programs. For example, in Burma there was established what is known as the Burma Economic Aid Committee, which consists of principal officers of the Burmese Government departments concerned. The committee meets twice monthly with the principal officers of the STEM. All aid proposals prepared by the Ministries are jointly considered, screened and transmitted to ECA/W for consideration and final action. Similar machinery was established in the other southeast Asia countries.

THE COUNTRY PROGRAM

The need of any country for public services and economic development must be met primarily through the most efficient use of its own resources. In addition, various kinds of outside aid may be available—ECA aid, Export-Import Bank loans, International Bank loans, UN technical assistance, aid from the Commonwealth under the Colombo plan. In our view it is highly important that all of the resources, domestic or foreign, available to each country be used in the most efficient and effective way. It is for this reason that we prefer, to the fullest extent possible, to fit our aid into a country program or national plan for the use of a country's total resources. It is only through the drawing up of a country program that the total needs of a country in all fields can be comprehensively surveyed and balanced against all resources available, and the most effective plans possible laid for their use.

The ideal of a country program has not been reached in any of the countries in which we operate. Nevertheless the machinery established in each country for working with ECA is to a degree serving as a general planning and coordinating agency, and we hope that in time genuine country programs will emerge.

THE VILLAGE—LEVEL APPROACH

Although the programs are planned with government agencies, we have been greatly concerned that they should directly and favorably affect the masses of the people living in the villages. It is there that one finds the unrest and the roots of political instability. It is of importance therefore that programs of economic development be concerned first and foremost with the people of the villages and derive their inspiration from the village level. We have used and are using our influence as much as possible to see to it that aid programs genuinely try to solve the problems of the rural masses and promote a broad base of popular support for democratic government. Thus, our health programs emphasize the mobile health units, clinics, and rural health centers; agricultural aid stresses a wide range of extension services; and industrial planning includes the development of small rural industries.

COORDINATION WITH MILITARY ASSISTANCE

In four countries, Formosa, Indochina, Thailand, and the Philippines, not only are ECA programs under way but also military assistance programs, the latter being administered by United States military assistance advisory groups. In Formosa one of the principal objects of ECA aid programs is to help relieve the inflationary impact of the defense effort which the Nationalist Government of China, with extensive United States assistance in the form of military equipment and supplies, is maintaining. Both in the planning and conduct of programs, in Washington and in Formosa, there is close coordination between the ECA program and military assistance. In Indochina, Thailand, and the Philippines, the inflationary impact of military programs is far less and the same degree of meshing of programs is not necessary. Nevertheless, in Indochina, Thailand, and the Philippines, close relations are maintained between the STEM's and MAAG's and there is frequent opportunity for inclusion in a STEM program of projects that are likewise useful for over-all military strength, as, for example, aid to highway building in Indochina and Thailand, and attention to refugees in the war zone in Indochina.

COUNTERPART FUNDS—SALES PROCEEDS

The device of counterpart funds, which was developed in connection with the European recovery programs, is likewise used in our programs in southeast Asia but not as uniformly, for the need in SEA is quite different from that in Europe. In Europe, the raising of local currency revenues to finance essential services and needed national projects was no problem. What Europe needed primarily was dollars to pay for urgently needed food, fuel, and raw materials that could be bought abroad only with dollars. The problem was essentially a balance of payments problem, and the ERP was essentially a supply program, with European counterpart funds then being used for needed projects and for other purposes mutually agreed upon. In SEA problem, the need, and consequently our programs, are quite different. In SEA the governments need immediately to institute projects and build essential services for which they may or may not be able to raise local currency revenues.

All SEA countries are not therefore required to put up counterpart funds on a commensurate value basis. In Indochina, for example, the new Government does not have the revenues needed to inaugurate the services that are necessary if the Government is to attract and maintain popular non-Communist support. The ECA program therefore includes the importation of substantial amounts of essential civilian supplies that are then sold for local currency. The sales proceeds so generated are then put in a counterpart fund which the local governments and the ECA jointly use to pay the local costs of needed projects. The Burma Government pays for part of the local costs of the programs from tax and other revenues, having only a modest commodity import program to generate the remainder of the local currency for needed projects. The Philippines program has a substantial commodity program, and Formosa has by necessity the largest commodity import program of all. Programs in Thailand and Indonesia are on a commensurate value basis, with each United States dollar of aid matched by local counterpart put up by the recipient government. Our programs there do not generate sales proceeds.

In southeast Asia there is no question whether the countries are making a maximum effort at self-help as a condition of our aid. By the very nature of the programs—which are built up of specific, agreed projects—we are merely helping the SEA countries with their own national efforts. Commodities supplied are either directly for the use of governments, or for sale, with proceeds used by governments for specific, agreed projects.

SPECIAL PROBLEMS

It is appropriate to mention briefly just a few of the problems which we have run up against. Take the matter of distance and transportation. Southeast Asia is on the far side of the world from here, and shipping service is slow and relatively infrequent. Consider likewise the difficulties of acquiring competent staff. The climate, the language, the remoteness—these are factors which prospective candidates have had to take into account. We have recruited excellent people and we believe our STEM's are now well manned, but for the most part we have had to go after them. Problems of housekeeping, such as the finding of office space and housing, which are relatively simple in many other parts of the world, assume great proportions in many parts of SEA.

After the arrival of staff members, working procedures have had to be developed in each country. The problem was not just a simple one of having proposals for United States aid directed at us but of helping the countries themselves work up the projects. Shortage of technical and administrative skill being of the essence of their difficulty, we have had in practice to help remedy it by working up projects in close cooperation.

Finally, consider the difficulties of procurement that developed just as we were initiating our programs in southeast Asia a year ago. The relatively small needs of our ECA programs in southeast Asia for equipment and supplies have had to compete since the beginning of the Korean War with mounting United States war orders, with United States civilian consumption, and with the greatly enlarged European rearmament program. As a consequence delivery dates have frequently slipped. Nevertheless, today the pipelines are filled and difficulties of supply on most items are being overcome.

RESULTS OF FIRST YEAR OF OPERATIONS

It is perhaps too soon to assess with any degree of confidence the first year of our operations in southeast Asia. The fact that we have had authority to operate

there for a year does not mean that we have had any substantial programs going for a year. The programs have developed fairly slowly for reasons already indicated.

Nevertheless, it is possible to indicate some real accomplishments. In the first place, we are beginning to win the confidence of the Governments and peoples of southeast Asia. In Burma, in Indonesia, in Indochina—where suspicion of the motives of the westerner is an understandable legacy of colonialism—we have rolled up our sleeves and asked of governments how we could help them solve their most urgent problems. This approach has been on the whole rewarded by an increasing cordiality, trustfulness, and cooperation which cannot fail to lead to better understanding between our countries. We are, of course, no strangers in the Philippines and Formosa; during the past year our increasing understanding of their problems and aid in their solution have cemented even more closely our relations. In Thailand cordial relations have grown even more cordial.

These questions of confidence, of course, are extremely difficult to gage but we think that by this measure alone the programs we have been carrying on in southeast Asia have been worth a great deal to the United States Government.

It is likewise difficult to measure the extent to which we have strengthened the governments of southeast Asia during the first year of operations. Certainly not a great deal visibly or tangibly. But, regardless of tangible or visible achievements, the very fact that a United States special technical and economic mission was in each country, equipped with the instruments of aid, and ready to help, has been of psychological value in strengthening governments and in stabilizing political situations.

There have also been certain definitely tangible accomplishments.

In Formosa, where we have been operating a program since the spring of 1949, the benefits of a well-thought-out and implemented aid program are evidenced by the order and the controlled economic situation that prevail there. Formosa is a directly threatened country sheltering a large army and a half million refugees, with a huge defense burden. And yet, not a single guerrilla band operates in the island. A man can go anywhere with confidence in law and order. The farmers, aided by recent land reforms and other agricultural programs, are contented; and threatening inflation has been largely kept under control. There is no question that, had it not been for ECA aid in bringing supplies and aiding the increase in local production, inflation in Formosa would be mounting so rapidly as to jeopardize military effectiveness, and economic collapse would have taken place.

In the Philippines, the improvement that has taken place in the economic and political climate in the past several months, accompanying the first reform legislation passed by the Philippine Congress in anticipation of United States aid programs, has been measurable and gratifying.

In other countries one can point to examples of specific projects under way without being able as yet to assess their impact.

In Indochina ECA supplies have enabled the governments to demonstrate to thousands of war refugees that they would be taken care of when they were dispossessed and impoverished by the Communist rebels. A refugee housing project in Saigon is demonstrating effectively the same point, while ECA aid to highway construction has been of great value both to the civilian economy and to the military operation. Burmese medical services and public-health facilities, almost completely destroyed during the war and the transition to independence, are being rehabilitated with American supplies and the help of American technicians. The latter have been on the spot only a few months and they have already made a wide and favorable impression. The commodity programs in Burma and Indochina have already resulted in the creation of the counterpart funds that are now providing revenues needed by the governments to carry a variety of greatly needed services. A malaria-control program is well under way in Thailand and an extensive highway program is getting under way in anticipation of the arrival of ECA-supplied highway-building equipment; and the railway repair shops are now rehabilitating engines and freight cars with ECA-supplied machinery.

As already indicated, it is too early to judge results of our programs in most SEA countries. In many of the countries, the ECA programs are the first United States Government operations of any size. I can tell you that we are learning about as much from them as they are learning from us. We are learning first and foremost how complex are the problems facing the leaders of these countries. We are learning humility in approaching their problems, and that may be not only the beginning of wisdom, but of genuine friendship.

What we have brought to SEA in the first year I would consider to be chiefly the hope and expectation that has accompanied the establishment of our programs.

PROSPECTS FOR FISCAL 1953

It will nevertheless require more than hope to carry the countries of southeast Asia through the coming year. It will take increasing real strength.

In the year ahead the pressure of the Chinese Communists in southeast Asia is likely to increase. This will be true especially if there is a cessation of hostilities in Korea. Internal pressures are also likely to increase in a number of countries. Lawlessness and disorders are serious problems in Burma and Indonesia; the end of the Communist-led rebellion in Indochina is not in sight; Thailand will probably continue in a state of tension; unrest and rebellion have been somewhat abated in the Philippines in recent months, but the situation is far from safe. The fight in Formosa against runaway inflation will continue to be tough and go.

The prospects are thus for another difficult year ahead.

United States aid programs, though marginal in nature, will be in better position to aid the governments of southeast Asia resist pressures that threaten their independence. Our missions will be fully manned. The pipelines are filling and the arrival of United States equipment and supplies will certainly be much more satisfactory in quantity than during the past year. Increasing numbers of technical experts are arriving to help get needed projects underway. The projects should begin to bring tangible benefits to the people—and this should impart strength to governments.

We believe the strength that can be mustered in southeast Asia will be adequate to enable successful resistance to expected pressures.

That strength will be much more easily mustered if we can succeed in convincing the governments and peoples of southeast Asia of our genuine interest in their achieving economic independence as to the companion piece to political independence. This we must in some manner manage to convey to them. One way of doing this is by continuing present programs of grant aid. But more is needed. They need assurance of a flow of capital for diversified economic development. And they need assurance that dollar aid, dollar loans, and their own dollar resources can be translated into physical supplies, equipment, and technicians. This means their needs must be accorded high priorities in the United States market.

The issue with which we are dealing is whether the countries of non-Communist Asia can become strong and self-sustaining assets in a free world. This depends in large measure on whether the West can win the friendship of the countries of Asia and channel to them enough of the missing components of strength to permit them to develop their own latent strength. This issue will be with us for many years, but the year ahead will be one of the hardest to weather successfully. We will need all of the tools we can get for the task.

The stakes are of great importance. Southeast Asia dominates a corner of the world and controls the passages and communications between the Pacific and Indian Oceans. It is a producer of vast quantities of vital raw materials, greatly needed by the free world. It is a potentially rich area. Its peoples are capable, with our understanding and with our moral and physical assistance, of developing it and of reaping the great rewards of that development.

NIGHT SESSION

The committee met in the House Foreign Affairs Committee room, the Capitol, at 7:30 p. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please. We will continue hearings on the Mutual Security Program legislation. Our first witness is our colleague, Representative Kenneth B. Keating, of the State of New York.

Mr. Keating, we will be delighted to hear what you have to say. Will 15 minutes be sufficient?

**STATEMENT OF HON. KENNETH B. KEATING, A REPRESENTATIVE
IN CONGRESS FROM THE STATE OF NEW YORK**

Mr. KEATING. Fifteen minutes will be fine.

Chairman RICHARDS. That will be fine.

Mr. KEATING. I am perfectly willing to be interrupted at any part of the proceedings.

Chairman RICHARDS. State it in your own way.

Mr. KEATING. I have requested this opportunity to be heard in order to discuss with you certain aspects of the proposed military assistance program, relating especially to its administration. I speak not as a Member of Congress, but as a former member of the armed services who had assignments from time to time pertaining to the administration of the lend-lease and reverse lend-lease programs during World War II, which I consider in some respects the counterpart to the present military-assistance program.

The International Division under the Assistant Chief of Staff for Matériel (Gen. Lucius D. Clay) in the service of supply was the staff organization which handled the planning of military lend-lease. I served for about 1 year in Washington in the Requirements and Assignments Branch of this Division.

This Branch specifically was charged with assisting foreign countries in programing their requirements and acting as a secretariat for the Munitions Assignments Committee, which divided American arms production between our own forces and the foreign beneficiaries of the Lend Lease program.

In March 1943 I was ordered to India where I spent nearly 3 years in the China-Burma-India theater. During the first 6 months of this tour of duty my principal assignment was to endeavor to increase the flow of reverse lend-lease from India of indigenous materials to supply United States and Chinese forces. To assist in this effort, an Indian Munitions Assignments Committee was set up with Indian, British, and United States Army representation.

Thereafter, following transfer from United States to an Allied command when the southeast Asia command was set up, part of my duties were in connection with the screening of British requests for lend-lease equipment to supply their troops serving in Burma and the Far East.

On the civilian side there was an organization set up known as the Office of Lend-Lease Administration, which handled requests of our Allies for items of civilian procurement deemed necessary to the prosecution of the war effort. The exact administrative structure has passed out of my mind, but I believe the Foreign Economic Administration was an offshoot of or successor to Office of Lend-Lease Administration and it had missions in various countries which worked in cooperation with the military authorities but which were not under military command.

While there were the usual number of headaches and conflicts, mostly of a trivial nature, the set-up I have outlined worked very satisfactorily. It would have been unsound, unworkable, and perhaps disastrous to have vested the administration of the military lend-lease program in the hands of the civilian agency and probably the converse is true.

The formulation of requirements for supply of Allied troops, the division of short-supply items between Allied and United States forces and among Allied forces inter se and, conversely, the acquisition of indigenous products from foreign countries for use by United States and other Allied forces were all essentially military problems. It would have been impossible for a civilian agency to have handled these matters.

Furthermore, many, many millions of dollars were saved to the American taxpayers by reason of the fact that the military officer charged with procuring items of indigenous production from the Indian Government, at that time dominated and widely staffed by British officials, was also the military officer who passed upon and screened requests of the British for supply of their far eastern forces, and without whose approval assignments of such material would not be authorized in Washington.

It frequently developed that, whereas we were first told that the civilian economy of India could not endure the strain entailed in the production of a certain military item requested by the United States forces, a different attitude was encountered later when it was felt that some footdragging ensued regarding the approval of British requests from American production.

I do not mean to imply that there was any active friction between British and American forces. My own experiences with British officers were in nearly all instances pleasant and satisfactory.

But the fact remains that, had we not possessed the leverage inherent in our responsibility for approving British requests for equipment from the United States, the volume of reverse lend-lease from India would have been greatly reduced with the consequent greater drain upon United States resources to supply the items and the increased burden upon American taxpayers through being required to put up the money for the items rather than to have their cost credited against a much larger lend-lease account.

My experience, therefore, leads me to recommend in the strongest terms that authority be granted to the Defense Department exclusively to handle the program of military assistance and that the Defense Department be granted at least a powerful voice through veto power or otherwise, if not exclusive jurisdiction over the program for enabling our allies to assist in the common defense effort.

My understanding is that MDAP is now handled through the appropriation of funds to the President, who turns them over to the Secretary of State, who in turn parcels them out to the Defense Department. It strikes me that this method of operation is unnecessarily cumbersome, time-consuming, and expensive.

Worse than that, if our country should be faced with a Pearl Harbor and forced to forsake its present relatively leisurely course for immediate action, the present method might result in fatal delays in the achievement of our objectives.

I confess unfamiliarity with the detailed method of handling this program. But I do feel strongly that it is a serious matter upon which this committee should take testimony to see whether the existing method entails a waste in man-hours or a costly time lag.

As to the latter, it should be borne in mind, it seems to me, that probably items of military procurement are not now being taken off

the shelf and that there is a necessary lapse of time in any event in getting them into full procurement.

What the committee needs to do is envision the situation which hereafter will exist when new procurement is going full blast and determine whether the procedures set up are best designed to get the items involved into the hands of the fighting forces of our allies or whether the paper work is such as to cause the program to bog down seriously just at the time it may be most needed.

If an all-out war should develop within the next year or two, it might be fatal to its successful prosecution as an allied effort if it were necessary to go through all the red tape of State Department and possibly ECA—or its off-shoot—clearance, as well as Department of Defense and then individual service clearance before a bullet could be sent to Belgium or a tank to Turkey.

I do not know how extensive an organization has been built up in the Department of State to handle MDAP. There may be factors with which I am unacquainted which make it desirable to vest in the Secretary of State partial responsibility for the administration of military assistance.

But I view with misgivings the constantly increasing trend toward converting a traditionally policy-making department into an operating agency. Particularly does this hold when the operations in question pertain to the defense and security of our own country, which furnishes the only justification, in my judgment, for embarking upon a program of military assistance to other nations.

While the Department of State, no doubt, should be kept informed in a general way regarding the military build-up overseas, I can see no reason for that Department to be concerned with the details of administration. Not only does that necessarily result in wasteful overlapping of functions and needless delays but also in wider dispersal of the security risk, an important element in this field.

There is another practical consideration of which this committee may feel it proper to take cognizance. Without leveling any accusations and refraining from any discussion of the justification or lack thereof for the prevalent feeling, it is an undoubted fact both public and congressional confidence and support for the program of military assistance will be enhanced if the measure which we pass clearly provides that the administration of the program will be a Defense Department rather than a State Department responsibility.

Many eminent authorities, I understand, advocate the creation of a new agency to take over all foreign aid programs, both economic and military. There may be merit in a closer integration of the various plans for economic assistance which, I assume, will be drastically reduced both on account of the improved condition of recipient countries and the necessities of the tense world situation, which require that the aid we furnish now must be primarily of either a direct or indirect military character, meaning by that either direct assignment of equipment and munitions of war or assistance in increasing the capabilities of other nations to build up their own military potential.

But I can see no necessity for or desirability in transferring to any such newly created agency the responsibility for essentially military programs. Reliance must be placed on those who, by training and

experience, are best equipped to deal with the problem, namely, the Army, Navy, and Air Force personnel.

Although a new agency probably would command greater confidence than the Department of State, any administrative set-up which envisions double screening and paper work seems to me undesirable and unnecessary.

No doubt there are in Government service now, notably in ECA, many capable men and women who have specialized knowledge regarding the contributions which other nations associated with us could make to the over-all defense picture. Their advice would be of inestimable value in determining just how far it is appropriate and desirable for us to go in insisting that indigenous materials and labor in the various countries be utilized in the common effort.

This corps of trained personnel, for instance, can render invaluable help in arriving at the correct conclusion as to how these air bases which are being distributed all over the world are to be constructed. Insofar as it is possible, they should be built with indigenous materials and labor. To the fullest extent feasible, French francs, not American dollars, should be used to build airfields in France.

If these trained people cannot for some reason be transferred to the Defense Department, there should, of course, be the closest kind of a working arrangement to take advantage of their specialized abilities.

But the final decision in these matters should rest with the same persons who are going to decide the amount and type of military equipment and weapons which will be transferred to the beneficiary countries. I am convinced, from personal observation and experience, that such a centralization of responsibility is essential to the success of any plan and the proper safeguarding of the interests of the American taxpayers who must foot the bill.

I am satisfied that the concept of collective security is sound. From every point of view, not the least that of the American taxpayer, it is desirable that we should divert a portion of our defense budget for the purpose of helping to arm other countries whose aims and principles and whose determination to resist aggression coincide with ours.

From the dollars-and-cents standpoint alone, it is infinitely cheaper to arm and equip a French, Italian, or British division than it is an American division. For the success of the venture, however, it is imperative that any program have the widest possible public acceptance.

It will facilitate the achievement of that objective, in my judgment, if we make sure, in framing the legislation, that we fashion a measure which is administratively sound and which gives effect to our previous experience under the lend-lease and reverse lend-lease programs.

Chairman RICHARDS. Thank you, Mr. Keating. That was a very thoughtful statement. I appreciate it's coming from you, particularly in view of your military service.

What was your rank in the service?

Mr. KEATING. I was a colonel when I left the service. I am now a brigadier general.

Chairman RICHARDS. You outrank Mr. Mansfield. He was a sergeant.

Mr. CHIPERFIELD. I was a private.

Mr. KEATING. I have enjoyed both Mr. Chiperfield's and Mr. Mansfield's ranks at varying times.

Chairman RICHARDS. Now I believe the defense proposal for this fiscal year will amount to about \$60 billion. Do you believe that this proposal for military assistance, this part of it, will amount to something over \$6 billion as proposed?

Mr. KEATING. That is on top of the \$60 billion?

Chairman RICHARDS. That is right. Which is about 10 percent. Do you feel it is a reasonable sum to spend for collective security abroad?

Mr. KEATING. Well, I haven't given it thought in a percentage relationship. My feeling is perhaps colored somewhat by the fact that I was in the middle of this activity in the last war. I think it is money well spent to take a part of the total amount that we can afford to spend for arming ourselves to assist in arming those who are friendly with us.

I wouldn't be prepared to say what that percentage should be. Certainly it doesn't sound out of the way to put it in that way, I would think. But I haven't studied the amount sought sufficiently to be competent to answer that, really. We must always consider, of course, the imperative necessity that we maintain a sound economy.

Chairman RICHARDS. Well, Mr. Keating, we have heard from a good many witnesses here, and we have learned that they think that the military end item of it, such as for use abroad in this program, and economic aid that would increase military production over there, are closely akin. Naturally, we want to get the recipient countries to contribute themselves so that we may not have to furnish so much military aid.

Do you think that feature should be under the armed services too?

Mr. KEATING. I would prefer to see the armed services responsible for increasing the military contribution of our allies. I think they would do the best job.

There is a certain amount of trading in that, as I brought out in my statement. We do want to have them do everything that they possibly can be convinced they should do. And one method of convincing them is by the old Yankee trading system. In my experience that was the most effective way that we really built up the reverse lend-lease of India to a sizable figure. I don't say that is the only way; that wouldn't be quite fair.

Chairman RICHARDS. It is a lever that should be used?

Mr. KEATING. It is definitely a lever that we should use, and we should be fair but should be very firm in our dealings with our allies in that regard. Whoever has the final say on the one should have the say on the other. Or at least there should be such a close working arrangement that it amounts to that in effect.

It is possible that you could have the military authorities who are actually charged with assigning the end items make that decision or have them simply have a veto power on that, so that foreign nations—nation X, for instance, that wants so many guns, needs them for their forces—will realize that they are only going to get them if they take certain action as a part of the price, which we must always be fair about and measure within their reasonable capabilities.

Chairman RICHARDS. Thank you very much.

Mr. Chipperfield?

Mr. CHIPPERFIELD. You have made a very fine statement, Mr. Keating. I think we all have the same objective, and that is to get

a good job done. Mr. Hoffman and Nelson Rockefeller suggested a single agency to handle the military and economic parts of this program. You suggest the armed services might do it.

Mr. KEATING. The armed services, Department of Defense.

Mr. CHIPERFIELD. If I understand your statement correctly, you would want to take advantage of the existing civilian personnel under ECA and work those into the program somewhere?

Mr. KEATING. Yes, I would,

Mr. CHIPERFIELD. Now we also have under this program point 4, the Far East and Africa and Near East. You would not have the armed services handle that end of it, would you?

Mr. KEATING. No, I would not; nor do I believe the armed services would want it either.

Mr. CHIPERFIELD. No, I agree. Strangely enough, there is more ECA aid per se in this program than you would think, rather than just ECA to help the military, production, because of the fact that if a foreign country increases its military effort the dollars that they use in that effort have to be made up some other place out of the general economy.

Now I do not know whether the armed services would be the best agency to handle that kind of thing or not. I am just wondering what your opinion on it was.

Mr. KEATING. I would not think they would be equipped to handle what was purely economic aid.

Mr. CHIPERFIELD. Economic aid, per se.

Mr. KEATING. I had in mind that economic aid breaks itself down into two categories, and the purely economic aid I would think would necessarily be reduced almost to the vanishing point now.

The other type of economic aid, to assist them in their contribution to common defense effort, I believe the military could handle.

Mr. CHIPERFIELD. I thought so too, but ECA as I say, per se, is about to end. But I find that according to the views that have been presented to this committee, because of the extra additional effort to increase military production, there is a feeling that general economic aid is still necessary in many instances.

What I thought we should do is have specific economic programs that would aid the military production, for example signal equipment; they may need raw materials, the same with radar. But ECA still clings to general economic aid. And I am, as I said before, wondering whether the Armed Services would be the best agency for that.

Or would it be better to have a single agency like Mr. Rockefeller suggests, or Mr. Hoffman suggests, that would take all the economic phases, point 4, ECA, maybe Import-Export Bank loans, and so on, and have them all under one agency, and then have cooperation with the Armed Services and let them handle the purely military.

Mr. KEATING. Well, I would urge in any event that the final word on the assignment of military equipment be left with the Defense Department.

Mr. CHIPERFIELD. Well, I feel that everybody who has been before us wants to leave the military end items and all that kind of thing to the Military Department or Armed Services. I don't think anybody suggests the military end should be taken from the armed services, but there should be close cooperation, and maybe one agency have the

final responsibility of bringing the economic and the military programs together.

Mr. KEATING. Well, I recognize the eminence of men who have recommended the creation of a completely new agency, and I have great respect for their ability and experience. I have not myself been sold on the necessity for that single new agency, but I do not consider myself fully informed or by any means an expert on it.

I would not want to leave to that new agency the final say on the military assistance.

Mr. CHIPERFIELD. One final observation. Of course the time element is involved here, and if we were to create a new agency that would disrupt our aid for a considerable period of time, we have to take that into consideration, and whether or not we had not better just go along the same lines which have worked pretty well with ECA and the armed services, we at least ought to give that consideration.

Mr. KEATING. And your point 4 and other additional items are now handled by the State Department; is that right, or is that ECA?

Am I right, John, it is handled separately, the point 4? It is under the State Department. But I think ECA officials do not handle that directly, as I understand it. I think they have their own set-up.

Mr. VORYS. Where there is both point 4 and ECA, ECA handles it; where there is only point 4, the State Department handles it.

Chairman RICHARDS. Mr. Gordon?

Mr. GORDON. Thank you, Mr. Keating, for your appearance. I have no questions at this time.

Mr. VORYS. Mr. Keating, you have told about your experience. Was your experience military or civilian prior to that?

Mr. KEATING. It was entirely civilian.

Mr. VORYS. I know that you did efficient work, but was there anything about this soldier suit that you put on that particularly colored the type of service you rendered when you went in green in the Service of Supply?

Mr. KEATING. Yes; there was. Because I was under military command, and I was under some very able Army men. I do not know enough about guns and ammunition to stick in your eye, myself, but I did know a little bit about horse trading. And under the direction of very able senior officers I could assist them with the problem.

But I feel confident, not because of my own abilities but because of my suit, if you want to put it that way, and the great abilities of my superior officers, that we could do a very much better job than any civilian group I have ever encountered in any department of the Federal Government could do under similar circumstances in inducing our allies to increase their military output.

Now I do not want to disparage the fine work of the Foreign Economic Administration, which worked with us out there.

Mr. VORYS. You are wrong in your history, the ancestry of that agency. It was a successor to BEW—Board of Economic Warfare—and that became FEA. Henry Wallace headed BEW and that became FEA. But lend-lease, I think, continued through to the death, to the end of the war.

Mr. KEATING. Then I am mistaken when I say lend-lease had missions around the country. It was FEA that had the missions.

And it had no connection. I accept your explanation, because I was not familiar with that. It had passed out of my mind.

But they were concerned with assisting the countries out there with civilian items that they needed.

Mr. VORYS. Well, you remember that at all times lend-lease had a civilian head.

Mr. KEATING. That is right.

Mr. VORYS. Who was an independent officer under the President? What would you think of that as a pattern for this thing, based on your experience?

Mr. KEATING. Well, that was Mr. Hopkins; was he not the head?

Mr. VORYS. Mr. Stettinius, until he became Secretary of State. Then Leo Crowley.

Mr. KEATING. I just do not think, from my experience, that they would be hard-boiled enough in dealing with these other countries that we have to deal with. I believe that the Army authorities would have to be shown, and they have demonstrated that they have to be shown, before they take action, a little bit more than the civilian agencies have. Furthermore, the military are the only ones who possess the technical know-how to do the job and I am not convinced that there is need to create another layer above them with all the red tape that entails.

Mr. VORYS. As you no doubt have been told by others, the procurement of military equipment is under the defense agencies in the military, under all the proposals before us.

Mr. KEATING. No; I do not know that.

Mr. VORYS. Yes. But even the military procurement under the appropriation that the President siphoned into the State Department, is procured by the Defense Department, and the end items are substantially the same as we get for ourselves.

The problem comes when the question is whether you should have—let us say ship over small-arms ammunition to France or set up a small-arms ammunition plant in France. It is at that point that it has been urged upon us that the military would not be the best deciders.

And I may say this from our experience in this committee, and I think in Congress generally: We have not found that the military in negotiating or in spending money were any more economical than these civilian agencies. We possibly found that that was the case.

Mr. KEATING. Well, I have been critical of the military on the same basis. But I can speak not only from my own experience, but from that of others who were associated in the handling of the lend-lease, reverse lend-lease programs, I think we often do not realize the extent of reverse lend-lease during World War II. And I sense, perhaps without justification, a spirit now which inclines toward having Uncle Sam do it all, without having the other nations do what I would consider their fair share. I believe that the military might be a little tougher in having them do their full share than a civilian agency.

But that again gets back largely to a matter of administration. I had not heard of this idea of setting up a new administrator right in the White House, you might say. I think perhaps for over-all direction, that might have some merit.

Chairman RICHARDS. Mr. Keating, we are under the 5-minute rule here, so I am going to let Mr. Mansfield have his say.

Mr. MANSFIELD. Mr. Chairman, I think it is especially important that we have such a distinguished statesman as our colleague from New York with us tonight presenting his views on this legislation.

Mr. Keating, it appeared to us who went to Europe last month, that there was a very close liaison between ECA, the military missions, and the ambassadors in the countries we visited. And as Mr. Vorys has brought out, the Defense Establishment does have the right to declare and to trace down and to produce the needs for the military, and those things to which the military missions are assigned. It is my impression that the military in those countries are the ones who are directly responsible for specifying minutely just what the needs of that particular country are. And so far as I know there has been no friction between these different agencies, but a great deal of collaboration.

In other words, the military seem to be satisfied with the situation existing.

Now, if you were to follow your conclusion through to its logical end, it would appear to me that in those countries you would place the head of the military mission at least on a par with the ambassador, and perhaps because of his power through the use of these huge sums of money, he would be in a more strategic and more powerful position.

Do you think that would be the right thing to have? You see this is not only military, but it is political as well, when you look at the over-all picture.

Mr. KEATING. I know. You have the double problem, or we do in Congress, before us. We must not look at it purely as a military proposition.

In the first place, I am delighted to hear you say that they do work in harmony, and that there is no friction. I would hope that that would continue after the program really got going.

I would not be concerned about the head of the military mission being as highly considered as the ambassador, and the various other questions. I am not much of a fellow for protocol. There might be repercussions from that that do not occur to me, but I would not be shocked at all to have them on a par with the ambassador.

Mr. MANSFIELD. What I had in mind, Mr. Keating, was this: You might find the head of the military mission with so much power in a particular country like Belgium, for instance—their request was something like \$450,000,000 this year—you might have that man, who I believe was a colonel, become the fellow to whom the officials in that country would go because of the power which he naturally would wield.

As it is at the present time, the ambassador in every country, men like James Bruce in France, James Dunn in Italy, and others are the ones who, because of their position, seem to have the final say.

Now, as you say, this collaboration and this good will might not exist forever, because it does appear to me that you cannot look at this thing alone from the military view, but you also have to consider the political conditions, if any, and keep in mind the position of the ambassador.

And I might say that on the basis of what I saw in Europe we have an extremely capable bunch of representatives there who get along very well.

Mr. KEATING. I have the highest regard for two or three, and I do not mean to eliminate the others whom I do not know personally. I appreciate that there may be force in what you say.

Do I understand that it is proposed that the ambassador in the country might have the final say on what would be sent to the country in the way of military equipment after taking advice from the military authorities?

Mr. MANSFIELD. Well, I could not answer that question specifically.

Mr. KEATING. I was wondering whether that was one of the proposals before you.

Mr. MANSFIELD. Oh, no. But in those countries the government therein looks to the ambassador as the representative of the American Government. I imagine that the ambassadors in each country are consulted, and they seem to have a pretty good grasp of the situation. And on the basis of their collaboration with the military and the ECA, so far as I have been able to find out, there has been no friction yet.

Now if you were to transfer the position which the ambassador has held, through decades, and have this put in the hands of a military man because of his power of the purse, so to speak, then you would create a situation which I think might have had repercussions.

I do not know, I am just throwing the thought out.

Mr. KEATING. I presume it would be vigorously opposed by the State Department. I expect that. As you know, I have been a supporter of the foreign-aid programs consistently, but I am critical of the lack of realism displayed at times by the Department of State in their dealings with our allies. I just do not think they are two-fisted enough in their dealings with the foreign countries. I think it has been demonstrated time and time again, and perhaps it is inherent in the art of diplomacy that you are more inclined to give in.

But it does seem to me that we give in too much. I do not want to get warmed up on that subject either, because it is a little bit apart from where we are. But despite the high regard which I have for two or three of the ambassadors in Europe whom I personally know, they have to think who is layered on top of them. And I would be afraid that the best interests of the American taxpayers would not be served by leaving the final say in their hands.

Mr. MANSFIELD. Of course we all recognize the fact that in our foreign policy today there has to be a close liaison between the military and the political, or the State Department.

Mr. KEATING. That is right.

Chairman RICHARDS. Mr. Carnahan?

Mr. CARNAHAN. I have no questions, Mr. Chairman.

Chairman RICHARDS. Mr. Burleson?

Mr. BURLESON. Mr. Keating, I just want to express my appreciation for your being here. Obviously you have given a great deal of thought to your statements—especially to the administration of this program, and I want you to know this feature has been a great concern to many of us around this table.

Chairman RICHARDS. Are you all Republicans or Democrats around there?

Mr. BURLESON. We are playing both sides.

Chairman RICHARDS. Mr. Battle?

Mr. BATTLE. Sir, I have no questions. However, I would like to say that I appreciate the testimony of the distinguished gentleman from New York. I know he has supported our foreign policy in the past, and I hope we will work out legislation in this committee that will be sound enough to merit his support this time.

Chairman RICHARDS. Mr. Hays?

Mr. HAYS. I would like to add my word of appreciation. I am sorry I could not be here to hear it presented, but I have read the statement of our colleague.

When you were in India, did you have an opportunity to study the agricultural situation there?

Mr. KEATING. Well, not very fully, but I saw what agriculture there was there to be pretty primitive. I did have occasion to be nearly all over India. I was not just stationed in one place.

Mr. HAYS. Assuming that we can work out a sound plan that embraces a certain emphasis upon fundamental agricultural change and advancement, would you feel that the Congress should get into that field for the purpose of stabilizing conditions in that critical area?

Mr. KEATING. In India?

Mr. HAYS. Yes. I have moved on the assumption that agriculture is basic in that part of Asia, and that their mixed economic and social problems are so complicated that we need to give more attention to it than we have. I am wondering if you can confirm that.

Mr. KEATING. Well, India is mostly desert, most of what I saw. Arid desert. Worse than any of our areas here.

Mr. HAYS. Well, of course then you have a reclamation problem, water resources. But in the areas in which there is fertility, or potential fertility—

Mr. KEATING. There have been wonderful jobs done by some of the missionaries out there, agricultural missionaries if you can call them that. One of them ran a school, wrote a number of articles when he came back, a man with a long name.

Mr. HAYS. Higgenbotham?

Mr. KEATING. That is the name. Reclaiming a lot of that land. But to try to get into that is just a stupendous task. Just stupendous. I am not prepared to say we should not make a start, but it is a long-range proposition.

Mr. HAYS. That is all.

Chairman RICHARDS. I know Mr. Hays is a very fine Member of Congress, but he has been accused at times of riding to his office in the morning on a cloud.

Mr. KEATING. Well, I am sure he is closer to heaven than almost any of the rest of us.

Chairman RICHARDS. I know if he rides on a cloud, I would just as soon be there with him.

Mr. HAYS. You cannot learn enough of these problems, Mr. Chairman, without getting altitude. You have to have a view of the whole landscape.

Chairman RICHARDS. What did Mr. Lanham say when I accused you of cloud riding?

Mr. HAYS. Modesty forbids my saying, but he stuck up for me.

Mr. VORYS. As our chairman said, as a good Baptist he may have his head in the clouds, but he has his feet in the water.

Chairman RICHARDS. That would not do him any good unless he goes all the way under.

Mr. Keating, I just want to ask one question: You do not think that, although you served in the Army as a general, you qualify as a brass hat?

Mr. KEATING. No. One-star generals are a dime a dozen and ex-generals cheaper than that.

Chairman RICHARDS. Thank you very much, sir. We appreciate your testimony.

Mr. KEATING. I appreciate the privilege of appearing before your distinguished and hard-working committee.

Chairman RICHARDS. The next witness is Mrs. Allen C. G. Mitchell, of the League of Women Voters.

Mrs. Mitchell, will you have a seat, please? Have you a prepared statement?

**STATEMENT OF MRS. ALLEN C. G. MITCHELL, A DIRECTOR OF
THE LEAGUE OF WOMEN VOTERS OF THE UNITED STATES**

Mrs. MITCHELL. Mr. Chairman, I have a short prepared statement, and I would be very glad if the committee would interrupt me at any time to answer questions, or afterward.

Chairman RICHARDS. Would you like to place your statement in the record and then have discussion? We have not had an opportunity to read it yet.

Mrs. MITCHELL. I think I would rather read it, if that is all right with you.

I would like to add just one word, though: We are very much aware of how much time you gentlemen have spent hearing experts, and we have the feeling that the main way that we in the League of Women Voters can be of assistance to you is to give you a bird's-eye view, you might say, of public opinion as we see it reflected in our membership.

First, I would like to say a word about our organization to give you a brief idea of the group. It is a nonpartisan organization devoted to developing informed and active citizens. We now have over 100,000 members, organized in 764 communities, in 43 States.

The league is supporting a program of economic and military assistance to other countries because we believe such a program to be basic to the present and future security of the United States. In particular, the league has given sustained attention to the North Atlantic Treaty Organization, the European recovery program, and assistance to underdeveloped countries by the United States and the United Nations.

We would like to see these three programs included in the bill which this committee will write. I should like to speak briefly first about NATO and ERP, and then at more length about aid to underdeveloped countries which our members believe should be emphasized at this time.

1. The League of Women Voters supports the North Atlantic Treaty, and that support is based on our conviction that collective security offers the best chance for a lasting peace. We have supported this treaty since 1949 when it became evident that efforts in the United Nations to create an effective security system were being blocked.

We regard the treaty as a necessary expedient and supplementary to the United Nations, but by no means a substitute. In April, at our national council, the delegates again discussed collective security problems. We favor the strengthening of the North Atlantic Treaty

Organization and supplying it with the necessary materials to enable the member countries to build and coordinate their defense effort.

2. The league endorsed the European recovery program in 1948 after prolonged discussion of the risks and costs involved. The evidence shows that the hopes of the program were realized beyond most expectations.

Exclusive of the accomplishments in the realm of industrial and agricultural production and increase in trade there are other favorable outcomes. The European recovery program has inspired the member nations to take bold steps toward the integration of their economies and toward closer political cooperation. The Organization of European Economic Cooperation, the Strasbourg assembly, the Schuman plan, the European Payments Union, as well as proposals for a European army represent significant advances toward a Europe capable of supporting and defending itself.

All western European nations, however, have not progressed in their recovery at the same rate. In some nations production still lags and the balance of payments problem is acute. Also, the living standard is still so low that many of the people remain discontented and are susceptible to totalitarian doctrines which seem to promise relief.

The existence of such problems warrants continued United States participation in European recovery. These nations now have the added burden of rearming to defend themselves against possible aggression. Without continued United States help, European nations would seriously jeopardize the economic strength brought about by their labor in the last few years.

The League of Women Voters, therefore, urges Congress to continue adequate appropriations for economic aid to Western European nations.

3. In the past 2 years the league has given much attention to the acute problems of underdeveloped countries, particularly their effect on the immediate security of the United States as well as our longer range plans for peace.

At our last convention in 1950, one of the three national issues chosen for concentrated attention was—

the expansion of world trade and international economic development with maximum use of United Nations agencies.

More recently at this year's council meeting the delegates were outspoken in reporting widespread support among the league membership for technical assistance to underdeveloped countries.

The support among our membership for this program of assistance to the underdeveloped nations is so great that I am including a few quotations from local leagues.

From Peterboro, N. H.:

The Peterboro league heartily endorses the point 4 program. It does not want to see the long-range objectives lost sight of in the defense crisis. It felt that the psychological value was as great as the strategic materials value if they must be balanced against each other.

The league believes—

I am still quoting the Peterboro, N. H., league—

that in spite of difficulties and complications due to the defense effort, the program should be carried out for the benefit of the peoples in the underdeveloped areas and in the hope that it will further the peace effort.

This is one from Lancaster, Pa.:

We feel strongly that a really bold and imaginative point 4 program is the most important challenge facing us. By far the strongest feeling—

that is what came out of the debate in this league—

was that the military aid program should not be allowed to disrupt economic recovery in Europe and that a strong point 4 program is the best containment policy in Asia.

From Yellow Springs, Ohio:

We believe that conditions in backward areas are an ever-increasing danger to world peace and would be so even if Russian imperialism should somehow disappear. Therefore, we feel that point 4 cannot wait until the emergency is over, but must be pushed immediately and vigorously.

Yellow Springs members are strongly in favor of our promoting the point 4 program largely by appropriating funds to be administered through the UN.

We support wholeheartedly maximum use of United Nations agencies.

From Pasadena, Calif.:

At a time when military measures are receiving primary consideration, we believe it is the league's function to emphasize the importance of international economic development as a means of promoting world stability.

From St. Louis, Mo.:

At a members' meeting in March, our league voted to ask national to be on the watch for point 4 legislation, and to support it in every way possible.

I have another one that is included here, testimony from Stillwater, Okla. And if you would like more, to give you an impression of the opinion from other regions, we would be very glad to give them to you.

But I think that gives you an idea how public opinion is running as we see it from our office. This whole international economic development program makes sense to our members. I am on page 4 now. I am cutting a little bit in view of the lateness.

Chairman RICHARDS. Those were the impressions you were talking about?

Mrs. MITCHELL. They were the impressions, and I thought in inserting them you would like to have them in the words of the people as we get it in our office.

Now I will just continue with the prepared text on page 4, the second paragraph.

This program makes sense to our members and we believe it has also caught the imagination of the American people. We agree strongly with the view expressed in the Rockefeller report, Partners in Progress, that the United States can no longer assure its own security with means found here at home. We need the underdeveloped countries, both economically and politically, and the peoples of those countries are anxious for a chance to help themselves.

We believe the United States should seize this opportunity for a mutually beneficial program. Such a program offers hope to the people of the United States, and, we would like also to point out, to the people of the free world, that we can in due course cope with our world-wide economic problems before we are overcome by internal or external attack or by the strain of arming against attack.

Communism has spread by exploiting the very real conditions of want which exist for the vast majority of people in the underdeveloped

countries and for the sizable group of underprivileged in certain developed countries such as France and Italy. The sound way to combat the Communist advance is for the free world to meet it squarely with a positive program to cut the ground from under its feet.

Fortunately, the free world already has a successful start on such a positive program through the activities of the United Nations and its specialized agencies, the United States point 4 program, and the Colombo program of the Commonwealth.

We have learned through experience with the European recovery program and in Latin America how to apply the techniques of mutual aid and self-help so that the contribution we make in personnel and in dollars can result in lasting benefits.

The technical assistance program is one that allows those who have skills and who have profited from the atmosphere of a free society to share those skills with others who have not had those opportunities.

The league is concerned that the technical-assistance program go forward as much as possible through the United Nations. We realize some of the limitations of the program progressing on a multilateral scale, but the League believes that the advantages outweigh the disadvantages.

Maximum use of the United Nations is efficient use of American money as it means sharing with other countries the burden of providing funds, equipment, technicians, and training facilities. Maximum use of the United Nations also has the advantage of counteracting the deep fear of recipient countries of exploitation by the economically developed countries.

The Congress and those who administer technical-aid programs should look with foresight to the increased use of the United Nations in carrying out these programs. It is gratifying that the rehabilitation programs for Korea and the Arab refugees are to be carried out through the United Nations. I emphasize the United Nations because the league believes that the foundation of American foreign policy lies in supporting and strengthening the UN whenever we can, and that without such an international body there is little possibility of maintaining international order.

Our success in maintaining the rearmament effort over the necessary period of years will depend directly on the success of economic effort of the free world. Furthermore, not only the rearmament effort but the present and future prosperity of the industrialized regions depends on the markets and raw materials of the underdeveloped regions, which are in turn dependent on us.

We see the interrelationship of these programs to the extent that one cannot succeed without the fulfillment of the other two.

One of the most difficult questions which the Congress must face in connection with this mutual security legislation is what is a sound division of funds and materials between the arms program and economic program. We fear there may be a tendency to sacrifice economic aid to the more obvious needs for military aid. We believe this would be short-sighted and in the long run perhaps disastrous. The importance of economic aid has been expressed by our members again and again, so I want to emphasize it to the committee.

The League is well aware of the strains which the rearmament effort is putting on the American economy with the consequent danger of inflation. In the modern world the price level is not merely

a domestic concern. Inflation here produces repercussions throughout the free world.

Our members have been active in urging the Executive and the Congress to support a firm program to control inflation, particularly stressing the need for a pay-as-we-go tax program, credit controls, and reductions in nonessential Government expenditures.

At the same time we are convinced that the United States must continue to fulfill its collective security obligations under the United Nations Charter and such regional agreements as the North Atlantic Treaty.

In the long run, a collective system of defense will be less costly to the United States, as well as offering the world its best chance of deterring aggression.

In summary, the League of Women Voters is supporting military aid to implement the North Atlantic Treaty, continuance of the European recovery program, and assistance to underdeveloped countries; and we are emphasizing the importance of the economic assistance and full use of United Nations agencies wherever possible.

We believe that the goal of world peace is to be won only through cooperative effort, and we are convinced that American leadership is imperative if this cooperative effort is to succeed.

Finally, we know that the United States leadership is the responsibility of every American citizen. The League of Women Voters, a citizens' organization, is concerned with the Government's role in national and international affairs, assures the Congress of its active and concerted support for these three programs of United States foreign policy. We ask that the bill which your committee reports make adequate authorization for their support.

Chairman RICHARDS. Thank you very much, Mrs. Mitchell. You have not only given us some good advice in the foreign-aid program, but in other aspects of this problem. We appreciate your coming before us.

Are there any questions from the members of the committee? Mr. Chipfield.

Mr. CHIPFIELD. No questions. Thank you for your statement, though.

Chairman RICHARDS. Thank you very much, Mrs. Mitchell.

Mr. BURLESON. I would like to say it is nice to see you again, Mrs. Mitchell. Although we have no one from your State on our committee, I have spent some time around the university at Bloomington.

Mrs. MITCHELL. We have a very active league in Texas.

Chairman RICHARDS. They join everything in Texas.

Mr. BATTLE. May I ask one question? Did I understand you, Mrs. Mitchell, to say that the League of Women Voters is willing to pay higher taxes in order to support some of these worthy programs?

Mrs. MITCHELL. Yes, I think we have a pretty good understanding as to some of the implications of the inflation program. We have had discussion groups, literally hundreds of them, throughout the country, which have gone into the detail of the relationship of taxes to inflation.

I think I can honestly assure you that our members understand that, and feel in the long run they would benefit more by paying the taxes than paying for the increased defense cost.

Mr. BATTLE. My ladies in Alabama know all about that?

Mrs. MITCHELL. If they are members of my organization, I think they do.

Chairman RICHARDS. I think the women understand the necessity of doing that a lot more than the men. If the ladies in Alabama do not know anything about your program, I wish you would inform them. Thank you very much.

The next witness is Mr. Lynn, of the American Farm Bureau Federation.

STATEMENT OF JOHN O. LYNN, ASSOCIATE DIRECTOR OF WASHINGTON OFFICE, AMERICAN FARM BUREAU FEDERATION

Mr. LYNN. I would like permission to have Mr. Gwynn Garnett come up and be with me.

Chairman RICHARDS. Mr. Garnett, will you come over? I do not believe Mr. Garnett was listed as a witness tonight. What is your position with the Farm Bureau?

Mr. LYNN. I am associate director of the Washington office of the American Farm Bureau Federation.

Mr. MANSFIELD. May I ask if Mr. Garnett is going to make the opening statement for both of you?

Mr. LYNN. I will make the statement.

Chairman RICHARDS. I notice you have a pretty long statement, and that you have a great many figures there. We would love to have them in the record, but I do not believe I would go over all of them.

Mr. LYNN. With your permission—I know you are pressed for time—we would be pleased to brief the statement orally and file it for the record.

Chairman RICHARDS. Without objection, that will be done.

Mr. LYNN. Communist imperialism has divided the world and jeopardized not only our peace, but also our way of life. During these critical times, major foreign policy decisions must be made. If these decisions are to be well founded and if they are to endure, they must come from the people. We all must put forth the maximum effort to insure that the average citizen has a basic understanding of the fundamentals of the economic and political problems that will influence the formation of our long-range economic development program abroad.

This statement will outline briefly the long-considered policy of the American Farm Bureau Federation as developed and expressed by the 1,449,000 member farm families. Time will not permit a discussion of the democratic processes by which these policies were developed and adopted; however, we should add that our membership reflects a broad basic understanding of some of the fundamental problems facing America in both domestic and foreign policy. Farm Bureau is pledged to a continued development of this understanding through the educational process.

A foreign-aid program of the magnitude under consideration by this committee must be most carefully considered and both its foreign and domestic effects appraised. The immediate future is, of course, of great importance to all of us, but so also is the direction taken. After all, this has implications for the indefinite future. Therefore, the program at the outset, must be sound. Without criticism of the past, it should incorporate the lessons learned from operating past

United States foreign-aid programs. From this point of view—and the whole of the American Farm Bureau policy regarding foreign aid, as well as inflation control—we believe it useful to attempt to set forth the objectives of United States foreign aid as clearly as we are able.

The following objectives must be achieved through mutual and cooperative efforts of nations joined together in common purpose, with United States exercising the leadership:

1. To build quickly sufficient military defense together with friendly nations to protect the anti-Communist bloc against aggression and even against the fear of such aggression in order to create conditions of confidence in the future.

2. To bring some immediate improvement of living standards and a hope for still better food, education, and medical care.

3. To achieve a great expansion in the capacity for producing food and consumer goods and services to provide improved living, directly and through international trade.

4. To show real evidence of progress in governmental undertakings within cooperating nations in order to expand both human rights and opportunity for individual citizens.

5. To accomplish these vast undertakings without destroying or impairing the stability of the United States economy, the economic system, or the free institutions of the United States.

The farm-family delegates expressed very clearly through resolutions in December 1950 some basic principles, quoted in part below:

New United States programs are needed to strengthen the free nations, but not without a review of our objectives in world affairs and our capabilities to achieve them. Our foreign affairs have reached a stage when major policy decisions must be made. The time has come for our Nation to formulate comprehensive dynamic foreign policy for a long period, founded on public understanding, and thus provide the standard to rally all free peoples.

The burden of our foreign policy must be borne by a positive sound program of international economic collaboration for raising the standards of living of all free peoples and for the support of our common defenses. * * * Our foreign policy must capitalize our unexcelled ability to raise standards of living, and thus give substance and hope to those who might otherwise give way to communism. * * * Therefore, the essence of our foreign economic programs must be collaboration, self-help, and mutual aid among cooperating nations. * * *

It is recognized that in the national interests and in the interest of the community of free nations, the United States will be required to provide aid to weaker nations. We should never lose sight of the fact, however, that great human and natural resources exist in other free countries. Our own resources are being strained to the point which could jeopardize our economic structure, while in other free nations great manpower and resources are underemployed. Our aid, therefore, insofar as possible, must assure increasing production of essential raw materials and productivity of nations that cooperate with us, and each nation in turn must make its maximum contribution to the common economic and military effort. * * *

Our foreign aid should be based on the principle that all aid should be paid for with whatever the recipient can best contribute to the common welfare, over a period which will avoid undue weakening of the recipient. * * *

The United States should state prerequisites for economic, political, and military strength as conditions to United States aid. If we have not the courage to make such conditions and "would-be" recipients have not the strength to comply, then we commit ourselves without limit—a commitment the acceptance of which could destroy us. * * *

We reaffirm our support for continuing aid to Europe. * * *

All economic aid should be given as a loan repayable in goods, earned dollars, or local currency to the account of the United States. Such local currencies accepted should be used exclusively for meeting other United States foreign commitments wherever possible for new and additional productive capacity, for

modernization of existing capacity, for education and information, for national defense, and for the development of underdeveloped areas * * *

All United States foreign aid programs should be administered through a single independent agency * * *

There are eight distinct and interrelated principles expressed in American Farm Bureau Federation policies dealing with foreign economic development, as follows:

1. The needs of the non-Communist world must be related to the resources of the non-Communist world and no longer to United States resources alone. Our resources are limited. We need help to preserve our strength, stability, and capacity to help other nations. There must be a cooperative endeavor among nations to raise living standards. This requires the introduction of new procedures to enable countries who receive our aid to provide aid, in turn, to still other countries, thus multiplying the effects of our assistance in lieu of the United States supplying direct aid in all instances to all participating countries. Ways must be found to supply aid to needy countries on a multilateral basis, with all cooperating nations contributing.

2. This multilateral relating of non-Communist resources to need among non-Communist nations must be effected largely through developing and expanding multilateral private international trade on a sound and permanent basis. This will require a reduction of customs barriers and a freeing of trade from currency and quantitative restrictions among cooperating nations—a closer economic integration. (See appendix I.) We believe that many of these items could have been procured through trade within Europe. With the proper utilization of counterpart funds the United States could have facilitated this trade. We ask the members of this committee to study this list and we believe you will determine that many of these items could have been purchased with local currencies within Europe or elsewhere without overtaxing the resources of the United States.

In appendix III we have copied from the proposal now under consideration by this committee and have made some observations applying the principles set forth in this statement to the proposed Mutual Security Program.

3. Tremendous capital investments must be made in military and civilian productive capacity throughout the free world on a scale hitherto unknown, if United States objectives are to be reached in time. Steps must be taken to create conditions similar to those that attracted huge private capital investments to develop this country and which made it possible for us to create the highest standard of living in the world and which, at the same time, made the world's greatest contribution to the standards of living of other nations through private international trade. Our aid must be the "pump primer" for increasing investment in productive capacity in cooperating countries as a basis of world trade and to effectuate that trade.

4. The principal means for the multiplication of our foreign economic aid lies in the judicious and businesslike use of counterpart funds. We propose the use of counterpart funds much different from current practice. We recommend that countries receiving United States aid be required to deposit counterpart funds to the account of the United States for the full commensurate cost of the goods received. Such is the key to ever-expanding national economies and international trade.

The funds of this account could be utilized only as might be agreed upon by the recipient and the United States for one or more of the following purposes: (a) To help increase food and general economic production, (b) to help develop the Nation's resources and exportable creativeness so as to pay in normal international trade for increasing imports to raise standards of living, (c) to pay for such commodities and/or matériel as are available or may be made available in the country and are needed to cover United States needs or commitments of aid including matériel to other cooperating nations, and (d) to pay for goods or materials transferred for export to the United States for stockpiling or other purposes which are required by the United States as a result of deficiencies or potential deficiencies in its own resources, providing that the recipient undertake to export to the United States or other cooperating nations a sufficient part of the additional production made possible by such investments so as to repay the aid advanced within a period of years.

To avoid any danger of the charge that we are interfering unduly with the economies of participating countries, provisions should be made whereby any country may elect to convert its aid obligations to loans repayable in earned dollars, materials, or services whenever it wishes to do so. (See appendix II.) The purpose of ECA, as announced many times, is to cover only dollar shortages. Here in appendix II we give you a statement copied from the *London Economist* illustrating that this is not always the case. We believe this type of action greatly impairs the confidence within the cooperating countries, since our operations are quite different from our announced intentions. We raise this question: Are wharves for Borneo a legitimate part of dollar shortages? We would point out that the Scandinavian countries are greatly dependent upon exports of lumber products.

Our proposal may be expressed generally in another way: United States aid would be extended as an advance to beneficiary nations, thus creating an obligation for an equivalent export of some product to the United States or to other cooperating nations within some reasonable time. Meanwhile the capital created by the advance within the country would be used to invest in the capacity to increase production of the requisites to higher standards of living and requiring repayment of the advance out of a part of the increased production made possible by such capital investments.

5. To incorporate these principles in the implementation of our foreign aid program, we believe that all United States foreign aid and action programs, including military matériel, technical assistance, and aid similar to that provided through the Economic Cooperation Administration, should be coordinated through a single independent Government agency, with a bipartisan public advisory board, and an interagency coordinating committee, and charged with the responsibilities enumerated at the beginning of this statement and authorized within congressional limitations to deal with friendly nations entitled to cooperate under conditions defined by the Congress. We visualize that this single agency would have administrative responsibility for some functions such as economic aid and technical assistance, but only coordinating responsibility for others, such as the Import-Export Bank, foreign operations of the Department of Agriculture, military matériel etc.

The objective of this agency's operations would be to make new dollar appropriations a last resort for meeting United States foreign commitments in creating productivity throughout the free world as a basis for sound and enduring trade for improved living. The operation would not jeopardize the sovereignty or independence of cooperating nations and would encourage a maximum of private business enterprise.

We feel that such coordination would concentrate our bargaining power for attacking the causes of communism, and only through such an agency can the resources of cooperating nations be equated to their needs and not to ours alone.

6. Technical assistance: The economically underdeveloped areas are highly susceptible to Communist propaganda and subversion, which exploit discontent over prevailing low standards of living. Failure in these countries to show economic progress and the inability of free governments to find some way to start building an effective and dynamic structure, at best sap the resolution of these countries to protect their freedom and in some instances threaten to destroy the very foundations of national unity. A strong sound technical assistance program is perhaps the most effective means to correct these dangers. We therefore fully support such a program.

Tanks, guns, and planes become obsolete after a very short time, but ideas through the educational process never become outmoded. Therefore, we believe that the main effort of our foreign-aid program and our foreign economic policy must be directed toward the utilization of our skills and technical know-how in a well thought-out integrated educational program, to teach people how to do things better and to provide an opportunity for the people to improve standards of living.

This is particularly true in the so-called underdeveloped areas that we think of as being concentrated primarily in southeast Asia. We already have many experiences on which to draw in formulating this program. We would emphasize the need for better coordination in our technical assistance effort. Again this technical assistance program can be accomplished with a huge saving in expenditure of dollar resources. We believe that with the proper use of counterpart funds as outlined in this statement, our efforts in technical assistance can be multiplied many times over.

7. United States respect among cooperating nations will be influenced greatly by our leadership in stating the objectives and prerequisites for cooperation. We must demand that each cooperating country attack the want, misery, social inequalities, and lack of opportunities which breed communism. A multi-billion-dollar aid program backed by the United States military security, and private and limited Government investments would give us a strategic position from which to press these demands with firmness, yet without encroaching upon the sovereignty of cooperating nations. It would give us the offensive by adopting a program with a powerful appeal to peoples both before and behind the iron curtain. If we have not the courage to make such conditions and "would be" recipients have not the strength to comply, then we commit ourselves without limit—a commitment the acceptance of which could destroy us.

For those nations desiring assistance we should provide the means by which they may collaborate among themselves, and each in turn

aid weaker member nations. Each should earnestly seek to raise the standards of living by increasing production for the benefit of all. To fully capitalize the potential benefits we must make our position crystal clear to the world so that those nations who elect to cooperate with us will know where they stand, what they must do, and what to expect. The United States should state prerequisites for economic, political, and military achievements as conditions to the United States aid. (See appendix IV.) There must be a universal attack against the conditions which encourage the spread of communism.

8. Now the last of these propositions, Mr. Chairman, already has been alluded to, but it deserves still further consideration; i. e., our aid must be given in such a way as to achieve our foreign objectives without destroying or impairing our own economy, our economic system, or our free institutions. It is our economic strength and stability—our free institutions—that buttress the hope of free and would-be free peoples around the world. The soul of our Nation and its strength is the free-choice and opportunity system with a maximum of free prices, private enterprise, and a sound currency. These must be protected in order to preserve the source of strength. We could lose ourselves while trying to save others.

To briefly summarize, we recommend:

(1) That the resources of the non-Communist nations be related to the needs of the non-Communist world and not solely to the resources of the United States. This has been illustrated in the examples referred to in this statement.

(2) That, in future aid programs where loans or grants are involved, the country receiving this aid should deposit counterpart funds to the account of the United States equivalent to the dollar cost of the goods or money furnished. Funds in this account of the United States would be used in agreement with the recipient country in developing its resources and productivity out of which the aid advanced would be repaid either by exports to the United States or to cover United States commitments to other nations.

(3) That all foreign-aid programs be under the direction of a single Government agency; this agency to have administrative responsibility for some of the functions outlined, and coordinating responsibility for others.

(4) That the United States should state prerequisites for economic, political, and military achievement as conditions to United States aid. We should not continue to furnish aid to nations for the perpetuation of policies and schemes that are not directed at the economic improvement of the nation. The example of the recent agreement with the Philippines should be used as a pattern for all countries in this connection.

(5) The technical assistance program should be the heart and foundation of our foreign-aid program. We should draw on our past experiences in operating these programs and concentrate on simple improvements to achieve a balanced economy within the capabilities of each cooperating country.

(6) Last, but not least, we must protect our own economy and free institutions. Our aid must be given in such a way as to achieve our foreign objectives without destroying or impairing our own economy.

We hope that the committee will take into consideration the principles stated above. The American Farm Bureau Federation is prepared to offer legislation and/or amendments to accomplish these objectives. We believe that by following these recommendations, the same or greater quantities of aid may be provided at much less dollar cost.

The above principles developed by the American Farm Bureau Federation are designed to mutually protect and strengthen the economies and defenses of the nations of the free world on a sound and enduring basis. We believe that through these principles, aggressively implemented, the conditions of a lasting peace can be created.

(The appendixes referred to follow:)

APPENDIX I

Procurement authorizations in the United States and possessions for ECA countries announced July 2 and 5, 1951:

	Thous. of dol.
Austria:	
Coal and related fuels.....	1,070
Construction, mining, and conveying equipment.....	435
Generators, motors, and metalwork machinery.....	342
Synthetic rubber and products.....	200
Belgium-Luxemburg:	
Motor vehicles, engines, and parts.....	2,227
Tractors, wheel and track.....	1,000
Iron and steel materials.....	200
Medicinal and pharmaceuticals.....	200
Tractor parts and used wheel tractors.....	50
Agricultural equipment.....	50
Denmark: Raw cotton:	1,468
France:	
Raw cotton.....	17,785
Tobacco.....	438
Alcohol.....	9

Norway: Tobacco.....	700	

APPENDIX II

[Extract from the Economist of June 9, 1951, London, England]

The Economic Cooperation Administration has announced a \$7.7 million grant to the United Kingdom to assist in strengthening the economies of dependent overseas territories and facilitating the production and transport of raw materials in short supply in those territories. The funds will be used for the following projects:

	Thousands of dollars
Construction of a rail link in the Gold Coast.....	1,400
Construction of wharves in North Borneo.....	952
Coal development in Nigeria.....	455
Road building Tanganyika, Northern Rhodesia, and Nigeria.....	4,100
Rice development in British Guiana.....	621
Replacement of ferries with road bridges in Sierra Leone.....	210

APPENDIX III

Exact uses of funds proposed by the administration in its mutual security program for fiscal year 1952 are most obscure. Yet there are enough indications among these to raise legitimate question as to whether the United States is the only nation in which the articles can be produced within the limits of military and strategic expediency. To the extent this question is justifiable, there is a question as to the need for new dollar appropriations if the counterpart funds are properly used. Following are some examples:

EUROPE

(a) "By far the largest proportion of the funds requested (\$6.3 million) is extended for the procurement of tanks, other combat vehicles, modern fighter aircraft, some mine sweepers, and escort vessels. Large amounts are also to be used for artillery and fire control, ammunition, motor-transport vehicles, naval and Air Force ordnance items, and electronics equipment of many varieties. Spare parts and maintenance equipment needed to keep equipment serviceable for an initial period are also included."

(b) Economic aid (1) to increase the production of basic materials essential to military and economic strength in the free world; (2) to provide technical assistance designed to raise European productivity; (3) to pay ocean freight; (4) funds to cover United States costs of contributions to UN and its specialized agencies; (5) administrative costs.

NOTE.—If appendices I and II are representative examples of this economic aid, considerable portions can be covered through the recommended use of counterpart funds without appropriating dollars in each case.

(c) Aid for special purposes in OEEC countries and their dependencies:

1. To finance exploration and initial development and promotional activities.
2. To finance actual production and shipment and installation of facilities for production and shipment in those case where these activities cannot be financed by Import-Export Bank.

NEAR EAST AND INDEPENDENT COUNTRIES OF NORTH AFRICA

(a) Military aid of \$415 million to continue support of Greek, Turkish, and Iranian Armies.

(b) Economic aid (excluding Greece and Turkey) of \$125 million. The security objective in the area must be to create stability by laying solid foundations now of economic progress and by establishing, now, confidence that further advances can be made.

(c) \$50,000,000 for reintegrating Arab refugees and direct relief.

(NOTE.—The need of dollars to cover the proposed \$340 million aid under our assumed use of counterpart is a reasonable question.)

ASIA AND PACIFIC

(a) To furnish certain major deficiencies in the armed forces, to provide training and packing, handling and transporting, totaling \$555 million.

(b) Aid for (1) essential public services such as training in the fields of agriculture, fisheries, and forestry; (2) improved medical and sanitation services at the village level; (3) repair or improvement of essential public works; (4) improvement of public administration; (5) public health; and (6) needed economic support of defense efforts.

(c) \$112.5 million to Korea.

(d) UN programs in area.

NOTE.—Total cost \$930,000,000—same basic question, How many new dollars are needed if a cooperative multilateral approach is adopted?

LATIN AMERICA

(a) \$40,000,000 military assistance for rehabilitation and maintenance of United States equipment on hand, modernization of naval vessels and the like from non-United States origins and additional equipment to fill matériel shortages and training in modern techniques and tactics.

(b) Technical cooperation to increase production and to overcome weakness in economic structure for \$22,000,000.

NOTE.—Modernizing European vessels might possibly be done in European currencies if the recommended use of counterpart were approved.

APPENDIX IV

Excerpt from Foster-Quirino agreement, November 14, 1950, which agreement was preliminary to the Philippines becoming eligible to receive assistance:

"3. The main recommendations of the report to the President of the United States by the economic survey mission to the Philippines¹ will be the basis for serious and immediate consideration by the Philippine Government in order to attain the objectives mentioned above, and may be considered a practical and sound point of departure in working out a program of social, economic and technical assistance and cooperation.

"4. To this end, and considering that time is of essence, the Council of State shall forthwith formulate a legislative program of the following measures for prompt consideration by the Congress of the Philippines:

"A. Tax legislation of an equitable nature designed to balance the budget and build up a surplus to gradually eliminate previous deficits at the same time to help in counteracting inflationary trends. It is estimated that, in order to be able to take advantage fully of United States aid, it will be necessary to fix as an immediate goal a total of not less than 565 million pesos in tax revenues. It is proposed that new and increased taxes go into effect January 1, 1951.

"B. A minimum-wage law for all agricultural workers as the first step toward labor and rural legislation designed to raise the level of wages especially in agricultural areas and to improve the living conditions of agricultural and industrial workers.

"C. A joint resolution expressing the general policy of Congress to accelerate the carrying out by congressional enactment of the social reforms and economic development measures recommended by the economic survey mission to the Philippines."

Excerpt from bilateral agreement between ECA and the Philippines (art. II, Undertakings, par. 2) (the recommendations referred to are found in the report to the President of the United States by the economic survey mission to the Philippines dated October 9, 1950):

"2. Initiate and further implement social, economic, and technical programs based upon the recommendations of the economic survey mission and such other measures as will strengthen democratic and free institutions in the Philippines."

Mr. LYNN. Mr. Chairman, I would like to say that the American Farm Bureau Federation, over the past 2 years, has given a great deal of study, and I mean down at the county and community level, to foreign aid and related programs.

A very concentrated effort was made at our last annual convention, and a great deal of time was devoted to the development of policies that farm people could understand, and that citizens in general could understand, and that would make this foreign economic policy work.

I want to say we have made some recommended changes here that are quite different from perhaps anything you have heard up to now; certainly they are different from the way the programs have been operating.

We hope that during the course of this discussion to prove to you that these principles are well thought out and sound.

First, I would like to make this point. We find a great lack of understanding among the people down at the so-called grass roots

¹ Popularly referred to as the Bell report.

with regard to our aims and objectives; that is, the United States aims and objectives in regard to our foreign economic programs, including the military-aid program.

We are trying our best to develop that understanding through the educational process. We would like to look at this program not necessarily from the short-time point of view, but over a period of years. We have to remember that in this foreign work we will not accomplish these objectives as quickly as a lot of Americans would like to see them accomplished.

I asked to have Mr. Garnett up here with me. As the Honorable Mr. Keating spent some time in Asia, I have had the pleasure of spending 3½ years in Europe, and Mr. Garnett has spent 5½ years in Europe working in connection with these programs.

We have seen it operate from both ends, which gives one a little better perspective.

Getting down to the points we want to make in this statement, we believe that the resources of the non-Communist world must be related to the needs of the non-Communist nations, and not just only to the resources of the United States.

It has been our observation up to now—this is not true in 100 percent of the cases—that when a nation needs some material or some assistance of any kind, the tendency is to call on the United States, not only for the dollars, but also for the natural resources, the material, be it wheat, coal, or whatever.

Gentlemen, our resources are limited. We have tremendous underdeveloped resources in countries that are supposed to be on our side in this struggle. We have a proposal here which is the way we think these resources might be developed, so that we could get, as Congressman Keating said a few moments ago, "some reverse lend-lease."

In relating these needs of the non-Communist nations to their resources, we would like you to refer briefly to appendixes 1 and 2 in this statement. It illustrates what we mean. We have taken the ECA announced authorizations and used them. I would like to add in the beginning that this committee knows we have supported from the very inception the ECA program. We have taken the announced procurement authorizations from ECA on July 2 and 5, 1951.

We would like for you to look over the list and see if there are not some of these items that could have been procured outside of the United States or its possessions.

We realize perfectly well that there is a lot of pressure—agriculture is not completely immune to that—on various countries and on ECA to buy this material in the United States.

We point out, for example, appendix 1, Belgium and Luxembourg, iron and steel materials, to be purchased in the United States of America and possessions if you are familiar with the situation in Europe, you know that Belgium and Luxembourg are perhaps the most efficient producers of that kind of material in Europe.

Mr. CHIPERFIELD. Do you mind an interruption, sir?

Mr. LYNN. No, sir.

Mr. CHIPERFIELD. But they can get them for free from us and they would have to pay Luxembourg and Belgium for it, and that is the trouble.

Mr. LYNN. There may be something to that.

Mr. VORYS. You say millions of dollars. That would make the first item \$1,700,000.

Mr. LYNN. There are two or three typographical errors here. That is thousands. I would like to ask the question, Where did these countries procure these materials before World War II, let us say? Where would be the natural place for Greece to go to buy agricultural equipment, industrial chemicals? It would be Germany, in my estimation. Where would be the place for Belgium and Luxemburg to go to buy agricultural equipment? It would be Germany or France. You can go right down the list. In Italy, there is the normal source of supply for pulp and paper.

What countries in the ECA have the greatest surplus of pulp and paper? It is the Scandinavian countries. We have a shortage here. Why could not this item have been supplied in Europe without continuing to drain our resources? You can go through this whole list and raise similar questions.

I think that is enough to illustrate what we mean.

The next logical question is: How do you propose to go about it?

We think by the proper use of the counterpart funds our objectives as set forth in this statement can be accomplished in most cases.

As you gentlemen are well aware, a great part of the aid through ECA—I do not know exactly how much—the countries have been required to deposit counterpart funds, supposedly, to a joint account of the United States and that country participating. This money was supposed to be spent on the agreement between the United States representatives and the participating country.

I have firsthand knowledge, primarily in Germany, that the Germans have had a great deal more to say as to where those counterpart funds should go than the Americans have. Mr. Garnett was the administrator of the food and agriculture program under Mr. McCloy until less than a year ago. He can give you some specific examples in that connection.

What we propose is that all aid, and we do not mean military material, we mean all economic aid, that the country to which this aid is given deposit to the account of the United States, to the credit of the United States, local currency equivalent to the value of the goods or services furnished.

Mr. BURLESON. May I interrupt there, Mr. Chairman? Did you advocate such a system in the granting of aid to India?

Mr. LYNN. Yes, sir.

Mr. BURLESON. I do not recall that.

Mr. LYNN. Yes, sir, we did.

Mr. BURLESON. You advocated we ask for critical materials, manganese, and so forth?

Mr. LYNN. No, sir, counterpart funds to develop those resources.

Mr. BURLESON. But exchange of materials needed in this country—you did not advocate that we put a provision in the bill requiring India to reciprocate in that respect?

Mr. LYNN. Not trading wheat for zinc, or anything. We did advocate this principle of counterpart funds to be used.

Mr. BURLESON. That was when it was a grant.

Mr. LYNN. Ours was based on a loan or a grant.

Chairman RICHARDS. Solely by the United States?

Mr. LYNN. No, sir. I would like to elaborate on that.

Mr. BURLERSON. Excuse me. You did not testify after the Indian aid bill was changed from a grant to a loan basis did you?

Mr. LYNN. No, sir.

Mr. BURLERSON. You testified when it was a grant?

Mr. LYNN. Yes, sir.

Mr. BURLERSON. You could not have counterpart funds after it was a loan?

Mr. LYNN. You could, sir.

Mr. BURLERSON. We did not figure that out.

Mr. LYNN. It makes no difference. You take somebody's promise to pay on the loan. When the people, using India as an illustration in this proposition, when the peasants get their grain, they do not get it as a gift, they pay their rupees for it.

What does the Government do with the rupees? What have some of the governments done with local counterpart currency? They have balanced their national budget and paid off some of their war debts. We have a few little problems in that connection here at home that we must consider.

These counterpart funds would be spent jointly by the United States and the participating country. They would be used for the following purposes—

Chairman RICHARDS. They do that now. They approve the projects. The United States has the say-so in it.

Mr. LYNN. That is pretty complicated. It is not true in every case, sir. For example, let us use Germany as an example. We would attempt to say, "Now, look, we have so many million deutschmarks here, counterpart funds. We believe the thing you should do is try to increase agriculture production here through an extension service," speaking from the agricultural point of view.

I submit to you that we worked for 3 years in an attempt to get an extension service established by the use of the German share of the counterpart funds, but finally we used the 5 percent counterpart funds which are ours, which belong to the United States.

Not until the middle of 1950, just prior to the time Mr. Garnett left Germany—we are using this as an illustration only—did we succeed in getting the Germans to agree to use some of their counterpart funds to do these worth-while projects.

What happened in that case, we found they had included some of this money in their budget to be gotten from taxes. As soon as it was determined that they must release some counterpart funds instead of supplementing what they already planned to do they simply cut it out of their budget and used what we think was our legitimate deutschmarks to do what they should have been doing with tax money.

Chairman RICHARDS. I see what you are talking about. But we had to agree to that.

Mr. LYNN. We have some more to say about that a little later on.

Chairman RICHARDS. What do you say about that, Mr. Garnett?

Mr. GARNETT. We could not help ourselves. They have the veto power. You have to spend the money in the country, and they can "wait us out," and we have to more or less agree to that.

Mr. CHIPERFIELD. If they have to spend the money in the country, how can you use French francs to buy agricultural machinery in Germany?

Mr. GARNETT. I think Mr. Lynn is going to cover that in his statement.

Mr. LYNN. These counterpart funds would be used for increases in food production and economic production, generally, in the country, to help develop the nation's resources, in order to help them get on their feet, and, thirdly, to meet other United States' commitments in other countries.

Let me give you an example of what we mean by that. Last year, you remember, when the Yugoslav bill was being considered by the Congress with regard to the grant to Yugoslavia, the Yugoslav mission came to us for some help in getting the Congress in the mood to pass the bill.

We asked the Yugoslavs, "You don't want this as a gift, do you?" They said, "No, but how else can we do it?" We said, "The United States needs copper, and a lot of strategic materials, and a lot of things we think you have."

They admitted, to make a long story short, they did have some undeveloped resources, lead, zinc, and so forth. They said, "We need \$5,000,000 worth of mining machinery in order to develop and expand this production. Can you help us get the mining machinery here in the United States?"

We simply asked the question, "Where did you get it prior to the time the United States started helping everyone?" They answered, "We got it from Germany."

We checked further into this thing and found that the companies who produced this type of mining machinery were not working at full capacity. They needed, and wanted, to make this material.

We had at that time to the account of the United States with the Joint Republic several million deutschmarks in counterpart funds. Why would it not be logical to say to these German manufacturers, and they work for deutschmarks instead of dollars, "You manufacture and we will pay you out of these counterpart funds for this \$5,000,000 equivalent of mining machinery. You ship it to Yugoslavia and they, in turn, are going to ship us some strategic materials in order that we may replenish our stockpile.

That is a simple illustration, but we were unable to get other people to see the logic, but it would have worked.

Mr. HAYS. My understanding is that is exactly the thing that was done. I know in looking over what actually happened under the Marshall plan aid, you found American cotton going to Italy, making fish nets going to Norway to produce fish that went to Belgium, and so on. You start those cycles of trade, and it took this plan to do it.

What you are describing as an essential part is actually a part of the plan.

Mr. LYNN. In only a very few cases.

Mr. HAYS. You are suggesting we enlarge on it?

Mr. LYNN. Yes, sir. This cotton-textile manufacturer, that happened in Germany, too—

Mr. HAYS. I just used that as an illustration of what went on.

Mr. LYNN. It was sent to Germany, for example. The German economy, if I recall these figures correctly, was to keep 40 percent of the finished materials for their own indigenous use, to clothe their own people, and export to other countries to meet the United States

commitments, the 60 percent. That is the kind of thing we need more of.

I submit, gentlemen, that has not been done to a very great extent. If you look at the trade between western European countries in the last 4 years, you will see that is true.

We do not want to seem critical of ECA. ECA had a job to do to rehabilitate a war-devastated area. That has been pretty well accomplished now and we are trying to look at this thing over a longer period to suggest a better way. It has not been done to the extent that it might have been done up to now.

As a little further evidence, we would like to refer you to Appendix No. 2, which is copied from the London Economist, and we have checked and found this is a fact, with regard to a grant that has been made to the United Kingdom to develop her independent overseas territories.

We would like to ask the same question, as we did in relation to appendix 1: Could not some of these materials be procured in Europe or other friendly countries without this outlay of dollars for these materials?

For wharves for Borneo we assume wooden piles would be used. What countries in Europe have these piles? Germany, Norway, and Sweden surely could supply this material. Would it not be more sensible, instead of granting dollars to do this, to call on those countries whom we have assisted a great deal to furnish these facilities, and we not have to furnish dollars. We are not questioning the value of this for the British Commonwealth, but we are questioning the necessity for the use of dollars for this project.

One of the things that has held us back, I think, is our unwillingness to be "hard boiled" about these things. We have said over and over again we do not want to interfere with the internal affairs of these countries. In other words, we leave it up to the country. Here is the way we suggest our foreign economic aid programs be operated. Let us say these are the conditions. Let us state certain prerequisites before we enter into economic-aid agreements. I am reading on page 6, point 5. It is for the establishment of a single agency to implement these programs. I think it is best I read this from our statement, because it has been pretty well thought out:

To incorporate these principles in the implementation of our foreign-aid program, we believe that all United States foreign aid and action programs, including the military matériel, technical assistance, and aid similar to that provided through the economic cooperation should be coordinated through a single independent Government agency, with a bipartisan public advisory board, and an inter-agency coordinating committee, and charged with the responsibilities enumerated at the beginning of this statement and authorized within congressional limitations to deal with friendly nations entitled to cooperate under conditions defined by the Congress.

We visualize that this single agency would have administrative responsibility for some functions such as economic aid and technical assistance, but only coordinating responsibility for others, such as the Export-Import Bank, foreign operations of the Department of Agriculture, military matériel, and so forth.

The Administrator who may be charged with carrying out this program should know how much material France needs and where best to get it. I would assume that General Eisenhower would originate the request and coordinate it through the Pentagon.

We believe this military aid should be not set completely apart, but separated from the economic assistance.

We visualize the aid we give to the European countries, or any friendly country, as being in our corner in this thing. If we spend \$6,000,000,000 in Europe, or some other place, that is just \$6,000,000,000 that we would have spent here anyhow to protect ourselves and protect the free nations.

Therefore, we think that ought to be primarily the responsibility of the military, but coordinated with this administrator of this new agency.

As an example, let us suppose that General Eisenhower or someone determines that Europe needs 10 new mine sweepers. We would like to visualize this as being originated by General Eisenhower and his staff, through the ECA mission in Europe, coordinating with the Pentagon and the Administrator of this program, determining what countries are in our camp and which ones are best suited to build mine sweepers. We do not necessarily have to build the mine sweepers in the United States. There are companies in Europe who did a very good job prior to the Second World War.

Mr. CHIPERFIELD. Who is going to pay for them?

Mr. LYNN. The counterpart funds. I know there is a great deal of discussion whether we should allow France, for example, to produce small-arms ammunition. I know you have read statements that a M-1 rifle costs us \$300 and could be built in Europe for \$30.

The question in this time of great expenditure, when our resources and manpower are being strained to the limit, is whether or not we should not trust those people to the extent that we give them a blueprint and let them make an M-1 rifle since we are supposed to be fighting on the same side.

Mr. CHIPERFIELD. Do you think they would accept payment in their own counterpart funds?

Mr. LYNN. A Frenchman works with French francs not dollars.

Mr. CHIPERFIELD. We have had this problem before. That is one of the great problems. Here you have the capacity to produce mine sweepers. It may be in Italy, or where not, and then turn them over to France. There seems to be some gimmick in there on the payment of them.

Mr. LYNN. It says so in the law written by Congress, sir, that none of this money under the Mutual Assistance Act can be spent in any foreign country to build any military matériel, to build any factory—

Mr. CHIPERFIELD. I am not disputing you. I am trying to get information.

Mr. LYNN. We believe, sir, without question, that France can do something on this. I know they have some underused facilities over there. Our facilities are being used to the limit. Why not let France make the M-1 rifles, for example? We are in this thing together. We have to trust those people. France might not be a good example, but it is all right for illustration purposes.

Chairman RICHARDS. Wait a minute. Let me ask you this: You say, wherever they could make these materials, you ought to go ahead and take counterpart funds and buy them, is that right?

Mr. LYNN. No, not necessarily. As an example, let us suppose we will make 100,000 M-1 rifles in France.

Chairman RICHARDS. But suppose you have to get them from another nation. Suppose you want something only made in Belgium. Instead of buying it in the United States, you would buy it in Belgium?

Mr. LYNN. If it is available in Belgium.

Chairman RICHARDS. You would do that with military end items? You are a farm man. You represent a farm organization. What are you going to do with agricultural products that you need there, cotton, for instance, when you have a surplus in this country and you want to get a surplus out. Why not take some American dollars and get rid of the surplus over here, at the same time, instead of having that competitive situation?

Mr. LYNN. We are not making any exception for agricultural products, Congressman Richards. This committee well knows we helped defeat the so-called Vorys amendment last year on the earmarking of funds for the buying of agricultural surpluses with ECA money.

We have approached the ECA program from the very beginning that it should not be a surplus disposal program.

Mr. VORYS. You wanted to make it a surplus removal and support program. You would not let the American people use a billion dollars' worth of stuff that they had already bought. Go ahead. Let us not review that one. If we do, it will take an hour or so.

Mr. LYNN. If the United States, in the case of agriculture products or any other item, can produce that item the most economically of any of these non-Communist nations that we are in this pool with, then it should come from the United States.

In the case of cotton and wheat, I think there is no question that the United States is the most economical producer of those commodities. In the case of paper, pulp, and wood, and a few other materials, we are not.

Chairman RICHARDS. If you do what you say in regard to certain materials, for every million dollars we propose it is going to cost the American taxpayer \$2 million, because we are going to carry surpluses over here in just about that amount.

Mr. LYNN. I do not think so. To put it another way, for every million dollars or billion dollars we propose—I am sorry to refer to "billion dollars," because I hope it will not get that big—for every million dollars we propose under our proposal we will get \$2 million worth of aid out of it.

First, we will furnish the material for that country, and then that country in turn puts up the counterpart funds and agrees to furnish either material to us, or some other cooperating country, in the equivalent, dollar equivalent, of aid which we have furnished them. We get double value from our dollars spent in the foreign-aid program.

Mr. VORYS. May I interrupt? The thing would work if it were not for the fact that almost all of these countries with the exception of Britain are coming in for an extra hand-out of economic aid because of the burden of military aid.

So that if we would say to them, "We have furnished you \$20,000,000 worth of cotton, and that is sold to your people, you would have francs; take the \$20,000,000 worth of francs and hire some Frenchmen to make M-1 rifles," they would come back and say, "We are sorry. That is another thing. It has made such a dent in our economy, you have to boost the extra economic aid you gave us. Give us some more." That is what we are told.

Mr. LYNN. As long as we are willing to give it, they are willing to receive it. You can just bank on that.

Mr. VORYS. The one thing we have required, you know, is the 5 percent for strategic materials. We have picked up about \$69,200,000 of strategic materials.

That is net, and is all to the good, and along the line that you have in mind, except that instead of 5 percent, you say, "Let us just make it 100 percent."

I do not see that anybody has been hurt on this strategic material program, except these countries who come to us and say, "If you would let us sell you those strategic materials for dollars, then we would not need so many dollars to balance our accounts."

That is where the thing fouls up when they come to us about it.

Mr. LYNN. We helped, Mr. Garnett and I, to spend in Germany some \$4,000,000,000 of United States taxpayers' money. We know what good cases they can seem to make. If you stay there too long it will rub off on you and you will find yourself rubber stamping. That is one reason I left.

To continue on, I do not want to take too much of your time, but before we leave this we would like to refer to this appendix 3 and appendix 4.

We have copied from the legislation you are now considering some exact language and made a few comments in the form of notes. We would like to call your especial attention to appendix 4, which is along the line we are talking about, that is, the excerpts from the agreement between the United States and the Philippines in regard to economic aid.

We have heard a lot said that we do not want to interfere with the internal economy of these nations. Here is a step, we think, in the right direction, where we have stated to the Philippines "our aid will be conditioned on certain things that you are supposed to do within your own nation."

For example, we have gone so far as to say how many additional pesos they will raise in their taxes. They must enact a minimum-wage law, and so on down the line.

We think that does not go quite far enough. It is the first thing we have seen that indicates we are going in the right direction.

Mr. CHIPERFIELD. May I ask one question? I do not want to take up too much time. Let us suppose France is producing M-1 rifles. Where are they going to get the raw materials—steel? How are they going to pay for that? That will not come out of counterpart funds?

Mr. LYNN. It may be necessary that we send them some steel. Even if it did become necessary, I would first like to look around to the uses being made of steel in Germany, for example, to see whether or not it would not be better to put it into M-1 rifles, rather than the use they are making of it. The rebuilding of the Autobahn bridges for example, is a good thing, but maybe for the defense of Western Europe the production of M-1 rifles is more important. It may be necessary for us to send them some steel over there, but let's make sure they do their part.

I still submit perhaps it would be cheaper on us and would conserve our manpower and resources and a great deal of money even if we had to send some of the materials over there.

Mr. CHIPERFIELD. I cannot find the gimmick, but that is what I am looking for.

Mr. VORYS. Suppose we sent the materials; your idea is we still could use counterpart to pay the wages?

Mr. LYNN. Sure. Remember, gentlemen, that the people in these countries that we are aiding do not work for dollars. They work for the currency common to that country.

Chairman RICHARDS. They would be glad to work for dollars?

Mr. LYNN. Yes, sir; but there are some 1,038,000,000 people we are about to take under our wing. That is a lot of folks.

Chairman RICHARDS. They cannot pay it off in anything but their local currency?

Mr. LYNN. That is right. Just a word about the technical-assistance program. We have a great deal of faith in the so-called point 4 technical-assistance program.

We believe—we do not want to use personalities—Dr. Bennett has done an exceedingly good job in getting that program started on a sound basis.

We have particular reference to the program started in India. I am sure you had an opportunity to hear Horace Holmes, who did such a good job over there.

I would like to read from this statement:

Tanks, guns, and planes become obsolete after a very short time, but ideas through the educational process never become outmoded. Therefore, we believe the main effort of our foreign-aid program and our foreign economic policy must be directed toward the utilization of our skills and technical know-how in a well thought out integrated educational program, to teach people how to do things better and to provide an opportunity for the people to improve standards of living.

I think that is one of the keys to our success, provide people opportunity, as we have in America, to do better.

We may be in some cases perpetuating in some countries the very programs that we are trying to correct, that we hope we are trying to correct by giving aid, to perpetuate programs in countries that are just not according to our thinking. I do not want to get too specific in that. I am sure you know what I mean.

To summarize, Mr. Chairman, I would like to make one other point. It is point No. 8.

Now the last of these propositions, Mr. Chairman, already has been alluded to, but it deserves still further consideration: That is, our aid must be given in such a way as to achieve our foreign objectives without destroying or impairing our own economy, our economic system or our free institutions. It is our economic strength and stability—our free institutions—that buttress the hope of free and would-be free peoples around the world.

That, briefly, is the content with regard to this statement.

Chairman RICHARDS. As previously stated, your entire statement will be incorporated in the record.

Are there any other questions? Thank you very much, sir. We appreciate your coming up.

We have one other witness, Rev. Thomas B. Keehn. Mr. Keehn, you are legislative representative, Council for Social Action, Congregational Christian Churches; is that right?

STATEMENT OF REV. THOMAS B. KEEHN, LEGISLATIVE REPRESENTATIVE, COUNCIL FOR SOCIAL ACTION, CONGREGATIONAL CHRISTIAN CHURCHES

Mr. KEEHN. That is right.

Chairman RICHARDS. Do you have a prepared statement?

Mr. KEEHN. Yes.

Chairman RICHARDS. Do you wish to read your statement, or do you want to file it and comment on it?

Mr. KEEHN. I would be glad to file the statement and make a brief comment on it.

Chairman RICHARDS. Without objection, the statement will be made a part of the record, and we will be glad to hear your comment.

Mr. KEEHN. Mr. Chairman and members of the committee, my name is Thomas B. Keehn and my address is 1751 N Street NW., Washington, D. C. I am appearing before your committee today to testify upon behalf of the Council for Social Action of the Congregational Christian Churches with respect to the Mutual Security Program. My position with the council for social action is legislative secretary. The council is composed of a board of 18 persons elected by the General Council of the Congregational Christian Churches which is the representative body of our 6,000 churches and 1,100,000 members. The council for social action has been given the responsibility by the general council of helping the individual churches make the Christian gospel more effective in society in the areas of international relations, race relations, and economic affairs. I should like to make clear, at this point, that according to our policy each individual church and each national board speaks only for itself. In my capacity as a witness today I am, therefore, speaking only for the council for social action.

I am also authorized to state that another body of the Congregational Christian denomination, the American Board of Commissioners for Foreign Missions, has recently expressed its approval of the point 4 program as an essential part of America's foreign economic policy. The American Board has carried on a program of education, social welfare, industrial and vocational development, and medical care for more than 140 years. This program which involved expenditures of more than \$1,300,000 during the last fiscal year, has always been centered primarily in the so-called underdeveloped areas of the world.

In a letter dated July 19, 1951, addressed to me, Dr. Ronald Bridges, president of the American Board, stated:

I am interested and gratified to learn that you are to appear before the House Foreign Affairs Committee in its hearings on the mutual security program.

You know of the great concern that is being evidenced by the various foreign boards of our churches, especially in connection with the point 4 program and I want to be sure that you have the action recently taken by the Prudential Committee of the American Board on this matter. Enclosed you will find a copy which you may use as you see fit in the presentation of your testimony.

The resolution referred to by Dr. Bridges reads as follows in sections particularly relevant to this testimony:

That approval in substance be given to the findings of a special consultation on the churches' relations to peoples in underdeveloped areas of the world held at Buck Hill Falls, April 24-26, 1951, as a guide to the staff in dealing with the immediate proposals before them and as a basis for the formulation of a long range policy for the American board.

That officers and missionaries of the American board be asked to interpret to individuals and churches the fundamental humanitarian principle of sharing which is at the heart of the point 4 program, to the end that, progressively, popular support and congressional support of the point 4 program may be forthcoming * * *

This convergence of interest of the American board and the Council for Social Action is, we believe, a happy and significant development. It indicates a widespread interest within the churches in the kind of program to aid in the economic and social development of the underdeveloped areas which is symbolized by point 4. Growing out of generations of practical experience of the American board in the foreign-mission field, and the interest of the Council for Social Action in foreign policy, this program—point 4—represents something which we believe should be in the forefront of American foreign policy.

One personal word may be appropriate here. At the request of the division of foreign missions of the National Council of Churches, I was released from my present responsibility for the 8-month period October 1950 to June 1951 to make a special study of the relationship of missions to the point 4 program. The division of foreign missions represents the major Protestant missions boards. As has been stated on many occasions by both churchmen and political leaders, foreign missions pioneered in developing the point 4 idea. Particularly in the fields of health, education, and agriculture, these religious agencies have been concerned with basic human and social needs of people in the underdeveloped areas, as well as in their moral and spiritual welfare. One of the activities carried on during this period of service for the division of foreign missions of the National Council of Churches was to assist in the planning and carrying out of a 3-day consultation on the churches' relation to peoples in underdeveloped areas. This meeting was attended by 125 leaders of Protestant missions and social-action agencies. I am sending to each member of the committee a copy of the report of this consultation entitled "The American Churches and Overseas Development Programs." This document represents a realistic appraisal of the needs and obstacles to economic and social development in the underdeveloped area and the motivations and principles which must guide a program of this kind if it is to be successful.

As is apparent from this background, we are particularly interested in the provisions of the proposal before this committee relating to the economic aid of the more than 1 billion people who live in the underdeveloped areas of the world. This part of the foreign-aid program represents expenditures of approximately \$500,000,000. We are not at all opposed to the larger items requested for economic aid to Europe and military aid to the free world. In fact the Council for Social Action has on several occasions supported both of these programs. We do not feel qualified to speak about the details or amounts requested for either of these activities. It might be appropriate to express the hope that in the European economic-aid program, the original purpose of the Marshall plan will not be lost because of the new conditions occasioned by the rearmament program. Certainly some adjustment will be called for, but no military program in Europe can be achieved or even made palatable to the people unless there is

a sound and continuing improvement in the program of economic development in the European nations.

About the program of economic and social development in the underdeveloped areas, we do have several specific comments.

First we would like to emphasize the strategic and long-term importance of this program of economic and social development in the underdeveloped areas. Here we agree with the thesis developed by the report of the International Development Advisory Board and by Mr. Nelson Rockefeller in his testimony before this committee. The report of the Churches and Overseas Development stated:

In the past man has lacked the physical capacity either to destroy his kind by the tens of millions or to lessen measurably the misery and squalor which too often were an accepted condition of their daily existence. That is no longer true.

Today man has developed scientific instruments which are easily capable of crippling civilization as we know it. But he has also developed knowledge and techniques which for the first time make systematic social and economic progress a possibility not only for the citizens of a few nations but for the most of mankind.

The poverty and social disorder which afflict so much of the world are ancient and persistent evils. Their eradication will not be a matter of years, or even of decades. The problem is vast and complex, the misery pervasive, the causes intertangled. But a road toward a better lot for the people of these areas has become increasingly visible in the private, governmental, and intergovernmental development programs which have been launched or proposed since the end of the Second World War. The philosophy behind these programs has become familiar to Americans as the point 4 concept.

If the point 4 concept is not vigorously applied, a series of degenerative wars appears to be almost inevitable. But if the concept is given full support, the result can be a more wholesome and secure world for our children than their parents have ever known.

Thus we want a point 4 program that is clearly identified, that is in the spot light, that is a central and permanent part of American foreign policy. That is, from our point of view, a weakness of the proposal before you. Point 4 functions are scattered throughout the four titles of the document. It takes some arithmetic and a skillful detective to locate the pieces which, when put together, spell point 4. We believe that point 4 should be, at the very least, a separate title in an overall foreign aid bill. At present it is lost amidst military and temporary economic programs. This is a major weakness, a weakness which will be misunderstood particularly by the more than 1,000,000,000 people who live in the underdeveloped areas. Because military and economic aid are so mixed, it may be believed in some countries that they must take the military aid in order to qualify for the economic. And this will produce tension, perhaps resentment, in the underdeveloped areas where the spirit of political independence is as potent as the economic and social needs of the people are widespread.

Secondly, we are concerned with the magnitude and administration of the program. Point 4 has become a generic term. It is a symbol. It has a long history in government as well as among private agencies. At the present time there are at least two major point 4 programs carried on by the United States Government—one under the aegis of the Technical Cooperation Administration of the Department of State and the other under ECA, particularly its special economic missions in southeast Asia and its program in the dependent overseas territories of Africa. According to the report of the Rockefeller International Development Advisory Board, all of these activities

taken together accounted for the expenditure of nearly \$300,000,000 in fiscal 1951. ECA programs in the underdeveloped areas differ somewhat from TOA activities in that the former supplies some grants and materials as well as technicians. But they are all point 4 in the broadest sense. Presumably the \$500,000,000 listed as economic aid to the underdeveloped areas in the draft now before you represents a continuation and enlargement of this program although we have not seen a country by country breakdown. At any rate we strongly believe that the amount of \$500 million for technical assistance and economic and social development in the underdeveloped areas is a reasonable amount for the next fiscal year. It should be approved. This is the amount recommended by both the Gray and Rockefeller reports.

To administer such a program effectively, the operations now carried on by TCA and the ECA underdeveloped areas functions, should be combined into a single administrative unit. Probably this should be a division of ECA with clearly defined responsibilities and authority. This division could then become the nucleus of a single independent overseas economic administration as recommended in many private and public studies of the problem. The functions of this agency could be clarified as experience dictated. But at least here we would have the beginning of the kind of permanent, independent overseas economic agency which appears to be so desperately needed.

Incidentally reports from certain parts of the world indicate that in each country there should be much more effective coordination of the various United States programs—economic, information, and military—than now exists.

Thirdly, we believe that there should be the maximum use of voluntary agencies in the point 4 program. This was the intent of Congress as expressed in the Act for International Development, adopted last year. At the planning stage in advisory relationships, both here and in the field, and in the actual administration of certain projects, we believe that the aims and purposes of point 4 can best be fulfilled by use of voluntary agencies of all kinds.

A fourth and final concern which we would like to stress is related to the direction in which the program should move. For example, church agencies generally feel that increasing use should be made of the United Nations and the specialized agencies in technical assistance and economic development programs. Especially as long term, large-scale development projects are undertaken, financial and investment programs under UN aegis will help avoid possible charges of imperialism and thereby serve America's real interests. For this reason we support the proposals in the Rockefeller report for an International Development Authority and an International Finance Corporation, both related to the International Bank for Reconstruction which is a UN agency. Congress would serve the United States and the United Nations well by initiating steps to get these new programs started. At best, several years will be required, and now is not too soon to begin. In the meantime, we have made an investigation of technical assistance programs now carried on by the United Nations and the specialized agencies. We believe they fulfill an important function and could be expanded. United States contributions of approximately 10 percent of current appropriations for technical assistance

and economic development in the underdeveloped areas could be usefully employed by the UN.

Church agencies and members appear to be committed to the point 4 idea carried on by the United States and United Nations with greater enthusiasm than anything else in the last decade with the possible exception of the establishment of the UN itself. With their world-wide organization, they are prepared to carry on programs of education and assistance in the grass roots of America and the rice roots of Asia. They believe that this is a program which must be supported by citizens and by the Government for the long pull—for at least the next 50 years. Point 4 must go on when—in fact especially when—the military-aid programs decrease. Point 4 can become a kind of twentieth century emancipation for the billion and more people, largely colored, who are enslaved by poverty, ignorance, disease, misgovernment, and disintegrating social orders in the underdeveloped areas of the world. It can become a road to peace along which mankind may walk forward into the sunrise of a better tomorrow.

Actually, I am authorized tonight to speak not only in behalf of the Council for Social Action of the Congregational Christian Churches, but in behalf of an agency known as the American Board of Commissioners for Foreign Missions, an agency connected with the Congregational Christian Churches.

This agency, the Board of Foreign Missions, has worked for more than 140 years in these underdeveloped areas of the world which we have heard so much about.

I am not myself a missionary, but I have been, in the last year especially, interested in making a very careful study of the work of our Board of Foreign Missions and other Protestant missions in the underdeveloped areas, particularly discussing their relationship to this point 4 program.

It has been said here tonight, and many times in your presence, I know, that the foreign missionary enterprise has in a sense pioneered this point 4 program.

It is logical that as a church agency we are concerned with this aspect of the foreign-aid bill, the aid to underdeveloped areas.

The Council for Social Action has supported the military-aid program and the economic-aid program to Europe; but, frankly, we get lost in all this talk about counterpart funds and military end items, and we do not pretend to be experts on those aspects of the proposal before you.

The church groups do have a deep and practical feeling and concern for the point 4 program, this program of aid to the underdeveloped areas.

We would like simply to put a little spotlight on that phase of this proposal which is before your committee. Briefly, I think we could say we agree to a large extent to the thesis developed by Mr. Rockefeller in his testimony before you. We believe that this program of roughly \$500,000,000 of economic aid to the billion and more people who live in the underdeveloped areas is an essential part of the larger bill you are considering.

We would like to see one thing. This point 4 program is not clearly enough identified in the proposal before you. It takes a little arithmetic and a private detective to find this point 4 program, as we search through the proposal.

So, if there is anything concrete we would like to say, I believe it is this program ought to be segregated out of the various titles and put into one title, not only for the spotlighting purpose which I have mentioned, but because this would make a very good object lesson in terms of American foreign policy as it is represented to the peoples of the underdeveloped areas of the world.

They are going to be a little suspicious of military aid if they see it all mixed up with these forms of economic aid.

We would like, therefore, to see as much separate and unique attention given to this program of economic aid to the underdeveloped areas as is possible.

As a matter of fact, some of us have been concerned with this matter and have even drafted the outline of the proposal which might be used to formulate a section or a title of this bill to deal with economic aid to the underdeveloped areas.

If that is of any interest to the committee, we would be glad to leave it for you.

Chairman RICHARDS. How long is your proposal?

Mr. KEEHN. It is just 2½ pages. It is not in legislative language; it is an outline of it title by title.

Chairman RICHARDS. Without objection, we will include that in the record as your proposal.

(The material referred to is as follows:)

DRAFT PROPOSAL FOR INTERNATIONAL DEVELOPMENT ACT

I. TITLE

International Development Act of 1951.

II. PURPOSE

To promote the foreign policy of the United States by authorizing programs for economic and social development of the underdeveloped areas of the world.

This purpose is spelled out in the act for International Development, title IV, Public Law 535, Eighty-first Congress: "To further the secure growth of democratic ways of life, the expansion of mutually beneficial commerce, the development of international understanding and good will, and the maintenance of world peace; to further the efforts of peoples living in underdeveloped areas of the world to realize their full capabilities and to develop the resources of the lands in which they live; to achieve the most effective utilization of the resources of the United States, private and public which are or may be available for aid in the development of economically underdeveloped areas; to participate in multilateral technical cooperation programs carried on by the United Nations, the Organization of American States, and their related organizations, and by other international organizations wherever practicable; to plan, undertake, administer and execute bilateral technical cooperation programs carried on by any United States Government agency."

III. ADMINISTRATION

To administer this act, an independent agency in the executive branch of the United States Government is established. This agency, known as the Overseas Economic Administration shall be directly responsible to the President of the United States. There shall be an Administrator appointed by the President, by and with the advice of the Senate, and such other officials as may be needed.

The OEA shall carry on the functions now performed by:

(1) The Technical Cooperation Administration of the Department of State, including the activities of the Institute of Inter-American Affairs and the technical cooperation programs as defined in section 418 of the United States Information and Educational Exchange Act of 1948;

(2) Programs for underdeveloped areas administered by the Economic Cooperation Administration;

(3) Such other foreign economic programs as may be assigned to OEA by the President.

The President shall create a public advisory board which shall advise and consult with the President or such other officer as he may designate to administer the program authorized with respect to general or basic policy matters arising in connection with the operation of the program.

The President shall appoint an Interagency Board to coordinate activities of participating agencies of the United States Government.

The operational functions of the Agency shall be separated into two principal divisions:

- A. Long-range technical assistance and economic development programs;
- B. Short term relief and reconstruction programs.

IV. FUNDS

There is hereby authorized to be appropriated the following sums to carry out the purpose of this act:

A. \$500 million for long-range technical assistance and economic development in (1) Middle East; (2) Africa (includes dependent overseas territories of metropolitan European powers. Also includes free African nations); (3) Asia and the Pacific; (4) American Republics.

The Administrator is authorized to allocate funds in any of the above categories, not to exceed 10 percent in the present year to the United Nations and its specialized agencies for programs consistent with the purposes of this act.

B. \$162.5 million for relief and reconstruction work through the United Nations Relief and Works Agency for Palestine Refugees and the United Nations Korean Reconstruction Agency.

V. LOAN PROGRAMS

The OEA is authorized, through the United States member of the Board, to join with other members of the International Bank for Reconstruction and Development to establish the International Finance Corporation. The sum of \$150 million is authorized for this purpose on condition that other members of the International Bank subscribe \$250 million.

The OEA is authorized to propose through Department of State that the UN should create an International Development Authority.

The OEA is authorized to subscribe \$200 million for this purpose when \$300 million is subscribed by other nations.

The OEA is authorized to propose through the Department of State that the UN should create a UN Revolving Fund for Cooperatives to provide UN credit to farmer and small rural industrial cooperatives.

The OEA is authorized to subscribe \$_____ million for this purpose when \$_____ million is subscribed by other nations.

The lending authority of the United States Export-Import Bank is increased by \$1 billion to enable the bank to expend loans for projects in the underdeveloped areas of the world.

Mr. KEEHN. Thank you. We are also concerned that this program should be administered in a separate agency apart from the military aid program. I believe that has been said to you before. We simply would like to reiterate that.

Frankly, it is our opinion, after studying the matter, that more is being done in the terms of a point 4 program in the underdeveloped areas than is sometimes suspected. We have been quite impressed by the point 4 type activities carried on by ECA in southeastern Asia and in the dependent territories of Africa.

We took the figure from the Rockefeller report that nearly \$280,000,000 were spent in the last fiscal year, 1951, in the underdeveloped areas for economic aid.

We believe this more truly represents the magnitude of this program than that point 4 figure which has been talked about so much.

As a matter of fact, we would like to see the program now being carried on by TCA, and those activities carried on by ECA in the underdeveloped areas, put together in one operating unit, perhaps as a

separate division within ECA, but nevertheless giving a unified and comprehensive program of economic aid to the underdeveloped areas.

In our statement, we stress the importance of the use of voluntary agencies in planning these programs in the underdeveloped areas, simply because, I think has already been indicated, missionary organizations and many nonreligious groups have had a good deal experience in these areas of the world.

We would also like to stress the importance of using the United Nations to the maximum possible extent. Perhaps I could just conclude my brief comments by reading the last paragraph of this statement which I submitted for the record.

Church agencies and members appear to be committed to the point 4 idea carried on by the United States and UN with greater enthusiasm than anything else in the last decade with the possible exception of the establishment of the UN itself. With their world-wide organization, they are prepared to carry on programs of education and assistance in the grass roots of America and the rice roots of Asia.

They believe that this is a program which must be supported by citizens and by the Government for the long pull, for at least the next 50 years. Point 4 must go on when—in fact, especially when—the military aid programs decrease.

Point 4 can become a kind of twentieth century emancipation for the billion and more people, largely colored, who are enslaved by poverty, ignorance, disease, misgovernment and disintegrating social orders in the underdeveloped areas of the world. It can become a road to peace along which mankind may walk forward into the sunrise of a better tomorrow.

I think that is the essence of the statement I would like to make. I appreciate this chance to appear before your committee.

Chairman RICHARDS. Thank you very much, sir. We appreciate your coming before us and giving us the benefit of your views and those of your organization. I assure you that your statement will be studied very carefully.

Are there any questions?

Mr. CHIPERFIELD. I believe the witness has said a great deal in a very short time. He has done a fine job.

Mr. VORYS. I would like to ask this. At the end of your statement you say, "We believe church members are committed to this program," and in the beginning of it, you say that each church member speaks for himself and you are only speaking for the Council for Social Action, composed of 18 persons.

The truth is that you are just speaking for 18 persons; that you cannot commit the 1,100,000 members of the Congregational Church; that is true, is it not?

Mr. KEEHN. It certainly is. As the statement indicates, it is elected as an official body of our denomination. We, being a Congregational denomination, have a very strict policy that no agency at the national level can commit the local churches to any given action. We are authorized to carry on certain programs, and we speak only in the name of this particular agency.

This is also true of this board of foreign missions which I mentioned. Their actions which indicate their support for this program are such that they cannot commit local churches. They carry on the program only in their own name.

This is also the policy carried on by Mr. Hays' church, the Baptists, and the Disciples, and a good many other organizations operate in the same manner.

Chairman RICHARDS. Mr. Chipperfield.

Mr. CHIPERFIELD. No questions.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. Mr. Chairman, that is true of our denomination. We have a group comparable to this called the social-service commission. They do not speak for the 18,000 churches in our denomination, but only for the group.

It is an official body. I would like to say in that connection that I have had an opportunity to observe Mr. Keehn's work. He does an exceedingly valuable job of interpreting the work of Congress to his congregation.

I feel that it is very appropriate for him, in turn, to interpret their board's position to us. I feel the democratic process is helped by this approach.

I am sure that if Dr. Judd were here he would say something, as a Congregationalist, about it.

Mr. Keehn may have noticed that Dr. Judd and I had to enlighten the Congress the other day about the Congregational form of government. They are well versed in that.

Chairman RICHARDS. Thank you, Mr. Hays. You do feel, though, Mr. Keehn, that you are giving us the benefit of what you construe to be the collective thinking of the group you represent; while you cannot bind them, do you think that is their collective thinking?

Mr. KEEHN. That is right. According to the inquiries we have had from local churches, and the response which has been made to our literature which we have distributed on this subject, and the requests for speakers which have been received from local churches, I thought it appropriate to use the words I did use, Mr. Vorys, that church members and agencies appear to be committed to the point 4 idea.

I believe it is really a fair statement, that there is a genuine and deep interest among the church people in this program.

Mr. Hays, would you not concur in that, as far as church thinking is concerned?

Mr. HAYS. Yes. My work across the country has brought me in touch with many church groups. I would risk this statement on my own responsibility, that the leadership feels just as Mr. Keehn says, and also the rank and file.

Chairman RICHARDS. Thank you very much, Mr. Keehn. We appreciate your coming.

The committee stands adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 9:35 p. m., the committee adjourned until 10 a. m. the following day, Tuesday, July 24, 1951.)

THE MUTUAL SECURITY PROGRAM

TUESDAY, JULY 24, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the Capitol, at 10 a. m., Hon. James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Gentlemen, we will continue the hearings on the Mutual Security Program. I believe the question was raised last night by Mrs. Bolton and Mr. Vorys about the inclusion of certain countries in this area program that we are taking testimony on. It was understood last night that someone would be here this morning to testify directly on this issue.

Mr. COOLIDGE. I have Mr. John H. Ohly, Assistant Director of International Security Affairs, here who, I think, can answer Mr. Vorys' question on why India is where it is.

Chairman RICHARDS. Mr. Ohly, will you have a seat?

Mr. EATON. Did Mr. Coolidge say that this gentleman could tell us why India is where it is?

Mr. COOLIDGE. That is what I said.

Chairman RICHARDS. You are pretty good if you can. Mr. Ohly, will you tell the committee about that.

STATEMENT OF JOHN H. OHLY, ACTING ASSISTANT DIRECTOR OF INTERNATIONAL SECURITY AFFAIRS

Chairman RICHARDS. Your office is here in Washington?

Mr. OHLY. That is right.

Chairman RICHARDS. Will the members who raised that question last night state what it is they want to know? We want to get you what you want to know.

Mr. VORYS. I want to know who decided to put India in title III of the proposed legislation.

Mr. OHLY. To say who made the decision, Mr. Vorys, in the sense of one individual, I can give no answer because there is none. The action was taken after considerable discussion among people in all of the interested agencies, including within the Department of State the people in the Far Eastern Division, and the people in the Near Eastern, South Asian, and African Division.

I should add this: In part that decision, or that result, reflects the history of the whole MDAP legislation. In other words, it goes back to things we talked about in this committee last year.

It goes back to section 303 of the old Mutual Defense Assistance Act. It provided for an emergency fund for use in the general area

of China, to further the general purposes of the law. This section had several special features.

First, funds provided under this section were not restricted as to type of aid for which they might be used; they were not limited to military aid, in other words.

Secondly, there was a provision to the effect that these funds might be used without vouchering in this area.

Thirdly, the area itself was not defined. We have found that this provision was a very important provision in dealing with the kind of fluid and flexible situation we have had in the Far East.

We have always considered that the term "general area of China," as used in this section included those countries that were on the perimeter of China and it included the offshore islands of Asia around China.

Chairman RICHARDS. Mrs. Bolton contends that India is in the Western Hemisphere some place. Do you not contend that, Mrs. Bolton?

Mrs. BOLTON. I was inquiring how India suddenly appeared in the Near East. I went back into the committee set-up. Then I was told the committee set-up was not right anyhow. I knew India was in the Far East when we started. I wanted very much to go to India at one point. I was told I could not because it was not my area.

So it fastened itself upon my mind, Mr. Chairman, that India was in the Far East. That is what it was called for several sessions of our Congress, in the Eightieth and Eighty-first Congress.

I am very happy to feel that the State Department moves on into more fluid situations, and that it is better to have India in South Asia. I think that is an excellent idea. I was surprised by it and I was wondering about it.

Mr. MANSFIELD. Will the lady yield?

Mrs. BOLTON. Yes.

Mr. MANSFIELD. I think the credit for it should go to Senator Knowland of California, for his amendment covering the area adjacent to China. As Mr. Vorys pointed out, that would bring in India because of the frontier on the north.

Mrs. BOLTON. But I do not believe that it is on that basis that she is where she is.

Chairman RICHARDS. The basis of your decision was that India was in the general area?

Mr. OHLY. That is correct. We want to continue in this bill the authority contained in section 303.

I think the suggested legislation would and should do that, because we are still dealing with a fluid, dynamic situation there and we must, we believe, have the flexibility to use those funds there.

There are other things which support such a conclusion, which I will be glad to go into if the committee wants to take the time. The political and economic ties of India look to the east rather than, as in the case of the Arab States, to the west. Moreover, the Middle East represents an entity, a land bridge between the west and Asia.

I think it is also interesting that we commonly refer to the Near East as Asia Minor, as if it were something distinct and apart from Asia as such.

This bill is designed to have four parts, Europe, the Middle East, Asia, and Latin America, and we placed India in the Asia part. Actually, you have to make certain arbitrary distinctions, of which this is one, but which I think is backed by logical reasons.

Mr. VORYS. The reason given here is that it is in the general area of China. As I remember that legislation, it either provided for ECA administration or—

Mr. OHLY. You are thinking of a provision in the China Aid Act, Mr. Vorys. There were two provisions. One was in the MDAP Act, which vested the funds in the President, and which he has allocated among Defense, CIA, ECA, and other agencies, depending on the type of task and problem that needed to be accomplished with the money. Most of it has gone to military purposes, but small amounts have gone to other purposes.

Mr. VORYS. The China Aid Act, as I remember it, did provide for an ECA-type administration?

Mr. OHLY. I believe that is correct. But I cannot testify as to the China Aid Act.

Mr. VORYS. In any case, Formosa, which is the place which we are now thinking about, and we have put in some language to make sure about it, aid in Formosa is ECA aid, and it is under the general ECA principles; is that not correct?

Mr. OHLY. Certainly different criteria apply in administering aid there, but it is under the administration of ECA aid. The problems are not comparable to the European problems. The strict balance-of-payment principle cannot be applied.

Mr. VORYS. Do we have a bilateral agreement?

Mr. OHLY. We have an MDAP agreement, an agreement and an ECA bilateral arrangement.

Mr. COOLEY. Yes, sir. There are ECA bilateral agreements with all of the countries in the general area of China which are receiving aid, except Indochina.

(Discussion off the record.)

Mr. VORYS. Just going back, you were the headman under MDAP, when the President approved that were you not?

Mr. OHLY. That is correct.

Mr. VORYS. You were the headman the first year and second year?

Mr. OHLY. The first year, I did not come up; the second year, I did.

Mr. VORYS. What is your title?

Mr. OHLY. Acting Assistant Director of International Security Affairs.

Mr. VORYS. Acting Assistant Director to Mr. Cabot?

Mr. OHLY. That is correct, sir.

Mr. VORYS. And Mr. Coolidge is Deputy Director?

Mr. OHLY. Yes.

Mr. VORYS. What is your status between you and Mr. Coolidge?

Mr. OHLY. How do you mean that, the status?

Mr. VORYS. Does an assistant director rate higher than a deputy?

Mr. OHLY. Lower.

Mr. VORYS. But yours is an over-all assignment, is it not? Mr. Cabot told us there are about five departments in his office. You are not one of the five, are you?

Mr. OHLY. Yes; I am, sir.

Mr. VORYS. What is your particular function?

Mr. OHLY. It is called policy and program development. That entails working on the development of this fiscal year 1952 program for presentation, and the general work in other policy matters that cut across geographic areas.

Mr. VORYS. Since the Director "will be exercising responsibility for the Government as a whole," quoting the Presidentially approved memorandum, then you are the fellow, the head man of the whole Government for "policy and program development," this being the program; is that not correct?

Mr. OHLY. I think that is an overstatement, Mr. Vorys. The way the organization is broken down is this: There is an Assistant Director for European Affairs, who deals with the program and problems of the North Atlantic Treaty area and the other European countries to which aid is being extended.

The Assistant Director, who is here in the room today, Mr. Bingham, is in charge of those particular areas in the world outside Europe, namely, the Near East, Far East, and Latin America.

There is an Assistant Director for Program Management, who has the job, once the programs are formulated, of seeing that they are carried through, of tending to the central accounting and of exercising what you might call a control function.

Mr. VORYS. Who is No. 3?

Mr. OHLY. The Assistant Director for No. 3?

Mr. VORYS. What is his name?

Mr. OHLY. Mr. John Bell, who was my deputy last year.

Mr. VORYS. No. 4?

Mr. OHLY. Assistant Director for Policy and Program Management—

Mr. VORYS. That is you?

Mr. OHLY. That is me.

Mr. VORYS. Was there a fifth one?

Mr. OHLY. Not as an assistant director. There are certain special assistants in certain staff fields.

Mr. VORYS. That is supposed to cover the water front?

Mr. OHLY. That is true, sir.

Chairman RICHARDS. Have you anything further?

Mr. OHLY. I am just here to answer questions.

Mr. MANSFIELD. I want to make a remark, Mr. Chairman. Mr. Ohly, I am delighted that we have you before this committee again. I recall with pleasure the fine work you did when you appeared before us the past few years. I think Mr. Cabot and Mr. Coolidge are to be complimented on the use of your services in having you before us to give us the opportunity to ask you questions.

Chairman RICHARDS. There is nothing sinister about this thing in either the Near East or Far East. It is just a common-sense basis that under the present legislation it was put into that area of China as the best way to operate; is that right?

Mr. OHLY. That is right.

Mr. VORYS. There is nothing sinister, Mr. Chairman, but it is significant that we had about 20 experts sitting in the room yesterday and the simple question of why is this here, could not be answered.

I think Mr. Ohly's statement—I have the same high regard for him that Mr. Mansfield expresses—about the program being broken

down is quite interesting. It is broken down and up and sideways, and some of us are trying to find out how it is fastened together and who does it.

Chairman RICHARDS. We do not want him to break it completely down. Are there any other questions? Thank you, Mr. Ohly. We may call on you again before the morning is over.

Mr. OHLY. If you want me to stay this morning, I can. I think I am due to come back again on title I.

Chairman RICHARDS. I think we could excuse Mr. Ohly this morning.

Mr. VORYS. Will you and Mr. Cabot and Mr. Coolidge arrange to have, if the chairman approves, someone in the room constantly, of the 20 who are here, to answer simple questions on program and policy on this mutual security and assistance bill?

Mr. OHLY. Yes, sir.

Chairman RICHARDS. Mr. McGhee, would you mind taking the stand for a moment?

Mr. McGhee, we are glad to have you back again with us this morning. I think you know what the committee is concerned about. You know the question that has been raised with Mr. Ohly. Perhaps you would like to elaborate on it.

STATEMENT OF HON. GEORGE C. MCGHEE, ASSISTANT SECRETARY OF STATE FOR NEAR EASTERN, SOUTH ASIAN, AND AFRICAN AFFAIRS

Mr. MCGHEE. Splendid. As you know, Mr. Chairman, title III, as has been discussed, includes certain countries which come under my particular jurisdiction in the Department of State—India, Pakistan, Ceylon, Afghanistan, and Nepal.

Mr. Ohly has explained from the standpoint of over-all Department policy why this has been done. I might explain, because I think this question was raised yesterday, what the division of authority in the State Department is, and the reasons for it, if that would help clarify the situation.

The division of the Department into four bureaus, in the case of the bureau which I am responsible for, covering the Near East, south Asia, and Africa, has been in existence in the State Department for several decades. I found on my walls pictures of my predecessors going back for 40 years, having about the same area of jurisdiction.

At that time, most of south Asia was a part of the British Empire. As a consequence, it was administered in its entirety by one division of the Department. It had a logical relationship to the Middle East, where the British also had a strong position. It has turned out to be a fairly logical division even today, considering that any break in the world is arbitrary in nature where you are dividing continents, rather than take one continent in its entirety.

The south Asian area faces quite a different problem from the Far East. It is a relatively stable area. It still has close ties with the Near East. In particular, Pakistan looks to the Near East as a Muslim country. Consequently, this division, which one may say is a heritage of the past, nevertheless is fairly logical in the present circumstances.

In going into the program of assistance, however, for the reason Mr. Ohly stated, it was thought desirable to have one Asia program.

As a consequence, these countries were lumped for the purpose of this program and for its presentation. In its administration by ECA they will also be lumped as one group.

This corresponds to the inclusion of Greece and Turkey into the European program, by virtue of their membership in the OEEC, and the fact that the European countries can best be planned for and administered as an entity.

If there are any questions arising out of this, I would be delighted to answer them.

Mrs. BOLTON. I have just a teeny one.

Chairman RICHARDS. Mrs. Bolton.

Mrs. BOLTON. Just why, then, if this is an Asia program is India and Kashmir and Afghanistan, Pakistan included in a western idea—I do not mean west—why it is included with the Near East?

Mr. McGHEE. It is grouped with the Near East from the standpoint of administration in the State Department. Actually, there is relatively little interrelationship between countries on the extremes of the Near East and south Asia.

On the other hand, there is relatively little interrelationship between the southeast Asia countries and the countries on the extreme west of south Asia. You have to be rather arbitrary in your division.

I might say that as a result of experience, we did last year make a change with respect to Burma, which had been previously under my jurisdiction and which was given over to Mr. Rusk. I was pleased to see this done, because it seemed that Burma did share the same problem as the southeast Asia countries. However, South Asia, India, Pakistan, and other countries, do not share all the same problems of the southeast Asian countries, in that they are more stable.

Mrs. BOLTON. If Thailand and Burma are not southeast Asia, what are they?

Mr. McGHEE. If you consider Pakistan, her ties are to the Middle East. It would be unfortunate to administer India and Pakistan separately, because of their rivalries and the common aspects of their situation.

Chairman RICHARDS. Are there any other questions of Mr. McGhee?

Mr. VORYS. Yes.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. You were saying this could be lumped under ECA. It has not been lumped yet, in that Mr. Griffin is not familiar with the Indian program, which I understand was gotten up in the State Department as separate from ECA; is that not correct?

Mr. McGHEE. Mr. Vorys, in initiating new programs, and we propose for the first time a program of grant assistance to the South Asian countries, it has been customary for the Department to do the basic preparation of programs. ECA handles the programs for countries which have received ECA assistance previously.

Mr. VORYS. Afghanistan, Ceylon, and Nepal are going to be administered by point 4 with Mr. Bennett; is that correct?

Mr. McGHEE. Yes, sir.

Mr. VORYS. That is under the State Department?

Mr. McGHEE. Yes, sir; that is correct.

Mr. VORYS. The program on India will be gotten up, and since it has to be presented very shortly, it will be presented by State?

Mr. MCGHEE. Yes; India and Pakistan will both be presented by State. I am here for that purpose.

Mr. VORYS. After they are presented, and if authorized and appropriated for, they will be administered by ECA?

Mr. MCGHEE. That is correct, sir.

Mr. VORYS. At least, the Indian program is somewhat a continuing one. I do not remember how the draft bill goes. I do not think it proposes a change in ECA. It goes out of existence June 30, 1952. What is the proposal by the administration from then on?

Mr. MCGHEE. Sir, others here have responsibility for presenting testimony on over-all administrative matters. I do not consider that I am competent to address myself to that point.

Mr. VORYS. Is there anybody in the room that could?

Mr. HERTER. Will the gentleman yield?

Mr. VORYS. Yes.

Mr. HERTER. I saw yesterday a table of Mr. Bennett's personnel in different countries. I think there are 10 different agencies in the United States Government; in other words, the agricultural man works with the Department of Agriculture, the commercial man works with the Department of Commerce. And then you turn to ECA on a program to get a unification of that personnel, or do you still have a lot of people under different jurisdictions and a lot of people in different departments? If ECA had an agricultural man he would report to the ECA, but under Mr. Bennett, they would report to the Department of Agriculture. It is a different entity that governs here in Washington.

Mr. MCGHEE. It is my understanding, Mr. Herter, that at such time as these programs are assumed by ECA, they will be administered in the normal way.

Mr. HERTER. They would bring the agricultural fellow under them so that the fellow involved in that would be in under one head?

Mr. MCGHEE. That is correct. Mr. Chairman, Mr. Coolidge is here. I am sure he would be glad to address himself to this over-all problem that Mr. Vorys has raised a question about.

Chairman RICHARDS. Suppose you do that right now.

Mr. COOLIDGE. As I understand the question, it is what would happen to these aid programs after 1952, when under the ECA Act, ECA is supposed to terminate.

The draft act that is before you, submitted by the executive branch, provides that ECA shall continue as long as aid is being administered to these several countries. In other words, it extends the life of ECA so long as the program is going on.

Chairman RICHARDS. That would mean in these areas so long as point 4 is going on?

Mr. COOLIDGE. That is true. That is the proposal. Of course, that would be changed if the Congress created a new agency.

Chairman RICHARDS. Mr. McGhee, this is a little off the beaten track of what you are talking about, but since the wheat business and all, how is Mr. Nehru doing over there?

Mr. MCGHEE. Mr. Chairman, certain statements that Mr. Nehru has been making recently I think this committee would find very satisfactory from our point of view.

I had, in connection with my presentation here, brought along a speech which Mr. Nehru made on July 8, which I think your committee might be interested in hearing an abstract from this speech dealing with communism.

Chairman RICHARDS. Not the whole speech?

Mr. McGUIRE. No, sir. There is an abstract about his attitude toward communism which I think would be interesting.

Chairman RICHARDS. Let us have that.

Mr. McGUIRE. Mr. Nehru says:

Communism's appeal to the many has been based on its promise to satisfy essential human needs and provide security. We have seen that it brings in its train conflict and violence and authoritarianism and suppression of the individual. Can we provide economic security and progress without sacrificing democratic liberties? There is no reason why this should not be possible, though the path may be difficult.

That is the most pertinent quotation.

Chairman RICHARDS. And about the most contrary in regard to communism that he has voiced, is it not?

Mr. McGUIRE. That is correct, sir. The Indian Government has, however, always taken strong measures against communism in India. They have in many cases suspended the writ of habeas corpus in dealing with their local Communist problem. Many Communists are in jail today. India has always regarded communism as an internal menace.

Chairman RICHARDS. Are there any other questions of Mr. McGuire on this point?

Mr. VORYS. I notice in your specific projects you have one for plows. It is, I suppose, 10,000 tons of steel to be imported from the United States.

Mr. McGUIRE. Let us look at that project.

Mr. Chairman, I want to go by the wishes of your committee. I had prepared a statement which I proposed to file and to make a few remarks. Then we have other witnesses here, some of whose testimony will cover, I believe, this point raised by Mr. Vorys and other points. How would you like to proceed, sir?

Chairman RICHARDS. First, I would propose to ask the unanimous consent to put in the record the statement you have made. I do not know if there is anything else, unless you have something that you would like to speak about at this time. Would you suggest we put the other witnesses on, because we can call you later?

Mr. McGUIRE. That is fine. I have the statement which is comprehensive insofar as it describes the program in south Asia.

Chairman RICHARDS. Without objection, that will be placed in the record.

(The material referred to is as follows:)

Mr. Chairman, Mr. Rusk has presented a general view of the title III area, its problems, and our policies in that area. Other witnesses have discussed the specific characteristics of southeast Asia and the Far East. I shall discuss the area of south Asia which includes Afghanistan, Pakistan, India, Ceylon, and Nepal. As a part of the general presentation on south Asia, Dr. Bennett, the Administrator of the Technical Cooperation Administration of the Department of State, will discuss programs of technical assistance which we have undertaken in south Asia and will be supported by Mr. Horace Holmes, who has just returned from India with a first-hand knowledge of the current program in that country. Mr. Holmes has met with great success in his efforts which are an outstanding example of United States technical assistance to underdeveloped areas.

The problems of south Asia differ in some ways from those of other areas under title III. We are not proposing a program of military assistance for south Asia. We do, however, propose a program of grant economic assistance to these five countries in south Asia as a part of the general program for title III countries. With your permission, Mr. Chairman, I shall present our views on the specific problems and need for the proposed economic programs in the countries of south Asia.

The program for south Asia, while small in relation to the total needs of the area, will yield large returns in strengthening the free world and furthering our own security interests. These programs, coordinated with programs being developed by the south Asian countries themselves and financed by them, will do much to meet the great need of the countries of south Asia for perceptible progress in solving their pressing economic problems.

We believe that these programs of United States economic assistance are a necessary and integral part of total development plans in the area and will encourage further initiative by these countries. Aside from the material benefits to the countries and to the United States, the proposed programs if adopted would be additional evidence of our sincere concern for the well being of free peoples in this part of Asia and could also demonstrate to them the concrete advantages of free world cooperation.

A glance at the map shows that south Asia comprises five independent countries on the periphery of Communist Asia which form a bridge between the free countries of the Near East and southeast Asia. Should this bridge collapse, the security of both the Near East and southeast Asia would be jeopardized.

Some 150 million people live in the south Asian area of 1,500,000 square miles. The area is a vital source of many important commodities ranging from pepper to manganese. South Asia is the only important area of the vast Asian land mass which is not under communist control or under active threat of communist domination. United States aims in south Asia are to help and encourage these countries to deal with problems of economic adjustment and development under conditions which will permit the survival and growth of democratic political institutions, and to promote in cooperation with these countries, the strengthening of the free world. The proposed programs of United States economic assistance for the individual countries in south Asia will constitute a practical step toward the achievement of this aim.

Three of the countries in south Asia are newly independent and the Governments of all are non-Communist. The steady growth of non-Communist political institutions is an essential bulwark against expanding Asian communism. Basically, these countries look to the free world for support in their struggle for political stability. Internally, they have demonstrated their awareness of the danger of communism by strong measures against Communist activity and by public denunciation of communism.

INDIA

India is the largest country in south Asia and, indeed, has the largest population of the nations in the free world. It is over a million square miles in area. The vast majority of its 350 million inhabitants are Hindus, but its population includes 40 million Moslems and some 10 million Christians. The per capita income of India is estimated at between \$50 and \$60 a year as compared with \$1,150 in the United States. The budget of the Central Government of India for the present fiscal year is slightly in excess of \$1 billion.

India is predominantly an agricultural country; 70 percent of its people live in rural areas and work the land. However, India is also an important industrial country, particularly in jute and textile manufacturing, and has important raw materials. The importance of its raw materials to the United States is amply illustrated by the fact that in 1950 the United States received from India 36.7 percent of its manganese imports, 87.4 percent of mica imports, 55.3 percent of kyanite imports, and 82.5 percent of its burlap imports.

One derives a clearer impression of the economic level in India when it is realized that the supply of electricity per capita in 1949 was just over one half of 1 percent of the American per capita supply; steel consumption per capita was about 1 percent of the United States level, and coal consumption was about 2.5 percent of the United States level.

Indian agricultural development is retarded and the productivity of Indian farms is far below its real potential. While 70 percent of India's population work the land, only one-half of India's national income is derived from agricultural activity. Indian yields of rice are somewhat under 750 pounds per acre as

compared with 1,400 pounds per acre in the United States. Food consumption, which affects the productivity of labor, has been declining over the past decade. Even with substantial food-grain imports, ranging from 1 million tons in a year of comparatively good crop yields to almost 6 million tons in the current year, the Indian diet is far below a healthful minimum. The present supply of food grains from domestic production in India is equal to 1,400 calories per capita per day and the total food supply is equal to 1,760 calories for the average consumer per day. This represents a decline, over a decade, of about 16 percent.

A number of reasons may be adduced to explain the slow progress in raising living standards in India. A major impediment is the shortage of trained and experienced administrators and technicians required to manage important developmental projects in agriculture and industry. While India was not a theater of active combat during World War II except for Japanese attacks in eastern Assam and Manipur, it was an important base of operations against the enemy. During the war its industries and transportation system were strained to the utmost, without adequate servicing or replacements, to make possible a maximum contribution to the Allied war effort.

India's economy as it emerged from the war was further adversely affected by the dislocations and upheavals which accompanied the partition of British India. Most of the capital which has been available has been used, not for new development, but rather for reconstruction. Furthermore, since the war the leading source of certain important raw materials and manufactured items needed for the various developmental projects in India has been the United States, and in common with other nondollar countries, dollar exchange has been strictly limited and rationed for current as well as long-term needs.

Last year a series of natural disasters which affected food production forced the Government of India to allocate to food purchases even larger quantities of dollar exchange, which under normal circumstances could have been used for the purchase abroad of machinery and equipment for industrial and agricultural development. These disasters occasioned the need for emergency food aid which the United States extended on a loan basis. The proposed program is designed in part to help combat this sort of problem on a long-range basis.

The partition of British India and the events which accompanied it have given India one of the most difficult refugee problems in the world, and certainly one of the largest in terms of the numbers of displaced persons. Extraordinary efforts and expenditures have been required to care for more than 5 million people who left their homes in Pakistan and come to India.

In August 1947 India achieved full independence as a dominion in the Commonwealth of Nations. In fulfillment of its preindependence pledges, the Congress government adopted a republican form of government on January 26, 1950, but retained its membership in the Commonwealth. India's new constitution provides a form of government similar in many respects to the British parliamentary system, but many of its provisions have been drawn from our own Constitution, as well as from the constitutions of other democratic countries.

India is strongly nationalistic, proud of its recently acquired independence, opposed to colonialism, and anxious to participate in the solution of Asian problems. While its Government and the vast majority of the people are anti-totalitarian and are intensely anti-Communist in the domestic sphere, India has not firmly aligned itself with the western and democratic countries as opposed to the U. S. S. R. and its satellites. On the other hand India voluntarily retains its membership in the Commonwealth of Nations, is an active member of the United Nations, and since the founding of the United Nations has by and large, except for the China case, voted on the same side of questions as the other non-Communist countries. India's foreign policy seeks to keep the country out of what India regards as a global contest for power. The Government of India and its people want time to develop India's economy, to improve living standards, and to reduce sickness, hunger, and illiteracy. The Government of India and the State governments are stern in their treatment of Communists, who are the most bitter critics of India's present government.

In common with other countries of south Asia, the people of India believed relief from poverty and hunger would come with independence. Progress toward the amelioration of economic conditions has fallen short of their general expectations. The Government and the people of India are aware that the seeds of revolution in India are present wherever there is widespread poverty and inadequate social services. The perpetuation of these ills leaves the population vulnerable to subversion by communist opportunists. The people of India would not willingly submit to an imperialism more cruel and degrading than any the

world has yet seen. Yet in desperation some of them are already tempted to accept the promises of Communist agents. Tangible betterment of their lot can do more than anything else to foil communist aims. The continuation in power of a government founded in democratic principles depends in large measure upon the success with which it meets and overcomes pressing economic problems.

For these reasons the Government of India gives high priority to agricultural and industrial developmental projects for the raising of living standards. India has not received large amounts of United States assistance for economic development. There has been limited technical assistance under the point 4 program, and the United States has assisted India, at a cost to us of \$7 million, to purchase grain sorghums at special prices. Under the Emergency Food Aid Act the Congress recently authorized a loan to India of \$190 million for the purchase of food grains. The International Bank for Reconstruction and Development has granted to India loans of \$65 million for rehabilitation and development.

If India is to make rapid progress in the completion of its presently projected programs, it must have outside assistance to supplement its own efforts. An expanded program of United States economic assistance is therefore necessary.

We have followed with great interest the formulation of plans for essential development in India and other countries of the area under the Colombo plan. The initiative shown in embarking upon this 6-year plan and the more recently announced revision covering a period of 5 years, is gratifying to all who believe India has an important role to play in the free world.

In their scope, the two plans are similar. The program for India covering a period of 6 years from July 1, 1951, calls for a total expenditure of almost \$4 billion. Even with the assistance given by countries now participating in the plan, India is not yet assured that it will be able to arrange the financing needed to carry out the program of development so necessary to reverse the decline in the Indian standard of living. India does not have large reserves of foreign exchange available for long-term developmental expenditures, nor is indigenous private capital available in sufficient quantities for investment purposes.

The economic assistance proposed in the Mutual Security Program is designed to aid in the attainment of the economic stability which is the key to the maintenance of India's political stability. It is designed in particular to help solve India's formidable food problem which is the most important single economic challenge facing the country. It will provide India with a portion of the capital and technical assistance required for the most effective development of its resources, while promoting trade between India and the United States.

Since the principal weakness in India's economy lies in its agriculture and since the quickest results can be expected from specific projects in this field, the proposed program of United States economic aid for India would be directed toward an extensive improvement in agricultural productivity. The United States has particularly valuable experience in the discovery and use of those techniques which are directly applicable to India's present needs. Results in the improvement of agricultural productivity can be spectacular as is demonstrated by pilot projects undertaken by Mr. Horace Holmes in India. Mutual Security Assistance, by broadening the scope of efforts such as those of Mr. Holmes, would strike at the primary economic problem with high prospects of a rapid response.

Efforts to assist Indian agriculture under the proposed Mutual Security Program would be directed toward the use of land not now in use, the provision of good seed to sow the land, and fertilizer and water to nurture the seed.

Several types of projects will serve to illustrate the program which can be carried out in India with United States assistance. Three million acres of land presently overgrown with grass and jungle can be reclaimed and put into the production of additional food grains. Better seed, implements and techniques could be introduced through agricultural extension projects. Indian agriculture now lacks sufficient fertilizer. Advantage may be taken of available raw materials to construct additional fertilizer manufacturing plants which could be expected substantially to increase production within about 18 months. A project for sinking tube-wells can provide ground water irrigation for over a million acres and make available for production additional acreage which has been lost through saturation.

A fisheries project can take advantage of what are at present India's partially utilized resources for deep-sea fishing; the food made available would constitute a substantial addition to the protein content of the average Indian diet. Technical assistance can be provided for geological survey work to facilitate India's production and export of scarce materials. Technical assistance can also be provided in a variety of other fields including vocational education and public health.

Essential economic development in India will require considerable grant aid in addition to the limited additional amounts it may be able to borrow. The proposed United States aid under the Mutual Security Program will help fill this gap. Nevertheless, it is expected that India will supply almost all of the local currency costs of the program. It is contemplated that the administration of the program will be undertaken by the Economic Cooperation Administration, with a small ECA mission.

Without foreign assistance the Government of India will of necessity have to postpone or abandon certain of its critically needed development programs in order that it may devote larger quantities of its capital to current and consumer needs.

An aid program could also be expected to demonstrate to the people of India that it is possible for a country to enter into cooperative arrangements with another foreign country in such a manner that there need be no infringement of traditional concepts of state sovereignty and freedom of action. An important byproduct of a program of aid to India would be the beneficial effect of day-to-day contact between Americans and Indians at the working level.

A response on our part to India's pressing need for assistance in raising or at least in preventing a further decline in living standards would clearly demonstrate our basic good will toward the people of India and give them tangible evidence of our willingness to assume some responsibility for critically needed aid when such aid is necessary to defend freedom-loving people against threats of force or subversion and to prevent the perpetuation of unendurable conditions of life.

PAKISTAN

Pakistan, the fifth largest nation in the world, and the largest Muslim country, emerged as independent when the British withdrew from India. An important link between non-Communist Asia and the Near East, Pakistan occupies a prominent position in the Muslim world. It is a member of the Commonwealth with a federal form of government. The members of the Government of Pakistan are those who led the independence movement which led to Pakistan's birth. The people of Pakistan, like those of India, looked forward to great economic betterment following the achievement of independence. They have assimilated western education and political tradition, and are strongly oriented toward the west, particularly the United States. The inability of the Government rapidly to bring about progress in improving economic conditions in the new nation adversely affects its political position.

The Government of Pakistan has taken active measures to repress internal Communist activity. While Pakistan has recognized the Communist Chinese Government, it is clearly aware of the aggressive aims of communism, and seeks the friendship of the United States and the non-Communist countries.

Its basic problems of a low standard of living and lack of basic industrial development were compounded by the problems of partition which left Pakistan divided geographically. In approximately 370,000 square miles, Pakistan has a total population of over 75 million, of whom 42 million are in eastern Pakistan. Density of population per square mile is approximately 207 for all Pakistan and 773 for eastern Pakistan.

Roughly 75 percent of Pakistan's national income is derived from agriculture and over 80 percent of the country's agricultural production is confined to two principal food grains—rice and wheat, and two cash crops—raw jute and raw cotton. Rice production amounts to about 8 million tons a year and about meets the nation's requirements. Under good crop conditions, Pakistan produces about 4 million tons of wheat annually, of which about one-half million tons are available for export.

Pakistan lacks the basic mineral resources for large industrial undertakings, although small quantities of coal, petroleum, gypsum, limestone and chromite are produced. Most of Pakistan's chromite is exported to the United States. The country's few industries consist mostly of cotton mills, jute presses, railway shops and foundries, sugar and flour mills, and two small petroleum refineries. Although it has potentially important hydroelectric sites, actual facilities for electric power are still modest.

Since adequate capital for development is lacking internally Pakistan looks abroad for assistance. It has accepted assistance from the United Nations; it actively cooperates in the Colombo plan; and it is accepting bilateral assistance from the United States under the point 4 program. As yet, only limited progress has been made in carrying to completion the plans drawn up under these various auspices.

Under the Colombo plan, Pakistan plans for developmental projects contemplate a total expenditure of \$780 million in public funds over a 6-year period plus an additional \$140 million in private investment. In the governmental sector, more than a third is devoted to agriculture, a fourth to transportation and communication, a fifth to fuel and power, and the remainder to smaller industrial, housing, educational and health programs. For the Pakistan part of the financing of this program, strong reliance is placed on an extremely favorable change in the present condition of the budget, the balance of payments, and the volume of internal capital formation in Pakistan.

To date Pakistan has not made any loan agreements, although discussions are now under way for arranging a loan with the World Bank. Yet it is unlikely that Pakistan could borrow and service international loans in sufficient amounts to finance all those economic development projects which are essential if economic and political stability are to be assured.

Lake India, Pakistan is a new country that had to organize its economy overnight in the face of a vast influx of some 5 million refugees without sufficient capital resources to meet its economic problems. Taking Pakistan as a whole, population pressure on the land is less severe than in India but, on the other hand, crop yields are generally lower. Practically none of the industrial installations of undivided India went to Pakistan. Thus the country finds itself with a large refugee population who must be cared for with an economy producing valuable raw materials but devoid of manufacturing facilities, and with an extreme shortage of technically trained personnel. Favored by a steady demand for its raw materials, Pakistan has made some strides toward solving its economic problems. Nevertheless, because of the scarcity of funds and trained technical personnel, it has hardly begun to realize its economic potential.

Outside economic aid is needed to increase agricultural production and diversify the economy of the nation, so as to raise the standard of living, and to create stable internal economic conditions. There is every reason to believe that once the initial impetus is given, internal capital will be encouraged to participate in making further progress.

The economic assistance proposed under the Mutual Security Program is designed to assist the Government of Pakistan in carrying out its own program of essential economic development. The Mutual Security Program of economic assistance would concentrate on the improvement of agricultural techniques by the introduction of American extension methods, improved implements, and by encouragement of the use of fertilizer. The proposed program would provide for the introduction of tractors for the reclamation and tilling of large areas so as to achieve the optimum utilization of larger tracts of land. In addition to a direct attack upon the low standard of living in Pakistan, increased agricultural production will benefit all of south Asia. The reclamation of land, particularly in the Thal region, will go far to resolve the refugee problem in Pakistan, by putting reclaimed land at the disposal of refugees. It is anticipated that the application of fertilizer, chiefly ammonium sulfate, to the land can be expected to increase yields up to 30 percent.

The program can also sponsor the introduction of modern methods of rapid road construction. Pakistan's roads have never been fully repaired after suffering considerable deterioration during World War II. Assistance in this field will make an important contribution in improving distributional facilities of the country. Vocational education would also be stimulated by aid in the establishment of technical trade schools. A geological survey would be of considerable help to Pakistan in gaining a better knowledge of its resources. It is hoped that the proposed program will be administered by the ECA through a modest size ECA mission.

If no United States aid were provided, the Pakistan Government would find it difficult to provide the improvement in economic conditions that the people have been expecting as a result of their new-found independence. As in most countries, so in Pakistan political stability is directly related to progress in the improvement of the lot of the common people. In Pakistan there is a firm belief that the Government is responsible for any major economic development. This feeling is more than local and tends to become cumulative as one goes from the local level to the central government.

The Communist Party is attempting to increase its influence, particularly among the large number of refugees who have not yet been successfully assimilated into the Pakistan economy. Although the Government continues to enjoy wide popularity, it must make substantial progress in its efforts to improve living conditions for the people in order to maintain their support.

AFGHANISTAN

Afghanistan, with a population of about 12 million, is an important and strategically located country of south Asia. Afghanistan is land-locked, surrounded by the Soviet Union, Pakistan, and Iran. The population is agricultural and in part nomadic. Its agricultural economy is primitive with relatively few opportunities for the accumulation of private savings. Living conditions are extremely poor. It is, however, a primary source of karakul skins for the United States. Potentially Afghanistan is rich in mineral resources which, so far, have been only partially explored. Manufacturing and communications and transportation facilities are in an elementary stage of development.

Beginnings of a systematic program for the development of light industries and mining were made between the two World Wars, but the country still is almost completely dependent on imports for petroleum, machinery and vehicles, building materials, textiles, and other consumers goods of many types. During World War II, Afghanistan was able to accumulate considerable foreign exchange reserves by exports of karakul skins, raw cotton, hides and skins, wool, fruits and nuts. These reserves, supplemented by an Export-Import Bank loan of \$21 million, have been committed to a number of large river valley development projects some of which are nearing completion ahead of schedule. They involve the production of hydroelectric power, the irrigation of large tracts of potentially fertile land, and significant improvements in the country's transportation systems. These projects will create opportunities for the settlement of seminomadic and nomadic tribes and will thereby contribute to the political stability of the area as well as to its economic progress.

The concentration of the country's resources on these major projects has limited the resources available for strengthening other aspects of the Afghan economy, namely, manufacturing and mining. United States economic assistance to Afghanistan other than the loan already mentioned, has not been great. It has been supplied primarily through technical assistance for the development of Afghanistan's basic mineral resources and improvement in technical skills. United Nations technical aid has also been extended in limited amounts. The small program proposed is addressed to one of the principal shortages that presently hamper economic development in the Kabul area: the lack of coal for heating and manufacturing purposes. Expert advice has been obtained, and equipment for a fivefold increase in coal production has arrived at Ishpushtu, the principal mine. The proposed program would make its contribution in assuring the distribution of the coal where it is needed.

Afghanistan's needs for economic development are great and frustration of oft-deferred improvement would offer attractive opportunities for subversion nevertheless. Afghanistan is determined to cope with these problems and is putting forth admirable effort. Therefore, while proposed United States economic assistance to Afghanistan is small it will give encouragement and support to the programs already developed under Afghan initiative.

CEYLON

Ceylon is an island of 25,322 square miles with a population of 7¼ million. It became an independent country and a member of the Commonwealth in February 1948.

The Government is under constant criticism stemming from rising prices and slow progress in carrying out programs of economic development. Ceylon's Government leaders are now making a sincere effort to improve living conditions.

Ceylon is of great strategic importance to the United States. Undeveloped, yet rich in certain important resources including graphite and rubber, Ceylon has been seeking foreign economic and financial assistance to carry through important agricultural and other developmental projects. In common with the other countries of south Asia, Ceylon is prone to think that in the distribution of financial aid to foreign countries, it has been neglected despite the urgency of its need. As in the case of the other countries of south Asia antidemocratic forces in Ceylon are able to capitalize on the slowness of economic progress and entice the people to communism as the panacea of their social and economic ills.

Ceylon depends on imports for 60 percent of its food grain supply, and it pays for these imports almost entirely by exports of rubber, tea, and coconuts. In periods of high prices for these exports and when food imports are easily available, Ceylon prospers. On the other hand, a drop in raw material prices and shortages of food grains spell hardships for Ceylon's population. This excessive dependence on an unstable export economy is not imposed upon the country by the character

of its natural resources, but is the product of historical developments. The Government of Ceylon wishes to rectify the existing imbalance of reclaiming part of the present jungle for the cultivation of food crops, restoring the ancient irrigation works and increasing production on the land now under cultivation by the use of better methods.

The United States program proposed for Ceylon is designed to supply expert assistance for programs that the Government of Ceylon is planning to finance largely with its own resources. The three fields in which such assistance is to be given are agricultural extension, water resources surveys, and the production of educational training films.

NEPAL

Nepal lies astride the Himalayan passes that lead from Tibet to the Ganges plain of northern India. Most of Nepal's 56,000 square miles are mountainous and communications are almost totally lacking. Nepal's population is estimated at about 7 million.

Nepalese leaders took to the United States for assistance and support of their country's independence. The great interest shown by the Nepal Government in technical and economic aid for developing the country's resources has resulted in the recent signing of a bilateral agreement with the United States for assistance under the point 4 program. This assistance program, although small at the moment, is being actively pursued by the Nepalese.

There is no important mineral production at present in Nepal, although the Government of Nepal is anxious to secure American assistance in increasing production and in utilizing untapped mineral resources. Likewise, agricultural production is low. The proposed program for Nepal is concentrated in two fields. The program will supply (a) United States agricultural experts who will assist local officials in raising the present low yields, and (b) a mineral expert who will assist in determining the extent of the country's mineral resources and the feasibility of their development.

Finally, a general statement regarding United States objectives in South Asia. They are simple and well known. We desire the enduring friendship of the countries of south Asia—a friendship based on mutual confidence and integrity in international dealing, on our common devotion to accepted principles of international law and conduct, and our common respect for the independence of nations and their right to develop in accordance with their own genius. The governments and peoples of south Asia share three aspirations: They want to maintain their independence; they wish to join in collective efforts to maintain world peace; they wish to improve their living standards. These are the aspirations of the American people as well.

Without exception these countries of south Asia are beset with tremendous internal problems—problems of such magnitude that they might well stagger more experienced governments and put a strain on stronger economies. In their understandable preoccupation with these immense local problems during a period when other free countries are learning through bitter experience of the insatiable aggressiveness of international communism, some of these countries have sometimes regarded the threat of Asian communism as less immediate than we. This difference in emphasis need not obscure the fact that they are determined to remain free and that they are pledged to resist external attack.

The national independence of these countries rests on a continued political stability and on economic progress—progress that will be apparent to the common man in what he eats and wears. Economic progress has so far been dangerously insufficient to insure political stability. A program of economic assistance to the countries of south Asia will serve to accelerate essential economic improvement, and by strengthening the countries of south Asia will reinforce the security of all other nations of the free world.

Chairman RICHARDS. If you have anything else that you can think of which is particularly pertinent to the question we are discussing right now, I wish you would go ahead and say it.

Mr. McGHEE. I will be guided by our committee's wishes.

Mr. VORYS. I wondered if Mr. McGhee has a general statement of the program in south Asia. It might save time now merely to receive it and file it. He would know better than we whether we should hear it at this time, or at least a summary of it.

Mr. McGHEE. Why I raise this matter is that the particular question that Mr. Vorys has asked comes under the program of Mr. Horace Holmes, whom we brought from India to testify on this point. I thought after you heard Mr. Holmes testify this morning—

Mrs. BOLTON. Does it make any difference?

Mr. COOLIDGE. I think I can answer that question. We did not have him on the list. We were not sure he was going to arrive. He is an integral part of the program.

Chairman RICHARDS. What phase would he be most conversant with, and similarly what about Mr. Loftus?

Mr. McGHEE. Mr. Loftus has been responsible for the development of this over-all Title III program. In the Department, he is Economic Officer for the Near Eastern, South Asian, and African Bureau.

Chairman RICHARDS. You would know which would be the best man to give us the information on the particular subject we are discussing, Mr. Loftus or Mr. Holmes.

Mr. McGHEE. Mr. Chairman, with your permission, sir, may we proceed in this way: My particular responsibility covers India, Pakistan, Nepal, Ceylon, and Afghanistan. May I make a brief presentation covering that area, to supplement what Mr. Rusk said yesterday?

Mr. Rusk gave an over-all statement in connection with title III. Since his particular responsibility in the Department does not cover the south Asia territory, I think he left for my bureau the presentation of that program.

Chairman RICHARDS. The thing I was interested in was letting you outline the procedure as to making the best case for the part of it that you are interested in.

If you think it is best to make your statement now, do that.

Mr. VORYS. What you have lined up this morning is a kind of clean-up on title III, and these fellows would know the kind of stuff we want. I certainly do not want to pop a question ahead of time that will come up in the orderly way later and throw you off base.

Chairman RICHARDS. That is exactly what I am telling the Secretary. I want him to either proceed now along that line or call on the man you think best can give us the information.

Mr. McGHEE. With your permission, I will file this statement and make a brief statement of my own, and call on Mr. Holmes.

Mr. Bennett, who is in charge of the TCA program, and who was scheduled to testify, is overseas on official business. Mr. Bennett will be back on Thursday of this week. If your committee desires, he will be available for testimony at that time.

I would like to state, first of all, that for south Asia we request no grant for military assistance. We see no need for it. The countries have not requested it strongly. We do not find it in our interest at this time to offer it.

We do request funds for economic assistance for this area. This area, as we described earlier, includes the independent countries of south Asia—Afghanistan, Pakistan, India, Nepal, and Ceylon. There are some 450 millions of people, covering a million and a half square miles.

Mr. LANHAM. Mr. Chairman, can I ask a question that is bothering me? Mr. McGhee has said that they have not requested any military aid. I wonder if they have requested this ECA aid or this other aid, or is this program something that your Department is proposing without any requests from these countries for aid?

Mr. MCGHEE. Mr. Lanham, the countries that we propose aid for have in various ways, either formally or informally, let it be known they desire aid from us. We request no aid that we do not feel it is in our interest to provide.

The existence of a formal request covering the specific amount that we ask for, we do not consider as a necessary precedent to our extending aid.

You can be sure, sir, we would not wish to give aid to anyone who would not desire it. In the case of these countries, we know they desire it.

Madame Pandit, the Indian Ambassador, in a speech last week, stated clearly that the Indians needed our economic aid in their agricultural development. As a part of the Colombo plan, which includes three of the countries here under discussion, a specific appeal was made to other countries, not naming us in particular but meaning countries like ourselves who were in a position to do so, to assist them in carrying forth their over-all plan on a 6-year basis.

In the case of these countries you have as formal a request as anyone could expect from the countries who want our assistance, and where we feel it is in our security interest to do so.

Mr. LANHAM. Thank you.

Chairman RICHARDS. Is it not a fact, Mr. Secretary, that in going into this area and doing the things that are proposed here, you mention it is pretty hard to pass on the question of whether or not you had a formal request by a government as such, and after all the provision of these funds for the specific area, and elsewhere, is based on the theory that by spending this money we will be carrying on the general battle against the expansion of communism; is that not right?

Mr. MCGHEE. That is correct.

Chairman RICHARDS. And sometimes it may be wise. I doubt that the general rule will allow you to make proposals yourself to do certain things to help these areas; is that right?

Mr. MCGHEE. That is correct, sir. The assistance could not be effective if the recipient country did not desire to have it, and would not make proper use of it. On the other hand, there are many situations in which the initiative for the assistance could well come from us. They may not have thought of it.

Chairman RICHARDS. The basis for that initiative should be the over-all world picture and the danger of communism; is that correct?

Mr. MCGHEE. That is correct. I think we would be in a dangerous position if we reacted only to requests. The requests may be far in excess of what we should furnish. Many of the countries in the Middle East and Asia are new countries. They are self-conscious about being new countries. They are proud. They are reluctant to make requests, particularly where there is a danger that the request will be turned down. They feel it might be an indication of weakness; that they recognized our powers over them.

Chairman RICHARDS. And they might be afraid to make requests, like Czechoslovakia, Poland, and all in the European set-up when Russia laid down the law that you cannot participate?

Mr. McGHEE. That is correct. In any event, before the assistance is given, you may be sure there will be a bilateral agreement to cover all of the points under which the aid will be given.

It will be evident that they want the assistance and will use it properly.

Mrs. BOLTON. Mr. Chairman, are we not going to withhold our questions until the Secretary has made his statement?

Chairman RICHARDS. If it is the gentlewoman's wish, we will do that.

Mrs. BOLTON. I thought we were going to do that.

Chairman RICHARDS. That rule will apply to you as to any of the rest of them.

Mr. McGHEE. I will try, Mr. Chairman, to keep my remarks as brief as possible.

South Asia is the most stable area that exists today in Asia, which includes countries that are oriented to the West, that cooperate generally with the West, that are aware of the internal problems of communism and are determined to defend themselves against aggression.

One finds elsewhere in Asia much instability and even actual warfare. In this area are 450 million people, one-fifth, approximately, of the people of the world, and about a third of the people in the free world. They have relatively stable middle-of-the-road governments. They cooperate with us and are people with whom we can work.

If we should ever lose these people to communism, if they should be added to the 800 millions already under the control of communism, that would give communism the majority of the people in the world. I, myself, would be pessimistic about the future of the relationships between the free world and Asia, or indeed the future of the free world itself, if that ever took place.

If one turns to the individual countries in this area, India, of course, looms largest, both in terms of size and population. India has 350 millions of people. It is the largest one country of the free world. India finds herself in the position of having a great excess of population in respect to available resources. They have a low income, some \$50 or \$55 a year per capita, compared to \$1,450 in this country. Yet, India is extremely important to the Western World, both from the standpoint of its people and its mineral and other material resources.

We, for example, receive some 36.7 percent of our manganese from India; some 87½ percent of our mica and some 82½ percent of our burlap. The Indians, on the other hand, depend to a considerable extent on the west. They must, even in good crop years, import a million to 2 million tons of wheat a year from the west. They obtain all their oil products from the west.

The agricultural yields of India and the productivity of its industry are extremely low. The Indians, for example, consume only one-half of 1 percent per capita of the electricity that we consume; 1 percent of the steel; 2½ percent of the coal. Some 70 percent of the people of India are farmers. Their productivity is only one-half of ours. They produce 750 bushels of rice per acre as against 1,400 in this country.

India has all the problems of a new state, the establishment of an effective administrative organization, the problem of balancing her accounts with the rest of the world in which she is projected for the first time, the problems of acquiring political maturity and developing trained leadership. This has been added to the problem of her low productivity and her very large population. You are aware, of course, of the request which India made upon us recently, and which this committee acted upon in a most forthright way, to assist in meeting a grave crisis arising out of a short crop in their grain production.

I am glad to report that the reaction in India to this generous gesture on the part of this Government in making available \$190,000,000 on a loan basis to purchase this wheat has been most salutary. It has contributed to the favorable editorial comment that we now find in Indian papers with respect to this country.

This country has also given some point 4 assistance during the past fiscal year. We assisted India last year by subsidizing sorghum going to India to meet their grain needs to the extent of \$7,000,000. Some of this help was in the form of an ECA advance from its "general area of China" funds; the balance was in the form of concessionary price worked out with the Department of Agriculture. The International Bank has loaned some \$62,000,000, largely for river development projects. The Indians, together with the other southern and southeastern Asia countries, have entered into the Colombo plan. Under this plan India would, within a 6-year period, expend some \$4,000,000,000 for their economic improvement. This economic development would cover all phases of the Indian economy. They would utilize to a considerable extent their own indigenous currency and resources. They would also depend in the carrying out of this plan on some \$1,110,000,000, in dollars, of which part would have to come from outside sources.

This, as I stated previously, is in a sense a formal request from India, as a part of this larger Colombo plan, to assist her in her development. The response we propose here could well be considered our response to the Colombo plan.

I might also say that the grain which is to be furnished and which will generate at least \$150,000,000 of rupee equivalent in India can also be considered as contributing to the Colombo plan, since a large proportion of these funds we would hope would be devoted to the Indian 6-year Colombo plan development program.

I might just briefly review here the present Indian political policies, because they have in the past been a matter of some concern to the Congress and to the American people.

It is clear, as Mr. Nehru stated in the excerpt I read, that India is aware of the problem of internal communism, even though she has not been as aware as we would like of the danger of external Communist aggression. India has stated clearly she would defend herself against aggression, if it comes.

India has in general cooperated in the United Nations with us and the other countries of the West. The principal point of divergence that has arisen has been with respect to Communist China. There we must face clearly the fact that India has had a different policy toward Communist China from the policy which this country and other western countries have had.

As you know, the Indian Government voted for the basic Security Council resolution with respect to aggression in Korea, but as you know also, she did not participate in the resolution branding Communist China as an aggressor.

India has shown a natural tendency to attempt to see in Communist China the best that she possibly can, as a fellow Asian. She has not felt that Communist China has had aggressive designs vis-à-vis the other Asian countries. I think that has been the basic difference between us.

India did supply an ambulance unit for the Korean War, although, as you know, she did not supply troops. There exists in India a feeling of neutralism with respect to the so-called cold war. The Indians do not feel that it is their conflict. We think they are wrong, of course, and we attempt to refute their arguments, but they see the cold war as a great power struggle between the Russian system and the West, and they would like to stay out of it.

They feel themselves weak economically, and would like to have time in which to develop themselves before they are projected into the struggle, if the struggle must continue. They still have a considerable reaction to the period of their colonial existence. They are afraid of any country or system which has enough power to exert a strong influence over them, because they are determined to preserve the independence which they have won. This applies to some extent even to us in that they do not want to be dominated by us or any other country, either economically, culturally, or politically.

The program we propose here for India is basically agricultural. It is basically directed to the problem of overcoming the great deficiency which India has in her production of food grains and other food products. India must normally, even in good years, import up to 2,000,000 tons of grain. The program which is given to you in detail in the breakdowns directs itself to this food production problem in a number of specific ways.

For example, it directs itself to assisting the Indians in the reclaiming of some 3,000,000 acres of land which have been overgrown by the Kans grass, a type of grass that prevents other crops from being grown on this land. This grass is very difficult to exterminate.

The program includes expansion of agricultural extension services which have been so successful in India, and particularly the project under Mr. Horace Holmes. We are fortunate to have Mr. Holmes with us. He left India last Friday to come back and testify before your committee as to the great possibilities that exist in India in increasing food production. In the area in which he has worked food production has been increased as much as 50 percent through extension methods, demonstrating better seeds, better plows, and so forth.

In addition, this program would anticipate the building of more fertilizer plants. One of the best ways to increase agricultural production is to make cheap fertilizer available to the farmer. This offers more possibilities than the expansion of agricultural lands, since the total amount of land that can be brought under cultivation is limited.

The one largest expenditure in the program is for the drilling of some 3,000 tube wells which would bring under irrigation, land which is not productive now or only sporadically productive at a low level,

because of the uncertainty of rainfall. This would be a comprehensive project including geological work in locating the correct ground water levels and the drilling of wells.

In addition, there are projects proposed for fisheries and geological surveys in helping map mineral resources of India which are not yet developed.

I might say in connection with India's mineral resources that we currently obtain from India quite satisfactory quantities of the manganese, mica, and chromite. India makes them available to us without any restrictions. In addition to the specific projects that I have just described, there are others that I should be happy to discuss with you.

(Discussion off the record.)

Mr. McQUEE. When one turns to the other countries of south Asia one finds in Pakistan a somewhat different problem. It is a Moslem country and looks to the west, whereas India looks to the east.

Pakistan is the largest Moslem country and has 83,000,000 people, of which slightly more than half are in eastern Pakistan and the remainder in western Pakistan. It is a food surplus country. It produces 8,000,000 tons of rice and sufficient wheat in excess of its needs to be able to export to India some half-million tons a year. It does have a need for expanding its industries. In the partition Pakistan got almost none of the industries of old British India.

Pakistan still needs, however, to improve its agricultural methods. Seventy-five percent of its income comes from agriculture, mostly wheat, rice, jute, and cotton. It also needs to develop its hydroelectric power and start industries which can give it a more diversified base and assist in raising the standard of living which, like in India, is very low.

(Discussion off the record.)

Mr. McQUEE. Ceylon is a deficit country in food. She must import some 60 percent of her food, and she can pay for it during times of good prices for her products—her rubber, graphite, and tea—but normally it is difficult for her to pay for her imports. We would like to help expand agricultural production and assist Ceylon in other ways through technical assistance.

In the case of Nepal, a country of some 7,000,000 people, landlocked behind India, up against the Himalayas, we would like to assist these people, who are just awakening to the modern world, and help them in developing their resources. They have unexplored mineral resources which may be of great value. We propose for them a very limited program of technical assistance, one of the most important aspects of which would be mineral surveys.

Afghanistan is a country which is also just awakening to the possibilities of economic progress. With funds which Afghanistan saved during the last war she is engaged in a very large program of development of her water resources. This has been supplemented by some \$21,000,000 from the Export-Import Bank. The firm of Morrison-Knudsen is now building a great dam on the Helmand River there.

We would like to assist Afghanistan principally through technical assistance in making more modern her present exploitation of coal and chrome, and assisting her in developing her agriculture both in the areas where there will be water for irrigation and in the valleys of

Afghanistan, which now raise the wheat and other products which the Afghans need.

Mr. Chairman, I will not take any further time. I would just like to summarize that we have here in South Asia a stable group of countries, all with middle-of-the-road governments; all oriented to the west; all aware of the problem of internal communism, and all cooperating in general with us in the western countries.

We would like to present the assistance requested for South Asia as a sound investment on the part of our country to assist these peoples, to whom we have not previously extended grant aid, in overcoming the basic development problems which they face in raising the very low standards of living of their people.

We feel that this modest program, making full use of the technical assistance component which is included, will not only give these people a start, but would also give them the incentive to cooperate more with us, and would help overcome the feeling of neutralism which unfortunately has tended to exist.

With your permission, Mr. Chairman, I will either hold myself subject to questioning, or we can have Mr. Horace Holmes testify more in detail about the agricultural extension work.

Chairman RICHARDS. I suggest we call Mr. Holmes.

STATEMENT OF HORACE HOLMES, AGRICULTURALIST FOR THE DEPARTMENT OF STATE AND DEPARTMENT OF AGRICULTURE

Chairman RICHARDS. Mr. Holmes, what is your position?

Mr. HOLMES. Mr. Chairman, I am chief agriculturalist under the point 4 program in India, and also on loan to the Government of India as extension adviser to that Government.

Chairman RICHARDS. Do you act in any other capacity, such as coordination activities, or cooperation activities?

Mr. HOLMES. Yes, sir. There are quite a number of efforts being made through the FAO, and there is a developing program now of technical assistance being offered by the Danes that we are trying to tie together the various efforts in, all aimed at trying to help India help herself.

Chairman RICHARDS. Are you employed by the State Department or ECA?

Mr. HOLMES. I am employed by the State Department and borrowed from Agriculture.

Chairman RICHARDS. And you are under the point 4 program?

Mr. HOLMES. Yes, sir. TCA.

Chairman RICHARDS. Is there any comparable function of the ECA, as such, in your field there?

Mr. HOLMES. There is one man there now whose main function is to observe and report deliveries under the food grain loan program. He has more or less done some exploratory work. He has arrived just recently. There is no ECA program in India as yet.

Chairman RICHARDS. How long have you been in India?

Mr. HOLMES. Three years—a little over 3 years.

Chairman RICHARDS. What I was trying to get at is whether you had any other duties in addition to your agricultural duties? I mean, such as the matter of cooperation and coordinating the program.

Mr. HOLMES. We are working on agriculture. As such, we are trying to use every available source of help we can and coordinate that into this agricultural program. Our primary function is agriculture.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. You could not have been with point 4 for 3 years.

Mr. HOLMES. No, sir.

Mr. VORYS. Were you under the Department of Agriculture?

Mr. HOLMES. No, sir. I was employed by the Indians themselves first.

Chairman RICHARDS. And you have been under point 4 from the inauguration of the program?

Mr. HOLMES. Yes, sir. Since the earlier part of September—September 9, I believe it is—of last year.

Chairman RICHARDS. The Department of State borrowed you from Agriculture?

Mr. HOLMES. Yes, sir.

Chairman RICHARDS. Go ahead, sir.

Mr. VORYS. India borrowed him from Agriculture.

Chairman RICHARDS. I thought when he finished his duties with India his status reverted back to Agriculture.

Mr. HOLMES. It did.

Chairman RICHARDS. And State got you from there?

Mr. HOLMES. Yes, sir. You see, I went to India first as a private individual paid by the Indians themselves. I was there under a 2-year contract, which I completed in April of last year. Then I came back to the States and went back into Agriculture, where I originally came from, and was borrowed from Agriculture by State, that is, by TCA.

Chairman RICHARDS. When you went first to India to work for the Indian Government, were you in Agriculture then?

Mr. HOLMES. Not at that time, but I had been.

Chairman RICHARDS. But you have been since then?

Mr. HOLMES. Yes, sir.

Chairman RICHARDS. Are there any other questions about this background?

Mr. SMITH. Did you work under Mr. Dodd in the Department of Agriculture?

Mr. HOLMES. Under whom?

Mr. SMITH. Who is the man in charge of FAO?

Mr. HOLMES. That is Mr. Dodd. When I came back to the States in the spring of last year they asked me to do an extension bulletin for them. I thought this work should be done because I thought it was part of an over-all program that should be done.

I do act now as a consultant to them in that part of the world.

Chairman RICHARDS. Go ahead, sir.

Mr. HOLMES. I have not prepared a statement, but I would like to tell you just a few simple things we have been doing that we think are important. It holds some hope where so many people feel that there is not too much hope. I will make it very brief, Mr. Chairman.

India is such a huge country and with such complex problems that at first we are inclined to think that the whole thing is hopeless, but it is not at all. Our efforts have been to try to get into some specific

areas and get down to a specific problem and concentrate on that, so as to find a place or way in which we can do something, and then spread it horizontally. Otherwise we get so involved that we do not know where we are.

It is on this basis that we have been working up in the northern end of India. We have done work now in the United Provinces. We have three areas we are working in now, each about 100 square miles.

Our approach has been to find somebody who wants to do something, and then find out something they can do with what they have. Frequently we have to search a good bit to find simple things that will give results, but we have been able to do so, and I will give you one example.

In the northern part of India, the whole Ganges Basin slopes eastward about 1 foot to the mile. It is a huge, flat area of silt and fine sandy-loam soil. Wheat is produced in the western end of the Province and rice in the eastern end. There is a map here which will make it a little easier to explain.

In this area, the yield of wheat has been about 11 to 13 bushels. The farms are very small. The methods they are using are just about the same as they were 2,000 years ago. The farmers have made very little change. The first thing they need is hope. They need to see something can be done, and that is where we have started.

In the first instance, they had all kinds of ideas, but centering in a small area like this we tried to find something they wanted to do that could be done with what they had. It is on this basis that we came in and got some better seed wheat and also changed their plows a bit.

For example, in the southern part of the United States it requires about 3½ days to grow and harvest an acre of wheat. Under the methods the Indian farmers have used out there, which has been going on for centuries, it requires 69 days to grow and harvest an acre of wheat, and their yield is much less than the yield we get here in our so-called backward southern mountain countries.

So we take the position that the only way those people can have more is to help them produce more. You just cannot divide it any other way and come out with an answer.

We found that by demonstrating and training a group of men to work with the farmers on their own farms, that when farmers once see that a new practice is useful they would adopt it. As a result of the simple practices used our yields of wheat increased by 67 percent on the demonstrations. In addition to improved seed, improved plowing, and the growing of legume crops, the farmers began using straw, cow dung, waste, scrap, trash, and anything they could get to make compost, which was spread on their fields. This past year we doubled the wheat yield on those demonstration areas.

I do not think the yields of India can be doubled quickly, but I do think judging from our experience in these areas, that we can help them do a great deal.

We had one man this year who harvested 63 bushels of wheat per acre, which is good wheat. That sort of thing has given them quite an incentive to try to do something more.

The average yield of potatoes was about 113 bushels. Their seed was poor and diseased. In addition, the farmers did not know how to use legumes in rotation and to plow the legumes under in order to

increase their crop yields. By demonstrating these simple things, the yield of potatoes has been more than doubled. One man this year struck a new high by harvesting 725 bushels of potatoes per acre.

The total increased amount of food we have been able to achieve in these small areas, while it is important to those areas, is lost in the magnitude of the whole food problem. It does show, however, that there is a way that India can feed herself.

We are working now on about one twenty-five hundredths of the country. We realize that this is small, but we have had to bite off small enough areas so that we could work with them and get something done.

As a result of the work we have been doing, Madras—the little state of Mysore and Madhya Pradesh, Bombay, Punjab, the United Provinces—and Bihar, have all requested technical assistance from us.

What we are trying to do is go to each of these areas where the problem is somewhat similar and set up one or two or three projects, and try to find out what we can do to help them to do better, and then train their people and expand it.

That, Mr. Chairman, illustrates what we have been working on, and those are the methods we are using. We have found the Indian farmer is just like the farmer anywhere else. He is skeptical. He is not going to listen to somebody talk, but he will certainly follow if you show him something that helps him.

In that I think we are very fortunate, because otherwise they would have a lot of trouble. We are fortunate because we must prove our technique.

Chairman RICHARDS. Have you finished your statement?

Mr. HOLMES. Yes, sir.

Chairman RICHARDS. How much does one of these small projects cost the United States, would you say?

Mr. HOLMES. So far we have only put in technical assistance. This means the salary of the American workers. Most of the cost has been borne by India.

Mr. HERTER. How big an area is that?

Mr. HOLMES. Usually 100 square miles.

Mr. HERTER. Actually, how many pilot farms are you working on now?

Mr. HOLMES. We are shooting at 18 pilot areas of 100 square miles each as our next group, but we have got to cover India pretty well with these demonstrations, just as we have done with extension work in this country.

Mr. HERTER. Can you get it down to a per-acre cost in new aid or technical supervision, and so on? I think that is what you were getting at.

Mr. HOLMES. This is total cost I am talking about, in India and otherwise. I would have to figure on getting it to that sort of a figure. Generally, though, a village will run about 500 acres, and that is about 150 families. You will have about 3 acres per family.

Chairman RICHARDS. Can you make us up a statement that will show the cost of these projects in area and so forth, to the American taxpayer? That is what I was trying to get at, because as I understood it, in the program you are working under, the know-how is provided by the United States, and I did not know whether there was any additional cost in addition to scientific instruction.

Mr. HOLMES. So far we have provided only some technical know-how. We are stuck in that many of the States cannot go ahead because they cannot finance it, but I would be delighted to get up a statement.

Chairman RICHARDS. In this program do you furnish any aid?

Mr. HOLMES. No, sir.

Chairman RICHARDS. Do you furnish any agricultural equipment for ploughing?

Mr. HOLMES. So far we have not. We need some, but we have not had anything to work with so far.

Chairman RICHARDS. To put on a real demonstration project you would need some equipment.

Mr. HOLMES. We need some equipment, and seed, and we certainly need to train some people. We have to train 60,000 men.

Chairman RICHARDS. You said two of these States invited you to come in and participate in the organization. They did not do that at first, did they?

Mr. HOLMES. No, sir.

Chairman RICHARDS. But they have seen what you were doing?

Mr. HOLMES. Yes, sir; we have had nine States that asked us to come in.

Chairman RICHARDS. I would like to know what the agricultural program that you have done there has cost over-all, and the cost of these projects, if you will put that in the record.

Mr. VORYS. Instead of putting it in the record later, I believe it is available in the room now.

Mr. MCGHEE. We have the breakdown on the proposed program. Mr. Holmes has been talking about the program in the past as he said they have not been able to do what they wanted to do in the past.

Chairman RICHARDS. You could not tell what the future program is going to cost? I do not think they can tell unless they have figures on the past project.

Mr. MCGHEE. We have the figure, Mr. Chairman, that it would cost some \$2,690,000 for supplies and some \$200,000 for trainees and technicians.

Mr. VORYS. But I am sure the chairman's question is what did his project cost in dollars?

Mr. MCGHEE. Under the point 4 program?

Mr. VORYS. Yes.

Mr. MCGHEE. We have that figure.

Mr. LOFTUS. The cost thus far is Mr. Holmes' salary only.

Mr. HERTER. May I get one point straight in my mind. You spoke of the improvement shown in these experimental areas through better wheat seed and seed potatoes. Where did that come from, and who got it?

Mr. HOLMES. We searched out something they have and did a good bit of experimental work. We tried to find something that is acclimatized and to increase it and demonstrate it.

Chairman RICHARDS. You talked about potatoes where the seed has gotten down to the point where it would not make anything. You have to get the seed from somewhere. Now, where did you get that?

Mr. HOLMES. From the experimental stations in India.

Chairman RICHARDS. In India itself?

Mr. HOLMES. Yes.

Chairman RICHARDS. You sold them on the idea that they have to have better seed and their own country has not been able to sell them on it?

Mr. HOLMES. That is right. We got the seed from the town of Putnar in Bihar, where there is a good potato growing section. We got the agricultural people there to select some disease-free seed and we planted it and arranged to save the seed and multiply it in that way.

Chairman RICHARDS. Mr. McGhee, you are talking about a \$2,000,000 figure. Is that over-all?

Mr. MCGHEE. No, sir. It is only part of the total program for India. The projected cost for this agricultural extension program we propose for next year is \$13,700,000. That sum will finance an expansion of what Mr. Holmes is trying to do.

Chairman RICHARDS. For all India?

Mr. MCGHEE. Yes, sir. It will not cover all of the half-million villages in India, but will spread this effort.

Chairman RICHARDS. On the program you have along this line you estimate that it will take \$2,000,000-plus next year?

Mr. MCGHEE. That is correct. \$3,700,000.

Mrs. BOLTON. Where would you get the people to do it?

Mr. MCGHEE. It will take 50 technicians, we estimate, and they will be recruited in this country. In addition, some 40 trainees would come here. That would cost totally \$800,000.

The actual supplies and equipment involved, including transportation, would cost us \$2,900,000. This figure includes \$860,000 for jeeps, parts, and supplies; steel for plows, \$1,000,000, which is the program Mr. Vorys referred to earlier; fertilizer, \$600,000; insecticides, \$300,000; and other supplies, \$200,000.

This would enable Mr. Holmes to expand greatly the program he has been doing on a very limited scale last year under point 4.

Chairman RICHARDS. What do you think about putting all this program which you are doing now under one administrator, like ECA, and let it go at that, or under some other administrator, or something like a central agency?

Mr. HOLMES. I do not know that I am competent. However, it would seem we need some coordination. Whether or not that is the way to do it I would not be competent to answer.

However, we are struggling along and feeling our way, and we are playing the thing by ear. That is why our programs have been so small, because we have got to find out where we stand. We feel we are ready to move on forward because the Indians are ready to go along with us, and we found out a lot of things we did not know, too.

Chairman RICHARDS. It would appear to me that is the best argument for some kind of central authority doing the thing, because there are a lot of people who feel in different ways, and go in a lot of different directions, and end up nowhere, or else end up in conflict.

Of course, you are not passing on that policy?

Mr. HOLMES. No, sir.

Chairman RICHARDS. Are there any further questions?

Mr. SMITH. I have some after Mr. Vorys gets through. Are we under the 5-minute rule?

Mr. VORYS. The 5-minute rule.

Chairman RICHARDS. All right, I will do that. It is the first time I heard you volunteer on that. That is good.

Mr. VORYS. There are certain reasons why others have suggested it.

Chairman RICHARDS. Mr. Vorys.

Mr. VORYS. What was the budget for the point 4 work in India last year?

Mr. LOFTUS. \$71,000.

Mr. VORYS. \$71,000?

Mr. LOFTUS. Yes.

Mr. VORYS. That was a lot more than Mr. Holmes' salary then?

Mr. LOFTUS. Yes. Here is the breakdown of it for insertion in the record.

(The material has been submitted for inclusion in the executive session record.)

Mr. VORYS. Did you have a Government jeep?

Mr. HOLMES. We got a used jeep about a month ago and we just put a new engine in. We got our first United States Government vehicle 2 months ago.

Mr. VORYS. So you did all this that you told us about without a Government jeep?

Mr. HOLMES. The Indians furnished us vehicles.

Mr. VORYS. Yes, but we did not?

Mr. HOLMES. No.

Mr. VORYS. How many American technicians did you have under you?

Mr. HOLMES. During this past year we have had two in addition to myself. However, two have just arrived. We are just getting started now.

Mr. VORYS. How many native technicians have you?

Mr. HOLMES. Oh, we have probably 300.

Mr. VORYS. Three hundred?

Mr. HOLMES. Yes, sir, about 300.

Mr. VORYS. Have you trained 300 in a year?

Mr. HOLMES. This training has been going on now for a period of 3 years.

Mr. VORYS. Is it something you started under the Indian Government?

Mr. HOLMES. Yes, sir. We are just continuing building right on the same thing.

Mr. VORYS. Let me ask you this: You were there for 2 years under the Indian Government?

Mr. HOLMES. Yes, sir.

Mr. VORYS. Then did you come home, or did you simply go on to the point 4 payroll?

Mr. HOLMES. I came home for 6 months and went back, but we carried right on with work that we had started.

Mr. VORYS. How did you happen to come home? Did the Indian Government release you?

Mr. HOLMES. No, sir. My contract was up.

Mr. VORYS. And they did not renew, or you did not want to renew it?

Mr. HOLMES. I did not want to renew it.

Mr. VORYS. Could you tell us why?

Mr. HOLMES. Yes, sir. I could not afford to renew it.

Mr. VORYS. They did not pay you enough, you mean?

Mr. HOLMES. Yes; they paid me, but there are many items of expense that were not covered. I felt that I had fulfilled my agreement and the fact that they wanted me to stay was some satisfaction, but I did not feel that I could.

Mr. VORYS. Then you went out again. You understand I am interrogating you, but we all think you are the answer to a prayer and you are the fellow we wanted to talk to, and a very worth-while witness.

Mr. HOLMES. Do not hesitate, and I will be glad to answer you.

Mr. VORYS. Are those 300 technicians at work now?

Mr. HOLMES. Yes, sir.

Mr. VORYS. And they know about this? They are highly localized, though, are they not?

Mr. HOLMES. Most of them are country Indian boys that we have gotten from the villages and trained. Some of them are men we have gotten from the various agricultural departments and have trained.

Now, we train the trainers and get men to train the other men right in the field on the job. They are not well trained, but they are trained well enough to do a lot of the very important things we need to do, and they are continuing the work.

Mr. VORYS. We have been told by some of your friends from India, Mr. Miller for one, that there are just hundreds of agricultural college graduates in India, but their idea is that they want a desk and an office to sit in, and one vast problem is to get these fellows who know their stuff out in the field.

Is there anything to that?

Mr. HOLMES. There is a great deal to that, sir.

Chairman RICHARDS. Will the gentleman yield?

Mr. VORYS. Yes.

Chairman RICHARDS. Do they lose face if they go out and work?

Mr. HOLMES. The whole idea in the East is quite different from that which we have. There is too much of education for the sake of education. It is not the people's fault, but the whole culture is different. We have to break away from the idea that educated people do not work, because educated people must work if we are to get anywhere, and that is what we are trying to change there.

Mr. VORYS. Did you work?

Mr. HOLMES. I worked.

Mr. VORYS. You went into the fields and showed them what to do?

Mr. HOLMES. Our system is any job that is too dirty for me is too dirty for them. I think that is the way we have got to do it.

Mr. VORYS. What is the attitude of the Indian Government, the Department of Agriculture, toward your work?

Mr. HOLMES. Oh, they are very cordial; very cooperative.

Mr. VORYS. I have been told that the Department of Agriculture thought it was wonderful and hoped they could get it across the country. Is that true?

Mr. HOLMES. I do not know whether they thought it was wonderful, but they are cordial and our relations are most pleasant. Mr. Nehru appreciates it also. I was in his office just a few weeks ago and he has been most cooperative.

Mr. VORYS. This same sort of thing, though, has been going on—

Chairman RICHARDS. This rule that you called up is in operation, Mr. Vorys. You have had 5 minutes.

Mr. Carnahan.

Mr. CARNAHAN. I do not have any particular questions, Mr. Holmes, but I just want to say that the account you have given us of what you have done is to me an excellent example of what is being done, and what can be done under point 4. I think it backs the policy that the point 4 program should not be taken over as a military program at the present time.

That is all, Mr. Chairman.

Chairman RICHARDS. Mr. Smith.

Mr. SMITH. Mr. Holmes, Mr. Vorys intimated that your fame has preceded you. We had a very interesting session one afternoon with Mr. Miller, and one other gentleman, who showed us the type of plows you were using over there. We became greatly interested in the kind of plow you had developed. I think you had developed it.

Mr. HOLMES. No. We did not develop it. We found it.

Mr. SMITH. You found it?

Mr. HOLMES. Yes.

Mr. SMITH. It was a kind of plow that was pulled by an animal, was it not?

Mr. HOLMES. A bullock. Yes, sir.

Mr. SMITH. Is there any place in India for tractors?

Mr. HOLMES. Yes, sir. They have quite a lot of jungle land. They have a lot of land that needs to be reclaimed, and they do need heavy power for that. They cannot do it with their bullocks. The bulk of their small farms, though, are bullock operated, and will probably have to continue to be. They do need power for their reclamation and jungle clearance, and that sort of thing.

Mr. SMITH. To furnish food for the people the bullock-operated plow, as you call it, is the one that is greatly needed. Is that right?

Mr. HOLMES. They need both, but they need more of the bullock plows. They will be on a bullock economy for a good while yet, I think.

Mr. SMITH. Have you seen the breakdown on the figures for plows and agricultural machinery in this program?

Mr. HOLMES. I am not sure I have. I just got in and I am not too familiar with it.

Mr. SMITH. You have not conferred with the men in the Department?

Mr. HOLMES. I have seen some of those figures, but I am not sure I know just what you mean.

Mr. LOFTUS. May I speak to that?

Mr. SMITH. Yes.

Mr. LOFTUS. Plows as such are not in this agricultural program, but there is steel for use in this Allahabad Institute that we visualize would be part of Mr. Holmes' operation. The idea of importing steel for the plows was developed with Mr. Holmes in India back in January of this year.

Mr. SMITH. How much steel have you allocated?

Mr. LOFTUS. 10,000 tons.

Mr. SMITH. How many plows will that turn out?

Mr. VORYS. Sixteen pounds to a plow, is it not?

Mr. LOFTUS. Yes. That would be 1,250,000 plows.

Mr. SMITH. At a cost of how much per plow?

Mr. HOLMES. Those plows would be made for about \$1.75 each.

I would like to make just a point there, if I might. This plow business is one of a series or a sort of chain of things that are required. With the plows themselves we could get from three to five times the efficiency of the manpower and bullock power, just by changing their little simple implements. That itself is not too much, because at some seasons of the year the people do not have much to do and it does not do much good to save time then, if they do not have anything else to do, but it does make it possible to fit their land earlier in order to get legume crops growing on that land which can be turned under in time to grow their principal crops. This is the way we are using the plow to build up those yields.

We feel there are just little simple things that the people use there, and are accustomed to, that we have to take into account. For example, something that makes perfectly good sense to us here may not be acceptable. It has to be adapted.

As an example, they plow by riding on their plow. They have done that for centuries. As a result, we had the plow there that they rode on, and the back tooth went in the soil so deeply that the bullocks could not pull it.

They said, "This plow is not suitable. It is too heavy."

We kept raising the back tooth up higher and higher until it worked. It is easier for us to adjust the plow than it is to change the man. So we raised the tooth so high that they cannot stick it in the ground so far, and they have finally taken it and liked it, and they are greatly used.

In that same connection, we have to take into account their way of thinking in order to make it acceptable there. We have a lot of damage to food, for example, from mil gais, or antelopes that they have out there. They are called blue cows. "mil" is blue and "gai" is cow. To those of us from the west we would never think of a solution like this, but one of our Indian workers did. We were talking about it, and somebody commented that it looked more like a horse than a cow. He said, "That is it—a little blue horse." So they changed the name to blue horse. They got the name changed in the legislation, and now you can shoot the blue horse. You would never be able to shoot the "blue cow."

Chairman RICHARDS. The gentleman's time has expired.

Mr. Battle.

Mr. BATTLE. No questions.

Chairman RICHARDS. Mr. Merrow.

Mr. MERROW. No questions at this time, Mr. Chairman.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. I would like to hear some more of this.

Mr. SMITH. I think it is the best we have had.

Mr. HERTER. I think the details are very important. It is as interesting a demonstration as anything we have had before us, as to what you can do there.

Chairman RICHARDS. Well, you gentlemen have 15 minutes down there. Would you like him to go ahead for 15 minutes?

Mr. HERTER. I would be delighted to have Mr. Holmes go right ahead.

Chairman RICHARDS. Would that be satisfactory to you, Mr. Zablocki, or did you want to ask some other questions?

Mr. ZABLOCK. I will wait with my questions.

Chairman RICHARDS. How about you, Mr. Lanham?

Mr. LANHAM. I would like to know one thing. If India was doing this work and paying Mr. Holmes and wanted to carry on, why should we pay for it and send Mr. Holmes back over there if India was willing and able to do it herself? I cannot see that.

Chairman RICHARDS. Maybe Mr. Holmes can answer that.

Mr. HOLMES. I would like to comment on that, if I might. I went out there—it is a long story, so I will not go into that, but at any rate they had the idea that they would like to find out something about this American extension service, and they wanted to see what could be done. Well, the idea is, as is all too frequently the case in the East, that we are going to make a big plan and do everything at once. Well, you cannot do it that way. So we got the idea across, let us take a little area here and there and find out what we can do, and test it and prove it. Then we can use that as a pilot project or as something to guide you in your future planning and development in trying to meet this terrific food problem.

Chairman RICHARDS. I do not want to interrupt, but is the point you are making that as long as you are employed by India you had to do it more or less the Indian way, but if you came from the United States with these ideas, they would receive it?

Mr. HOLMES. No, sir. They will receive it in any case, if it is sound, but the point I am making is that this Indian program we started was one of trying to search out a method of doing it. We searched out a method and it worked satisfactorily in one area. We are searching out similar methods in all these different areas because the crops and soil are different in each.

Mr. LANHAM. That does not answer the question I asked at all. India was paying for this program. Why should generous Uncle Sam just take it over and spend United States dollars when India can do it herself? They wanted you to stay.

Mr. MCGHEE. May I respond to that, Mr. Chairman?

Chairman RICHARDS. Yes, sir.

Mr. MCGHEE. Mr. Holmes has just come back from India and may not be fully aware of some of this background.

The real point, I believe, Mr. Lanham, is that this work which Mr. Holmes did was so successful that we would like to capitalize on the techniques that he has worked out and help the Indians apply it on a much larger scale than they could do themselves.

Mr. Holmes stated, for example, that the conditions of employment with the Indians were not attractive to him. The Indians could not get Mr. Holmes to stay. If this program which we propose is acceptable the ECA can. The ECA will send Mr. Holmes back, as they plan to do, and let him run this program. He can take the techniques he has learned in this pilot operation on a very small scale, and apply it widely in India, so it will have a real impact on the Indian economy. If Indian food production can be increased enough, they will not have to import so much. They will not have to ask us as they did this last year to help them out.

The sum of \$3,500,000 which is proposed for this program can, we feel, be used as a lever to amplify food production many times. This is the one most effective way in which we believe we can help India with a very modest expenditure.

Mr. LANHAM. But he says it is so slow and he can affect such a small part of India that production cannot be doubled in the foreseeable future. I understood we sent aid to India because they had a crop failure, and not because normally they did not produce enough to take care of their needs.

Mr. McGUIRE. That is correct, but normally they do need to import 2,000,000 tons which, of course, costs them approximately \$190,000,000 in foreign exchange. This is one of the reasons why they have not had the funds to devote to their own development.

Mr. HOLMES. I would like to add a little comment to that, if I might. I was coming to the point, but I was coming to it too slowly, I think. It was that in this early stage we were limited, and limited by our techniques, as well as the Indians were limited by their ability. First, of course, their seed was not correct to begin with and, secondly, their funds were limited, so we had to operate in a smaller way. For instance, we had a terrific time during this period just getting enough food to feed the men we were training. We have gone about as far as we can go without some—in other words, we cannot expand this sort of thing into these other states and gradually build it to the point where it would have a real effect over the whole economy without some backing somehow. We have gone about as far as we can go under our own steam.

Mr. VORYS. Do you know the Indian language?

Mr. HOLMES. I can understand a little of it, but I cannot speak it. There are so many different languages there, though, that if you speak one and you move 30 or 40 miles away, you have another language again. We found, however, you do not have to speak a language to a people. If your heart is right and they know it, you can understand each other.

Mr. VORYS. If you are showing them and not telling them you do not have to talk much.

Mr. HOLMES. You do not have to do so much talking.

Is there any other phase you would like me to talk about?

Chairman RICHARDS. Mr. Zablocki.

Mr. ZABLOCKI. It was very interesting having Mr. Holmes relate his experiences, particularly the relation of the instance a legislative technicality permitted the Indians to shoot cows by renaming them blue horses instead of blue cows.

During the hearings on the aid to India bill charges were made as to the enormous consumption of food grains by the sacred monkeys and cows. I wonder if Mr. Holmes would care to comment on the amount of grain consumption of animals due to the Indian practice?

Mr. HOLMES. There have been a number of estimates made as to the amount of damage by the monkeys and cows. The cows do not consume much grain. They do not get it. They do consume a great deal of the grass, and even the leaves from the trees, which cuts down on the organic matter, and they are a very serious problem.

The monkeys, however, do consume a great deal of grain, and they can ruin a field in a very short time. It has been estimated that they destroy—and they destroy more than they eat—about 10 cents per day per monkey. Nobody knows how many monkeys there are. The only thing we do know is there are far too many.

In many places the monkey population is about equal to the human population.

Chairman RICHARDS. Do they multiply as fast?

Mr. HOLMES. Yes, sir. Like, well—yes, they do, sir.

Mr. ZABLOCKI. To what extent do the monkeys contribute to the scarcity of grain?

Mr. HOLMES. We do not know, of course, but it is quite a considerable extent. Now, we are making some progress on that. It is a very delicate thing. It is something you just cannot walk in on and say, "Let us get rid of them." Monkey catchers have been used to catch the monkeys. They are paid by the villages. They take them over and turn them loose at another village.

Mr. ZABLOCKI. Mr. Chairman, I can certainly sympathize with the gentleman. As much as we hate starlings here, some Members of Congress do not want them to be exterminated in Washington. It is a problem when people have certain attachments to the destructive animals.

Mr. HOLMES. This thing has a religious significance.

Mrs. BOLTON. How is it religious?

Mr. HOLMES. If we go back to our ancient culture here, we have a number of things in the Christian group that many people say helped them. For instance, Moses struck the rock and the water poured forth, or the children of Israel were led through the Red Sea. They have the same things in their culture that some of them take literally and others say was a figurative expression of the thing at that time.

The thing they hold on to is that back in their early growth and development one of their great leaders, Rama, had a very beautiful wife by the name of Sita, who was captured and taken down to Ceylon. She was taken to the little island of Ceylon. Rama went to the forest to meditate, and while he was there he was approached by the king of the monkey tribe, who offered to help him. So he and the monkeys came all the way across India from the northern part, almost in the Punjab, which is where they started, and came down to the Palk Strait, which is a little strip of water which separates Ceylon from the mainland. Rama could not get across, so the monkeys formed a bridge across there, and he rode his horse over, and they helped him capture his bride. For that they have a reverence for the monkeys.

You can call it absurd, if you want to, but it is very deep.

On the cow business we have made some progress. They are sacred for another reason that you have to go back some time for.

In their early history, according to some of my Hindu scholar friends, these people were nomadic people. They were a pastoral group and were eating up all of their animals without any thought for the food. So their civil law was so weak that the only way they could get any real enforcement was to put it into their religion. So they said, "Why do you eat the meat of man that furnishes milk and is a beast of burden?" That was the cow. So they said, "You must not eat the cow."

Now, putting that into their religion was really a measure of economics, but it was put into their religion because they had no other way to enforce it. The thing hung on and on, and now it would be so much better if somebody would eat some of them, but we do not do it.

We have made some progress in this cow and monkey problem in that we are getting now to the place where we can protect the cows

that are worth protecting from some of these diseases, and let nature herself help thin them out.

In regard to the monkey problem, there have been some little items of progress made. For example, in one state they will not issue a gun license, or would not, until the holder of the expiring gun license would bring in five monkey tails. Well, that stirred up quite a furor, but it does indicate that they are making a change.

The monkey catchers would go out and catch the monkeys and turn them loose. Other methods are being resorted to now. Some of the Brahman-- the highest caste of the Hindus, who have to take the lead-- are watching the monkey catchers now and make them go down to the river and hold the monkeys under the water long enough to make them harmless.

Chairman RICHARDS. They could cut off the monkey tails and let them go, could they not?

Mr. HOLMES. Yes.

Chairman RICHARDS. Has this program the United States put on there, increased our standing with the Indian people, and has it made them more resistant to communism?

Mr. HOLMES. It has helped us a great deal. When I first went into India it was 7 months before I was invited to the first staff meeting of the agricultural workers. There were many people who resented our being there. Gradually, though, I think the thing has changed to this point, that not only are we welcome, but we are taken into the family, more or less.

The first battle that I think we have to win out there is the battle of hope. These people have to see some hope on the horizon of something better for themselves and their children. In these early starts I think the hope is the most concrete thing that we have been able to achieve. If we can follow up on that hope and help them to achieve these things in such a way that they can keep their self-respect and we keep their friendship, then the job can be done.

Chairman RICHARDS. Are there any other questions?

(No response.)

Chairman RICHARDS. Mr. Holmes, we thank you very much.

Where were you educated? Down South somewhere.

Mr. HOLMES. Tennessee and Cornell. I took my undergraduate work at Tennessee.

Chairman RICHARDS. You are from Tennessee and educated at Cornell?

Mr. HOLMES. I took my graduate work at Cornell.

Mr. SMITH. That is near North Carolina.

Mr. HOLMES. I was for 2 years on the faculty at North Carolina.

Mr. SMITH. At North Carolina?

Mr. HOLMES. Yes.

Mr. SMITH. The chairman will be very glad to hear that.

Chairman RICHARDS. I am from South Carolina, but it is just across the line.

Mr. VORYS. On this language difficulty, are there enough English speaking natives scattered around so that you can get hold of somebody to start the thing off?

Mr. HOLMES. Language is no barrier. All of the educated groups speak English, and many of them speak English much better than I do.

Mr. VORYS. With an English accent.

Mr. HOLMES. Yes. With a very definite English accent. But language is not much of a problem at all. I do not use an interpreter because it puts you too much at the mercy of one person. We do not have any trouble with language.

Dr. Bennett, I understand, is going to appear before this committee, and on a number of these points that I could not answer because of my limited field I would like for you to refer those to Dr. Bennett, who I am sure can help you.

Mrs. BOLTON. Mr. Chairman, I have not been allowed to open my mouth.

Chairman RICHARDS. Oh, I am sorry. You walked out on us. Mrs. Bolton.

Mrs. BOLTON. It seems to me, Mr. Holmes, you have given us something that Mr. Herter was expressing in his way, which is exceedingly important for us to have. It is the whole human element—the human side of everything this country wants to do in the world. You people in Agriculture are particularly fortunate because you were able to work with the people at their level, in the earth. We had the same sense of what is possible when Mr. Haggerty spoke to us, who had been all over Yugoslavia working with the people.

For myself I do want to thank you most deeply for reminding us, though you were not doing it intentionally, probably, that this whole program is a program of humanity and one of deeper understanding of one country for another.

Mr. HOLMES. Thank you. It is a pleasure to be here.

Chairman RICHARDS. Thank you, Mr. Holmes.

Mr. ZAHLOCKI. Off the record.

(Discussion off the record.)

Mr. VORYS. On this cow business, they do milk the cows, do they not?

Mr. HOLMES. Yes.

Mr. VORYS. So there is some economic value to the sacred cows?

Mr. HOLMES. Yes, and there is a great need to improve the cows.

For example, you will be interested in an experiment going on now by one of our good Hindu friends who, if this experiment succeeds, I think will begin to open up a new thing. This man has, I believe, 9 acres of land. He has 27 cows, and he does not get enough milk to feed his three children. So we have asked him now as a leader in his community to undertake this experiment, which he has done.

He is growing Egyptian clover that he cuts to feed one cow. Since he is not feeding the others anyway, we are going to let them roam at large. So he is tying up that one cow and is keeping it in the field. He is trying to determine whether or not he can get any more milk from the one cow that he cares for than he can from this whole herd that he does not take care of. We know he can.

When he is convinced and he convinces his neighbors we will have another little nucleus breaking into this cow business. Those are the sort of things we are working with.

It is fascinating. They are lovely people when you get to know them. Strange, yes, but so are we; and we must recognize it.

Mr. HERTER. There is a little further clarification needed of the question Mr. Lanham wanted answered. I think it has been left a little fuzzy and hazy. That is, as to what the Indian Government can do for itself, and what contribution we are making on top of that.

I think it ought to be clarified a little further, because I think part of that question is still unanswered.

Chairman RICHARDS. It is the question, I think, that you have touched on there of a lot of things they could do for themselves, but it is getting them to do it.

Mr. LANHAM. They wanted to employ Mr. Holmes again. That is the thing that bothers me.

Mr. HOLMES. If I may make this point, my own salary in connection with this thing is a relatively small matter because it takes a large number of their own people. We will never have enough technicians to go out and do the job for them. We can feed them and work with them, but, for example, the ratio has been about 300 to one.

Mr. LANHAM. They were paying for the whole program, were they not?

Mr. HOLMES. Yes.

Mr. LANHAM. That is the point I am trying to bring out.

Chairman RICHARDS. You want to know why they do not employ him to train them, that is, why India itself does not employ him?

Mr. LANHAM. Mr. Holmes has said he did not want to accept employment, but my point is did they employ someone else to do this work; or, if they could employ you, then why can they not, with their own resources, continue this work instead of calling on you and, by the way, have they asked us to do this?

Mr. MCGHEE. I think the question involved here is the scale of the program they want to undertake. This last year, for example, the Indians had a budgetary deficit indicated, so in their new budget in the fiscal year which is already under way they had to cut back their development program.

Mr. LANHAM. How much is that deficit?

Mr. MCGHEE. \$100,000,000.

Mr. LANHAM. Ours is \$10,000,000,000.

Mr. MCGHEE. That is correct, but they have, of course, a limited ability to finance a deficit like that. In any event, they felt it necessary to cut back their development program, and as a consequence to cut back, possibly, but certainly to preclude expansion of the type of thing Mr. Holmes is describing.

In the face of that, there is a steady deterioration economically in India. They are not even holding even. There is a steady deterioration in terms of the real standard of living of the people.

They devised this Colombo plan through which they asked us to assist them, and they estimate in addition to the rupees they could take from their own resources that they would over a 6-year period need this \$1,100,000,000, as a balanced development program. We are in a sense responding in part to that appeal.

Mr. LANHAM. Did they approach you about that, or did you approach them and say, "We want to spend some of our money and we will do it here"?

Mr. MCGHEE. No, sir. They approached us with the Colombo plan, Mr. Lanham.

Chairman RICHARDS. I want to ask you this question: When you were employed by the Indian Government, how many additional agricultural men of the United States were employed as instructors at that time?

Mr. HOLMES. None.

Chairman RICHARDS. You were the only one?

Mr. HOLMES. The only agricultural man.

Chairman RICHARDS. That ought to answer your question to some extent, Mr. Lanham.

Mr. McGHEE. There is proposed in this total program some 400 technicians to go out. It will be greatly amplified.

Mr. HERTER. Do you visualize a termination date on this program from the point of view of what you can effectively do in building up an agricultural extension service within India, so that eventually they can carry on for themselves?

Mr. HOLMES. Oh, very definitely. I think it has to be run that way. We have to help them help themselves train their people, so that when we withdraw they can go ahead. That is the only sound way.

Mr. HERTER. In your own mind have you a period of years that it will take to accomplish that?

Mr. HOLMES. Yes, sir. It will take—back in my own mind I have a figure that it will take several years. It will take 10 or 12 or 15 years to get it going reasonably well.

Mr. HERTER. From there on they can carry on by themselves?

Mr. HOLMES. I think they can, because they are smart people.

Mr. HERTER. Thank you.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. I was curious as to what your recruitment problem will be. Mr. McGhee said we are going to have about 400 agricultural experts. Are you going to be able to get 400 top-notch men who will be able to work with these backward areas?

Mr. HOLMES. I have not done very much recruiting. I am not sure that I am too competent on that. We have found so far some excellent men. We have some outstanding men. Whether or not we can continue to have that good luck I do not know.

Mr. McGHEE. Mr. Ribicoff, this becomes a world-wide problem as we testified to. There are some 800 that are projected for the Middle East. All of these 400 are not agricultural technicians, but the large percentage are. Perhaps representatives of the ECA can respond to the problem.

Mr. RIBICOFF. It would seem to me the type of man you would get would be the greatest determining factor of the success or failure of the program.

Mr. McGHEE. Yes, sir. Of course, we will not expect to get men of the caliber of Mr. Holmes. However, we have recruited very good men, many of them from our agricultural colleges, who have gone out to assist the underdeveloped countries.

This number of agriculturalists is not large in comparison with the graduates from our colleges each year and the people employed by the Department of Agriculture in extension work.

Mr. RIBICOFF. In going out to the colleges and recruiting, is there much interest toward this program?

Mr. McGHEE. Yes, sir. For instance, this program in Iran which I described to the committee in my last appearance, is backstopped by Utah State College. They were under contract to ECA and have undertaken to recruit, I think, twenty-odd agricultural specialists. That college is going to act as the backstop for the program in Iran. The head of the program was formerly the president of the college.

Chairman RICHARDS. Thank you very much. Thank you, Mr. Holmes.

The committee stands adjourned until 2:30 this afternoon.

(Whereupon, at 12:20 p. m., the committee adjourned until 2:30 p. m. the same day)

AFTERNOON SESSION

(The committee reconvened at 2:45 p. m., Hon. James P. Richards (chairman) presiding.)

Chairman RICHARDS. The committee will come to order. We are in executive session. We have one witness, Mr. William O. Hall, Director, Office of International Administration and Conferences, of the State Department, who is scheduled to testify. I do not think his testimony will take very long. Then we will go into open session on some other witnesses we have scheduled. Mr. Hall.

STATEMENT OF WILLIAM O. HALL, DIRECTOR, OFFICE OF INTERNATIONAL ADMINISTRATION AND CONFERENCES, DEPARTMENT OF STATE

Mr. HALL. Mr. Chairman, I will be very brief. I want to speak to section 303 of the draft bill which authorizes a contribution by the United States Government to the United Nations Korean Reconstruction Agency.

The amount of new appropriation authorization we are requesting is \$112,500,000. In addition to that amount, we are requesting that \$50,000,000 be continued from the unobligated balances of the ECA Korean funds, and the agreed value of goods and services made available to the agency later on by any department or agency of the Government will be part of the \$162,500,000; in other words, goods turned over by the Army at the conclusion of hostilities which might be contributed to the agency will be counted as a part of the United States contribution.

I believe a question was raised as to whether there would be any objection by the Department in writing in a proviso establishing an absolute limit in value of \$162,500,000 to this contribution. We would have no objection to that whatsoever. We would be glad to prepare the necessary language to do that. That is our intention.

The United Nations Korean Reconstruction Agency was established by resolution of the United Nations General Assembly on the 1st of December 1950 as a result of action by the Economic and Social Council and the Assembly on the initiative of the Canadian Government, the United Kingdom Government, and the United States Government.

I will submit a copy of that resolution for the record, if you would like to have it.

Chairman RICHARDS. Is there objection?

Mr. HERTER. I wonder if an interruption would be permitted at this point?

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Before you get away from the Korean reconstruction operation, I understand Mr. Kingsley is the individual who has been selected by the United Nations to take charge of that operation.

Mr. HALL. That is correct.

Mr. HERTER. Where is he going to operate?

Mr. HALL. He is in Geneva at the present time. He will spend most of his time in Korea or New York City. He is concluding the work on the International Refugee Organization, and is running that program down at the present time.

Mr. HERTER. Has he been handling the International Refugee Organization?

Mr. HALL. Yes, sir.

Mr. HERTER. I understand he has been recruiting for this Korean thing already, and doing it in Europe from the old Refugee Organization set-up. I wonder how large a staff that will be. Will it be thousands and thousands of people?

Mr. HALL. No, sir. The number of people would be perhaps not more than 200 for the first program. It is difficult to estimate how many will be eventually hired. We would not anticipate a large staff of administrative people in the organization. The people so far recruited have come from four sources. One has been the recruitment of people who are in the International Refugee Organization, men who have key jobs there, and have been well qualified, in our opinion, and have been picked up by Mr. Kingsley for this new organization.

Also, some of the people who have worked in ECA have been hired for this. There were, in addition, a few people in the United Nations who handled the Secretary-General's emergency appeal for Korean relief. Those have been taken over by Mr. Kingsley for his staff.

He has made a small recruitment from the outside. He has taken on a Thailand banker as his principal economic adviser. He has taken on one retired Australian general, and I believe one or two United States nationals have been employed.

Mr. HERTER. I do not want to get delayed too long. I have been told by those who know something about the Japanese economy and the Korean picture that if this Korean rehabilitation job was done, spending most of the money required for the job in Japan, it would save us a great many tens of millions of dollars in relief operations that we have to conduct in Japan. But the Japanese economy at the present time is being bolstered up very largely by what the military spends in Japan and for the Korean operation,

If you get a cease-fire and the rate of spending in dollars falls off militarily, the Korean rehabilitation job, most of it, can be done from the Japanese economy and can save most everybody a great deal all the way around.

The Koreans will not want anything from Japan.

Mr. HERTER. Would there be any objection if legislation were passed expressing the hope that the money we put in would be spent largely in Japan?

Mr. HALL. As Mr. Rusk testified, we would expect that purchase program to support in part the Japanese economy wherever feasible.

Mr. HERTER. I missed that.

Mr. HALL. Mr. Kingsley is very aware of this. General Hissong has been stationed in Japan with that specific job in mind, with the idea of doing that in Japan. There is to be determined the availability of items which would be required which might be difficult to procure in the United States or Western Europe. That is very much in mind.

Our member of the advisory committee will also be aware of that and will be pressing in that direction, that the maximum amount of dollar expenditure be made in Japan.

Mr. HERTER. I did not realize this had been gone over.

Chairman RICHARDS. The statement that Mr. Vorys is looking at, do you think that should be placed in the record?

Mr. VORYS. It seems to me it would be most appropriate.

Chairman RICHARDS. Without objection, the statement you have just mentioned will be included in the record.

(The material referred to is as follows:)

RELIEF AND REHABILITATION OF KOREA

RESOLUTIONS ADOPTED BY THE GENERAL ASSEMBLY AT ITS 314TH PLENARY MEETING ON 1 DECEMBER 1950

(adopted on the report of the Joint Second and Third Committee (A/1567, Part II))

A

The General Assembly,

Having regard to its resolution of 7 October 1950 on the problem of the independence of Korea,

Having received and considered a report of the Economic and Social Council submitted in accordance with that resolution,

Mindful that the aggression by North-Korean forces and their warfare against the United Nations seeking to restore peace in the area has resulted in great devastation and destruction which the Korean people cannot themselves repair,

Recognizing that as a result of such aggression the people of Korea are desperately in need of relief supplies and materials and help in reconstructing their economy,

Deeply moved by the sufferings of the Korean people and determined to assist in their alleviation,

Convinced that the creation of a United Nations programme of relief and rehabilitation for Korea is necessary both to the maintenance of lasting peace in the area and to the establishment of the economic foundations for the building of a unified and independent nation,

Considering that, under the said resolution of 7 October 1950, the United Nations Commission for the Unification and Rehabilitation of Korea is the principal representative of the United Nations in Korea and hence must share in the responsibility for the work undertaken by the United Nations in furtherance of the objects and purposes mentioned in the said resolution,

Considering that it is nevertheless desirable to set up a special authority with broad powers to plan and supervise rehabilitation and relief and to assume such functions and responsibilities related to planning and supervision, to technical and administrative matters, and to questions affecting organization and implementation as are to be exercised under the plans for relief and rehabilitation approved by the General Assembly, such authority to carry out its responsibilities in close cooperation with the Commission,

A. ESTABLISHMENT OF THE UNITED NATIONS KOREAN RECONSTRUCTION AGENCY FOR THE RELIEF AND REHABILITATION OF KOREA

1. *Establishes* the United Nations Korean Reconstruction Agency (UNKRA) under the direction of a United Nations Agent General, who shall be assisted by one or more deputies. The Agent General shall be responsible to the General Assembly for the conduct (in accordance with the policies established by the General Assembly and having regard to such general policy recommendations as the United Nations Commission for the Unification and Rehabilitation of Korea may make) of the programme of relief and rehabilitation in Korea, as that programme may be determined from time to time by the General Assembly;

2. *Authorizes* the United Nations Commission for the Unification and Rehabilitation of Korea:

(a) To recommend to the Agent General such policies concerning the United Nations Korean Reconstruction Agency's programme and activities as the Commission may consider necessary for the effective discharge of the Commission's

responsibilities in relation to the establishment of a unified, independent and democratic government in Korea;

(b) To determine, after consultation with the Agent General, the geographical areas within which the Agency shall operate at any time;

(c) To designate authorities in Korea with which the Agent General may establish relationships; and to advise the Agent General on the nature of such relationships;

(d) To take such steps as may be needed to support the Agent General in fulfilling his task in accordance with the policies established by the General Assembly for relief and rehabilitation;

(e) To consider the reports of the Agent General to the General Assembly and to transmit any comments thereon to the Economic and Social Council and the General Assembly;

(f) To call for information on those aspects of the work of the Agent General which the Commission may consider necessary for the proper performance of its work;

3. *Authorizes* the Commission to consult from time to time with the Agent General in regard to the provisional programme adopted by the General Assembly on the recommendation of the Economic and Social Council and especially with regard to the adequacy of that programme to meet the needs of Korea as defined in the statement of general policy, and to make recommendations thereon to the Economic and Social Council;

4. *Directs* the Agent General:

(a) To co-ordinate his programme with measures taken by the United Nations Commission for the Unification and Rehabilitation of Korea to carry out the recommendations of the General Assembly relating to the establishment of a unified, independent and democratic government in Korea, and to support the Commission in fulfilling this task;

(b) To commence the operation of the programme in Korea at such time as may be agreed upon by the United Nations Unified Command, the United Nations Commission for the Unification and Rehabilitation of Korea and the Agent General;

(c) To consult with and generally be guided by the advice of the United Nations Commission for the Unification and Rehabilitation of Korea on the matters set forth under paragraph 2 (a) and be governed by its advice on the matters covered in paragraphs 2 (b) and 2 (c);

5. *Further directs* the Agent General, in the carrying out of his functions:

(a) To ascertain, after consultation with the designated authorities in Korea, the requirements for supplies and services for relief and rehabilitation made necessary by the consequences of armed conflict in Korea;

(b) To provide for the procurement and shipment of supplies and services and for their effective distribution and utilization within Korea;

(c) To consult with and assist the appropriate authorities in Korea with respect to measures necessary for the rehabilitation of the Korean economy and the effective distribution and utilization within Korea of supplies and services furnished;

(d) To submit reports to the General Assembly through the Secretary-General, transmitting copies simultaneously to the United Nations Commission for the Unification and Rehabilitation of Korea, and to the Economic and Social Council;

(e) To be guided in matters of administration, to the extent consistent with the special requirements of the programme, by the rules and regulations established for the operation of the Secretariat of the United Nations; Specifically he shall:

(1) Select and appoint his staff in accordance with general arrangements made in agreement with the Secretary-General, including such of the staff rules and regulations of the United Nations as the Agent General and the Secretary-General shall agree are applicable;

(2) Utilize, wherever appropriate, and within budgetary limitations, the existing facilities of the United Nations;

(3) Establish, in consultation with the Secretary-General and the Advisory Committee on Administrative and Budgetary Questions, and in agreement with the Advisory Committee established under paragraph 6 below, financial regulations for the United Nations Korean Reconstruction Agency;

(4) Arrange, in consultation with the Advisory Committee on Administrative and Budgetary Questions, for the rendering and audit of the accounts of the Agency under procedures similar to those applicable to the rendering and audit of the accounts of the United Nations;

6. *Establishes* an Advisory Committee consisting of representatives of . . . (five Member States) to advise the Agent General with regard to major financial, procurement distribution and other economic problems pertaining to his planning and operation. The Committee shall meet on the call of the Agent General but not less than four times a year. The meetings of the Committee shall be held at the Headquarters of the United Nations except in special circumstances, when the Committee, after consultation with the Agent General, may meet elsewhere if it deems that this would be essential to the proper performance of its work. The Committee shall determine its own methods of work and rules of procedure;

7. *Requests* the Secretary-General, after consulting the United Nations Commission for the Unification and Rehabilitation of Korea and the Advisory Committee to appoint the United Nations Agent General for Korean Reconstruction, and authorizes the Agent General to appoint one or more Deputy Agents General in consultation with the Secretary-General;

8. *Authorizes* the Secretary-General to establish a special account to which should be credited all contributions in cash, kind or services, the resources credited to the account to be used exclusively for the programme of relief and rehabilitation and administrative expenses connected therewith; and directs the Secretary-General to make cash withdrawals from the account upon request of the Agent General. The Agent General is authorized to use contributions in kind or services at his discretion;

9. *Recommends* that the Agent General in carrying out his functions:

(a) Make use at his discretion of facilities, services and personnel that may be available to him through existing national and international agencies and organizations both governmental and non-governmental;

(b) Consult with the Secretary-General and the heads of the specialized agencies before appointing his principal subordinate personnel in their respective fields of competence;

(c) Make use of the advice and technical assistance of the United Nations and the specialized agencies and, where appropriate, request them to undertake specific projects and special tasks either at their own expense or with funds made available by the Agent General;

(d) Maintain close contact with the Secretary-General for the purpose of ensuring fullest co-ordination of efforts of the organs of the United Nations and the specialized agencies in support of the programme;

10. *Authorizes* the Agent General to enter into agreements with such authorities in Korea as the United Nations Commission for the Unification and Rehabilitation of Korea may designate, containing terms and conditions governing measures affecting the distribution and utilization in Korea of the supplies and services furnished, in accordance with the statement of general policy on Korean relief and rehabilitation contained in section B of the present resolution;

11. *Requests* the Secretary-General to make available to the maximum extent possible, and subject to appropriate financial arrangements, such facilities, advice and services as the Agent General may request;

12. *Requests* the specialized agencies and non-governmental organizations to make available to the maximum extent possible, and subject to appropriate financial arrangements, such facilities, advice and services as the Agent General may request;

13. *Requests* the Economic and Social Council to review the reports of the Agent General and any comments which the United Nations Commission for the Unification and Rehabilitation of Korea may submit thereon, and such other data as may be available on the progress of relief and rehabilitation in Korea and to make appropriate reports and recommendations thereon to the General Assembly;

14. *Calls upon* all Governments, specialized agencies and non-governmental organizations, pending the beginning of operations by the United Nations Korean Reconstruction Agency, to continue to furnish through the Secretary-General such assistance for the Korean people as may be requested by the Unified Command;

15. *Invites* countries not Members of the United Nations to participate in financing the programme of relief and rehabilitation in Korea;

B. STATEMENT OF GENERAL POLICY ON RELIEF AND REHABILITATION IN KOREA

16. *Approves* the following statement of general policy:

1. The United Nations programme of relief and rehabilitation in Korea is necessary to the restoration of peace and the establishment of a unified, independent and democratic government in Korea.

2. To this end, it is the objective of the United Nations to provide, subject to the limit of the resources placed at its disposal for this purpose, relief and rehabilitation supplies, transport and services, to assist the Korean people to relieve the sufferings and to repair the devastation caused by aggression, and to lay the necessary economic foundations for the political unification and independence of the country.

3. The United Nations programme of relief and rehabilitation for Korea shall be carried out in practice in such a way as to contribute to the rapid restoration of the country's economy in conformity with the national interests of the Korean people, having in view the strengthening of the economic and political independence of Korea and having in view that, in accordance with the general principles of the United Nations, such assistance must not serve as a means for foreign economic and political interference in the internal affairs of Korea and must not be accompanied by any conditions of a political nature.

4. The United Nations programme is to be a supplement to the general recovery effort that will be undertaken by the Korean people on their own initiative and responsibility, through the most effective utilization of their own resources as well as of the aid which is rendered under the programme.

5. Whilst the programme should be consistent with the pattern of long-term economic development in Korea, it is itself necessarily limited to relief and rehabilitation, and contributions and supplies furnished under this programme shall be used exclusively for that purpose.

6. First priority shall be given to the provision of the basic necessities of food, clothing and shelter for the population of Korea and measures to prevent epidemics. Second highest priority shall be given to projects which will yield early results in the indigenous production of basic necessities; this will include the reconstruction of transport and power facilities. As the programme develops, emphasis should be shifted to the provision of other materials, supplies and equipment for the reconstruction or replacement of war-damaged facilities necessary to the economic life of the country.

7. The necessary measures shall be taken to ensure that distribution shall be so conducted that all classes of the population shall receive their equitable shares of essential commodities without discrimination as to race, creed or political belief.

8. Subject to adequate control, the distribution of supplies shall be carried out, as appropriate, through public and co-operative organizations, through non-profit-making voluntary organizations such as the Red Cross, and through normal channels of private trade. At the same time, measures shall be taken to ensure that the cost of distribution and the profit from the sale of supplies are kept to the minimum. Measures shall be taken to ensure that the special needs of refugees and other distressed groups of the population are met through appropriate public welfare programmes, and accordingly the sale of relief supplies will take place only in justifiable cases and under conditions agreed upon with the United Nations Commission for the Unification and Rehabilitation of Korea.

9. The local currency proceeds derived from the sale of relief and rehabilitation supplies or, at the discretion of the Agent General, an amount commensurate with the value of goods and services supplied, shall be paid into an account under the control of the Agent General. The Agent General, after consultation with the United Nations Commission for the Unification and Rehabilitation of Korea, and in agreement with the Advisory Committee referred to in paragraph 6 of section A of the present resolution, shall use these funds for appropriate additional relief and rehabilitation activities within Korea, for the local currency expenses of the relief and rehabilitation operations of the United Nations, or for measures to combat inflation. The proceeds shall not be used for any other purpose.

10. The necessary economic and financial measures shall be taken by the authorities in Korea to ensure that the resources provided under the United Nations programme, as well as Korean resources, are effectively employed to aid in laying the economic foundations of the country. Among these, special attention should be given to measures to combat inflation, to sound fiscal and monetary policies, to the requisite pricing, rationing and allocation controls (including the pricing of goods imported under the programme), to the prudent use of Korean foreign exchange resources together with promotion of exports, and to the efficient management of government enterprise.

11. Import taxes shall not be imposed on relief and rehabilitation supplies received under the United Nations programme.

12. The authorities in Korea should maintain such records and make such reports on the receipt, distribution and use of relief and rehabilitation supplies as may be determined by the Agent General after consultation with them.

13. All authorities in Korea shall freely permit the personnel of the United Nations to supervise the distribution of relief and rehabilitation supplies, including the examination of all storage and distribution facilities as well as records.

14. The personnel of the United Nations shall be accorded within Korea the privileges, immunities and facilities necessary for the fulfillment of their function.

15. All authorities in Korea and the Secretary-General shall use their best efforts to inform the people of Korea of the sources and purposes of the contributions of funds, supplies and services.

16. In determining Korea's needs for relief and rehabilitation, in drawing up programmes and plans, and in implementing such programmes and plans, the Agency created to administer the relief and rehabilitation programme should consult with and utilize, to the greatest extent feasible, the services of Korean authorities.

B

The General Assembly

1. *Requests* the President to appoint a Negotiating Committee composed of seven or more members for the purpose of consulting, as soon as possible during the current session of the General Assembly, with Member and non-member States as to the amounts which Governments may be willing to contribute towards the financing of the programme for the relief and rehabilitation of Korea;

2. *Authorizes* the Negotiating Committee to adopt procedures best suited to the accomplishment of its task, bearing in mind:

(a) The need for securing the maximum contribution in cash;

(b) The desirability of ensuring that any contribution in kind is of a nature which meets the requirements of the contemplated programmes; and

(c) The degree of assistance which can be rendered by specialized agencies, non-member States and other contributors;

3. *Requests* that, as soon as the Negotiating Committee has ascertained the extent to which Member States are willing to make contributions, all delegations be notified accordingly by the Secretary-General in order that they may consult with their governments;

4. *Decides* that, as soon as the Negotiating Committee has completed its work, the Secretary-General shall, at the Committee's request, arrange, during the current session of the General Assembly, an appropriate meeting of Member and non-member States at which Members may commit themselves to their national contributions and the contributions of non-members may be made known.

*314th plenary meeting,
1 December 1950.*

* * *

In accordance with the terms of the above resolution, the President of the General Assembly, at the 318th plenary meeting on 4 December 1950, announced that he had appointed a Negotiating Committee, composed of the following States Members: CANADA, EGYPT, FRANCE, INDIA, the UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND, the UNITED STATES OF AMERICA and URUGUAY.

Mr. HALL. I might take just a moment to describe our objectives in supporting the establishment of this new agency. First, it is to support through the United Nations a self-governing and sovereign Korea, free of foreign domination, and secondly, through the United Nations to assist the Korean people to recover from the ravages of war and maintain a stable government.

The situation in Korea at the present time makes it essential that some such program be carried on if we are to have an independent and democratic government in Korea following hostilities.

The most pressing civil problem at the moment of the United Nations' command in Korea is providing for these Koreans. Help for these people will be needed following the termination of hostilities. The United Nations' command has made commitments for \$105,000,000 of relief supplies. Fifty-five health, sanitary, welfare, and supply officers have been sent to Korea by the United Nations to assist in alleviating distressed people in that country.

Supplies are being furnished at the rate of \$8,000,000 a year from United States Army appropriations.

Mr. VORYS. Wait a minute. Isn't it \$8,000,000 a month?

Mr. HALL. That is \$8,000,000 a month.

Mr. VORYS. You said per year.

Mr. HALL. I am sorry. Not only has the production and distribution of foodstuffs been disrupted by the events of war, but it has been impossible to supply the fertilizer during the past two months to maintain the self-sufficiency in foodstuffs which had almost been possible with the ECA help during 1949.

Major attention must be given to the importation and distribution of fertilizer for UNKRA if continuing food shortages are to be avoided. Most of the industries of South Korea have been brought to a standstill because of the invasion and reinvasion during the war. Transportation and communication facilities have suffered extensive war damage, and the restoration of power facilities is necessary to the restoration of industrial production.

There is serious inflation, arising basically from Korea's lack of resources to finance the war, and in particular from overdrafts, currency advances to the United Nations' forces in Korea, the expansion of bank credit, and the collapse of normal imports.

Continued importation of consumer goods and expert assistance in executing a stabilization program are necessary. There exists a great need for technical advice in the Government in all fields. Koreans were deprived of managerial experience during the Japanese period of occupation, and by the losses of personnel during the war and the disruptions that have come about from the war in every aspect of Korean life.

We have talked briefly about UNKRA. I might say in addition that Mr. Lubin has been our acting representative on the Advisory Committee. He is our representative on the Economic and Social Council, and Mr. Graham Hall would be his deputy in the Advisory Committee job.

I would like to run over the program which has been drafted, which will have to be surveyed after the hostilities.

Mr. BURLESON. How can we approach the matter of aid to Korea under present conditions?

Mr. HALL. It is assumed that this program would not begin to operate until there was a cessation of hostilities. The present program going on now is supplying essential civilian needs and is carried on by the Army. This would be in effect an authorization for the United Nations to go ahead with the planning of this United Nations program, and with certain aspects of civil advice to the Korean government.

Mr. BURLESON. Dealing chiefly with relief?

Mr. HALL. The present program deals chiefly with relief. This project would be primarily for the essential rehabilitation of Korea.

Mr. BURLESON. You would not think it advisable to wait until after all these things were determined and then have a single piece of legislation dealing with it?

Mr. HALL. I think such an action would have a damaging effect on the morale of the people. I think if the United States decided not to go ahead with the program the effect would be unfortunate.

Mr. BURLESON. Is this the contribution of the United States to the UN, or is it a separate aid program directly to them?

Mr. HALL. It would be a separate agency of the UN, a separate agency set up specifically for Korean relief and rehabilitation. The United States would contribute goods, services, and money in the amount of \$162,500,000.

Mr. BURLESON. Then there is no so-called ECA, as we call it now, operating in Korea?

Mr. HALL. There would be no ECA program in Korea. It was terminated shortly after the hostilities. Those functions that were necessary during the hostilities were taken over by the Army. If I may continue, the effect on contributions from other governments would be very unfortunate. I think we would have great difficulty on that score.

I might say the Canadians, the Saudi Arabians, and Indonesians have already made their contributions in cash.

I think they would be quite disturbed after having made their contributions if the United States decided not to participate.

Mr. VORYS. You were going to tell us what the percentage of contributions were going to be?

Mr. HALL. Yes, sir. Our contribution was calculated on the basis of 65 percent of the total. We recognize that we might not achieve that goal; we might have to pay slightly more than that. The other contributions of the Canadians and the UK are roughly the UN relationship to our contribution.

In this program, however, we have to recognize the Chinese will not be able to contribute normally in any sizable amount, that the Russians will not contribute, that the Eastern Europeans will not contribute. There is a question as to how great an extent the French will be able to contribute in the light of the drain on them in Indochina.

The Australians, Canadians, British, New Zealand, the Western Europeans and ourselves will have to bear the major load in this program.

The program being of the magnitude and of the character is it, I think the United States has to expect to carry the major load in this program.

Mrs. BOLTON. I thought we had cut down some to 33½ percent.

Mr. HALL. We have on the administrative budget of the United Nations Organization. On operational programs of this kind we must pay more. There are three classes of contributions. First, are the contributions to the regular administrative budgets, in which our goal has been to get down to 33½ percent. We have made substantial strides in that direction.

The second category is the technical assistance and childrens funds, where we pay 65 to 70 percent of the international fund, but there are substantial amounts paid in local currency by the recipient countries.

There is a third type of program, like this program and the Palestine program, where the aid has to come entirely from outside. In those cases we have to be prepared to pay a larger percentage of the contribution if the program is to be done internationally.

You may ask the question, why do it internationally? My answer is, we ought to follow through on the action that was taken against aggression in Korea by carrying this program on through the United Nations, and, secondly, to the extent that we get contributions from other countries we reduce the load on our people, even though those

contributions do not constitute what we would like to have the situation to be throughout the world.

Mr. VORYS. Our pattern is that we operate through the UN and put up 90 percent of the military forces and 80 percent of the relief to follow?

Mr. HALL. I think 65 to 70 percent on the relief.

Mr. VORYS. \$105,000,000 from us and 20 from the rest, so far.

Mr. HALL. 205 million has been pledged to UNKRA as such as of this time, not counting contributions made in the past to the unified command for direct Korean relief. I would like to point out the French have not said what they will contribute.

Mr. BURLESON. Is there point 4 assistance involved in this?

Mr. HALL. There is point 4, but it would be handled through this agency. There will be some technical assistance in the sense of economic advice and agricultural advice.

Mr. BURLESON. It will all come through the UN?

Mr. HALL. It will all be part of this \$162,500,000, our contribution to the \$250,000,000 program.

Mr. REECE. What type of rehabilitation is anticipated?

Mr. HALL. I did not get that, sir.

Mr. REECE. What type of rehabilitation do you envision will be carried on over there?

Mr. HALL. It would involve the minimum restoration of the power industry, things of that kind. \$250,000,000 will not go very far in that direction. There will have to be a continuing program. We hope the Koreans will be able to help themselves in a large portion of it. There are essential industries that will have to be reestablished for them, things that involve imports from the outside.

The textile machinery, any heavy equipment of any kind, would have to come from the outside. The program does envision that the Koreans themselves will do most of the work in housing, in the spinning of textiles, in the rehabilitation of their agriculture.

There will be fertilizer imports and cotton imports.

I can give you an idea of what will be in the program. Perhaps it will not be the final program. Food will be \$31.3 million; clothing, \$14 million; medical supplies, \$5.5 million; soap and miscellaneous goods, \$2.5 million; raw materials for domestic production would be agricultural prerequisites, primarily fertilizer, \$42.7 million, plus some seeds; coal, \$8 million; petroleum oil and lubricants, \$5.5 million; raw cotton, \$8.8 million; miscellaneous materials, \$20.5 million; then materials and equipment for reconstruction, lumber would be \$8 million; cement, \$2.5 million; iron and steel, \$15 million; railroad rolling stock, \$9 million; electric power facilities, \$6 million; communications, \$3 million; trucks and accessories, \$2.4 million; other equipment and parts, \$8.3 million; and technical services would be \$2 million; and then the administrative costs would follow.

Mr. REECE. Two point plus for soap, and 0.9 for railroad equipment and supplies. My offhand observation is that would be out of line.

Mr. HALL. That is soap and miscellaneous. I can get the other items.

Mr. BURLESON. I expect they are behind in the use of soap.

Mr. REECE. They can stay behind without being seriously impaired.

Mr. HALL. This includes household items such as thread, needles, cooking utensils; also alkalis and fats, to get their own soap production started.

It is not soap as a finished product but rather the components of the soap.

Mr. HERTER. You have a \$59,000,000 item for transportation. That would certainly not indicate that a great deal was coming from Japan.

Mr. HALL. The explanation on that is that—in order to make use of the contributions of the United Kingdom and the European countries, and the Australian and some of the others, farther away contributions—there would need to be substantial transportation involved in that by UNRRA estimates.

We raised the same question in the Advisory Committee very frankly. This is one of the questions that we raised in the first meeting of the Advisory Committee, the question that you raised, as to whether the freight charges were not excessive. They have promised to recalculate the program in the light of the needs as they see them. They are not interested in spending more for freight than they have to.

This is the first calculation that was made up. These figures, the background of them, were developed originally by the military authorities in Korea, in December. I think that there are areas in the figures that undoubtedly will have to be corrected.

I would agree, Mr. Herter, that one of these things is the question of transportation.

Mr. VORYS. When you speak of Korea, you mean what?

Mr. HALL. Whatever area of Korea is under the United Nations at the cessation of hostilities.

Mr. VORYS. As I remember it, they have coal and fertilizer plants up north.

Mr. HALL. They have. Those have pretty much been destroyed by bombing. There would have to be some rehabilitation. If we had the whole of Korea, the total program, in the years beyond the first year would be substantially less because they would do much more to help themselves.

Mr. VORYS. When you talk of cessation of hostilities, I suppose that the UN cannot decide—nobody can answer this, but are we going in to repeat what was done before, to build up something that can be knocked off again, or does there have to be cessation of hostilities plus such guaranties that hostilities are not going to start again that it would be worth while doing more than merely running relief bread lines and that sort of thing?

Mr. HALL. I think we would have to have some sort of guaranty, or at least a good chance that hostilities would not start again. There would be no point in taking in supplies just to have them endangered again by the enemy. When I say cessation of hostilities, I mean settlement that is satisfactory to the UN and which gives us assurance that there is at least reasonable chance that the Koreans will be able to build a peaceful and productive future life.

Mr. VORYS. You used the word "reconstruction." I noticed in the United Nations resolution that whatever is done shall be limited to relief and rehabilitation. During the UNRRA days we had a lot

of discussion about when relief and rehabilitation left off and reconstruction started in.

A lot of these items sound somewhat like being over the line into substantial reconstruction. I wondered if these projects that you have mentioned are presumed to be within the limits of the United Nations resolution of relief and rehabilitation.

Mr. HALL. Yes, sir; they are. The United Nations resolution spells that out. There was great concern about that on the part of a number of countries. Mexico, for example, was very much concerned that the program should not get very much beyond the relief, and essential elements of relief and rehabilitation.

If I used the term "reconstruction" it was an unfortunate misstatement. It should be encompassed within the broader framework of relief and rehabilitation. The Mexicans were concerned about that. They said if you get very far on the reconstruction program we have needs at home that are greater, as far as they are concerned, than those in South Korea.

So there is in the United Nations, on the part of the other members, very great pressure to keep this program to the minimum that is essential to keep good faith with the people of the Republic of Korea. I think we can be assured, handling it through the United Nations, with the other governments, many of whom are not in a very favorable economic position, they are going to insist that the program be kept to the minimum required to keep faith with the Korean people.

Mr. REECE. I am glad to see the breakdown in the detail that you have, although you might not be certain about some phases of it, which one can readily understand.

Mr. Chairman, that is what I have been wanting to see in connection with all these areas where we are extending relief. I do not know to what extent that breakdown has been supplied for the different countries. You remember I propounded that query upon another occasion, to what extent a breakdown has been supplied reference to these countries.

Chairman RICHARDS. We have a breakdown for the different areas. Each member of the committee has that, I think. We have some more people who can testify on that phase of it this week. If you do not get what you want—

Mr. REECE. We have, as I recall, pretty much of a dollar breakdown.

Chairman RICHARDS. That is right.

Mr. REECE. But not a commodity or application breakdown. When we asked for an appropriation on the floor for ourselves, we have to substantiate, justify the particular appropriation, whether it is for a small amount or large amount of money, whether it is for a bridge or some other improvement.

We have to do that in very great detail, and in this connection we are appropriating vast sums, the expenditure of which is left largely to the administrative officers. I recognize that I do not have the historical background of this subject that the other members of the committee have, but that was one of the things that I was impressed with during the proceedings here, the fact that there had not been a breakdown for which a person who did not make a personal study of the program could ascertain what was being done in any country.

Chairman RICHARDS. We have a good many more witnesses. If the gentleman is not satisfied when that is completed, I assure you that we will cooperate in trying to get the very thing that you are trying to get.

Mr. REECE. I beg the pardon of the committee for bringing it up out of context.

Chairman RICHARDS. I think that is a very important phase of the thing. I do not object to you bringing it up.

Mr. VORYS. Will the gentleman yield?

Mr. REECE. Yes.

Mr. VORYS. We on this committee always before have had the breakdown somewhat in advance, and our staff has had them, and at least in my memory we have never had hearings where the first we heard of the details was from the lips of some witness. We had a chance to do a little homework and get ready for it. This is the first time that I have seen it occur this way.

Chairman RICHARDS. Mr. Coolidge, will you say something on that?

Mr. COOLIDGE. Yes, sir. We did not get them up as soon as we have in the past, but my recollection is that about a week ago—it has been just about a week—the staff has had a breakdown of all these programs which were submitted to the staff.

Chairman RICHARDS. We members ought to have them.

Mr. COOLIDGE. We got up enough copies, one for each member.

Chairman RICHARDS. What about that, Mr. Clerk?

Mr. COOLIDGE. Whether they go into the details Mr. Reece wants I do not know.

Mr. REECE. My thinking arises out of that general question. My thinking goes along the line that after these vast sums have been expended, how much permanence is there going to be.

Chairman RICHARDS. I want to get the statement from the clerk as to what they have along this line, and also the staff. If they have that breakdown to the extent that you say, we want the members to have it. If they have not, we want to get it. I imagine the people would want to provide it for us.

They certainly had better if they want to substantiate their case.

Mr. REECE. It occurred to me as a result of Mr. Hall's breakdown there, which impressed me, that he attempted to give a detailed breakdown which has to be on a rather inadequate basis in view of the uncertainty of the situation.

Chairman RICHARDS. We will suspend for a minute to find out what they have.

(Discussion off the record.)

Chairman RICHARDS. Are there any other questions of the witness?

(No response.)

Chairman RICHARDS. If there are no further questions, we thank you very much, Mr. Hall.

Mr. HALL. Thank you, sir.

Chairman RICHARDS. We will hear Mr. Richard F. Harless, Atlantic Union Committee, appearing for the Honorable Will Clayton.

Mr. Harless is an old colleague. Mr. Clayton could not get here.

STATEMENT OF WILL H. CLAYTON, FORMER UNDER SECRETARY OF STATE, AS PRESENTED BY RICHARD F. HARLESS

Mr. HARLESS. Thank you, Mr. Chairman and gentlemen of the committee.

Mr. Clayton had hoped to be here, but he found it impossible. This is his own statement. He drew it up over the week end and then had to leave and asked me to present it to the committee.

Chairman RICHARDS. Will you proceed.

Mr. HARLESS. Mr. Chairman, gentlemen of the committee, this statement is made by Mr. Clayton, former Under Secretary of State, in behalf of the Mutual Assistance Aid Program now pending before your committee.

During the past third of a century, the people of the United States have shed much blood and spent upward of half a trillion dollars for the preservation of freedom in the world.

The weight of this stupendous effort has so far saved the world from complete totalitarian rule.

But the battle between the forces of enslavement and the forces fighting to hold those precious human freedoms won at such great cost over the centuries is still raging; the final result is by no means certain.

From the tragic experiences of the past 35 years, one great truth stands out clear as a beacon to guide us: There must be unity of purpose and of action by the free nations of the world if they would remain free.

Whatever may be said about the foreign policy of the United States during the past few years, it cannot be denied that it has been directed toward holding the free world together.

We could be wrong about everything else but if we are right on foreign policy, our country is so young and virile that it could overcome its mistakes in the domestic field and go forward; but if we are wrong on foreign policy, we could be right on everything else and still the result could be a disaster, not only to the people of the United States but to the whole world.

We must be right on foreign policy. The very security and prosperity of the United States are at stake. The United States has taken the lead in measures designed to hold the free world together and to bring peace to the whole world. We must continue that policy and strengthen it in every proper way.

The North Atlantic Treaty is by far the most important step yet taken in this field.

The very foundation of this enterprise rests on an understanding that the security and prosperity of its 12 members depend upon their unity in the international field.

The passage of the foreign aid bill now before the Congress is essential to the realization of this concept.

Just as the Marshall plan has saved Western Europe and the world from the aggressive and expansive policy of Communist Russia over the past 3 or 4 years, so the foreign aid contemplated in the bill now before Congress may very well be credited by history as having set in motion measures and forces leading to the establishment of world peace and prosperity. No informed person can doubt that the execution of the very specific plans for the protection of the free world

contemplated in the North Atlantic Treaty is immediately dependent upon this aid.

The United States cannot afford to reverse the direction in which it has been headed in world affairs. To do so would be an invitation to disaster.

General Eisenhower constantly refers to the necessity of unity in the free world. Beginning with his speech before Congress on his return from Europe in February 1951, he has hardly made a single public statement which does not emphasize the critical need of unity and more unity if the free nations of the world are to win this fight.

One cannot help feeling that behind General Eisenhower's carefully chosen words, heard and read around the world, is a deep conviction that the North Atlantic Treaty, powerful and historic document that it is, leaves much to be desired as a constitution of the free world in its fight to hold back the forces of slavery and darkness which are descending upon it.

The obvious weakness of the North Atlantic Treaty is that it proposes to unify the military forces of its 12 members but fails to provide for political unification to create a common foreign policy and to give direction to the military; or economic unification to furnish the strength to support the military and to bring about a rise in the standard of living so important to the morale and well-being of the people.

As an immediate measure in the defense of the free world against Communist aggression, the North Atlantic Treaty is a bold and essential step. But neither the North Atlantic treaty nor the United Nations, essential as both are in the long-range plan for the establishment of world peace, are sufficient to accomplish that purpose in the world of today.

To realize this, we must first thoroughly understand the nature of the revolution through which our modern world is now passing.

Many people believe that if it were only possible to rid the world of the evil of Communist aggression, there would no longer exist any serious impediment to the prompt establishment of world peace and prosperity. These people argue that Communist Russia is the only nation in the world at present or for the foreseeable future which is frankly bent upon world conquest, and indeed that is true.

But it would be a tragic mistake to fail to recognize that the aggression of Communist Russia, with its stated determination to conquer the world for communism, is merely an outward demonstration of the revolution through which the world is now passing—a revolution of the "haves nots," not so much against the "haves" as against their own tragic lot in life.

There can be no permanent peace until there is some amelioration of the conditions of the hundreds of millions of people who go to bed hungry and cold every night.

The job of the western world, then, is broadly twofold: It must make itself so strong that no aggressor dare strike, and it must do this in a way to avoid undue economic strain. Freedom can be lost through economic collapse as surely as through military defeat.

And it must reorganize its economy so that all the forces of development, production, and distribution, operating as one market, may have full play, to the end that people all over the world will have more to eat, more to wear, and better homes in which to live.

It is not believed possible to reach these two targets with the present loose organization of the western world which rests on a military base only—and a shaky one at that.

This base must be broadened and strengthened to cover adequately the political and economic aspects of unity.

Nothing short of a federal union of the Atlantic democracies will afford a foundation sufficiently strong and broad to support the necessary measures for the realization of permanent world peace.

If such a federal union had existed 18 or 40 years ago, World War I would never have occurred; if it had existed 12 years ago, World War II would never have started; if it existed today, world war III would not even be thought of, real disarmament would be under way, a development and production boom on a world-wide basis would be in progress; the world standard of living would be rising, tranquility would be restored and permanent world peace would lie within our grasp.

Chairman RICHARDS. Thank you, Mr. Harless. We appreciate very much our old colleague coming before us to give his and Mr. Clayton's viewpoint on this subject. We are sorry Mr. Clayton cannot be here. We have a very high opinion of his ability and statement.

Mr. HARLESS. He expresses real regret that he could not be here in person. I appreciate the opportunity of reading this statement to you.

Chairman RICHARDS. Mr. Hays?

Mr. HAYS. I wish to express appreciation of the statement not only because of our regard for Mr. Clayton but because of my personal pleasure in seeing my former colleague with whom I came to Congress in 1943. I am interested in the views that he advances. I think it is worthy of our consideration.

Mr. Harless has rendered a great public service in his own State, and as a member of the Congress for three terms. I am glad to have this statement about a very important movement. I assume that Mr. Clarence Streit will be here?

Mr. HARLESS. He will be here this evening.

Mr. HAYS. Whether one agrees with Mr. Streit and former Justice Roberts as to all details of the Atlantic Union idea or not, I believe it is the universal opinion of thoughtful people that they are rendering a great service.

I would like to ask Mr. Harless if he saw the statement of Senator Hendrickson, of New Jersey—

Mr. HARLESS. Which article was that, Congressman?

Mr. HAYS. It just reached my desk this morning. It is an eloquent defense by Senator Hendrickson of your organization's purposes. I hope you will see it.

Mr. HARLESS. I would like to see it. I appreciate those remarks, Congressman, and I appreciate the opportunity of coming here before you gentlemen. I hope sometime in the foreseeable future when you have all these heavyweight problems out of the way that we will be able to present complete arguments on the plan that we propose. The resolutions are now pending. I know you are very, very busy, but when you do have some time, we have gathered a great deal of information.

Mr. Streit, who will appear before you this evening, spent 3½ months in Europe recently where he contacted many of the leaders in Europe, political and economic, and others, and I think he has a real message to your committee. When the opportunity does arrive, when you have time, we certainly would like to present some further testimony.

Chairman RICHARDS. Are there any other questions?

(No response.)

Chairman RICHARDS. Thank you very much, Mr. Harless. We appreciate your coming.

Mr. HARLESS. Thank you, Mr. Chairman.

Chairman RICHARDS. We appreciate getting the benefit of yours and Mr. Clayton's viewpoint.

The next witness on the list is Mr. J. T. Sanders of the National Grange.

STATEMENT OF J. T. SANDERS OF THE NATIONAL GRANGE

Mr. SANDERS. Mr. Chairman, gentlemen of the committee: the National Grange appreciates very much the opportunity which the committee has presented to us.

Chairman RICHARDS. Mr. Sanders, have you a written statement? Would you rather put it in the record and discuss it offhand? Or would you rather read it?

Mr. SANDERS. It is about 10 double-spaced pages, Mr. Chairman. It would be a little difficult to discuss it because I have not had time to outline it for discussion.

I want to apologize to the committee members for not having mimeographed copies of it. Had I come tonight when I was originally scheduled, I would have been able to have met that deadline.

Chairman RICHARDS. Mr. Sanders, the committee was largely responsible for that. We moved up your schedule to this afternoon. Tonight you would have had those copies, I know. I plead guilty to that.

Mr. SANDERS. The National Grange has supported foreign aid programs of the United States and the United Nations since its inception. We supported these foreign aid programs because we felt they offered the most constructive help to the people of the world who wished to defeat communistic infiltration and outright aggression.

The accomplishment of ECA in Europe has manifold justified our faith in this means of giving hope to a fear-ridden world. We have followed the work of ECA in intimate details, one former national master, Albert Goss, followed by our present master, Herschel D. Newsom, having served during the entire life of the ECA on its present advisory board.

ECA has demonstrated conclusively that the most dependable people are those who have reasonable hopes of their future freedom, and at the same time it has been shown otherwise that the most undependable people are those who can see little such hope.

In a recent report to the President on ECA's accomplishment the advisory board made the following statement:

There is reason to believe that ECA's work actually stopped Soviet Russia from swallowing up Western Europe. In addition, Europe's trade barriers are being broken down and a continental market is being created. Her economy is being integrated. She is being taught American technical know-how; production

is constantly climbing. A healthier Europe and a stronger people elsewhere are emerging.

This is work that must underlie and support any defense effort. The major purpose of these hearings is, we judge, to provide for the defense of our Nation and other friendly nations by building up the free world military forces, by promoting defense production, and by strengthening the will of people to defend their freedom through assisting them in their economic development.

The National Grange believes that all three of these approaches to the problem are sound, but we do not feel competent to discuss the soundness of the proposed military assistance phases of the proposals being considered. In thus avoiding a discussion of the military aspects of aid, we are mindful of the extreme importance of this phase of aid and of the existence of a margin where military aid and economic aid cannot readily be distinguished or separated.

We know that military aid is far more important when measured in terms of immediate national security, but we are convinced that in a longer view of solving the problems of the troubled world economic aid is far more important. Military aid may stave off imminent aggression, but only friendly economic aid that brings mutual improvement to both the receiver and the supplier will in the end bring the world into an era of peace.

Since therefore we are not able to analyze adequately the amount or nature of military aid, we would like to address our remarks primarily to the phases of the work of the committee dealing with the economic assistance, especially technical cooperative assistance.

From the long-time viewpoint we look upon this phase of the proposals, as we implied above, as offering the best hope for a peaceful world. Economic aid if pursued wisely and in the proper spirit will bring hope where there is little hope. It will bring to people the means of helping themselves where, without the assistance, they could not help themselves.

At this point we wish to emphasize the importance of making the economic aid portion of our foreign assistance programs truly mutual assistance programs. These economic programs in the strictest and most materialistic sense, and not in the abstract or tangible sense, can and should be made mutual aid programs.

We believe that every dollar wisely and judiciously spent in helping the underdeveloped free nations of the world to increase and better their economic capacity will return to our Nation at least as many and probably more, hard dollars of return in the future.

Furthermore, we believe that the more clearly this assistance is offered and put on a mutual assistance basis, the more will all nations assist in maintaining their own self-respect and their ambitions to help themselves.

More specifically, what does mutual aid mean? What do we and the other countries each supply and receive? In the first place, we will supply technical assistance and direct financial aid, probably both public and private. In supplying this we should make it clear that we are also giving the receiving nation greater assurance of independence, both political and economic. This means that they as a result should have a greater feeling or assurance against aggression or internal interference, both from the United States or the U. S. S. R., and from other nations.

This assistance should also be given in such a manner as to assure them of the most rapid practical development of, and fruits from, their own natural and human resources. In short, we shall miserably fail in our offer of economic assistance unless we can show the recipients of this aid that it is not given for exploitive purposes but for mutual development and aid aims.

And what kind of material returns do we get from this aid? What do we get out of it? In the first place, one of the most expensive undertakings before this Nation is the elimination of the great danger of communism. We therefore help to create in these underdeveloped areas a progress that stabilizes their friendship for other free nations and an insulation of their political and economic life against communistic influences. This is the really important gain that we undoubtedly realized from Marshall aid in Europe.

But our aid is also certain to bring greater trade and its consequent material gains. It will open up many new opportunities for self-liquidating public and private investments and will add greatly to the security of, and the income from, these investments.

In the months and years immediately ahead we should also gain greatly in the amount, cost, and dependability of supplies of strategical and other needed raw materials; for, from the noncommunistic so-called underdeveloped areas, we obtain around three-fourths of most of our supplies of needed raw products and have in them some of our best export markets.

The economic aid needed for the underdeveloped countries is of a much different nature or kind from that which was supplied to the European recovery program by ECA. In the latter program agriculture played a minor, though important, role. In the underdeveloped areas agriculture constitutes over three-fourths of their economic activity. Also, agriculture in these areas varies widely with its primitiveness.

The problem is first and foremost to develop a more productive agriculture, to first raise their dietary standards and then gradually release farm workers into nonfarm pursuits. All of these countries are important sources of supplies of minerals, timber, and related materials.

Much of the initial stages of economic aid to these countries must be devoted to improving the agricultural and other extractive industries, to give them the double benefit of increased export credits, and to release personnel for work in nonextractive industries.

Undoubtedly the first nonextractive or fabricating industries will be in the lighter industry fields—such as processing food, raiment, and shelter products. This means that both technical assistance and economic assistance in the form of investment must be on a far more modest scale than the assistance supplied to Europe where the problem was the earliest possible rehabilitation of the world's second largest and most complex industrial economy after the problems of its immediate relief were taken care of.

Not only is the assistance in the underdeveloped countries on a relatively less expensive scale than that of the European recovery program, but it will take a much longer period to initiate and mature. In short, it must be on a more modest magnitude and more deliberative basis than the European recovery program.

Agricultural methods are deep rooted in the customs and prejudices, and in the social, religious, and political lives of people. These are not and cannot be changed by revolutionary means, and only highly skilled and experienced farm technicians can understand and develop needed and practical improvements. The most practical way of initiating this type of help is on a small scale and at a cautious rate. Yet this must be initiated and developed fairly successfully and extensively before appreciable workers can be released for programs of industrial development.

The methods used in the technical assistance program conducted by the Technical Cooperation Administration under the direction of Dr. Henry G. Bennett, and in the technical activities of ECA, are geared to the rural, largely primitive economies of the underdeveloped areas. Their primary need is to produce more and better foods to feed their people a minimum required amount of food. To do this they do not need large grants of dollars or consumer goods. They need immediately few or no tractors or other up-to-date agricultural machinery. They need to take simple basic steps that they can understand and apply themselves, largely with the resources they already have at hand. They need scythes instead of sickles, threshers instead of flails, plows of steel instead of wood, and better seed and livestock. They need insecticides and fertilizers and need to know how to use manure and legumes, to know better methods of harvesting and storing their crops, and need better systems of land tenure and credit that will assure them a larger share of the fruits of their labor.

The nature of the problem determines the nature of the solution. It is for this reason that the technical assistance program consciously and deliberately emphasizes the "rural approach." The aid it extends consists primarily of the services of American technicians—agricultural research and specialists, public health doctors and nurses, educational and vocational instructors, engineers and public administration experts—and the training of technicians of the other countries in these and similar fields.

The American technicians are supplied with sufficient equipment and operating funds to show the people with whom they work how to put the improved techniques into practice. This demonstration method has the virtue of seeking not to impose a preconceived, ready-made result upon other people, but of helping them to do what they want and need to do anyway—to better their conditions of life by their own efforts.

It does not humiliate them by offering them charity in the form of food, or goods they will not earn. It dignifies them by enabling them to create new wealth of their own.

This method also enables the American people to express their spirit of cooperation with other people in vast areas of the world at relatively small cost. It has been demonstrated repeatedly that a dollar spent on technical cooperation goes further than one spent on any other form of foreign assistance. Moreover, the people helped in this way can contribute in kind, in the form of services of their own technicians, officials, and workers, their own land, buildings, and facilities, in addition to money in their own currency.

More than 30 countries now cooperating in the technical assistance program are contributing \$3 to every \$1 that the United States is putting into the joint effort. In some instances, small amounts of

United States equipment, such as stainless steel for a vaccine plant, can greatly multiply the effectiveness of a technical-assistance program.

In this area which permits greater use of the funds for investments, the broader flexibility of the ECA legislation has real advantage over that of the Technical Cooperation Act. This broadened provision should therefore be incorporated in all technical assistance work for the coming fiscal year.

Around 20 percent of the countries cooperating in the technical assistance work with ECA, and over 60 percent of the visits of foreign trainees to the United States that are sponsored by ECA, are for trainees to study and learn about improved American agricultural techniques and methods that could be adapted to the more primitive agricultural economies of the countries sending the trainees. This is a very significant and valuable work which has been sponsored principally by ECA in its technical assistance work.

I have just spoken of assistance supplied by the countries being 3 to 1 to what we put up. This does not mean that additional funds are not needed to aid the underdeveloped countries to develop water supplies, sewage systems, hospitals, dams, irrigation canals and power plants, roads, harbors, and industries which they need. These projects require large amounts of capital, but most of these projects can and should be carried out on a self-liquidating basis as they have been in our own country.

Sound projects of these kinds are investments in the economic development of the country and they yield monetary returns either directly or indirectly. Such projects can be financed by loans from the World Bank or the Export-Import Bank, or from private sources.

One of the basic shortcomings of the country with only a primitive agricultural economy is the lack of opportunities for diversified investments. In such a country, as is evidenced by the prevailing situation in India, China, and similar old civilizations, savings of the wealthier people are predominantly invested in rural land, urban real estate, precious metals and stones, and in distributive and financial institutions. These investments nearly always become means of exploiting the masses rather than sources of wealth and income to them. As, for example, the landlordism of India, Italy, Spain, China, and other countries. By offering alternate industrial investment opportunities for savings, by reducing the overinflated social and economic value in landed property, and by helping to work out more attractive land reforms for both the farm operator and the farm owners, the technical-assistance program can bring about a firmer and more stable democratic economy for these underdeveloped countries.

One of the major objectives, therefore, of the technical-assistance program is to help mobilize the capital that exists in many of these countries themselves, and to help create the condition that will diversify and make investments in the underdeveloped countries attractive and profitable to private capital, both domestic and from abroad.

Technicians, working under the technical assistance program, under the Technical Cooperation Administration and ECA, can do this in part directly by developing the engineering and financial plans for sound projects and in part indirectly by energizing the inherent productive capacities of the people in these countries and showing how their natural resources can be soundly developed and used.

Technical assistance is no new and revolutionary concept. It may be made a "bold program," but it is certainly not a bold "new" program. American missionaries have for decades carried out rudimentary technical assistance programs, but nonetheless the essentials of this program all over the world have been conducted in the form of agricultural improvements, hospital buildings, and providing medical care and general economic and social betterment measures.

Furthermore, all the elements of the technical assistance program have been carried since 1938 by our Government in its Latin-American agricultural work. So we are not launching out on an untried or visionary program, but rather on a well-tried and proved program.

There is one difficulty and imminent danger in the effectiveness and soundness of this program of technical assistance. It is fragmented in various agencies in responsibilities of the National Government, between ECA, the Defense Department, State Department, and other agencies. The whole philosophy, method, and approach of technical assistance is different from the major job confronted in the European recovery program, and in military aid. Since this is the case, a separate and unified administration assumes major importance. It should be separately and distinctly administered so that its guiding principles and philosophy may be preserved.

This does not mean that it should not be coordinated with and kept from conflicting with the military and other special forms of aid. All the evidence points to the fact that the President, in requesting Congress to authorize the technical assistance program, and the Congress in adopting the act for international development, had in mind a unified world-wide continuing program to operate in the underdeveloped areas as a whole. Nowhere in the act is there any geographical limitation on where technical cooperation with the underdeveloped areas would or would not be operated. On the contrary, the act explicitly provides:

Sec. 405. The President is authorized to plan, undertake, administer, and execute bilateral technical cooperation programs carried on by any United States Government agency, and in so doing, to coordinate the direct existing and new technical cooperation programs.

We believe that this unification of the administration of the various technical assistance programs is very important, and that in writing the newly revised provision of the technical assistance under one administrator is urgently necessary. This should be done in such a way that the technical assistance program would not be endangered by the necessity of absorption of presently employed personnel of ECA that may be qualified for military and rehabilitation aid, but who are ill-prepared and experienced to perform the specialized technical assistance functions we have described previously.

The major and original functions of ECA were that of administering the immediate relief, and the less immediate job of rehabilitation of the war-devastated countries of Europe. In this charter it was given a temporary existence and a definite termination date. This assignment necessarily involved for Europe some technical-assistance functions, but basically the great mass of ECA personnel is ill-equipped to perform the distinctive job of technical cooperation administration. If these two organizations are to be put into a new and single agency, it is highly important that the Technical Cooperation Administration not in any sense lose its distinctive and unsubordinated identity.

In view of the unfinished task of ECA in the rehabilitation of Europe and the further spread of ECA's functions of rehabilitation due to the mutual defense program, ECA's functions, exclusive of the technical assistance functions, should probably be extended. But under no circumstances should its relief, rehabilitation, and specialized military aid functions be mixed with the technical functions of the Technical Cooperation Administration.

The writer has several different times during the past 2 or 3 months met with the representatives of some 20 or more organizations who were interested in the point 4 program, and he does not recall any vigorous defense of leaving the technical assistance program in and under the supervision of the State Department, although some of these groups may possibly think that it can best be carried out in this Department.

Technical assistance is a job that will involve the necessity of drawing specialists from every department of the National Government -- from Agriculture, Commerce, Labor, Reclamation, Health, Education, Highway and other agencies. Also, to be done with the greatest effectiveness, it should draw liberally from the personnel of our land-grant colleges, our universities and technical schools, and from private service, construction and manufacturing agencies. This means that domestic programs and policies, as well as our foreign policies, must be coordinated with or utilized in the Technical Cooperation Administration programs.

We believe, therefore, that technical assistance should not be left in the State Department but should be separated from any specific department. Because technical assistance must draw in the widest sense from the entire Nation's reservoir of technical knowledge, we recommend that most of the actual workers of the Technical Cooperation Administration be required by law to be drawn by assignment from agencies outside of the Administration, and that its expenditures for salaries of permanent employees be restricted to not over a third of all salary expenditures for any fiscal year, or some other proportion of salaries which an intensive study by the Congress indicates is sound.

Certainly the Technical Cooperation Administration should not be allowed to build its own complete and permanent staff of experts, for when it does, it will lose its resilience to a growing United States technology, and will come into constant bureaucratic conflict with sound domestic sources of technology and experience, and in constant conflict with other departments of the Government.

To the credit of the present Technical Assistance Administration, it has not done this, that is, it has drawn experts by assignments for almost all of its personnel.

We believe that experience of ECA with counterpart funds indicates that a sounder and more serviceable use of these funds can be made than has been the case with ECA. As a long-time policy, we believe counterpart funds should be held to the credit of the United States in the country receiving the original grants from the United States; that these funds should be used in the country only for projects or purposes mutually agreed to; and that if used to build self-liquidating works or projects, installment and interest payments should be deposited to the credit of the counterpart fund. The recipient country should have the right to buy up and close-out all or any portion of the counterpart fund by paying the United States current

exchange dollar equivalents of the retired funds. Thus the counterpart fund would be in the form of a revolving fund used by mutual agreement and held for sole use in the recipient country, but held in the name of the United States instead of the name of the country, as was the case with ECA's funds in Europe.

We believe that efficiency and coordination of the overseas affairs of the United States Government can best be served by administering all overseas affairs except the functions dealing exclusively with foreign policy and diplomacy in a unified "overseas affairs administration" similar to that recommended by a minority of the members of the Hoover Commission, including Mr. Hoover. Such an agency should have an independent status. It should be directly under the supervision of the executive branch, with an active Federal advisory board for the technical assistance work, composed of representatives of the major departments of the Federal Government vitally interested in and contributing to technical assistance phases of the agency's work. The technical assistance work would be one of possibly three coordinate services (following the Hoover Commission terminology) possibly called the "Overseas Affairs Administration," as follows:

(1) The Technical and Economic Cooperative Services;

(2) The Relief Rehabilitation and Recovery Services, which would include present ECA functions, exclusive of all long-time technical assistance work and including the civilian occupied territory functions;

(3) The Overseas Territory and Property Services.

Rough estimates of the amount to be spent for technical assistance during the current fiscal year, including that spent in Asia, Africa, Latin America and by ECA, indicate an amount of from \$275 million to \$300 million. The Rockefeller report suggested that the amount spent for this purpose should be about a half-billion dollars per year. We are not in a position to either endorse the Rockefeller recommendation or to suggest an amount below that suggested.

The question of how much of this should be allocated to the technical assistance work of the UN is a question that merits more study than we have given it. We believe, however, that the UN can perform an excellent function in this field by setting up standards of investment, standards of repayment of loan, rules and regulations that are fair and equitable for both recipient and applying countries, and that are nonexploitative of the underdeveloped areas.

By promoting the use of these standards of technical assistance work done by bilateral arrangements as well as their own multilateral work, and by making general overhead surveys of the needs and priorities of these needs, by analyzing the opportunities for profitable public and private investments of underdeveloped countries, and by undertaking to get the adoption and use of these standards and such surveys by all countries, the UN would do much to dispel the fear of underdeveloped countries of the interference from supplying countries.

Mr. GORDON (presiding). We thank you very much for your statement, Mr. Sanders. It is a very fine contribution to this important bill. Do any members have any questions?

Mr. VOYTS. It is certainly a broad statement and covers all phases of our problems. As I understand it you want ECA to be a separate organization outside of other departments, and the technical cooperation, technical assistance, to be another separate organization. Would

the head of that have Cabinet status? How would you envision that in the governmental set-up?

Mr. SANDERS. We leaned toward the plan that was set up in the Hoover Commission report, which was to set up an Overseas Affairs Administration with services within the Administration following out the terminology of all of the Hoover reports. We suggested that the services be three: the technical assistance service, the rehabilitation service, and the overseas properties and territories administration services. So there would be three services in this administration, and there should be an overhead administrator, and the assistant administrator, probably, of each of these services.

Mr. VORYS. Do you contemplate that would be a new department of the Government with Cabinet rank, outside the State Department and other existing departments?

Mr. SANDERS. I do not believe that that was contemplated by us in discussing this. I am sure that the Hoover Commission did not contemplate it being a separate department with Cabinet rank.

Mr. VORYS. Thank you.

Mr. HERTER. As I understand it, you are bringing an entirely new thought in here, and that is a new organization to take on the administration of overseas territories.

Mr. SANDERS. Yes, sir.

Mr. HERTER. As recommended by the Hoover Commission. That would be one of the three phases of this new outfit. So that in effect it will be like a colonial office under the British Government from the point of view of structure?

Mr. SANDERS. Yes, sir. It would take over the functions now being performed by the Interior Department in administering Hawaii and Alaska.

Mr. HERTER. And the islands in the Pacific?

Mr. SANDERS. Yes, sir; and battleground monuments and properties of all kinds owned by United States all over the world.

Mr. HERTER. So it would take that load off the State Department and other departments of the Government entirely?

Mr. SANDERS. Yes, sir.

Mr. HERTER. You believe there should be a separate administration for the ECA continuing to the point where it peters out?

Mr. SANDERS. Yes, sir; a separate service.

Mr. HERTER. Then carry on with point 4 from there on out?

Mr. SANDERS. Such problems of relief and rehabilitation as are presented in Korea today, if peace comes in Korea, would be a decided function for ECA to repeat some of the things it did in Europe, it seems to us.

Mr. HERTER. We have been asked to handle the whole Korean matter through the United Nations and not through ECA. There has been testimony given at one time or another on both sides of that, whether it should be done internationally, to which I think we are committed, or whether it would be better administration and better policy for us to handle it entirely separately.

Have you any judgment on that?

Mr. SANDERS. My feeling on that is this: It would be very difficult to justify to the people of America if we had to put up about 90 percent of the money to rehabilitate Korea, if we did not take a very direct interest in the rehabilitation. I think we should cooperate

with the United Nations. But I doubt whether the United Nations would have the necessary machinery to administer it adequately, and I doubt whether it would be the most satisfactory arrangement for this country to put up, we will say, 90 to 95 percent of the money and then not have much more direct influence on the rehabilitation work than we would get through the UN.

Mr. HERTER. You would turn the money over to the UN and let the commission of its own choosing do the job?

Mr. SANDERS. That question is one that our organization has not discussed at all. What I have given you is my own personal opinion. Certainly it is not the policy established by the Grange.

Chairman RICHARDS. Are there other questions?

(No response.)

Chairman RICHARDS. Thank you very much, Mr. Sanders. We appreciate your coming up and testifying on this subject.

Mr. SANDERS. Thank you, sir.

Chairman RICHARDS. The next witness is Mr. John Brophy, representing the Congress of Industrial Organizations.

Mr. Brophy, we are glad to have you with us today. You have a prepared statement?

Mr. BROPHY. Yes, sir.

Chairman RICHARDS. Will you proceed?

STATEMENT OF JOHN BROPHY, CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. BROPHY. Members of the committee have copies of the statement. It is rather brief. The Congress of Industrial Organizations appears today to give its support to the principal components of the Mutual Security Program, now under consideration by Congress for the 1952 fiscal year.

We want to emphasize the fact that the Mutual Security Program recognizes the interdependency of military, political, and economic measures necessary to insure the security of the free world.

We believe that neither political and military security nor economic security taken alone can answer the problems of the world today. Political and military security standing alone are at best precarious because they are always subject to an attack upon their flank—where the ill-housed, ill-clothed and the ill-fed are fair game for those who would exploit their need. Economic security standing alone fails to take into consideration those human needs and aspirations—individual freedom, the right to free expression, to worship as one pleases, and other fundamental rights of men—and could lead only to eventual enslavement.

I might add here that last year, in July and August, I was in south-east Asia on a commission representing the International Federation of Free Trade Unions. There I met representatives and groups of people in all walks of life. The effort of this commission was to get a clear picture of the situation, particularly from the trade-union standpoint, as to what could be done to aid in meeting some of the problems that had created the widespread revolution that had been going on in Asia for many, many years. The thing that stood out in that experience was that mass poverty, illiteracy, and disease were everywhere, and a terrifically low standard of living, unbelievably low

to the western mind, in that area that we visited, and they are all underdeveloped areas. There we see unrest and tension everywhere, caused by the great disparity in living standards, in the underdeveloped as compared with the developed countries of the world.

I think this can be told graphically by just a simple figure or two. The average annual income in the underdeveloped countries in this area where two-thirds of the population of the world lives, is \$41. An unbelievably low figure. While in the developed countries, the figures were \$461, and, of course, it is much more in the United States. That, I think, tells a story, tells a story of a standard of living that is animal in its meager supply of food and shelter. In some cases it is so close to the minimum that it is almost nonexistent, at least for shelter.

I saw millions of these impoverished people in India and other countries through that great arc of some 7,000 miles of Southeast Asia. When that miserably low standard of living is coupled with an average expectancy of life in the underdeveloped countries of 27 years, as compared with an expectancy of life of 63 years in the developed countries, you get there the basic cause of the great social unrest that has been disturbing all of the underdeveloped countries of the world, particularly Asia.

Unless we meet this problem of poverty, it seems to me that we are going to be in a condition of world turmoil all the time. So the organization for which I speak, the CIO, meeting in twelfth constitutional convention at Chicago, Ill., in November 1950, adopted a resolution which said, in part:

We shall defeat the forces of Communist tyranny and create the world environment in which a just and lasting peace can be won only if we mobilize the full strength of the free people of the world to fight the forces of communism on every front. A purely negative approach to this problem will not get a satisfactory answer. We believe this requires that American democracy fully mobilize its human and material resources—its economic and spiritual power to forge weapons of war to stop Communist aggression on the military front, and the tools of peace to fight poverty, hunger and injustice on the economic and social fronts.

For these essential reasons, the CIO supported the European recovery program, the military assistance program, and the Technical Assistance Act. It believed that if the free world was to be defended, it needed the economic and military power which was basic to that defense. The United States, in its position as leader of the free world, has the responsibility of helping its allies to help themselves in the cooperative struggle for peace and security. The mutual security program is the expression of that responsibility in concrete terms.

Without such a program, we would be serving notice on the free world that we were content to "go it alone." But many years of isolation, with its disastrous consequences, should have indicated to the skeptical that we cannot retire behind our Atlantic and Pacific moats that can now be crossed by air in a few hours.

We are in the world to stay and we should have learned by this time that if peace and security are to be firmly established, they will be achieved by collective action. Collective action is the essence of the Mutual Security Program. Section 2 of the act declares:

The Congress declares it to be the purpose of this act to promote the foreign policy of the United States by authorizing military, economic, and technical assistance to friendly countries to strengthen the individual and collective defenses

of the free world, to develop their resources in the interest of their security and independence and the national interest of the United States and to facilitate the effective participation of those countries in the United Nations system for collective security.

However, it must be emphasized that if the Mutual Security program—or any program of international aid and assistance—is to be effective in preventing the world-wide scourge of Communist imperialism, it is clear that attention must be paid to the ills upon which communism thrives. Military aid must not be used simply to bolster reactionary regimes in power—economic aid must reach the rank and file of workers and farmers. We would indeed be pouring American money down a bottomless pit unless we see it to that our aid abroad does improve the standard of living of these people.

In Europe—particularly in Italy, France, and Western Germany—there is an urgent need for closing the gap between prices and wages. Without such reforms, the Communists are all too likely to reap the harvest. In other parts of the world, particularly the colonial and former colonial areas, Communist imperialism has found fertile fields for its nefarious activities because poverty in fact does exist there to an appalling degree. Simply granting military aid to the governments in power in these areas will not be enough to stop the sweep of communism there; the working people must actually have a way of life they feel is worth defending against Communist aggression. And I believe, after meeting, as I said, some thousands of people in all walks of life and listening to their stories, very largely through interpreters, I am convinced that there are elements, even among these poor people, who have hopes and do have desires, and who recognize that something can be done if there is cooperation, if there is some assurance in that directing in working things out in a progressively helpful and cooperative manner.

It is to be deeply regretted that we live in a world where crisis and tension abound, where we must gird ourselves with armaments in order to stave off a third world war. The tremendous emphasis in the Mutual Security Program on weapons for war as against the tools needed for positive construction should not obscure the other purposes of the program. It can be truly said that without Marshall aid, the Red tide would have long since reached the English Channel and engulfed large areas of the world.

We believe that more emphasis than is being given should be placed on nonmilitary aspects of the Mutual Security Program. The nonmilitary appropriation is but a small fraction of the cost of our own national rearmament program. We think that it should be enlarged, and we base our opinion on the belief that in many parts of the world, a new irrigation pump is equal to a battalion of armed and equipped soldiers. Again, in the words of the Foreign Policy Declaration passed by the Twelfth CIO Constitutional Convention assembled in Chicago, Ill., in November 1950:

* * * The struggle between freedom and tyranny—between democracy and communism, is a struggle for men's minds, their hearts, and their loyalties. We cannot win this struggle—we cannot make freedom secure and build peace in the world if we fight communism with guns alone * * *

And we may have to do that. But it is true that great ethical principles have dynamic powers that exceed and are beyond the power of explosives. We reiterate that while it is urgent to build up military

strength for the common defense, we must not lose sight of the fact that, in the last analysis, peace, democratic free institutions, and human welfare can be assured only within the framework of an expanding world economy.

For the purposes of long-range economic development, particularly in the underdeveloped areas, both public and private sources should be channeled into investment abroad. A new Overseas Economic Administration is needed to integrate the work of the present agencies, including the Export-Import Bank, which are functioning in this field and to coordinate this activity with the work of the World Bank and the United Nations. The old American tradition of help thy neighbor paid off because it established better community relations, and while it did not obviate the necessity for a local police force, it did at least prevent chaos. The same situation can prevail in the world at large.

As always, American foreign policy should be dedicated to positive and constructive goals, while we stand ready to defend our free institutions and our way of life.

I think the use of economic power, backing great moral principles, will win out in the great struggle for men's minds and for a stable world in which men can live in freedom and peace, and can build up their standard of living to something approaching decency. In Asia there is great potential of resources that can be developed and tapped, and men's lives can be enriched and made more hopeful and secure.

Chairman RICHARDS. Thank you, Mr. Brophy. We appreciate your coming here and giving us the viewpoint of your great organization, made up of so many thousands of American working men and women, in regard to this program.

Mr. VORYS. In the point 4 program in this committee, we wrote in a couple of provisions which would have made it part of our basic law to encourage increase in wage and living standards in other countries. We had a dual purpose in mind. It would be of great benefit to people in those countries, and it would also benefit our own workers and the industries in which they worked by cutting down the competition from underpaid workers abroad.

Mr. BROPHY. Very good.

Mr. VORYS. It was a good idea, but after a bitter fight it went out in conference.

Mr. BROPHY. It has always paid worth-while dividends to stand for sound principles.

Chairman RICHARDS. Mr. Javits?

Mr. JAVITS. Mr. Brophy, the CIO represents workers, very many in heavy industry. Do you believe that your members fear the competition, either in this country or in the free world, that might come if there is greater industrialization in the free world, or greater ability to supply consumer goods in underdeveloped areas?

Mr. BROPHY. I think that more and more people understand that we can organize our affairs in such a way that they do not impair the standards of those people who have won advanced positions. I think that there is a better appreciation of the interdependency of people and a willingness to take certain risks, and they do not need to be really risks if we make a cooperative approach. I think the statement that I have read, as representative of the CIO, is a reflection

tion, a very, very substantial reflection of a point of view of the membership.

I do not think they are afraid of competition. I think they feel that we can maintain our legitimate position and our standards and still at the same time cooperate to build up the rest of the world on the basis of social justice.

Mr. JAVITS. As a matter of fact, we can have even higher standards and greater well-being in our country if the rest of the free world is better off.

Mr. BROPHY. That is right. But \$41 a year average for some three-fourths of the population of the world, is no market for anybody or anything.

Mr. JAVITS. Therefore the low standards of living throughout the world have a tendency to drag down everybody's standards, including our own?

Mr. BROPHY. Very true.

Mr. JAVITS. That, of course, represents a modern philosophy on the part of the great labor federations. What was their point of view in bygone years?

Mr. BROPHY. That is true, that in a period when the trade-union movement was weak and fighting for a toehold, its position might have seemed narrow, looking at it very generally. But now that labor is strong, now that labor has more than a toehold, it has a definite position in American society, it can afford to look at matters very broadly and surely. This is not the time to maintain a rather limited point of view that might have prevailed in some sectors of the trade-union movement in years gone by.

Mr. JAVITS. Has that same point of view in fact also motivated labor in its changed outlook on immigration which it took since 1945 with respect to displaced persons?

Mr. BROPHY. We need more understanding about the displaced persons immigration. We can afford to take a more liberal attitude than has been the case in years gone by. I think the very fact that we have built up labor unions to the extent that we have will permit us to take a more liberal attitude on the subject of immigration.

Mr. JAVITS. Would you like to add any other to the modern fundamental elements of the philosophy of the American labor movement?

Mr. BROPHY. I think it is true that the sense of social responsibility grows with numbers and with power. That is, labor is concerned with basic questions, basic industrial questions. It recognizes the importance of production in support of a good wage; it recognizes this increase in production makes possible a program that will work for peace; and I think that very generally the labor movement has broadened its outlook. It is socially minded to a greater degree than in the earlier days when it was fighting for its very existence. It has shown a sense of responsibility and accepted citizenship in the fullest degree. So that labor has great promise in dealing with not only the domestic problems but also with international problems. I just came from an International Trade Union Congress in Milan, Italy. I left there a week ago Sunday. There were representatives from all the free trade-unions of the world. Some of these unions were from countries that had been at war with us.

There was a new fraternity developing based upon peace and justice, based upon the strengthening of democratic institutions and processes, an effort to build up production, to build up and strengthen the economies of the countries whose economies had been damaged by the war, and a sense of total social responsibility that should be heart-warming to those who believe in people doing the right thing in the right way for a just cause.

Mr. JAVITS. I think, Mr. Brophy, it is for that reason that so many of us feel that the trade union movement as now developing is one of the very foundations for fighting against communism in our country and in other countries of the free world.

In many countries where such a statesmanlike trade movement is lacking, there is infinitely more opportunity than there is in countries where it is present, for the advance of communism internally.

Mr. BROPHY. We of the trade-unions oppose communism because we love freedom and democratic institutions.

Mr. JAVITS. Thank you.

Mrs. BOLTON. May I say something on that? I have tried to read everything that I could lay my hands on with respect to the Milan meeting, as well as talking with some people from abroad. I appreciate very much the work done by your union and by the AFL in the work against communism in years gone by, in the Italian elections, and so on. It is most heartening to have you express yourself as you have today.

I think all of us feel just what you have expressed, that there is a growing sense of responsibility on the part of trades-unions, that it is an imperative thing if trades-unions, management, and the people are to sit down together and work out together the strength of the people and of the world, and they must sit down together if we are to build a strong nation.

Mr. BROPHY. If we have confidence in democratic principles and great faith in it we can overcome totalitarian action, whether it comes in the guise of labor, as Communists present it, or in any other form—we can overcome it provided we are true to our own democratic ideals and principles.

Mrs. BOLTON. We must find ways for deeper understanding of each other.

Chairman RICHARDS. Thank you very much, sir. I want to say to the members of the committee that we have a very important meeting tonight. I do not believe it will last over an hour.

We will recess at this time until 7:30 this evening.

Whereupon, at 4:55 p. m. the committee adjourned, to reconvene at 7:30 p. m. the same day.

NIGHT SESSION

The committee met in the House Foreign Affairs Committee Room, the Capitol, at 7:30 p. m., the Honorable James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen, we will continue the testimony on the Mutual Security Program. Our witness tonight is Clarence Streit, of the Atlantic Union Committee.

Mr. Streit, do you want to make a preliminary statement of your connection with the Atlantic Union Committee, or proceed with your testimony?

**STATEMENT OF CLARENCE K. STREIT, ONTARIO APARTMENTS,
WASHINGTON, D. C.**

Mr. STREIT. Well, Mr. Chairman, I would like to make a preliminary statement. I understood I was testifying on the Mutual Security bill as a citizen who served many years as a correspondent of various American papers in Europe and the Near East and Africa.

Could I condense this as I go along? I had to make it hastily.

Chairman RICHARDS. I think maybe you could condense it and put the whole statement in the record. And there may be some questions we may want to ask you.

Mr. STREIT. Shall I proceed?

Chairman RICHARDS. Yes.

Mr. STREIT. I wish to testify on the Mutual Security bill as a citizen who served many years as the correspondent of various American papers in Europe, the Near East, and North Africa. The last 10 years of this period I covered the League of Nations and the disarmament conferences for the New York Times.

This experience led me to write a book, *Union Now*, dealing with the basic problem the bill before you tackles.

I also speak as one who recently returned from a crowded 3-month trip to nine European nations: Britain, France, Switzerland, Western Germany including Berlin, Belgium, the Netherlands, Denmark, Norway, and Sweden.

How crowded that trip sometimes was may be seen from the fact that on my last day in Paris I talked with General Eisenhower; President Auriol; Vice Premier Plevin; Jean Monnet; Edouard Bonnefous, chairman of the National Assembly's Foreign Affairs Committee; General Billotte, right-hand man of General de Gaulle. I met with a group that is organizing a French Committee for Atlantic Union, and then I spoke extemporaneously in French for about an hour at a night public meeting.

Among the others with whom I had previously talked Atlantic Union were the British Foreign Secretary, Herbert Morrison; the Conservative leader, Lord Salisbury; Arnold Toynbee; former French Premiers Herriot, Bidault, Reynaud, Ramadier, Mollet; Dutch Foreign Minister Derk Stikker, who is president of the Council of Europe; former Belgian Premier Spaak, who is president of the European Consultative Assembly; President Van Cauwelaert of the Belgian Chamber of Deputies; Foreign Ministers Lange of Norway and Petitpierre of Switzerland; ex-Premier Sandler of Sweden; Walter Hallstein, Permanent Secretary of the West German Foreign Office; Heinrich von Brentano, head of the German Catholic Party; the French and American High Commissioners, Francois-Poncet and John J. McCloy; the French and American Atlantic Council members, Herve Alphand and Charles Spofford; Ambassadors Bruce, Gifford, Murphy, Chapin—but I will exhaust you before I exhaust the list.

For I saw 34 top-level statemen, plus 71 diplomats, including 9 ambassadors and 40 United States diplomats, plus 53 labor, socialist, and trade union leaders, plus 48 Conservative, Liberal, Catholic and

other party leaders, plus 34 European business executives, plus 26 eminent scholars, plus 121 editors and newspapermen—387 persons in all.

I also addressed 32 groups in 7 countries, in all about 2,000 persons. These figures will indicate the basis on which I give my views.

I strongly favor adoption of the Mutual Security bill with no cut in the aid it provides, but I would urge as earnestly as I can that it is not nearly enough to achieve the purpose.

I would say of it what I said on earlier occasions when Congress was considering approval of the United Nations Charter, the British loan, Turko-Greek relief, the Marshall plan, the Atlantic Pact, and the Mutual Defense Act: it is a step in the right direction but it is not nearly enough to do the job the American people want done: to end the menace of dictatorship without another war, and without living forever on the edge of war.

Events have proved that each of these steps was at bottom merely a time-gainer. At each step some of us urged that the time gained be used to explore the possibility of doing the job the American people want done by federating the Atlantic democracies in a union of the free modeled broadly on our own Constitution.

Congress has not yet even begun to explore this way out, though an Atlantic Union resolution, House Concurrent Resolution 26, calling for a Federal convention of the sponsors of the Atlantic Pact to make this exploration, is now before Congress with, I am glad to say, the support of many members of your committee.

Not only has each proposal put before you proved merely a time-gainer, but the time gained has been used so far only to prepare another time-gaining proposal. At first it cost us only money, though more and more billions, to buy time. Those were the years of the British loan and the Marshall plan.

But since then we have been buying time not merely at still greater cost in money but with American lives. Who will say that we shall not have to pay still more in future, if we do not mend our ways and use this precious time to prepare something more than stopgaps?

And so I would urge that you couple or follow up the passage of this Mutual Security bill with prompt adoption of Atlantic Union resolution. I would like to give you a few reasons why.

More important, perhaps, than anything said to me by European statesmen or Americans serving in Europe was the better perspective I think I gained abroad of the great debate and of the problems General Eisenhower faces over in Europe.

General MacArthur is right, I think, in insisting that the administration provide a reasonable plan for winning the world-wide struggle with communism, some hope of victory in the foreseeable future. General Marshall is right, I think, in insisting that the MacArthur plan does not provide that hope.

But what does General Marshall offer as a plan for winning soon, and without war, our world-wide struggle with dictatorship? At best, what is this administration plan but the old policy of containment, which with all the good it has done, has already led us from nonmilitary aid to Greece, through the Berlin airlift to the Korean War, from crisis to ever more perilous crisis?

Certainly among its fruits have been heavier taxes, inflation growing like cancer, military service extending, world war coming nearer and nearer.

In holding that we cannot hope to remove the world Communist menace by a policy of merely resisting aggression, General MacArthur is right. The administration, it seems to me, concedes this major point when its spokesmen keep telling us—and how often we hear it—that we must prepare for some 30 years of world tension.

In other words, they offer us nothing better than everincreasing taxation, evergrowing debt and inflation, ever greater military sacrifice, more and more and more and more—30 years more—of living as we do now, on the edge of world war.

Three points are essential in any strategy that would win this struggle for freedom without another general war.

First, such a strategy must be based primarily on the free Atlantic community.

Second, it must unite that community in the strongest way.

Third, it must, above all, unite and arm the free, not just materially, but morally, with a powerful idea.

It must be based on the Atlantic if only because 97 percent of the people who have practiced individual freedom for even 50 years live around the North Atlantic. About half of them live here in the United States and Canada, the other half in Western Europe. We cannot save freedom by sacrificing half of the freest people on earth.

The American people recognized this when they decided to invest \$16 billion in Western European recovery. They recognized it when they followed this up with the Atlantic Pact. The ECA has done wonders under the wise guidance of Paul Hoffman.

One of the things that most impressed me in Europe was the astonishing degree of recovery already achieved. It could not have been done without our aid. Still less could it have been done without Europe and the Europeans, without land of such resources, without people of such resourcefulness, education, skill, vitality, freedom.

What impressed me even more than our aid to Europe was the strength of Western Europe itself, its intrinsic strength. The essentials of that strength are the people, their freedom, their knowledge and skill, their land, their small towns, their great cities, their factories, means of communication, their renowned universities and schools. Relatively little of their strength viewed as a whole was destroyed by the war and much of the destruction has been already repaired.

The people—there are now more Europeans in Western Europe than before the war. They have lost none of their liberties; they have gained in freedom. I call it a gain when women now can vote in France, and that no one lives in terror now in Western Germany. In some important respects they still know more than we, and are more skillful, just as we surpass them in other important ways.

Their land has hardly been scarred by the war. Flying over it as I did, one can see pockmarks here and there made by bombs that fell in the fields, but you have to look carefully to see such scars; you cannot help but see that almost every acre is under careful cultivation.

The destruction we associate with war was mostly in the cities, ports, factories, bridges. I saw some appalling examples, especially the German cities, as you no doubt have seen.

But I also saw many great cities that came through with little damage: Paris, Lille, Brussels, Amsterdam, Copenhagen, Oslo. And even in Germany the small towns and villages seem to have escaped, generally speaking.

The factories, railroads, bridges, mines—they suffered the most. But here too, even in Germany, many escaped. In general, the damage was such that only a few billion dollars were needed for Europe to surpass in a few years its prewar production.

The great network of paved highways in Europe remains intact. So, too, is one of its greatest assets, its amazing, teeming network of inland canals and navigable rivers. As for such ancient places of learning as the Universities of Oxford, Paris, Brussels, Amsterdam, London, I can testify from personal knowledge, having spoken in most of them, that they were spared by the war.

We have heard too much about what the war destroyed in Europe, too little of the essentials that survived it, too little of the fact that its capital installation still far surpasses that of any other equal area on earth save our own. We have heard too much about Europe being bankrupt, too little about the sterling qualities of our fellow freemen in Europe which allowed them to come so well through an ordeal such as we have never yet had to meet here at home.

And so while the great debate centered American attention on Korea, I returned from Europe with a new respect for its unique importance to freedom.

Where, I ask you, where on this planet could we have gained so soon with so few billions such remarkable results as the ECA has already produced in Western Europe? In other continents where we would have had to build even the roads, build even the schools that teach ABC? Where else on earth could we have strengthened the forces of freedom so much at so little cost?

I come from the West. I was raised in the Rockies. As a transitman I have made the first surveys ever made of many square miles of public land in Montana and Alaska, working for the General Land Office. I know what it means to be in a land where everything is yet to be done, where there is not even a trail, a wilderness where people are few.

I love that kind of country as I do no other, but it has taught me to appreciate how much work has already been done in Western Europe by generations and generations of men, and what a wealth of quick assets freedom already has there.

We Americans needed more than a hundred years to give our land the people and the plant that have made it so powerful. We drew the great bulk of those people and most of the original capital from Western Europe.

We ceased being a debtor to Europe because of the wars it suffered on its soil. But now that we have helped restore European production and made it all the more a prize for Stalin, it would be folly to leave this prize weakly defended.

I come back to the point I made No. 1: Any plan that honestly and intelligently aims to win for freedom without world war—and without making our generation wait tensely through 30 bleak years—any such plan must be based on the Atlantic, and not elsewhere, because the other half of freedom's world is Western Europe.

Now for point No. 2: Any such plan must seek to unite freedom's two halves in the strongest way.

Does anyone really believe we can otherwise win this world-wide struggle in a few years without world war?

Well, how is our Atlantic community now united? We have the Atlantic Pact, and the Atlantic Council, and General Eisenhower and his Atlantic Command.

We have an Atlantic set-up whose structure is as undemocratic as it is unworkable. In creating it we have done something unheard of in this country, or in any other democracy. We have established a military command without constituting any effective civil government to control it. Fortunately, General Eisenhower is a thorough-going democrat—with a little “d.” But that does not make our Atlantic set-up a democratic one, let alone workable.

The Atlantic Council is the nearest thing to a political authority to which General Eisenhower can now turn. The present treaty limits the Council to power merely to “recommend” action to each of the 12 governments now represented in it. Unanimity is needed even to recommend, and each has an equal vote, the United States and Luxemburg.

An eminent man in position to know first-hand told me in Europe that dealing with the Atlantic Council is “like being in a boat in the Atlantic Ocean without any oars and without any helm.”

“Right now,” I was informed authoritatively in Paris where General Eisenhower has his headquarters, “the Atlantic Council can’t settle such a small question as apportioning among its members the expense of General Eisenhower’s staff. What are they going to do when they have to apportion the expense for cannon, soldiers, planes?”

An effective political authority cannot be provided without a new Atlantic agreement. The problem is one of setting up adequate democratic executive, legislative, and judicial authority, responsible to the people who are providing the soldiers. This is a constitutional, not a diplomatic problem. It is the kind of task the Atlantic Union resolution would tackle. The longer the United States delays in thus tackling it, the more we undermine freedom’s great asset—General Eisenhower.

It does not take one long in Europe to understand that he is the one man who is capable of weaving the tough but tangled threads of democracy into a powerful Atlantic life line. Yet today he is in danger of being damned if he does and damned if he does not.

If he does make political decisions he risks suffering General MacArthur’s fate, but if he does not enter the domain of civil authority, essential decisions, as things now stand, will not be taken in good time—and the general risks being blamed for disasters that follow.

There is good reason to believe that General Eisenhower was sent to Europe in the hope that through the magic of his personality he could get the good results from NATO that he did from the wartime alliance. In other words, it was understood his own role would be more political and diplomatic than purely military. It seems to have been overlooked that this assignment was far harder than the previous one. He has to achieve results now without war’s pressure for unity and action, and without even a *de facto* civil authority, such as the Roosevelt-Churchill team, to back him up.

General Eisenhower, one can be certain, quickly felt the fears roused in Europe by the MacArthur affair. Nor can he fail to realize that his present position and relation to the White House are quite different from that of General MacArthur in Korea. Because the troops

in Korea were mainly American, the White House could supply the civil authority which the United Nations Security Council could not effectively provide. But the troops under General Eisenhower as Atlantic Commander, instead of being predominantly American are to be predominantly European.

There is good evidence that after the MacArthur affair General Eisenhower leaned backward to confine himself to the purely military side of his office. And so indispensable work on the political and diplomatic side which it was hoped he could push forward despite the defective Atlantic set-up lagged even worse than before.

We owe it to democracy, and to General Eisenhower, to back him up with an effective democratic Atlantic government. This essential to success cannot be provided quickly. We do need to buy time to provide it. But while we delay to tackle this constitutional task, we are wasting the time that the administration has been buying in Korea at such cruel human cost. The one goal that justifies such sacrifice—world victory for freedom without world war—requires this precious time to be used for much more than arming. The arms will be of little avail if the Atlantic community has no effective government.

So long as the two halves of the democratic world do not trust each other and their own principles enough to tackle the task of constituting that government, so long as statesmen are too "practical" to begin using this way the time they are buying with the blood of young men in Korea, we are not going to awe Stalin into keeping the peace, or develop the revolutionary moral power that can overthrow his dictatorship from within.

To win without world war—and without being bled white through 30 bleak years—we must (I repeat point No. 2) unite the two halves the strongest way. That means we must unite them organically. What American will deny that the strongest way to unit sovereign democracies organically is through federal union? That is the way the people of our own 48 States are united.

Let Congress take no more chances on doing too little too late. Let Congress follow up this Mutual Security bill by passing promptly the Atlantic Union resolution which calls for a federal convention this year to explore with other democracies how far we can go in constituting now that kind of union.

Through that kind of union we can win without war. Let me give you some evidence from Europe on that. I asked several Germans—one of them fought at Stalingrad—if they thought Moscow would attack if we made that kind of union. They all answered substantially this: "Such an Atlantic Union would be so strong that there would be no further danger of war." Those men could not afford to guess wrong. They would pay with their lives if the Red Army moved forward. They live in the American sector in Berlin, where the Red Army needs only suddenly cross an unguarded street to take their lives. You have no doubt crossed that street, as I have, and gone into the Soviet sector and back.

Through Atlantic Union we can win without 30 tense years of ruinous taxation. An eminent man in exceptional position to speak told me in Paris: "I believe if we got effective political union in the Atlantic, we could cut our defense costs in half."

I reported that statement to another eminent man in Washington. He studied it, and then he concluded: "Yes, I suppose we could cut our costs by half if we formed a real United States of the Atlantic."

We Americans alone are spending this year, I understand, \$50 billions on defense. The Government, I hear, plans to spend \$70 billions on it next year. How much more will it be spending in the fifth, the tenth, the twentieth year of those thirty tense years? Think of saving \$25 billions the first year, \$35 billions the next, incalculable billions the following years. Think of the roads, the schools we could then help Asia to build. Think of saving all the lives we would save by winning without world war. Think of the golden age we can enter by being ourselves the men and women who had the courage to unite both halves of the Atlantic in one great union of the free.

Is it not worthy of being explored? Dare we continue buying time with other men's guts if we have not the guts ourselves to use that time now even to explore Atlantic Union?

I come to my third and final point: Any strategy that would win this struggle without war must above all, unite and arm the free not just materially, but morally, spiritually, with a powerful idea.

When you examine the bill before you from this standpoint, its inadequacies become positive dangers. To rely, as we do with it, on money and material alone, can be worse than money and weapons wasted.

If anyone thinks that alliances fail only among autocracies and can be relied on when a democracy pledges its word, I suggest that he reexamine the history of the last 200 years, beginning with the alliances our own 13 States formed among themselves under the Articles of Confederation and their alliance with France. I would refer him also to the section on "Morale," pages 8 and 9, of the pamphlet giving basic data supplied by the executive branch on the present bill. There the executive gives some reasons why it is harder to hold together under freedom than under autocracy.

We must take no chances—but look at the chances we are taking if we fail to accompany this bill with an effort to bind the Europeans to us by the most powerful of political and moral bonds, federal union. When I returned to Europe this year I had not seen it since 1938, before the war. A thing that struck me immediately was that the standard of living of the British and French people—to say nothing of the Germans—was distinctly below their prewar standard. All the reports tell us—and them—that they are now producing more than they did in 1938. The basic data of the Executive stress this point, find it "inspiring," but skip suavely over the human fact that the producers are still worse off than they were. The nearest the basic data come to recognizing it is this gem of gobbledygook on page 14: I quote:

There has also been some peristence in segments of the free European peoples of attitudes retarding rearmament. These include: Reluctance to postpone indefinitely, through large sacrifices for a stronger defense, the fulfillment of hopes and expectations for a better standard of living after a long period of want and frustration * * *

I would like to quote what U. S. News and World Report says in its current issue, July 17, 1951, on that subject:

In plain language United States experts say that practically the entire French defense program has been financed out of the living standards of the lower-income groups.

The groups, I might add, that are going to furnish the soldiers.

We Americans are obviously hoping now to gain a better standard of living than we have ever had, despite the burden of Korea and rearmament. But suppose we had had the war on our soil, had suffered as the Europeans have, and then after 12 years of this were told we were producing more than in 1938—and needed only look at the supper plate, the wife's dress, the shabby house, to see we had not yet regained even our previous standard of living.

Suppose we were working hard all day producing good clothes which we used to wear ourselves, but could no longer buy; they were reserved for export to rich Europeans so that our country could overcome the pound and franc shortage. And then suppose our hopes of regaining our old level of life were "indefinitely postponed," to quote the Basic Data phrase, by those rich Europeans threatening to cut off their aid to us if we did not shift more men, materials and plants to rearmament to help them fight the Communists.

Our generals and diplomats apparently do not think such human facts important as regards a security program. Well, I do.

I think Aneurin Bevan, who is already exploiting this situation in Britain, is no fool in politics, but I am not so sure about those among us who are doing nothing realistic to meet this situation.

The wonder to me is not that the Communist vote has fallen so little in France, but that it has not risen. When I consider the living conditions of the people there, as I found on my return, I think their resistance to communism is proof their individualism is deeply rooted, and that freedom appeals to them strongly. But they and even the British are human. It is idle to suppose that Atlantic rearmament can continue long on the present alliance basis without inflation striking their standard of living even worse than ours.

Well, then, what then of the arms they have, and the bases on which we are staking our security—while leaving all this to depend on a mere alliance between governments? Theirs retain all the national sovereignty ours insist on keeping, and they can change those governments with an election, or as in Czechoslovakia.

Wherever the blame may lie, the net result of United States policy in China was to arm communism in China with American arms. I would put on the record now the belief that if we fail to shift the basis of our security in the Atlantic from alliance to federal union, we shall see the day when many of the arms we send to Europe will also be used against us by communism, after perhaps an interlude of neutrality.

Armed power, money power, material power—put together these are not enough, and left alone they are a fearful danger to those who rely on them. We must arm the free with political, moral, spiritual power or we perish.

Who is to arm us with a powerful idea?

The Defense Department? That is not its side of the security problem.

The State Department? The White House? These have a responsibility in this field, and it seems evident to me that they are not discharging it. They seem to rely mainly on arms. If they were as active and productive in developing the political and moral side of our security as Secretary Marshall and Charles Wilson are on the arms and material side, how much brighter the outlook would be.

But Congress has its responsibility, too. Before there was a State Department or White House, there was Congress. From it came the great Declaration of free principles of government that brought Lafayette, Von Steuben and many others to Valley Forge—to fight with us for liberty when about all we had was moral power. And when the victory thus won for individual freedom was threatened by the chronic fatal malady of all alliances, by the sovereignty each of the 13 States insisted on retaining at the sacrifice of the life and liberty of the citizens—when the free faced on a continental scale then the problem we face on an oceanic scale today, it was again Congress that called the Federal Convention in 1787 to explore whether something better than alliance and league could not be found. The result was our present Constitution, the creation of the Federal Union system under which freedom has grown so strong.

Here is the great idea we need. Freedom alone is not enough. Freedom without union is anarchy, just as union without freedom is tyranny. The great American idea is, in the words of Webster, "Liberty and Union, now and forever, one and inseparable."

It is not enough to urge union on the Europeans. Every time we urge on them what we refuse even to try to do with them, we lose in moral power. We may—though this is very doubtful in my judgment thus get the Europeans to federate, but we shall not thus solve our security problem of binding them strongly to us, morally and politically.

More than one European statesman prominent in efforts for European Union at Strasbourg told me that "Atlantic Union is the only way to keep these efforts from proving vain; it would greatly help them to bear fruit."

"We need Atlantic Union," a famous European diplomat still in active service said to me, "not only for military and economic defense, but for moral recovery, to capture the imagination of the sorely tried people of Europe, to fire them with new hope as only a bold idea can, and above all to give Europe's young people the faith in the future they are hungering for. Europeans are now very receptive to the idea of international federation, but Strasbourg is discouraging many, and there is a great danger of the old evils of nationalism returning as Germany grows stronger."

A former French Premier said to me: "We must not forget the people behind the iron curtain, where communism's deadening yoke is settling down." And I might interject there, I spent many years as a newspaperman covering that area of Europe—Czechoslovakia, Hungary, Vienna, and the Balkans, and so I know whereof he speaks.

He continues: "I have a feeling that time is slipping through our hands. Atlantic Union now could unleash the revolutionary force needed if those people are to free themselves."

I wish you could have heard the tone in which a very influential Belgian statesman said to me: "Don't let another year go by without adoption of the Atlantic Union resolution, or it may be too late."

I found, of course, many shades of opinion in Europe with regard to the Atlantic Union resolution, but the net result was very favorable. Among the doubts expressed, the most widespread and significant was that Congress would ever adopt this resolution. That the United States should thus offer even to explore federal union with them—though the Atlantic Union resolution involves no greater

commitment than exploration—seems to many Europeans too good to be true—"a fairy story," as one statesman witsfully said to me. That shows how its adoption would electrify Europe and arm us with a powerful, morale-making idea.

For Atlantic Union to change from fairy tale in Europe to the next great achievement in American history depends now on Congress, and first of all on your committee. It is for Congress to arm us morally as well as materially, and nothing can prevent Congress but Congress itself from doing this. I trust your committee will decide promptly to follow up this hearing on this Mutual Security bill with a hearing on the Atlantic Union resolution which alone can make that security secure.

Chairman RICHARDS. Thank you, Mr. Streit. You are a very persuasive witness.

I remember some years ago when I think you, more than anybody else, initiated this idea. Some people called it a dream. You were a voice crying in the wilderness then, more or less, but you have a lot of powerful people supporting you now, people like Justice Patterson, formerly Secretary of War; and a former Justice of the Supreme Court of the United States, Mr. Roberts; Will Clayton, formerly Assistant Secretary of State for Economic Affairs; and a lot of other people.

It is a very entrancing idea. I do not know whether it would work or not. If you want to, you can start it off by having the resolution prepared and getting together and deciding the first step to put into effect.

A few years ago nobody would have ever dreamed that the North Atlantic Pact would have ever been put into effect. I want to tell you that I enjoyed your testimony here tonight.

Mr. Vorys will proceed under the 5-minute rule.

Mr. VORYS. Mr. Streit, your statement is a devastating criticism of what we are doing now, and I know we are all looking for a chance to do something better. I was particularly struck with your statement on page 7, about saving of "\$25 billion the first year," through your plan.

The Atlantic Union countries have a gross national production of \$102 billion as opposed to our \$330 billion, we are proposing to spend \$66 billion on armament, including what we are spending for over there. And of course their taxes will average fairly high, not as high as ours, but they produce no such sum.

Nelson Rockefeller pointed out, for instance, that our proposed expenditures for defense were more than the gross national production of Britain.

I wondered if you would sketch out how we would save this \$25 billion the first year.

Mr. STREIT. That was the statement made to me, as I said, by a very eminent man. It was the last thing he said as we were at the door; I do not know what his reasons are. I am sorry I cannot identify him. But his position was such that I gave it the weight that I did there.

There are a number of ways in which it is obvious, it seems to me, that we could save considerably by establishing a common union, a common defense force. We would save increasingly in the way of standardization. You cannot standardize, of course, overnight.

None of these things can be done overnight, but we can get ourselves started at it at this critical time when we are starting to organize an army in the Atlantic. We can either organize it as we are now, in a mold, that is of each nation, as the United States News reports we are actually doing in the very excellent article I cited and would recommend to everyone: "Twelve Bosses Mess Up Eisenhower's Job," it is entitled. Each of these nations is now arming on its own basis. There is little we can do on standardization, while things crystallize on the national basis.

By starting in on the other, the union basis, we can begin really to save by standardizing. The sooner we move over to a union defense force, the sooner we begin, moreover, saving by avoiding duplication of all sorts of weapons, and the sooner we save through our being certain—and each country in the union being certain—that we can count on the rest.

I think that one of the most costly factors at the present time in armament, is the fact that each nation retains the right to interpret the alliance as it sees fit. Each one knowing what happens in those circumstances, having seen in history what has happened to alliances, they must keep a pretty large margin for safety, for the sad event in which some ally interprets the treaty to suit itself, or that some ally decides for one or another reason not to carry it out at the showdown.

For example, take the case, that some ally decides we cannot use its bases. For that case we would have to have a big aircraft carrier and other things of that kind in reserve, and it seems we have decided to build that big aircraft carrier. That sort of expense could be cut down by units. It would be unnecessary. There are many other ways than that, but I would put as most important that we would have an increasing certainty that we would be together.

Now, there is the incidence of the military expense which depends, of course, on the national income or national product, whichever way you want to put it. This union would increase this enormously, it seems to me—and that is the view of Will Clayton and others who are more of an authority on that than I am. It would increase the national production of these union countries as a whole just as the establishment of our own Union has enormously increased production in our 48 States and made it possible for us to have a far greater income than all the countries over in Europe put together. Increasing their production would increase production over on our side as well. The whole level would be raised and the amount we are spending on defense would be a smaller proportion of the total income of the Atlantic democracies than now, which would be another great saving.

Mr. VORYS. We have been through figures a great many times in executive session. Certainly I cannot reveal them, but I mentioned some that we could. There is nothing in the testimony that we have had in this field of economic and military aid, and some of us have been comparing it to what we have been spending, that would come anywhere near that figure of a possible \$25 billion saving. There is no increase that we have had brought before us for Europe that would come anywhere near creating a tax base that would cover that. So I wondered if you had some information that we did not have.

Mr. STREET. Well, I have no official information that you do not have. I was quoting a statement of one who I can assure you I believe is in a position to know. Until the administration is ready

and until the Congress is ready to pursue a union plan, I would not expect that while they have to build up defense on this other system of alliance—I would not expect the proponents of that alliance system to come before you with the figures of what might be saved by a union until they are ready to take that step.

Chairman RICHARDS. The gentleman's time has expired.

Mr. Gordon.

Mr. GORDON. Mr. Streit, I certainly listened attentively to your statement, and it was very interesting to me. I believe it is a great contribution to the bill we are working on.

I have no questions at this time.

Chairman RICHARDS. Mr. Javits.

Mr. JAVITS. Mr. Streit, I too am deeply interested in your statement. I was interested in some of your ideas, such as the idea of a federation on a world basis and the idea of a veto in the United Nations.

I would like to know from you whether you think if we did this now under the forced draft of defense anxiety, if it would not similarly produce a federation or a union on the part of the Communists and that they would react by uniting China and all the vast territories with the 800,000,000 people that they have their hands on right now?

Mr. STREIT. I do not see how they can unite any closer than they are already, for all practical purposes.

Mr. JAVITS. Do you feel that we would, by making an all-white union, as it were, be excluding ourselves from an opportunity to go further and bring in colored people and underdeveloped people, and that we would be sort of debarring them out of a club if we went ahead under this forced draft with this proposition now?

Mr. STREIT. It does not seem to me, Mr. Javits, there would be any such danger now; not any more than we have under the present alliance. We are concerned here with the same group of countries that are in the Atlantic Pact. What I was proposing is we couple up the appropriations for mutual security in that area with an exploration of the possibility of changing the Atlantic political set-up, of backing up General Eisenhower with an effective federal democratic government in that area. It is the same group of countries either way you shape it.

It would not seem to me we would incur any greater danger. I would think we would lessen the present danger considerably because we would certainly make a considerable saving and get more defense at less cost, and then we would be in a better position to carry out a point 4 program with these undeveloped countries.

I think it is highly essential that we should do that.

Mr. JAVITS. I must say I rather go along with my colleague, Mr. Vorys. I think it is a little hard to see where we would get much more defense at less cost unless it is your theory that the Atlantic Pact countries do not trust the Atlantic Pact declaration that we will defend them to the last breath, as we expect they will defend us. Do you think they will trust us more if we had a union and that then maybe they will have more will to fight and throw more resources of morale into a fight, that is one thing. Other than that I feel very strongly about the Atlantic Union—I rather think most of us do—as a step very much in the right direction, but it does seem to me it is claiming a little too much for it to assume that it will have the enormous impact, except—and that is what I would like to hear you on

very much—except on the basis of what is in men's hearts, which is perhaps far more important than the guns, and money, and the pacts. That is what I hoped you would give us a word on.

Mr. STREIT. I tried to stress that in my third point, that all the money we spent and all the arms we give to other countries would be worse than useless if we had not tied them to us tightly politically and militarily. We cannot do it politically except on the moral side, too. As long as we retain the alliance basis, we retain a basis whereby we as well as they can step out at any time. We need only read the history of all these alliances to see what happens.

If any of you can cite to me any alliance in our lifetime, or before that, an alliance, that is, a peacetime alliance, that served the purpose of preventing a world war, or even winning it, I would like to hear of it. If you do not find in history many cases where allies interpreted their solemn agreements to suit themselves when it came to a show-down, I would be very much surprised.

Consequently, it would seem to me an extremely dangerous policy for us, or for any other democracy, to rely implicitly on an alliance between sovereign governments.

Mr. JAVITS. I think my time is up, Mr. Chairman.

Chairman RICHARDS. Mr. Carnahan.

Mr. CARNAHAN. Mr. Streit, I listened with a lot of interest to your very challenging statement. I feel that this committee should give consideration to the Atlantic Union resolution.

Mr. STREIT. Thank you.

Mr. CARNAHAN. I just have this one question. Do you feel that the adoption of the Atlantic Union resolution by the Congress would carry no greater commitment than mere exploration?

Mr. STREIT. I certainly do. I think that is the only commitment involved there.

I have been advocating this, as the chairman was good enough to say, for a number of years, but I would certainly reserve my own right to oppose the results of this convention if I did not think it was the best result. My own thought is the convention result would probably be too weak. It may well be too weak to suit my judgment as to what is necessary at the time it is made.

I would retain the right to reject such a result. Since I would want to retain that right, I would want everyone else to, and so I stress that this is an exploration to see what we can agree on. The result, how far it would go, or how strong it would be, or how weak it would be, is something none of us can foresee at the present time, nor the conditions obtaining in the world at the time when the convention meets.

My own guess is, we are going to face still worse surprises in the future, than we have had, and that in those circumstances it will be highly prudent that we have somebody exploring this union.

If I am wrong, and if the Atlantic Council can turn out to work better than I said it was working—or if the world situation improves—well, then this convention is then going to move very slowly, I would expect. It seems to me all that one can prudently and reasonably do at the present time is to decide to explore what we can work out on our Federal basis with these countries and not anything beyond that.

Mr. JAVITS. Have I time for one more question, Mr. Chairman?

Chairman RICHARDS. Yes, you have.

Mr. JAVITS. What would be the relationship of such a union to the United Nations?

Mr. STREIT. Once made, the relation of that federation to the United Nations would be, broadly speaking, either that of our own federation, the United States of America, to the United Nations, or that of the Canadian federation to the United Nations. That is, the Union would be a member there, I would assume.

Mr. JAVITS. That is all, Mr. Chairman.

Chairman RICHARDS. Would it be just another regional arrangement under the authority of the United Nations?

Mr. STREIT. It would not be under the authority of the United Nations in any way, Mr. Chairman.

Chairman RICHARDS. If it was what you wanted, it would be within the United Nations.

Mr. STREIT. Oh, very decidedly. I believe we should uphold the United Nations. I believe it is the best way of obtaining universal coordination at the present time. We must have some universal organization.

Chairman RICHARDS. Mr. Herter.

Mr. HERTER. Mr. Streit, you made a very eloquent statement here and one very apropos of the resolution a good many of us have been supporting to carry out the exploration you want. But, as you visualize that exploration you do not necessarily see a complete federation in all respects as being the immediate outcome, do you? There may be intermediate steps where bit by bit a nation would be willing to give up a part of its sovereignty to a monetary union or some form of united command that actually has authority to function, because certainly the one you are speaking of does not have the authority to do so at the present time.

Am I correct in my assumption? It does not necessarily mean you have to go whole hog at once in an exploratory process?

Mr. STREIT. Exactly. I think it would be absolutely necessary that there be certain transition measures in the field of defense, economics, monetary, or whatever you will. These things we can make the decision to federate in a convention. We can federate some of them afterward, but whatever we decide, it is going to take a considerable time to carry the decisions out. That is also true the measures you take in establishing an Atlantic Army or an Atlantic Pact are concerned. Implementing them, that takes time.

I would quite agree we cannot do these things overnight. All we can do overnight or quickly is to make decisions: The only thing, it seems to me, that would have an immediate effect on the world situation, is on the psychological side by the line of the policy that we develop in this of deciding how far we can go in exploring. The very phrase "how far we can go" in the Atlantic Union resolution indicates we may well not be able to go all the way in the very beginning.

I would add, however, in my serious judgment, we had better aim at going all the way to a union on the defense, foreign policy, economic and monetary side.

If our real purpose is to prevent a world war and do it within the foreseeable future we had better make our mistakes on the side of being too strong, for once, in democratic history, rather than repeat

the errors of the British and the French, and our own errors in the past, of doing too little too late.

I would not expect, however, that view of mine to triumph in the convention, except if there were some very serious disasters occurring.

Chairman RICHARDS. The time of the gentleman expired.

Mr. HERTER. Thank you.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. No questions, Mr. Chairman.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. It is not quite clear to me, Mr. Streit, whether you have in mind a military alliance or union, or ultimately, when carried to the conclusion which you visualize, that this would become an integrated government of which each of the present nations would be one component part?

Mr. STREIT. I would aim—what I mean, Mr. Reece, by a federal union, is the system we have, broadly speaking, in the United States, or in Switzerland, where you have government provided with a central government, as the Government here, and the State governments; both elected by the people, but with their jurisdiction divided, and one operating in this field and the other operating in the other fields.

Mr. REECE. Here we have our Federal Constitution and each State is, in its basic mold, subordinate to the Federal Constitution. While the Federal Constitution, as it was drafted, outlines certain areas of interest that belong solely to the State, still no State constitution can contravene the Federal Constitution. So that the Federal sovereignty becomes the supreme sovereignty of the land.

In this North Atlantic Union of which you speak, is it to be sovereign?

Mr. STREIT. In the fields which would be transferred to it from each of the national governments it would be sovereign, just as they would remain sovereign in the fields left to them.

It seems to me, Mr. Reece, that the important thing there is not so much the sovereignty of the state but the sovereignty of the citizen. When our forefathers made our Constitution they did not lose any of their sovereignty in doing this, but simply shifted the certain powers from the legislature in Richmond, or Virginia, and Pennsylvania, North Carolina, and New York, to our present Federal Government, but they continued to choose the Representatives, and continued to have the same voting power in electing gentlemen to Congress as they did to the legislature.

Mr. REECE. I would like to observe as a result of the statement you made earlier here that our high standard of living and our great productive capacity, our great system of enterprise of free labor and free management, I think is based on the principle of government which was established by our forefathers of preserving liberty and individual opportunity, as a result of which every man can become as prosperous as his ability, initiative, and determination might permit.

Mr. STREIT. I agree with you completely.

Mr. REECE. This is the only government so far where that principle is completely preserved, whereby the government is completely subservient to the people and not the people to the government, and that is the one thing I would hate to risk.

Mr. STREIT. I would hate to risk it too, very much. I fear by following the old European system of alliances and that sort of inter-

state agreement we are endangering it very much indeed. I might add, there are certain other peoples, for example, Switzerland, where I lived for 10 years as a newspaperman, and I would say the Government of Switzerland is very much subservient to the people.

I am glad that you stressed that point in our own Constitution here, because I think the important thing in all our calculations is to keep that sovereignty of the citizens supreme. If an exploration survey of this Atlantic Union should result in any proposition that would be sacrificing the basic principle of the sovereignty of the citizen, I would certainly be against any union on that basis.

I do not anticipate any such result at all. I anticipate through this exploration the extension of this system that you spoke of, across the Atlantic.

Chairman RICHARDS. The time of the gentleman has expired.

Mr. REECE. Thank you.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Mr. Streit, I appreciate your statement tonight. We have had interesting talks on this subject before. I think certainly we should not close our minds to the concepts that you have outlined here, but rather should explore them. I take some exception to some of your statements, but just on the basis that I think they are a little bit extreme. For instance, the statement about the Atlantic Council not being able to settle such a small question as apportionment among its members of the expense of General Eisenhower's staff. If I understand it correctly, the members from each country on General Eisenhower's staff are paid by their respective countries. In any case I think they can settle such questions as that without any difficulty; but whether or not they can do the big job they are supposed to do is a different question.

As was indicated a while ago, it would take some time for even the Atlantic Union to get into full-scale operation. That is a little bit inconsistent with the suggestion that this Union could save \$25,000,000,000 the first year. I cannot quite see how the Atlantic Union would cure all these economic evils of Europe, such as raising their standard of living, and so forth, so quickly, or so much better than is being done at the present time under the present conditions. However, even so, I still think your basic concept is worthy of exploration by our committee.

I would like to ask you, how this constitutional convention would work, and where it would meet; who would go to it, and how would the members be selected; who would take the leadership, and what would be on the agenda; and what would be the real objective of such a convention?

Mr. STREIT. That is quite a series of questions, Mr. Battle.

Chairman RICHARDS. Those questions can extend his period for an hour and a half.

Mr. BATTLE. Anyway, I got my questions asked in the 5 minutes allotted to me.

Mr. STREIT. Before that, Mr. Chairman, there are a number of things I would like to clarify. On the statement I made about the apportionment of expenses it was a quotation from a person who I said was in a position to know. I took his word for it. It is borne out, incidentally—

Mr. BATTLE. I had better question him instead of you, then.

Mr. STREIT. But that is another thing. As for the standard of living in these countries and the savings on armaments, on defense, and so forth, I did not think I meant, and I certainly would not mean, that that is for next year, or anything like that. It is in the first year we really got the union under way. That, just as the establishment of an army, or any action, takes time, but it is one thing whether we are facing a period of 20 or 30 years and going, as we have been doing in the last 5 years, deeper, deeper, and deeper into expense, or whether we are going into one that is giving us more defensive power at a decreasing cost. That is the point I would think is before us, and not the exact figures here or there.

Now, as to the convention. The details as to the convention are not put into the resolution. It has been left either for the committee here or the Executive to work out its details. I have my own personal ideas on how that should be done. If you wish me to go into them at this time, I would be very glad to.

Mr. BATTLE. I doubt if we have time in 5 minutes.

Mr. BURLESON. I shall be glad to yield my time to Mr. Battle.

Chairman RICHARDS. If you wish, Mr. Streit, and I am sure the committee would give you unanimous consent to do that, you could put a statement in the record to add to your oral statement about that. That might be worth while.

Mr. STREIT. I would be very glad to, Mr. Chairman.

Chairman RICHARDS. Without objection, that will be done.

(Mr. Streit subsequently decided to postpone submission of the statement referred to until committee consideration of the Atlantic Union Resolutions.)

Chairman RICHARDS. Mr. Burleson.

Mr. BURLESON. I will yield my time to Mr. Battle if he wants more time.

Mr. BATTLE. Thank you. I believe that statement will take care of it. We are going to have subcommittee hearings on this anyway.

Mr. BURLESON. I have no questions.

Chairman RICHARDS. You liken this superunion to the United States, Mr. Streit, and the Federal Union and the States. I hope it will not develop like ours has, where a State, even the great State of Texas, with all those longhorn cows, is not even a knot on the log in this Federal Union we have now. There are not many States' rights left. Is your Atlantic Union going to eat up the rights of the United States like the Federal Union is eating up the rights of the States?

Mr. STREIT. Mr. Chairman, I think that this union is going to fortify States' rights, because when you establish these Federal agreements across the Atlantic with the French, the British, the Dutch, and the Belgians, you have got some groups there that are going to be very tenacious about holding on to their French and Dutch language and their local customs of one kind or another. They are going to be just as anxious as your State, if not more anxious, to prevent being dominated by ourselves or anybody else.

I think it is going to give new life, really, to the States' rights doctrine, and it will tend to restore the balance that we began with in our country--this principle of balance between the rights of the Federal Government and the rights of the States.

Chairman RICHARDS. I wish you would talk to these Yankees some more.

Mr. STREIT. Give me a chance, Mr. Chairman, and I will do it.

Mr. BURLESON. I want to say Texas has difficulty in keeping the other 47 States in line.

Mr. BATTLE. Since the answer is going to be extended, may I ask him another question along that line, Mr. Chairman?

Chairman RICHARDS. Yes.

Mr. BATTLE. Do you envision an international judicial system and police force, and an international legislature; and, if you envision an international legislature, does that mean we are going to have municipal, county, State, national, and international taxes?

Mr. STREIT. I would think that this convention would certainly have to explore that, and in my view it certainly would come out with a proposal that whatever power is established in the Atlantic Federal Government, it would have the right to tax also. I do not expect that to be popular with many people, but I think it would be a great deal more popular than the future we face at the present time of a greater and greater load of taxes.

Personally, I would rather fill out one more income tax form, or pay taxes to some other authority, if the total amount I was paying in taxes to all government was cut down, and if at the same time I felt more secure for the system of freedom that we have here. If I felt that our freedom was secure against invasion and against war and all that sort of thing, I think we would be glad to pay a little bit more in taxes, in order to have a little security in that field.

What we are now getting in this regard—I can give you a very vivid example of it from a thing I saw today. I was up in New York State and spoke at Colgate University this morning. I drove over from Syracuse. Along the road there was a great billboard, and it said, "This road will be closed to traffic in case of atomic attack. It will be reserved for the military."

Well, a policy that we are pursuing in which we are spending billions and billions more, taxing each citizen more and more each year, and the net result after winning the Second World War is that we have these posters up on our highways, is a very bankrupt policy, I would say.

Mr. REECE. May I say something? I have one question, sir. I hope I am not being too burdensome, but when was the Atlantic Union formed?

Mr. STREIT. In March of 1949, I believe, the forming of the Atlantic Union Committee was announced.

Mr. REECE. Were you associated previously with a predecessor committee of the same general purpose, and if so, what was it called?

Mr. STREIT. I have been associated since 1940 with the organization called Federal Union, Inc.

Mr. REECE. What is the purpose of that?

Mr. STREIT. Its purpose is to educate the public in the principles of the United States Constitution with a view to applying them between democratic nations to secure peace.

Mr. REECE. Did that look forward to having a Federal union of the world at some time?

Mr. STREIT. Eventually, at long last; yes. We would begin by applying these principles where we could, and as time went on, just as the 13 States grew into 48, the nucleus could grow into a universal government.

Mr. REECE. It occurred to me to ask why you diverted from the objective of the Federal union of the world to the concept of an Atlantic union?

Mr. STREIT. I would not say I had. The object I took in my book *Union Now* was to preserve freedom, and to do that it would seem to me eventually we must have a free world government on the lines of the United States' Federal system. I never believed, and I never maintained there, that we could do that right away. I said, then as now, we must begin by federating the Atlantic democracies, so I do not consider I have been diverted at all.

This is what I have been urging for many years.

Mr. REECE. So this is to be one step toward the world union, then?

Mr. STREIT. I would hope that eventually it would lead to a world union. I do not know how far ahead. It would seem to me every patriotic American should look forward to the time in the distant future in which we had all the world so organized as the United States is for we then would have a peaceful world. We would have, too, a world with a high standard of living all around. But, as I say, it takes a long time to accomplish.

It would seem to me it would be a goal that we should look forward to reaching, and that we would view with great pride the day when the principles our forefathers established here, that you were speaking of earlier, should thus be established throughout the world, be adopted by every people on earth, and followed. What greater tribute could we have to our system of government?

Mr. REECE. Then in an Atlantic union, or world union, when it was finally perfected in line with your ultimate thinking, we would just be one member of the union, on a par with each of the other members?

Mr. STREIT. We would be as Tennessee is now in the United States, a member of the Union; yes.

Mr. REECE. There are some other thoughts that occurred to me in connection with this whole problem, but we will not have time now to go into that.

Mr. STREIT. I would like to add there that the resolution I was urging you to couple to or follow up in the security bill is one that is to explore how far we can go in that direction—that is, in the direction our forefathers took when they established our own Constitution. How far can we go in achieving a more perfect union? How far can we go at the present time? How far we can go no man can say.

Mr. REECE. But at that time the representatives from the Thirteen Colonies were together agreeing upon a course of action. To what extent have other nations of the proposed North Atlantic Union been taking the initiative in formulating such a plan? Is a similar resolution being considered by the parliaments of the other countries in the North Atlantic?

Mr. STREIT. A similar resolution has already been adopted by the Senate in Canada, with only one dissenting vote. That was last year. I think a motion along similar lines was introduced in the House of Commons some time ago. I am not quite certain of the time, but I believe that to be the truth. I think such moves are under consideration in some other governments there, but have not been taken.

Mr. HERTER. Will the gentleman yield?

Mr. REECE. I yield to Mr. Herter.

Mr. HERTER. We can always reserve the right to divide ourselves into 48 separate States, just as the State of Texas has reserved the right to divide itself into five States at any moment.

Mr. STREIT. Right. They have not used that right, though.

Mr. HERTER. They have not exercised that right, but they can still hold it over everybody's head.

Chairman RICHARDS. What right was that, Mr. Herter, that they are reserving?

Mr. HERTER. I was talking about the State of Texas.

Chairman RICHARDS. The gentleman from Texas sent me a note, asking if they could reserve their tideland rights in Texas if we should be under a world government?

Mr. STREIT. I think when he gets out into that tide, he is getting over my head.

Mr. VORYS. Mr. Chairman.

Chairman RICHARDS. Yes, Mr. Vorys.

Mr. VORYS. There has been a suggestion that our speaker have leave to file answers to questions. I would like to suggest this: Mr. Streit in his dozen or more years of thinking and speaking on this ought to know more about it than anybody in the world. Every so often when I get to hear him and his presentation, as this evening, it contains a devastating criticism of what is going on now, but a rather amorphous statement of what might follow. I frankly think that that \$25,000,000,000 savings the first year is a bunch of bunk.

If that is all you have got to back it up, that is not an argument for it.

However, I thought it would be helpful if he would receive permission to file a proposed outline or summary of the constitutional provisions that he would suggest as the goal of the exploration of Atlantic Union if we would explore it. I might say that we have around the table here illustrative programs under this \$8,500,000,000 bill. Our Government is reluctant to make a statement of what they are going to do in a particular country for fear it will be considered as a commitment by our Government, but they provide us with what they call illustrative programs.

I feel confident that you would not expect to prophesy what will happen, nor would you prophesy for sure what should happen, but it would be helpful in these hearings if those who searched through them could find something a little more constructive and concrete as to where the exploration might end up an "illustrative program." It would answer some of the criticisms that have been made here.

It would certainly provide food for thought, and I would suggest if the committee is willing, that Mr. Streit be permitted to file such a statement.

Mr. STREIT. I am not quite clear as to just what points you wanted covered, Mr. Vorys.

Chairman RICHARDS. Do you know Mr. Vorys pretty well?

Mr. STREIT. Yes, I do.

Chairman RICHARDS. Well, he is one of these men who loves to tear things apart and see what makes them tick, you know. That is the reason why he wants you to put it in the record, and if you could it would help us a good deal.

Mr. VORYS. I would think that Mr. Streit, after a dozen years, would have back in his office, or maybe up his sleeve here, the ideal

plan and say, "Well, if you want to know what I think it ought to be, here you are."

Mr. STREIT. You mean as regards Atlantic Union, Mr. Vorys?

Mr. VORYS. Yes.

Chairman RICHARDS. I thought your main trouble was to find out where the \$25,000,000,000 went.

Mr. STREIT. I would be glad to develop that point too, because that was not my statement. I was quoting a man whose judgment I would have a great deal of faith in. I do not know how he got it. I think it does deserve weight.

Mr. VORYS. I have seen some remarks which you made, and others made, on what the representation formula, tax formula, and reservation of rights should be, and I think it would help if we could have such an outline of the whole thing and what it would be, on a couple of pages.

Mr. BATTLE. Mr. Chairman, I understand we have a subcommittee that is going to delve into the question of the Atlantic Union.

Chairman RICHARDS. That is right. We are going to hear Mr. Streit a little later. I think we should hear from the other witnesses now.

Mr. STREIT. I would be glad to do it either way. As I said, we were hoping you would bring this Atlantic Union resolution up for hearings after you finished the present hearing and we can go into these questions then.

Mr. REECE. Seriously for the moment, if I may make one reference to something which I do not much like to see go in the record without some cognizance being taken of it. That is the statement that was made with reference to the United States buying time with other men's guts. I do not think we ever bought it with anybody else's lives. I do not care for an explanation, but that is a statement which I hardly think is proper to go in a record of a hearing of a Congressional committee of the United States of America.

Chairman RICHARDS. What do you think of that, Mr. Streit?

Mr. STREIT. I think we are buying time in Korea with the lives of other men.

Mr. BATTLE. Our own men too.

Mr. STREIT. I mean our own men, of course.

Mr. REECE. You did not say our own. You said "other men's lives."

Mr. STREIT. I see your point. I did not mean other nations', or anything like that. I meant we here in Washington.

Mr. REECE. I resent that very deeply, personally and officially. There has never been a time when I bought time, or anything else, with somebody else's guts.

Mr. STREIT. I was not—

Mr. REECE. And I do not think there is a Member of Congress who has done so. I believe that is a reflection on the Congress of the United States.

Mr. STREIT. I was not certainly aiming to reflect on you personally, or any member individually.

Mr. REECE. It certainly does, to say a Member is buying time with other men's guts.

Mr. STREIT. When I said that I was referring to us here in the United States. It seems while we are buying time there are people

who are losing their lives, and Americans are losing their lives, while we are trying to find a way to prevent a war.

Mr. REECE. I did not get that impression. It did not strike me as being very appropriate.

Mr. STREIT. When I said "We", Mr. Reece, I am part of that "we" certainly as much as anybody here. I do not think that is a reflection on anybody.

Mr. REECE. But your explanation made it worse.

Mr. STREIT. Well, I did not intend it to. It does not seem to me to be in that sense. The point is, what are we doing with the time we buy, however we buy it.

Chairman RICHARDS. I suggest you look that over.

Mr. Streit, we thank you very much for coming. I was about to adjourn the committee, but I find we have one more witness.

Mr. STREIT. Thank you very much, sir.

Chairman RICHARDS. The next witness is Mr. L. F. Hankins, Jr., representative of the National Student Young Men's and Young Women's Christian Association.

Mr. Hankins, are you here tonight as an official of this organization, or just a representative?

STATEMENT OF L. F. HANKINS, JR., NATIONAL STUDENT YMCA AND YWCA

Mr. HANKINS. I am a representative for this particular meeting.

Chairman RICHARDS. For this particular meeting?

Mr. HANKINS. Yes.

Chairman RICHARDS. You have a prepared statement you wish to make?

Mr. HANKINS. Yes, sir.

Chairman RICHARDS. Will you proceed, sir?

Mr. HANKINS. Gentlemen, I appear before you on behalf of the National Student YM and YWCA's to express our interest in and support of the point 4 program of technical assistance to underdeveloped areas and the appropriations to make this undertaking effective.

I might state for clarity here I am not authorized even to be illustrative as to the military and the ECA sections of this particular bill.

My authorization stems from our National Assembly held this year at Miami University in Oxford, Ohio, at which 1,100 delegates from 43 States and observers from 25 foreign countries came together to discuss the problems and future progress of the "Y." In addition to deciding our program emphasis for our own personal development as Christians, we discussed our participation both as individuals and an organization in higher education, the church, and our Nation and the world. In this latter connection we passed a number of hotly debated resolutions about the policies we felt this Nation should follow. The delegates of the some 750 colleges and universities that make up our movement were, however, very united in their endorsement of the point 4 program as a positive step toward peace and as a clear embodiment of Christian principles in national foreign policy.

Despite our lack of accord on such issues as our policy toward China, where the Christian point of view is certainly as elusive as any other, it is not at all surprising that we could unite in support of the

program for aid to underprivileged people no matter where they were in the world. Certainly as long ago as the pronouncement, "Inasmuch as ye have done it unto one of the least of these My brethren, ye have done it unto Me," the concern for those less fortunate than ourselves has been a fundamental part of Christianity. In this spirit Christians sent missionaries throughout the world to relieve suffering as well as to preach the Gospel.

There has been and will continue to be much done along the lines of technical assistance by Christians working through private channels, but it is highly gratifying to watch the development of such a constructive program by our Government too. We have come to realize that the needs of the modern war-torn world are so great that they can only be met by the government of free nations working together.

One of the great values of the point 4 program is that it gives us the opportunity to work together; to work with and not only for others. As the necessity of accepting alms has often tended to destroy the self-respect of those receiving them, the need of one nation to accept constantly the bounty of another has in many ways jeopardized the progress of international affairs. The provision of a portion of our great store of technical knowledge and material possessions in such a way that we and other peoples can work together to create a better world can hardly fail to be conducive to creating a peaceful world.

Peace as much as charity is a fundamental concern of Christians. Considering the forces at work in the world today it is definitely not likely to become peaceful so long as two-thirds of its people go hungry most of the time.

To establish lasting peace the economic as well as the political causes of unrest must be settled. While we recognize the need for military preparations in the present emergency, we feel this same emergency makes it even more imperative that we undertake a long-range program of assistance to build up the economic well-being of all peoples.

We deplore the current tendency to link and coordinate our defense and assistance efforts to the extent that we tend to help those who promise to help us in event of conflict. My generation will carry its part of the burden of protecting the free world, but we want to begin constructive programs apart from military defenses that will tend to build an even safer world in the future. We feel that it is only on a foundation of continuing progress toward more abundant living for all people everywhere that we can hope for some sort of lasting security.

The point 4 program as it has been set up has a good framework and in the isolated cases in which such assistance, both technical and financial, has been applied the ability to make great progress has been clearly demonstrated. However, when he announced it as the fourth point in his inaugural address, President Truman proclaimed a "bold new program" to eliminate suffering and shortages throughout the world. As the program has been established by Congress, it appears that instead of being bold and new, it may become the familiar "too little and too late" and possibly extended in the wrong manner as an additional note of woe, and I think now it may be trite in this committee.

The sum total of the world's sufferings is, of course, enormous and not to be expected to disappear in the face of even an all-out effort.

on our part in the immediate future. Because these problems are so enormous it is necessary that we undertake large-scale efforts if we are hopeful of making progress in solving them. Soon after the announcement of the point 4 program the Brookings Institution in an undefined manner estimated that it would take an expenditure of \$35,000,000,000 to make real progress toward developing the backward nations. On a rather small allotment the United Nations Food and Agriculture Organization undertook a survey of the world's food needs as one of their first projects in the UN technical assistance program, and produced the more concrete figure of \$4.4 billion as the amount necessary to supply minimum food needs throughout the world through technical and financial development.

The May 14 edition of the New York Times carried an estimate made by three UN economists that an investment of \$3,000,000,000 in technical assistance would facilitate an additional private investment of some \$19,000,000,000, and that this would make a sizable impression on the world's problems.

Mr. Paul Hoffman, in his book, *Peace Can Be Won*, estimated that some \$2,000,000,000 would be necessary for point 4 and Marshall plan projects apparently without foreseeing much new development. It seemed to me as I read it this was mostly for the projects now in being. We could not foresee any great expansion under the outline he gave in his book. From these we can at least begin to see the scope of what we undertake.

Last year our expenditure on the point 4 program was \$34.5 million. Of this \$12,007,500 went to make up our part of the UN program, another \$7.6 million went into current projects of the Institute of Inter-American Affairs, and a half million to the Department of Commerce for the development of private investment. Thus, after salaries we provided \$14.5 million to initiate our bold, new program and the UN spent about \$20,000,000 in a similar fashion on the same problem.

Altogether there was approximately around \$250,000,000 or \$300,000,000 spent in what we call the undeveloped areas, if you include in it ECA projects which went to places like Burma or, through Britain, to places like Africa.

There are already some 278 specific requests for aid before the UN, so it is not necessary to look around for a place to begin.

Soon after we began our point 4 operations, Assistant Secretary of State Thorpe explained what we hoped to accomplish in the UN. He made it plain, as we in the Y hope will always be true, that in keeping with the first of President Truman's four points we expected to extend such aid in complete accord with UN policies. His description of our proposed program elicited two interesting comments—that of the Indian delegate, Sir Benegal Rau, that the aid would be preferably extended through international agencies; and that of Dr. Charles Malik of Lebanon—not to be confused with Russia's Mr. Malik—that the program should be on a long-range basis seeking to fulfill specific goals if it was to be most successful.

Both of these points of view seem to us to be sound; it is necessary that we work through the United Nations and toward the realization of certain limited projects to achieve optimum effect.

Most recent developments in our program have seemed to be to implement a policy of pressure rather than one previously prepared.

For example, in the report of the National Advisory Board on International Development under Mr. Nelson Rockefeller which was established along with the point 4 program a year ago, it seemed to me that there was considerable stress on how much technical assistance would help our mobilization efforts. One chapter heading was "Let the left hand know," which I believe is taken from that section of the Sermon on the Mount in which Jesus said that when we gave alms we should "let not the left hand know what the right hand doeth" when we are giving alms.

President Roosevelt, speaking on the eve of the Second World War, said that our Nation had a "rendezvous with destiny." Gentlemen, your generation, with a lot of help from mine, has kept that rendezvous. Now, if one would pay heed to countless commencement speeches and similar observations, what was a rendezvous has turned into a lifetime affair for my generation.

We realize the vast problems we face, and the unlikelihood of the immediate establishment of lasting peace. We feel, though, that it is vitally important that we begin to work not just to contain communism, but to build up the constructive forces which ultimately are our only avenue to any kind of security. We realize the vast pressure on you gentlemen to cope with just the immediate needs but we feel that we are not expecting too much in asking that you make a substantial effort to build in partnership on an equal basis with other peaceful nations a sounder, safer world, and that this be apart from our current defense projects.

Chairman RICHARDS. Thank you, Mr. Hankins. We appreciate your coming before us tonight and letting us have the viewpoint of your organization. You are a very forceful reminder to us that there are other forces in this world far more powerful and greater than guns and bullets, if we would just use them.

Are there any questions?

Mr. HERTER. May I make just one comment?

There was one rather pessimistic note in here on page 2, when you say,

As the program has been established by Congress, it appears that instead of being bold and new it may become the familiar "too little and too late" and possibly extended in the wrong manner as an additional note of woe.

I think you might be interested to know in a recent part of our hearings Mr. Foster of the ECA, when questioned in respect to problems of developing programs in southeast Asia, was asked the question, "Is your problem one of money or one of personnel," and without hesitation he said it was a question of personnel.

We just do not have enough trained human beings in this country to develop the programs as rapidly as I know many impatient men want. Many people think that, if you throw money in quickly somewhere, a lot can be done.

Mr. HANKINS. I evidently failed to make myself as clear as I might, because I was not speaking in terms of haste. I know this type of program can be developed very frequently slowly better than it can by throwing out too much money too fast.

We feel a substantial amount, something perhaps in the nature of \$500,000,000, would begin this program in a way so that it would slowly build up to something that would begin to end some of these

shortages. However, here we were speaking of an additional note of woe of the tendency to make it become linked with our defense efforts, and as something that we as a single nation undertake by ourselves, rather than working through the United Nations as much as is possible.

Chairman RICHARDS. Are there any other questions?

Mr. VORYS. Mr. Hankins, you said, "Your generation, with a lot of help from mine, has kept that rendezvous."

What we did on point 4 the past year, based on our present budget and fiscal situation, was not done at all by our generation. Your generation is going to have to pay for it when you get around to paying the national debt.

Mr. HANKINS. We are aware of that, Mr. Vorys.

Chairman RICHARDS. Anyway, you are putting us in another generation. Is that right?

Mr. HANKINS. Now, I would not stress it too much. We can meet on common southern ground.

Chairman RICHARDS. Thank you very much.

The committee stands adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 9:20 p. m., the committee adjourned until 10 a. m. the following day, Wednesday, July 25, 1951.)

(The following was submitted for the record:)

AMERICAN CHRISTIAN PALESTINE COMMITTEE,
New York, N. Y., July 24, 1951.

HON. JAMES P. RICHARDS,
Chairman, Committee on Foreign Affairs,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN RICHARDS: You have been kind enough to inform us that, in lieu of oral testimony, your committee would accept a written statement from us, as spokesmen for the 20,000 members of the American Christian Palestine Committee, regarding the Mutual Security Program now under consideration by your committee. We wish, therefore, to place on record here the views of our committee with regard to title 2—the provisions relating to economic assistance to the Near East and Africa.

The emergence of the State of Israel in the Middle East has evoked our deep sympathy and support. For the return of the long-dispersed Jews to their ancient promised land is a manifestation of the divine purpose working through human history. Moreover, in the terms of our own time and its problems, the rebirth of Israel has a profound significance: It brings to a dormant region of the earth the best in the democratic tradition of the west.

In an area still struggling to free itself from the vestiges of feudalism and tyranny, the new Israel is being built on a basis that is sound from the social, economic, and ethical points of view. It is mature enough in its political understanding to be free from the irrational xenophobia that is one of the underlying causes of unrest from Iran to Egypt. It is, we are convinced, a natural ally of the free nations to whose security in the threatened Middle East it can contribute in no small measure by means of its uniquely high standard of technological skill and its trained and hardened youth.

American aid to Israel seems to us thoroughly consistent with the tenor of our entire foreign-assistance program in recent years. Israel is a young and promising democracy: It needs and deserves our help and will richly recompense us. But our help is needed with special urgency, because of the vast, humanitarian task Israel has taken upon itself in absorbing hundreds of thousands of Jewish refugees from Europe and the Middle East. Even a well-established economy could not easily withstand the impact of this sudden expansion. Israel, for all its present difficulties, has in the past proved its ability to make swift economic adjustments. We believe, therefore, that it is imperative that Israel be included in the Mutual Security Program and that the sum finally assigned to it be fully commensurate with its great needs and great potentialities. We append herewith a letter sponsored by our committee and widely published in the press throughout the country,

in support of the McCormack-Martin and Douglas-Taft bills to authorize a \$150,000,000 grant-in-aid to Israel.

It seems to us fitting and proper that the yardstick of great need be applied, as well, to the grants to be assigned to the Arab countries and the resettlement of the Palestine Arab refugees. The sensitive and troubled area of the Arab lands needs large-scale irrigation and reconstruction programs which alone can raise the standard of living of their depressed masses and ensure stability and peaceful development.

As the Clapp Commission has pointed out, the solution of the Palestine Arab refugee problem can best be worked out in conjunction with the execution of needed public-works projects in the Arab countries. We have been deeply moved by the plight of the refugees, which many of us have seen and studied at first hand and which seems to us particularly tragic because it need not have been, and was not desired nor caused by the new State of Israel. The passage of time and the changes it has effected has made repatriation of the refugees so difficult that it is almost impossible and far from desirable. We believe with the United Nations Conciliation Commission for Palestine that, "having the best interests of the refugees themselves in mind," we must concentrate on the resettlement of the refugees in the Arab countries. We cannot overemphasize how great a contribution to Middle East peace and stability will be made by successful resettlement along these lines.

We trust that out of your deliberations there will emerge an adequate program of American aid to the Middle East, as a whole, to the Arab refugees, and to the dynamic, new democracy of Israel, in particular.

Respectfully,

THE MUTUAL SECURITY PROGRAM

WEDNESDAY, JULY 25, 1951

HOUSE OF REPRESENTATIVES,
COMMITTEE ON FOREIGN AFFAIRS,
Washington, D. C.

The committee met in the House Foreign Affairs Committee room, the capitol, at 10 a. m., the Honorable James P. Richards (chairman) presiding.

Chairman RICHARDS. The committee will come to order, please.

Ladies and gentlemen: We will continue the hearings on the Mutual Security Program.

We have with us this morning the Honorable Edward G. Miller, Jr., Assistant Secretary of State for Inter-American Affairs; Mr. Kenneth Iverson, Director of the Institute of Inter-American Affairs, Department of State, and Gen. Charles L. Bolte, Chairman, Inter-American Defense Board, and Army Deputy Chief of Staff for Plans.

I want to say, as the members know, from time to time it will be necessary we will have to go downstairs to answer quorum calls and all of the members of the committee cannot be here at the same time. That is true today. We are going ahead with the proceedings.

Mr. Secretary, I believe it has been suggested that General Bolte testify first.

STATEMENT OF HON. EDWARD G. MILLER, JR., ASSISTANT SECRETARY OF STATE FOR INTER-AMERICAN AFFAIRS

Mr. MILLER. What I would like to do, Mr. Chairman, is this: Both General Bolté and I have a prepared statement. In my statement I was to testify initially on both the military and economic aspects of the program. My request is that we take up solely the military part first, and then let General Bolté continue.

Chairman RICHARDS. I did not know you were going to testify on that.

Mr. MILLER. I have a brief political introductory statement covering both.

Chairman RICHARDS. Mr. Secretary, proceed in your own way, and state what phase you are going to take up first for the committee's benefit; General Bolté can follow you.

Mr. MILLER. Under title IV of the mutual security bill there is being requested \$62 million for the fiscal year 1952 for the Latin American area. Of that, \$40 million is for military purposes and \$22 million is for technical cooperation.

Chairman RICHARDS. Have you a complete breakdown of that?

Mr. MILLER. Yes, sir. We will produce this morning a complete breakdown on both the military and the technical cooperation requests.

Chairman RICHARDS. Go ahead.

Mr. MILLER. I am not going to read this prepared statement, which is a general statement supporting our views.

Chairman RICHARDS. We would like to include that in the record.

Mr. MILLER. This can be included in the record and can be released to the press at the conclusion of the hearing.

Chairman RICHARDS. That will be done.

(The statement referred to is as follows:)

STATEMENT BY THE HONORABLE EDWARD G. MILLER, JR., ASSISTANT SECRETARY OF STATE FOR INTER-AMERICAN AFFAIRS

I am Edward G. Miller, Jr., Assistant Secretary of State for Inter-American Affairs. I am here to support the President's request for \$62,000,000 for the Mutual Security Program for Latin America in fiscal year 1952.

The Secretary of State has already spoken to you briefly on our relations with Latin America. The importance of those relations is well known but I would like to comment briefly on them. The other American Republics share with us a common desire to protect human freedoms and national independence. They are interested in working together to maintain the peace and security of the hemisphere and to defend the hemisphere from aggression. They want to realize greater economic and social progress. This unity of thought and action among the American Republics is often distorted by the Communists for their own purposes. Judging the rest of the world by their own standards of conduct, they feel such cooperation can only be achieved by ruthless force and domination. At the same time, realizing that inter-American cooperation is a bulwark against the plans of their masters, they have set themselves to destroy it.

Latin America is a major source of the raw materials upon which United States industry depends. The present emergency only emphasizes the importance of our sister republics in that respect. As pointed out in documents already made available to this committee, Latin America provides the major share of some twenty items on our stockpile list. These include such items as wool, copper, lead, nitrate and sisal fiber. Trade between the United States and Latin America in 1950 was valued at more than \$5 billion. Private United States investment in Latin America in 1950 approximated \$6 billion. I do not intend to overemphasize the importance of the economic relations between the United States and Latin America but I do think that they must be given thorough consideration in the discussion of the program before you. The importance of obtaining the essential materials for defense as well as for our own civilian economy while at the same time assuring that Latin America receives a fair share of the goods she needs is unquestioned.

Because of this close cooperation and identity of interests between the United States and Latin America we were able to come to general agreement among the American Republics at the recent Meeting of Consultation of Foreign Ministers as to what should be done to meet the threat of international communism. First and fundamentally, the American republics agreed to work together to maintain friendly relations among all of us and to settle any disputes peacefully. We reaffirmed the policy of nonintervention in one another's internal or external affairs. I say these are fundamentals because they provide the foundation upon which we build our inter-American cooperation. At the same time they frustrate the efforts of subversive elements to destroy the bonds of inter-American friendship and the support of the inter-American community for the free world in general.

Each American Republic agreed at the Washington meeting to strengthen its internal security against the infiltration tactics of international communism. I do not need to tell this committee that unless our partners to the South are economically and politically stable they cannot make an effective contribution to the common effort to maintain the peace and security of the hemisphere and to prevent aggression against the hemisphere.

The American Republics have mutually agreed to do everything possible to increase production and processing of strategic materials required for the defense effort, for essential civilian needs and, in underdeveloped countries, for economic development. We are cooperating actively with the other American Republics in studying and working out solutions to raw materials, transportation, and other problems which will arise in our efforts to promote the security of the free world.

I should like to turn from a general discussion of how the American Republics

are cooperating to meet the present emergency, to a discussion of the Mutual Security Program for Latin America. This proposed program, in the amount of \$62,000,000, includes \$40,000,000 for military grant aid and \$22,000,000 for bilateral and multilateral technical cooperation programs.

General Bolte will present to you the essential military basis upon which the request for military grant aid is made. I believe that, in the face of the increasing menace of Communist-inspired aggression, these military considerations are of the utmost importance. From the foreign-relations point of view and from the viewpoint of our traditional policy of inter-American cooperation, the Department of State fully supports the President's request for this military grant-aid program.

It is not necessary, I am sure, for me to dwell upon the deep roots from which cooperation in this hemisphere has grown. I do not minimize in any sense the spirit of inter-American cooperation when I say that a variety of circumstances has kept our cooperation in collective actions of a strictly military nature from achieving full fruition. Where it was possible in World War II—as in the instances of the Brazilian and Mexican overseas contributions, and the actions of other countries in local defense measures—the military resources of American Republics were employed in the common defense. It must be recognized, however, that there have been and continue to be limitations upon the ability of many of these countries to join in effective collective military action. Assistance from the United States will help to overcome obstacles which have existed, and will increase the total capacity of the free world to resist aggression.

All the American republics are members of the United Nations. Their solidarity with the nations of the free world on issues important to the maintenance of freedom against aggression has been frequently expressed. The Inter-American Treaty of Reciprocal Assistance provides the treaty framework for action on a regional basis for collective self-defense against armed attack and for taking the measures necessary to meet other forms of aggression or the threat of aggression against the American continents. In the recently concluded Washington meeting, the Foreign Ministers took steps to place the orientation of their military preparations directly within the collective-defense principles of the Rio treaty, and thus away from traditional and more limited concepts. They recommended that these preparations be directed toward increasing those resources and strengthening those armed forces best adapted to the collective defense. They recommended full cooperation in military matters in order to develop collective defense. Although this inter-American military policy is clearly implied in the terms of the Rio treaty, as well as in the action which led to the adoption of the instrument, I believe this is the first time that it has been so clearly and explicitly stated by the Foreign Ministers or their governments. It establishes a firm policy basis for inter-American military cooperation into which this program would fit.

The Foreign Ministers also directed the Inter-American Defense Board to do the planning necessary to ensure that the collective military strength is employed in the manner best calculated to achieve collective defense. This planning is being actively carried out by that body.

The military-aid proposal will strengthen the capacity of countries which agree to perform specific tasks in conformity with general defense plans developed through the Inter-American Defense Board. The agreement of the country concerned is indispensable, but I am confident that the present condition of inter-American solidarity is such that agreement will be reached.

One of the most conspicuous triumphs of hemisphere cooperation has been and continues to be the extent to which the threat or use of force in the international relations of the American states has been eliminated. I believe that we have reached the point where no American state has reason to apprehend the danger of aggression from any other American state. In their recent meeting, the Foreign Ministers declared that the faithful observance of commitments on nonintervention and peaceful settlement by the American Republics "make it possible for each of the republics to concentrate the development of its capabilities upon the tasks best adapted to the role each is best qualified to assume in the collective defense against aggression." By providing the assistance proposed we will strengthen our ability and the common inter-American determination to maintain the peace and security of the hemisphere.

The military program which I have already mentioned, and the proposed technical-cooperation program in the amount of \$22,000,000 which I shall now discuss, are opposite sides of the same coin. The program of defense on which our own country is so successfully building is not based primarily on warships, planes, and guns. It is built on the individual who is convinced that our way of life is worth fighting to preserve. It is built upon spiritual and moral values.

which we believe in as a people. It is built upon a well-educated, healthy, and prosperous society. Because of these things, the United States is the acknowledged leader of the free world. If our neighbors in Latin America are to have security from both internal unrest and external aggression ways must be found to provide adequate food, increase the supply of trained workers, and reduce illiteracy and the incidence of disease. In addition, if they are going to produce the many materials which are needed by the free world, the economic productivity of their population must be increased. Even without the strain of the present emergency, many of them were faced with the problems of inadequate food supply, poverty, sickness and illiteracy—conditions which are exploited by extreme nationalists, Communists, and other who desire to fan anti-United States sentiment. The present emergency only aggravates that situation. The Congress is concerned about the effect of the total defense program on the economy of the United States. The effect is going to be much more pronounced in countries which are not nearly as highly developed as the United States and which do not have the production machine to meet new and heavy demands. I believe at the same time our sister republics are making an effort to contribute effectively to the defense of the hemisphere we should make a greater effort to help them realize their aspirations for greater economic and social progress. It is the constructive way to build a free and democratic society.

It should be recognized that there has been a certain amount of disappointment expressed both in Latin America and on the part of citizens of this country interested in Latin America that such a small proportion of the funds provided for in the pending bill are allocated to Latin America. This criticism does not take into account the fact that we expect a substantial part of the job of development in Latin America to be done by private capital. Furthermore, to the extent that foreign financing of a public nature is required for particular development projects in Latin America, recourse may be had either to the International Bank or to the Export-Import Bank. Our Government's contribution to the International Bank amounted to \$3¼ billion. The Export-Import Bank has uncommitted funds on hand in excess of \$500 million and the President has requested the Congress to increase such funds by \$1 billion. The total amount that these two banks will have for foreign-development projects should be ample to provide for expected needs. It should be noted in this connection that the Latin-American countries are today in a greatly improved financial position as a result of higher prices for commodities. Under present and foreseeable circumstances we believe that the interests of all concerned will be best provided for by maintaining our contributions to development projects requiring large capital investment on a loan basis.

On the other hand, we are requesting increased funds for the technical-cooperation program. Neither private capital nor the public-lending institutions are equipped fully to supply the great need to improve agriculture, health, and education. It is these services which touch the individual upon whom the strength of each nation depends. It is for this purpose that we are requesting \$22,000,000 for both bilateral and multilateral programs of technical cooperation in Latin America in fiscal year 1952. This amount, together with the facilities for public lending which will be available through the International and Export-Import Banks, will enable us to carry forward a vigorous and comprehensive program of economic development in Latin America consistent with our own national self-interest and the deep friendship which the people of this country have for the people of the nations to the south.

Dr. Bennett will present a more detailed justification for the technical-cooperation program. I should only like to point out that most of the funds requested are for personal services and the training of Latin-Americans in the United States. Less than one-third of the bilateral program is intended to be used for supplies, materials, or operating funds. It should also be noted that our sister republics have been more than "pulling their own weight." In fiscal year 1950, for example, they matched each dollar of our funds with about \$3 of their own. We expect a similar or even greater ratio of contributions from them in the next fiscal year. In addition to proposing a program in which we believe the other American Republics can cooperate financially, we have included in the program over \$1¼ million intended to contribute directly to increasing the supply of critical materials. A part of the agriculture program is also intended to increase the production of commodities which we need for our own economy as well as to help meet the food requirements of Latin America. The entire program is intended to contribute directly to or support our mutual security effort.

I want to finish with a word about the multilateral contributions of \$4,000,000 included in the program for Latin America. The programs of the United Nations

and the Organization of American States can make an effective contribution in Latin America in concert with the bilateral program. They are effective demonstrations of what can be achieved by free nations working together. Other witnesses will discuss the United Nations program with you. In respect of the program of the Organization of American States, it is filling a very definite need and supplements the United Nations and bilateral programs. It is directed primarily toward strengthening the existing training institutions in Latin America. The program, to which it is proposed we contribute \$1,000,000 in fiscal year 1952 has just begun. It is attacking such regional problems as the training of personnel and the development of plans for the control of hoof-and-mouth disease and the training of agriculture extension personnel.

For the small investment of some \$62,000,000 in military aid and in technical cooperation we expect to continue to help build the economic, political, and military strength of Latin America. The total Mutual Security Program for Latin America is necessary if we are to press forward in this self-help effort to build a sound and secure hemisphere. It is a small but vital part of the Mutual Security Program for the free world.

Mr. MILLER. Mr. Chairman, the \$62 million which is being requested for Latin America represents about three-fourths of 1 percent of the total amount requested under this bill.

The \$40 million requested for military purposes is, in effect, a new program. The executive branch of the Government and the Armed Forces have had no authority to transfer equipment to Latin America, except the authority which lapsed under the Lend-Lease Act, and again the authority which lapsed upon the termination of the war-surplus-disposal legislation.

Since then we have been authorized under the military MDP legislation to transfer military equipment to Latin American countries at cost; with the exception in the case of used equipment it can be transferred to Latin America on the basis of its fair value.

We are now requesting authority to transfer on a grant basis up to \$40 million worth of equipment for specific purposes, which will be gone into in greater detail by General Bolté.

As the committee knows, all of the Latin American countries and ourselves are signatories to the Rio Treaty of Mutual Assistance, which has similar provisions concerning collective security in this area to those which were later entered into by the signatory nations of NATO.

Under the different inter-American resolutions there has been set up the Inter-American Defense Board, of which General Bolté is Chairman. That Board has drawn up a common defense scheme to give effect to the original provisions of the Rio Defense Pact.

It is for the purpose of enabling the implementation of certain aspects of that common defense scheme that we are requesting the \$40 million authority.

I want to make it clear that no transfers will be made under the military provisions of title IV, except pursuant to the negotiation of specific bilateral agreements, under which the recipient countries will agree to carry out certain specified tasks related to the common defense scheme.

No transfers will be made under this authority if it is granted by the Congress, unless the recipient country has signed such a bilateral agreement.

I think with that introductory statement, I will ask General Bolté to go more specifically into the purposes of this request, and the kind of tasks we are talking about. We will have some charts showing the breakdown of the \$40 million.

Chairman RICHARDS. Are there any questions?

Mr. JAVITS. I wanted to make a one-line statement. I will be leaving in a few minutes. I did not want the general to feel it was anything connected with his statement that we had to go downstairs.

Chairman RICHARDS. General Bolté.

STATEMENT OF GEN. CHARLES L. BOLTÉ, CHAIRMAN, INTER-AMERICAN DEFENSE BOARD

General BOLTÉ. I appreciate the opportunity of testifying now. The Joint Chiefs of Staff are testifying this morning, and I would hope I will get—

Chairman RICHARDS. One branch of the Joint Chiefs of Staff is meeting downstairs, too. We will do the best we can.

General BOLTÉ. I also have a prepared statement, Mr. Chairman. (Discussion off the record.)

General BOLTÉ. With the committee's permission, I will not read the statement, but will speak from notes and charts.

Chairman RICHARDS. The statement will be included in the record. (The statement referred to is as follows:)

STATEMENT IN SUPPORT OF TITLE IV, LATIN AMERICA MUTUAL SECURITY BILL, GIVEN BY LT. GEN. CHARLES L. BOLTÉ, ARMY DEPUTY CHIEF OF STAFF FOR PLANS

1. The Department of Defense strongly supports the President's request for grant military assistance of \$40,000,000 to Latin America. It believes that Latin American military forces may be put in a better position to undertake in this hemisphere defense missions which are important to the security of all the American Republics and which otherwise would have to be performed by United States forces. In most cases the requirements for United States forces for these missions can be reduced in direct proportion to the assumption of these missions by the other American Republics.

2. However, the armed forces of these American nations either lack much of the military equipment required for properly executing these tasks or the equipment they now have requires rehabilitation. We are therefore asking the Congress for authority to furnish matériel and services to those Latin Governments which agree to provide forces for the execution of the specific military tasks of importance in the defense of this hemisphere. The funds we are requesting will be used only for this purpose and not for any program of strengthening Latin-American forces in general.

3. In order to appreciate the requirement involved it is necessary to review briefly the history of recent Inter-American military cooperation. This cooperation dates generally from the beginning of World War II, when it was realized that the geographic isolation of this hemisphere no longer protects our American nations from threats of military aggression coming from outside the hemisphere. During World War II, while the Latin American nations were orienting themselves toward defense of their areas, their main contribution was in the nature of naval forces and facilities for use within the hemisphere. In addition, Brazil sent an infantry division to Italy and Mexico sent an air force squadron to the Pacific. These contributions of forces, particularly those outside the hemisphere, were made possible by the provision of considerable quantities of United States matériel.

4. To further hemispheric solidarity and cooperation the Inter-American Defense Board, established in 1942, has worked continuously for the attainment of full military cooperation. The United States, under various acts of Congress, has furnished military equipment on a reimbursable basis to these countries. And our three services, Army, Navy, and Air Force, at the invitation of Latin American Governments, are maintaining military missions to assist in standardizing military training and doctrine. Also we train a number of Latin American students in our military schools under existing authority. All of these measures are proving beneficial.

5. In their recent fourth meeting of consultation here in Washington, the Ministers of Foreign Affairs of the American Republics recommended to their governments that those of their armed forces best adapted for collective defense should be maintained so as to be immediately available for the defense of the hemisphere. Now, with the unsettled world conditions and with Latin American desires to contribute to hemisphere defense, some of these nations find it difficult from the financial standpoint to procure adequate spare parts for the proper maintenance of the United States equipment in their possession; others which can pay on the reimbursable basis are not included in this grant aid. The grant-aid funds which we are now requesting from the Congress would be used for these former nations to rehabilitate portions of their equipment.

Chairman RICHARDS. General Bolté will proceed in his own way as to the military phase.

(Discussion off the record.)

General BOLTÉ. During the last war we had something over 100,000 personnel disposed down in Central and South America for the protection of the sources of raw material and the protection of the maritime routes which insured continuity of that material coming from those countries to our east coast ports.

That was a considerable burden on our manpower situation. The basic purpose of the military aspects of the request for this amount of aid to those countries is intended to diminish or lighten or remove that burden in the event we get into another conflict, which we all hope we will not get into. But all of the plans and actions we are taking are designed to minimize the burden in the event of another war.

This first chart shows where one-hundred-and-thirteen-and-odd-thousand personnel of the Army, Air Force, and Navy, including the Marine Corps, were disposed throughout Central America and South America during World War II. We are hoping that as a result of our planning and collaboration with the countries of Central and South America, they can perform these tasks that had to be performed by our armed services in the last war.

(Discussion off the record.)

General BOLTÉ. The Inter-American Defense Board, of which I am the Chairman, has made very considerable progress in developing what is called a common scheme of defense for the Western Hemisphere. Based on that, it is now considering a more detailed plan which sets forth the strategic and critical areas and the tasks which we expect to be performed in those areas.

(Discussion off the record.)

General BOLTÉ. The Joint Chiefs of Staff, for whom I can also speak, definitely are not advocating across the board distribution of a certain amount of money to certain countries. They first want to evaluate the ability of a Latin American nation to handle a specific task in the defense scheme of this hemisphere. Then they would approach that nation to determine its willingness in the matter. If the answer were "we can do it, but we need this or that in the way of equipment," and if procurement were on a reimbursable aid basis, the Joint Chiefs would favor it. However, in many cases the reimbursable basis could not be applied because of economic difficulties in the country concerned. In these cases we propose allocating the grant aid requested to enable the nation to perform that defense task. No money would be transferred until that nation had completed a bilateral agreement with the United States.

To illustrate, I might use a case which occurred this last spring, in which Bolivia was interested in procuring from us some engineering

equipment with which she could work on the roads during peacetime and also be equipped for wartime employment.

The material was on hand and not required by us. It was possible to deliver it to Bolivia on a reimbursable basis. The equipment has improved some of the road systems in Bolivia, in turn expediting the movement of tin to this country.

(Discussion off the record.)

General BOLTE. The Panama Canal is another example for which we would welcome an opportunity to have a contribution of forces. Our defenses there are below what we would like to have, and they have had to be cut down to provide more troops for other areas of higher priority. It is conceivable that if one or more countries could contribute anti-aircraft battalions for the protection of that area, the Joint Chiefs of Staff would be glad to help out with equipment, for fire control, for example.

These examples point out the manner in which the Department of Defense would like to see this program executed. I know, from the standpoint of the Joint Chiefs of Staff, they are realistic about this and they have no intention of allocating an item of equipment to a particular country unless it is going to contribute positively to the plans which have been drawn up and set forth for meeting another emergency.

The Inter-American Defense Board, in which 19 nations, including the United States, are represented, has made in the last year what I consider to be phenomenal progress in collaborating on this over-all idea of the security of the Western Hemisphere.

The recent meeting of the Consultation of Foreign Ministers also resulted in the unanimity of their collaboration on planning and implementing the plans for the security of the Western Hemisphere.

This not very large amount of money will make a definite contribution even more in principle than it does in matériel to the security and the implementation of the defense plans.

(Discussion off the record.)

Chairman RICHARDS. Thank you, General. Mr. Carnahan.

(Discussion off the record.)

Chairman RICHARDS. Mr. Reece.

Mr. REECE. What progress has been made in rubber production in South America?

Mr. MILLER. Rubber production?

Mr. REECE. Yes.

Mr. MILLER. I think we will get into that in the technical program. I would like to pass that until then.

(Discussion off the record.)

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. You say there is no understanding between the United States and these countries. What is it—just a feeling that if anything happened, these countries would cooperate?

General BOLTE. I did not mean to say there was no understanding. There is a definite understanding. We have not only the common defense scheme, but the plan developed by the Inter-American Defense Board. But I mean for a specific defense task we have reached no bilateral agreement.

(Discussion off the record.)

Mr. RIBICOFF. You still have the wholehearted and good will cooperation of Brazil?

General BOLÍE. Yes.

Chairman RICHARDS. Mr. Mansfield.

Mr. MANSFIELD. No questions.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. No questions.

Chairman RICHARDS. Mrs. Kelly.

Mrs. KELLY. Mr. Chairman, do we have a detailed report of the agreements reached as a result of the Fourth Meeting of Consultation of Foreign Ministers of the American Republics.

Mr. MILLER. Those have been made public, Mrs. Kelly.

Mrs. KELLY. Not the detail.

Mr. MILLER. The resolutions.

Mrs. KELLY. Any agreements that we made.

Mr. MILLER. There were no secret agreements. I might emphasize one thing that General Bolíe has adverted to. Going back to Mr. Ribicoff's question, we have the Rio treaty. An attack against one country is an attack against all. We have set up the Inter-American Defense Board, which has worked out a common defense scheme.

Then at this very recent meeting of the Foreign Ministers, we reinforced the Rio treaty commitment in a resolution on Western Hemisphere defense, which for the first time put down on paper the obligation of each country to orient the use of its armed forces in behalf of the collective security of the Western Hemisphere.

It is really to implement that defense scheme and the Foreign Ministers' meeting that we are requesting this fund. That is why the Foreign Ministers' meeting is significant, in response to Mrs. Kelly's question.

Chairman RICHARDS. Mr. Lanham.

Mr. LANHAM. No questions.

Mr. RIBICOFF. Mr. Chairman, is it too late for me to ask one more question?

Chairman RICHARDS. Go right ahead.

Mr. RIBICOFF. I raised this question with the witnesses who have testified in the other phases of this program. The United States has been in the process of making not really unilateral agreements from a sectional standpoint with all sections of the world. In these the United States commits itself and its forces to come to the assistance of all the various areas.

Yet there seems to be a complete lack of a correlative duty on the part of these other areas to come to the assistance of the United States when the United States is in difficulty in other areas of the world.

Has there ever been any attempt in your agreements with Latin America and South America to have them come to the United States' assistance if we get involved in Europe, the Philippines, Japan, Australia, or any other segment of the world?

General BOLÍE. In some cases. They are all supporters of the United Nations Charter, which is designed, of course, for just that purpose. The countries of Central and South America support that Charter, of course. We have, for example, a Colombian troop unit in Korea now by agreement between the United States, as the United

Nations' command, and Colombia. Other offers have been made and are in various stages of consideration. So there are cases in which these countries have specifically committed themselves in support of the United Nations Charter and in the case of this hemisphere, the Rio treaty.

Mr. MILLER. I might add that we had a Brazilian division in Europe during World War II which was commanded by General Bolté.

Mr. RIBICOFF. Do you ever get the feeling of reluctance because they feel the defense perimeter is much too broad? Is there ever any talk from the South American countries about their jeopardy because of the widespread American commitments all over the world?

General BOLTÉ. I have never heard anything to that effect. I have heard representatives of some of the countries speak of the influence which public opinion in their own country has on the proposition of committing military forces outside the country or outside the hemisphere.

Mr. RIBICOFF. What is that attitude?

General BOLTÉ. It varies, of course, in different countries.

(Discussion off the record.)

In the event of another world war, I think every country of the free world would realize it would be an all-out effort and they would all be involved in it.

Mr. MILLER. I think it also ought to be stressed, Mr. Ribicoff, that what we are talking about here relates exclusively to Western Hemisphere defense under the Rio treaty.

When it comes to any action under the Rio treaty, I think by definition you get a much more wholehearted reaction from the Latin Americans than any situation involving sending troops outside.

Mr. RIBICOFF. That is all.

(Discussion off the record.)

Chairman RICHARDS. Are there any other questions?

Mr. REECE. What about Central America?

General BOLTÉ. I did not understand the question.

Mr. REECE. What about Central American countries?

General BOLTÉ. They are all small countries and they all have very small forces—able to contribute little to hemisphere defense.

Mr. REECE. What I particularly had in mind—I guess this is not the place to refer to it—in case trouble should arise, is the relationship with them such that you have a right to believe they would sympathize with us and cooperate with us?

General BOLTÉ. Yes, sir. As a matter of fact, since I have been associated with the Inter-American Defense Board, I have been constantly gratified at the unanimity and the willingness to collaborate in the production of these agreements.

Mr. REECE. What about Guatemala?

General BOLTÉ. Guatemala also. The Board resolutions that have been passed and the action on the scheme of defense prepared by the Board was unanimous. It was every country. It is a very pleasant relationship.

(Discussion off the record.)

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. General, your chart shows grant aid, and although the reimbursable paid is not chargeable to the taxpayer, how much do you estimate will be transferred in 1952 under this reimbursable aid?

General BOLTÉ. I will estimate a little over \$100,000,000 not including Canada. I have a record that shows what has been transferred in the past. The principal reason for small transactions would be our shortages in hardware and the heavy demands which Korea, Western Europe, and other priority areas in the world are placing on our production. Latin America cannot now be placed very high up on the list. While this bill would provide the money, which is, after all, the index, it is really the item of equipment, such as anti-aircraft guns, and so on, which are weighed in the balance as to whether they would go there from short supply or elsewhere.

Mr. BATTLE. Would you anticipate an increase?

General BOLTÉ. As the situation eases up. For instance, if we could ever settle Korea, we could switch that flow of supply and some could be made available for Latin America on the reimbursable basis.

In connection with this subject of reimbursable aid, I would like to mention in emphasis a subject which was discussed the other day before this committee. It concerns the proposed provision, section 604, of this legislation you are considering. This section provides for an increase in the total limitation which is now imposed on the value of military equipment which may be sold on a reimbursable basis to foreign governments. The requested increase in limitation, which of course does not require appropriations, is designed primarily to permit Canada to carry out her military modernization program through the purchase of United States military equipment. Such an increase, too, is a necessity for the Latin-American nations to enable them to maintain their armed forces at modern standards. We expect the bulk of our total assistance to Latin America to continue on a reimbursable basis.

Mr. BATTLE. Thank you, General. That is all, Mr. Chairman.

Chairman RICHARDS. Thank you, General. We will continue with Mr. Miller now.

Mr. MILLER. I will answer any political questions or proceed in any other way that you want.

Chairman RICHARDS. You go right ahead and proceed, Mr. Secretary, in the way you want to.

Mr. MILLER. Mr. Chairman, the second part of the administration's request under title IV relates to \$22 million for technical cooperation programs during the fiscal year 1952, of which \$1 million will be for multilateral programs carried out by the Organization of American States; \$3 million for continuing our UN programs in Latin America; and the remainder, \$18 million, will be for bilateral programs.

Mr. Kenneth Iverson, who is the president of the Institute of Inter-American Affairs, in the absence of Dr. Bennett, Technical Cooperation Administrator, will speak on that.

I will submit for the record a statement prepared for Dr. Bennett, which he will talk about when he eventually appears before this committee.

Chairman RICHARDS. I noticed that Dr. Bennett had a statement here. He does not want to include that in the record now?

Mr. MILLER. Not until he gets here.

Mr. MILLER. All of the technical cooperation programs that we are going to be continuing in the fiscal year 1952 have been in effect in preceding years.

Unlike other areas of the world, we have had technical cooperation programs going on in Latin America for about 11 years. During

World War II Mr. Nelson Rockefeller created the Institute of Inter-American Affairs, which Mr. Iverson is now directing.

About 77 percent of the funds which we are requesting in fiscal 1952 will be devoted to programs in the field of agricultural development and food production, health and sanitation, and basic education, primarily vocational training. These requests for funds for these programs are requests for merely continuations of and additions to programs already under way.

In addition to that, we are carrying out certain other programs. The next most important being programs for the development of rubber and mineral resources, and for transportation and communications, the latter consist primarily of continuing civil aviation missions and the supply of certain highway and railroad technicians. There is also some work under way in the field of industry and labor and government administration and services.

I have had distributed to each member present this morning a detailed breakdown—this mimeographed document—showing how the \$18 million of bilateral programs will be broken down.

This committee is generally familiar with the work of the Institute of Inter-American Affairs, which up until last year used to present its own program. You are also familiar with the work of the old Inter-Departmental Committee on Scientific and Cultural Cooperation, the programs of which are also included now in this single overall request for bilateral technical cooperation programs in Latin America.

We can ask Mr. Iverson to add what he wants to my statement, or we can go straight to the questions.

Chairman RICHARDS. Suppose we go ahead with Mr. Iverson, and then the questions may be asked later. Mr. Iverson. Please state your full name and title.

STATEMENT OF KENNETH IVERSON, PRESIDENT, INSTITUTE OF INTER-AMERICAN AFFAIRS, DEPARTMENT OF STATE

Mr. IVERSON. I am Kenneth Iverson, president of the Institute of Inter-American Affairs.

I would like to point out the problem in Latin America that the point 4 program is attempting to assist the countries of the Latin-American Republic to solve and also some of the activities.

As I describe the activities, I would like to circulate to the members of the committee pictures of the actual activities. As Mr. Miller stated, the work in Latin America has been going on for more than 10 years. We bring to the committee a series of accomplishments, and a number of problems in relation to which we hope to continue helping our Latin-American neighbors.

First, in the Latin American countries there are major problems of inadequate food supplies, poverty, illiteracy, and disease which confront these countries, and which they themselves must solve if they are to become strong democratic entities in the Western Hemisphere.

Some of these figures are as follows: There are approximately 155 million acres of land for 138 million people. There is 1.1 acre of land for each person in these countries. In the United States we have better than 415 million acres of land for the 155 million people, or 2.6 acres of land per individual in the United States.

That is not all. In the United States our production per acre is estimated to be about five times the production per acre in the Latin American countries, or, in reverse, the Latin-American countries produce about one-fifth per acre of what we do, and they have less than one-half the number of acres per individual in cultivation.

With the exception of possibly two or three countries in Latin America, the mass of the people do not have adequate food supplies. The best estimates we have on calories consumed is under 2,100 calories, as compared with approximately 3,100 in the United States. This does not include either Argentina or Uruguay, and possibly Cuba.

The annual per capita income in Latin America for ten countries is less than \$100. Only in Argentina, Cuba, Uruguay, and Venezuela, do we have a per capita income better than \$200. In the United States, it is better than \$1,400 per individual. Another factor of interest in Latin America is that the people have a life expectancy of about 35 years.

The first subject I want to talk about in this program is agriculture. Approximately 60 percent of the people in Latin America earn their livelihood from farming. There are two ways in Latin America to increase food production. One way is to expand cultivation to new land. It is estimated there are 200 million acres of land that could be opened up for cultivation. It is not the purpose of the proposed point 4 program to open that land, but the program will have a direct and indirect effect in encouraging the peoples of this country in opening this vast amount of land. The principal activities we propose to carry on in Latin America is the better utilization of the land which is now in cultivation.

These are the types of things we are going to carry on in these countries: Research activities. For example, in relation to coffee, which is one of the major items of production in Latin American countries, cooperative research is going on which is having the effect of materially increasing production.

Seeds are coming out of the Latin American research stations, farms, and experiment stations which we have helped organize. This picture will show the difference between the type of seed which is now being used (in the top picture) and the type of seed which is being used where proper cultivation is not practiced.

New sources of vegetable oils are being developed in these countries due to the new method of extracting oil from the plants themselves which have been introduced.

There are in the programs experiment stations which are established for the purpose, not only of finding solutions to the diseases that confront these countries in the production of agricultural items, but also bringing in and testing new items which can be used in agricultural production.

In addition, we have livestock improvement programs. Latin America has about as much livestock as the United States, but it is concentrated in a few of the countries.

For example, in Paraguay, we are carrying on a livestock improvement program. It is designed to bring better breeds of cattle into the country and to develop a type of animal that the country can afford to have and which will increase the production of meat.

Excellent results have been achieved by this type of program in these countries. One of the major problems that confront the

countries is the difficulty or lack of facilities for taking agricultural information to the farmer. We are working with the countries in Latin American in setting up extension services that will take information on how a farmer can produce more from the land than he has, and take that to that farmer in order that he can get better and greater crops out of his soil.

In Peru we have been successful in setting up an extension service in which 33 stations are being manned, not by Americans, but by Peruvians who have been trained either by Americans in Peru or Peruvians who have come to the United States.

Our extension service activities include conservation. The pictures here will show what is being done in improving and maintaining the land that is now being cultivated by the farmers, such as soil maintenance, use of fertilizers, and the results of fertilizers; pest control, improved irrigation practices, seed distribution, use of tools, and so forth.

We have set up machinery pools where the people of these countries are taught the maintenance and use of agricultural equipment in order that they themselves can either rent it from the pools that are set up, or purchase agricultural equipment if their resources permit. We also have a training program, not only locally, but in the United States.

I would like to point to one or two examples. In Peru, as a result of this program, potatoes which are one of the main items of diet, or the staff of life, were gradually being eliminated from the farms in this country because of the pests and worms that were getting into the soil. The cooperative program in the last 5 years, with the use of pesticides and insecticides has increased the volume of production 100 percent, and today there is a more adequate supply of potatoes in that country.

Four years ago tomatoes were very scarce in Peru. Today, although there has been an increase in the cost of living between 300 and 400 percent, the cost of tomatoes in that country is still what it was 4 years ago. So in effect there has been a decrease in the price of this article because of the increased production.

These are advances which I could go on citing in country by country up and down the hemisphere that have resulted from the work which is being performed by these people with the assistance of the United States.

At this time I would like to point out that it is not a program which is being administered solely by the United States; nor is it a program being administered solely by these countries. I think in the hemisphere we can point with real pride to the fact that the countries of Latin America and the United States are partners in carrying out programs for the solution of problems in the field of agriculture.

Years ago we started a type of administrative device which has come to be known as the *servicio* type of operation. In fact, when one of these countries asks for assistance in the field of agriculture and the United States, after considering it from the standpoint of foreign policy, decides to cooperate with the countries, we suggest to the country that rather than have simply an advisory program it ought to be an actual program where the technicians from the two countries work together. We suggest they create within the framework of their

Ministry of Agriculture an office called the Cooperative Servicio for Agricultural Development.

This device has been used in most of the countries of Latin America. The servicio is an agency of the Latin-American government. The governments, in order to insure that the work would move along as rapidly and as effectively as possible, usually appoint an American director of the servicio. This official receives his salary and expenses from the United States. Both governments assign their nationals as staff members. Then both countries put in the money which is used in carrying out these programs.

I can report today that the countries of Latin America in the field of agriculture are putting in more money into the cooperative agricultural development programs than the United States.

In addition to the items I have mentioned, there is a rubber development program which is being carried out. This program is attempting to solve the problem of blight and disease which is attacking the rubber trees of the hemisphere. This is the hemisphere where rubber trees were first found. The rubber trees of the rest of the world were taken from this area. Real progress is being made in the research stations of the countries that receive the assistance of the United States rubber technicians in combatting the diseases that affect not only the root and stalk, but the leaves of the rubber trees.

Secondly, real progress is being made in supplying plantings that can be purchased by the farmers of the hemisphere and planted in their own plantations or farms.

I would like now to move to the health and sanitation program and give one or two factual figures to indicate the problem these countries are confronted with.

The death rate of Latin America is 50 percent higher than the death rate in the United States.

Chairman RICHARDS. How much?

Mr. IVERSON. Fifty percent higher than in the United States.

I have already indicated that the average life expectancy in a Latin-American country is approximately 35, as against the life expectancy in the United States of 66. The disease problems that confront Latin America are legion.

I will not take the time of the committee to mention them, but there are many. I think you might be interested in some of the figures on the number of physicians in Latin America. There are approximately 50,000. In the United States there are 150,000. Nursing, which as a profession has not been recognized in Latin America until recent years, has not been developed. At present there are less than 10,000 graduates nurses in Latin America compared to more than 300,000 in the United States. There are only 52 nursing schools as against over 1,000 in the United States.

We have used the same type of cooperative services arrangements for health and sanitation programs, as previously described for agriculture.

Incidentally, it is a device which I believe is going to be used in other areas of the world, because we find in other areas interest in this device and a desire to take the meritorious aspects of it and use it in other areas.

One of the principal activities in the health program is the health center. The health program is primarily a program to reduce disease,

and not to cure it. There are too many people ill in these countries to take care of them in hospitals. The principal objective of our preventive medicine program is to reduce the incidence of disease.

The health center pictures which you see here will show the activities of the visiting nurses, who go through the communities giving vaccinations, taking care of expectant mothers, treating the youngsters and advising them on questions of health, and even developing little agricultural demonstration activities which will actually show the people what type of vegetables to raise, and what type of diet to have.

The next is malaria control. We have worked with the towns in the various areas. I remember the little town of Breves on the Amazon River. In 1945 no boats were stopping at that little town. The cooperative health program went in and sprayed DDT and cleaned up some of the swampy areas, so that town is today a thriving little metropolis on the Amazon.

These are examples of many of the hundreds of types of activities in which we are cooperating with these Governments.

In the field of health and sanitation from Mexico south, not including Argentina, there have been over 3,000 activities of this type—health centers, water and sewage systems, control of specific diseases, health education, hospitals, training, research, industrial hygiene. In the latter field the program is contributing to the production of strategic materials. In Peru, for example, the United States and Peruvian technicians have gone into the mines, examined the conditions, and have made recommendations to the Government which resulted in a safety law being enacted in that country. There has been improvement in the health conditions of the miners which results in a definite contribution to the defense effort by way of more strategic materials.

Our objective in the health program is to train the people of these countries so that they have a national health department, which will continue on to solve the problems which confront these people, without assistance from the United States.

The pictures that have been circulated may raise questions concerning these activities. We recently received a statement from the manager of the Victoria Minas Railroad, which is the railroad that serves the major steel mills in Brazil, which indicated that as a result of health programs in that country, the operating costs had been reduced one-third, because the workers were now in a position to come to work 6 days a week, whereas before, approximately one-third of their employees were sick with one type of illness or another.

Another major problem that the Latin-American countries face is that of illiteracy. About 50 percent of the population above school age have never attended school. Illiteracy rates run from approximately 35 percent to as high as 92 percent.

Many of those who have gone to school have received only 2, 3, or 4 years of schooling. The teaching methods used are generally that of memorization. The teachers, as a rule, have not received more than ninth- or tenth-grade educations. The cooperative program that is now being carried out is for the primary schools of the country, primarily in the rural areas. We are helping these countries develop a curriculum for the primary schools, and also for the vocational education schools. We are organizing teacher training

systems to train the teachers of these countries—not the students—so that the teachers themselves can more adequately handle the problem of education.

I think it is interesting to note one of the systems of organizations for the rural schools that we have approved, and helped them develop. This is what is called the nuclear system.

This system was already in existence in Bolivia when our program started, but the director of the cooperative educational program in that country encouraged the Bolivians to follow it to a greater extent. Under this system, a trained supervisor is placed in one center or nucleus and given the responsibility of demonstrating improved teaching methods, the construction and improvement of school houses. The teaching of youngsters in that entire area is improved by bringing in the school teachers from all the areas around, so that in one center you have a demonstration and a training program which, in effect, affects all the schools around that area.

At the present time there are a good many hundreds of rural schools in Bolivia that are organized into the nuclear system.

In these schools, not only in Bolivia but in the other countries where we are working, student attendance is generally about one-third higher, and is gradually increasing, as a result of the increased interest in schools both on the part of the parents and students. It is one-third higher than it is in the areas where we are not working.

In addition to the educational program we have, as Mr. Miller indicated, a program in industry and labor, under which we are bringing to the United States personnel in various fields of technology for training in order that they can return to their countries and help to develop them.

We are helping them develop vocational educational systems so that these countries may be able to train the personnel that are needed, as these countries develop their industrial capacity.

Transportation is a major problem, and those of us who have traveled around Latin America have seen it. It is one of the principal activities in the cooperative technical assistance program, and we are not only giving them advice and assistance in the field of air transportation, but consultative service on roads, railroads, and other types of transportation, such as water transportation.

In the field of mineral resources, the Bureau of Mines of the Department of the Interior has done a very fine job in working with the countries in exploration and testing of various minerals. The deposits of manganese recently found in Brazil were partly due to this type of work.

We have found in Latin America that deficient government administration is impeding the type of program we are attempting to carry on. If an agency is not capable of administering a program, no matter how good the technicians are, it is not possible for them to effectuate it. So we have been, through this servicio device, demonstrating good public administration. That has resulted in continuing requests from these governments for other assistance in improving the administrative structure of their government, including the tax structure, and the customs, tariffs, and other structures that are so important to the economic survival of the country.

Mr. Chairman, I have rapidly gone through the high lights of this program and, as Mr. Miller indicated, I would be glad to answer questions on it.

Chairman RICHARDS. Thank you, Mr. Iverson. We will go down the line under the 5-minute rule, and the committee members will ask either you or the Secretary questions as they wish.

Mr. CARNAHAN.

Mr. CARNAHAN. Your position is president of the Institute of Inter-American Affairs. Is that correct?

Mr. IVERSON. Yes, sir.

Mr. CARNAHAN. What department are you in?

Mr. IVERSON. Mr. Carnahan, the Institute of Inter-American Affairs, to get the background of it, was first created under the authority of Congress in 1942 by Mr. Nelson Rockefeller as a corporation of the State of Delaware. In 1947 the Congress incorporated it as a statutory corporation and vested in the Secretary of State the authority to appoint the members of the board of directors of the corporation. So that in effect we are attached to the Department of State, and Mr. Miller here is Chairman of the Board of Directors.

Mr. CARNAHAN. What is the status of the action that Congress took, I believe, in 1949, extending the Institute of Inter-American Affairs for 5 years?

Mr. IVERSON. Yes. In 1947 the Congress authorized the Institute for 3 years. Then, in 1949, it extended the life of the Institute, so to speak, to June 30, 1955.

Mr. CARNAHAN. As to the authorization of funds now in this bill, are we carrying some authorization of funds to be used directly by the Institute of Inter-American affairs?

Mr. IVERSON. Mr. Carnahan, the appropriation this year is carried in the total bill, and the Institute will carry out its programs from the funds in the request for \$18,000,000, which is the amount requested for the United States bilateral activities in Latin America.

Mr. CARNAHAN. How much of the \$18,000,000 is provided to the Institute?

Mr. IVERSON. There is no specific allotment of funds to the Institute this year. We will simply be one of the participants and the decision will be made later by Dr. Bennett and the board as to what part the Institute plays in the program.

Mr. CARNAHAN. What relationship do you have to the point 4 program?

Mr. IVERSON. Under the act of International Development passed last year, the act specifically provides that the President, and he to whom he delegates the authority, has the responsibility to direct and supervise the technical-assistance programs of the United States Government. We, being an agency carrying out a part of the technical assistance program, come under the general policy direction of Dr. Bennett as Administrator of the Technical Cooperation Administration.

Mr. CARNAHAN. Do we have programs in Latin America other than those under the direction of the Institute?

Mr. IVERSON. Yes, we do. There are a number of programs being administered by other agencies of the Government. I think it is very desirable to call upon the other agencies of the Government for the use of their technicians in assisting in the administration of programs. There are a number of departments that are working in this field.

Mr. CARNAHAN. That is all, Mr. Chairman. Thank you.

Chairman RICHARDS. Mr. Battle.

Mr. BATTLE. Thank you, Mr. Chairman.

It is good to see you, Mr. Iverson.

Mr. IVERSON. It is nice to see you, Mr. Battle.

Mr. BATTLE. In 1949 I believe I was a member of the Mansfield subcommittee that held hearings and went into the possibility of extending the life and funds of the Institute of Inter-American Affairs. I would like to say that at that time I was very much impressed with the work that had been accomplished. I know of no other governmental organization that accomplished more in the same amount of time with what you had to work with. I have had no reason to change my mind in regard to that feeling.

I believe you sort of paved the way, and to me it pointed out the great possibilities that we have all over the world through this type of work.

I would like to commend you and the Institute for what you have done.

Mr. IVERSON. Yes, sir. Thank you.

Mr. BATTLE. I would like to commend Mr. Miller too, for his work. I went on a trip with him once and he taught me how to speak Spanish. Thank you.

Mr. MILLER. Thank you.

Chairman RICHARDS. Mr. Ribicoff.

Mr. RIBICOFF. This can be off the record.

(Discussion off the record.)

Mr. RIBICOFF. That is all.

Chairman RICHARDS. Mr. Hays.

Mr. HAYS. I am particularly interested in your agency, Dr. Iverson, because I happen to have a son-in-law who is employed by the Institute. I do not know whether you know it or not, but he is an engineer in Mexico. I think at the time he was employed you did not know he had congressional connections. I was pleased about that.

Chairman RICHARDS. The question is, "Is he a good engineer?"

Mr. IVERSON. Yes.

Mr. HAYS. Thank you. I do not know whether I would get the same answer in private, but I am pleased to hear that. My wife and I went down to see him last fall. We had intended to make sort of a sightseeing trip and it turned into a field inspection of your work because it became so interesting to us. I went out with him and I did have a chance to learn something of your work in Mexico.

I would like to talk about that in my 5 minutes and ask you some questions to clear up some vague ideas in my own mind about it.

Does Mexico generally provide a pattern for the other Latin-American countries? Would my view of things there give me a good idea of what is going on in other countries?

Mr. IVERSON. Yes, sir, Mr. Hays, it would. The same administrative technique is used. The same brand of technicians of the two countries work together. While there is some emphasis in Mexico primarily in the field of water, sewage and health centers, there is a general educational health program in that country which is a good pattern for the rest of the area.

Mr. HAYS. I have been looking over your breakdown and most of the million dollars that we put into Mexico goes into personal services, does it not?

Mr. IVERSON. Yes, sir. I can give you the exact figures on that.

Mr. HAYS. I think it would be good to have that because I am confident in my own mind we can defend this figure. I do not know a better way to use a million dollars than improving conditions at our doorstep.

Chairman RICHARDS. Have you got the breakdown of that \$1,000,000 in figures?

Mr. IVERSON. Yes.

Mr. HAYS. It is all in the chart except that I do not read it quickly as between capital investment and materials, or personal services.

Chairman RICHARDS. Yes.

Mr. IVERSON. In 1951 the total contribution to the health and sanitation program of the Institute of Inter-American Affairs was \$237,784. Of this amount \$105,264 was provided for experts or United States technicians; \$32,520 for trainees or Mexicans who come to the United States for training; and \$100,000 was the program contribution to the joint operating fund of the two countries.

Mr. HAYS. Thank you very much.

Chairman RICHARDS. Is that in the printed breakdown?

Mr. IVERSON. Yes, sir; it is, Mr. Chairman.

Mr. HAYS. I went to see the Aleman Health Center, and it seems to me they are doing a very significant work in the field of health. Do we have any money in that building, or was our contribution just technical service?

Mr. IVERSON. Under the device we use, there is a cooperative servicio or bureau created in the Ministry of Hygiene of the Government of Mexico. Into that servicio there is contributed \$100,000 which came from the United States, and the money which was contributed by the Government of Mexico. I should say the last figures that we have are for the year 1950. We have not received the final figures for the year 1951.

The Government of Mexico contributed to this same account \$350,596. In the same year, 1950, the Institute contributed to the same joint fund \$100,000. It is that \$450,000, plus prior accumulations, that is used to do all of the work, including the construction of the Aleman Health Center.

In that particular case they contributed public money for that health center, but it comes out of the joint funds.

Mr. HAYS. Do I have some more time?

Chairman RICHARDS. Yes, sir. You have two more minutes.

Mr. HAYS. I want to come back to it, if you are going to give us time after the 5 minutes.

Chairman RICHARDS. We will give you additional time.

Mr. HAYS. Thank you, Mr. Chairman. I also spent some time with Mr. Herrar at the Rockefeller Foundation center. He had planned to take us to Chapingo that day, but canceled it because of a conference with the Secretary of Agriculture of the Mexican Government, leading, we hoped, to the establishment of a program comparable to our extension service in agriculture.

Are those plans materializing?

Mr. IVERSON. To date they have not requested an agricultural program, but the discussions are still going forward for the cooperative program in the field of extension services.

Mr. HAYS. Is that not the big vacuum generally in these areas where we are carrying out the point 4 program, that is, the lack of an extension service manned by their own people to do the educational job?

Mr. IVERSON. Mr. Hays, we believe that is one of the very important areas, and we are concentrating on the extension type of service, which means getting information out to the farmer, so that the farmer can produce more on his land.

Mr. HAYS. Another thing that impressed me is the emphasis you are giving to the use of native personnel. The inclination is when we look at the total picture, which is a rather grim picture, to feel that there is not much of a resource there. However, Mr. Herrar pointed out, for example, a young Mexican who had been in the United States under the training program who is a distinguished scientist already, and because he knows Mexico is able to do a job that is historic.

You would agree that that is a vital part of this program, would you not, and that we can do nothing better than to put some money in the training of these young Mexicans to help them become scientists and leaders in that field?

Mr. IVERSON. Mr. Hays, we have found there are, in all of the countries of Latin America where we are working, very capable people. Given the opportunity and the stability that we give them in this type of program, it permits them to use their training and education and experience. I point to the figures in the case of Mexico, where in the health and sanitation program we had on June 30 this year seven Americans. In the health servicio there were 478 Mexican employees working, so they have a ratio in that particular program of seven against 478.

Chairman RICHARDS. The gentleman's time has expired. We will come back to him.

Mr. Reece.

Mr. REECE. When will it be an appropriate time to discuss rubber and some of the other strategic materials that might be developed? This is what I have in the back of my mind. During World War II a considerable rubber industry was put under way, and plans were made for some of the other strategic materials down there. I do not know which of you, Mr. Miller or Mr. Iverson, would care to talk on that.

Mr. MILLER. Mr. Iverson touched on this in his direct presentation, Mr. Reece, while you were out of the room.

Mr. REECE. I am sorry I had to be out then. I had to go to another meeting and came back as rapidly as I could.

Mr. IVERSON. I would like first to point to the figure that is being requested this year and last year's expense.

In the rubber development program for 1951 there was authorized \$320,665 for rubber research and experimental work being carried on in the hemisphere. The proposed program for 1952 is a little over twice that, or \$783,200. That money is being used primarily to pay the salaries and expenses of United States rubber technicians in working with the experiment stations, and rubber technicians of approximately 11 of the Latin-American countries in two principal fields of activity.

One, in finding solutions to the disease problems which adversely affect the rubber tree.

Secondly, in actually planting and producing rubber seedling that can be purchased by the farmers and planted on their own farms or rubber plantations in the hemisphere.

Mr. REECE. During World War II Firestone started a development program down there in rubber. What has become of that work?

Mr. IVERSON. The Firestone research work is still going on, I believe, if I am correct in that.

Mr. REECE. Do you believe they are progressing?

Mr. IVERSON. They still have a reasonably large—we do not have the figures at hand, but they have a pretty large program.

Mr. REECE. What are the prospects of having rubber down there?

Mr. IVERSON. I was recently in Central America talking to one of the rubber technicians in Guatemala, and they feel real progress will be made in the development of disease resistant trees, and in spreading the rubber trees to the small producers and small farmers all over Central America.

Mr. REECE. Then there are a number of other strategic mineral programs in South America. Is any attention or direct responsibility being assumed in trying to develop a supply of strategic minerals? Rubber is only one, but there are many other strategic materials there also.

Mr. MILLER. I would say in a great number of ways, Mr. Reece, we are paying attention to that problem. One of the most important resolutions that was adopted at our recent Foreign Ministers Conference called for some cooperative efforts in the increase of strategic materials. I have read with a great deal of interest the staff memorandum on strategic materials that was prepared in preparation for this hearing. I think it emphasizes the amount of dependence that we feel toward Latin America. Of the \$18,000,000 bilateral program we have provided for fiscal year 1952 \$800,000 for technical cooperation in connection with the development of mineral resources, as compared to \$400,000 during fiscal 1951.

Also, we are allocating \$700,000 to technical cooperation in connection with transportation. That should facilitate also the deliveries of strategic minerals to us because one of the related problems is the question of transportation of the materials from where they are in many cases. Also, the Export-Import Bank and the International Bank, in which we participate, have been very active, and will probably be more active in the future, in making loans for the development of strategic materials. They have just made, that is, the Export-Import Bank just made, a loan to a firm in Peru for the development of tungsten.

Each institution has before it—that is, the Export-Import Bank and the International Bank each have pending before them—applications for the development of very large manganese deposits in Brazil. It is interesting that both of those deposits were found through the basic investigatory and exploratory work to bring them to the stage of development, and that was done under the technical cooperation program of the Bureau of Mines of the Department of the Interior.

Chairman RICHARDS. Your time has expired. We will come back to you in a minute.

Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Chairman.

Do you mean this \$800,000 appropriation, or planned expenditure for the year 1952 for technical assistance to develop the mines, is the reason for the increase of the appropriation or anticipated authorization from \$11,000,000 last year to \$18,000,000 this year?

Mr. MILLER. No. That is one of the items. We are doubling the amount for mineral resources, Mrs. Kelly, from \$400,000 to \$812,000.

Mrs. KELLY. By what other reasons can you justify this increase from \$11,000,000 to \$18,000,000?

Mr. MILLER. On the second page of this breakdown you will find the details as between 1951 and 1952. Fifty percent of the increase is in the field of agriculture, forestry, and fisheries. That item goes up from \$3,600,000 to \$6,500,000.

That is due, for one thing, to the fact that Dr. Bennett, who is the Technical Cooperation Administrator and who will be here before you when he returns, feels that is one of the fields in which most work can be done in Latin America.

Then, our rubber-development program has gone up substantially.

Those are the items I have mentioned. Plus transportation, those are the items in which the greatest increases will occur between 1951 and 1952.

Have you anything to add to that, Mr. Iverson?

Mr. IVERSON. No, sir.

Mrs. KELLY. That is the reason then for the increase in your authorization over the last fiscal year? There is a difference of \$6,828,970.

Mr. MILLER. Yes.

Mrs. KELLY. Due to the increase in trade to the South American countries this past year, their national income has increased in the hundreds of percent. Is that correct?

Mr. MILLER. I do not know the exact amount.

Mrs. KELLY. But it is very high?

Mr. MILLER. There has been a very substantial increase since Korea in the total dollar balance of Latin America.

Mrs. KELLY. Is it possible for them to assume any of this cost of increase themselves, since we are committed to other sections of the world?

Mr. MILLER. They will. All of these increases in our contributions will, because of the servicio technique Mr. Iverson has outlined, bring about increases in their expenditures for these programs.

Mrs. KELLY. But that does not lessen our contributions?

Mr. MILLER. No. These are the amounts of our contributions.

Mrs. KELLY. Thank you.

Chairman RICHARDS. Mr. Lanham.

Mr. LANHAM. No questions.

Chairman RICHARDS. I want to ask a question, Mr. Miller.

We are now considering a Mutual Security Program.

Mr. MILLER. Yes, sir.

Chairman RICHARDS. The European part of it is a defense program. Would you consider point 4 part of the Mutual Security Program, or is it an entirely separate activity, seeking to accomplish different ends?

Mr. MILLER. Well, I think that it is related to the over-all general objective that the Mutual Security bill is aimed at; that is, to try to strengthen the free world. I think it is in our national-defense interests that Latin America be stronger than it is, and that there be diminished

this great disparity between our standard of living and theirs, particularly since their very low standard of living makes them susceptible to Communist penetration.

When General Bolté was on the stand he spoke of the fact that some of these countries down there were not disposed to participate actively in oversea collective-defense efforts because of the feeling of remoteness from the conflict. That is due precisely to the fact that, although Communists have not penetrated into the upper reaches of government, nevertheless Communist propaganda has been very effective in many of these countries in influencing the attitudes of the governments toward what might be called neutral positions, by playing upon the sympathies and susceptibilities of the people, and emphasizing their very low standard of living in relation to ours.

Also, since strategic-materials procurement is one of our prime defense objectives in Latin America, I think it would be fair to say that virtually every item shown in the breakdown on page 2 is related in one degree of proximity or another to our over-all objective of strategic-material procurement.

Chairman RICHARDS. I thought that was your approach, but what about this now? You have several activities there, and I would like to know how you feel about consolidating those activities. What do you think about that? Can that be done without injury?

Mr. MILLER. Are you speaking about administration now?

Chairman RICHARDS. Administration.

Mr. MILLER. I am interested in the substance of the program. I think that the more coordination we can arrive at, the better. If we can cut down on administrative expenses, fine.

Chairman RICHARDS. Well, the activities are under the supervision of the State Department, including practically all of the activities going on in the Western Hemisphere outside of, you might say, those which are strictly military.

Mr. MILLER. The Technical Cooperation Administration coordinates all of the bilateral technical cooperation programs in this hemisphere which are carried out, as Mr. Iverson said, by various agencies. Any duplication between those agencies of course should be eliminated. That would be fine. That has been an objective of ours.

Chairman RICHARDS. That is what I understood, and I just wondered whether you had accomplished about as much of that as you could without hurting the program. That is the reason for my question.

Mr. MILLER. I would prefer that you would ask that of Dr. Bennett when he arrives here.

Chairman RICHARDS. All right. Are there any other questions?

Mr. REECE. If I may.

Chairman RICHARDS. Mr. Reece.

Mr. REECE. Mr. Miller, to what extent are you able to satisfy the Latin-American Republics with this relatively small amount that is proposed to be allocated to them in comparison, as they would say, to the very large amounts that are being given to other countries?

Mr. MILLER. Now we have the other side of Mrs. Kelly's question. She asked why we have to give this much to them, when they have inflated dollar earnings. There is no doubt there has been some comment throughout Latin America and on the part of friends of Latin America in this country, Mr. Reece, to the effect that to devote

three-fourths of 1 percent of our total appropriation to this very important area is too small.

I think the main difference between this area and the other areas is that, as far as the need of capital-investment programs is concerned, we feel that those can be handled or should be handled by private initiative. A substantial amount of new-dollar investment has gone into Latin America since the war. We expect more will go in. To the extent that is not taken care of by private initiative we feel capital-investment programs should be handled on a loan basis, rather than on a grant basis. For that purpose there are ample funds available in the International Bank and in the Export-Import Bank, and I should make note of the fact that the administration requested an increase in the funds of the Export-Import Bank at this session of Congress.

Chairman RICHARDS. Are there any other questions?

Mr. HAYS. I would like to ask a question and I think it can be off the record.

Chairman RICHARDS. Off the record.

(Discussion off the record.)

Mr. HAYS. On the record, I would like to ask Dr. Iverson about the problem of coordinating these programs. You see, we have a mixed picture. We have the institute, which is a Delaware corporation, you say?

Mr. IVERSON. It was originally, but today it is a corporation created by act of Congress.

Mr. HAYS. Yes. I remember our Banking Committee handled that. We made it a Government corporation. Also, we have point 4, and so on.

Now, administratively, do you think we need to make some improvements in that, so that we do not have this multiple approach? For example, take the foot-and-mouth-disease campaign. Has that been concluded? That is under the Department of Agriculture; is it not?

Mr. IVERSON. As to the program in Mexico, I think you could say that the hoof-and-mouth disease has been eradicated, and only a maintenance program is going on there now, to make sure that any outbreak will be taken care of. It has been successful.

Mr. HAYS. There was coordination at the Mexico City level with your program?

Mr. IVERSON. Yes.

Mr. HAYS. What is your answer to the problem of improving coordination of the various programs? I have selected Mexico, which is typical.

Mr. IVERSON. First, Mr. Hays, I would like to have the record straight. I am not a doctor, but I am just a plain "mister."

There is coordination on the country level that I think is pretty effective at the present time. First, through the American embassies and the staff of the embassies the ambassador has jurisdiction over all the programs in the country. Our people operate under continuous instructions in two fields, in effect. One, to find out what the other people are doing so that we can cooperate with them; and, secondly, cooperate not only with the United States agencies that are there but also with the multilateral agencies of the United Nations groups.

There may be areas of improvement, but Dr. Bennett is Administrator of TCA, and I am confident he has that continuously in mind.

Mr. HAYS. That is all, Mr. Chairman.

Mr. IVERSON. Mr. Chairman, I would like to supplement an answer to Mrs. Kelly's question, if I would be permitted to do so.

Chairman RICHARDS. Fine.

Mr. IVERSON. She raised the question as to whether these countries are going to contribute more because of their increased dollar earnings. I think the figures over the years in the development of the program and philosophy of the program definitely provide for the countries to increase their contributions.

I have figures before me here which show the total contributions for the Institute and the local governments, and they start from 1943, when the program was started.

The contributions of the local governments in 1943 were \$1,644,000. Last year 1950, which is the last year for which we have figures tabulated—and that is one gage to the effectiveness of the Institute program—the contributions were up to \$10,967,000.

The ratio in 1943 was about \$3 from the United States to \$1 of the Latin-American countries, but on the program contributions to these programs in 1950 the ratio was \$1 from the United States to \$8-plus from Latin America. That is only for the Institute programs.

In addition to that, the effect of the programs on the governments is that they are rapidly increasing their budgets for agricultural development, health, sanitation, education, and transportation, so that they are using their increased revenues very effectively.

I think that to some extent, as a result of the work we have been doing in the Latin-American countries, they have seen the desirability of using more and more of their revenues for these basic services. I do not have the figures before me, but in Chile the public-health budget went from 33,000,000 pesos up to 233,000,000 pesos. That is about 10 times in a period of 6 years, so that not only are they putting more money into the United States cooperative programs, but also into their own related programs.

Mrs. KELLY. That is the general pattern of all these programs; the initial cost is high.

Mr. IVERSON. Yes.

Mrs. KELLY. But I just wondered in the light of their increase in income why they could not assume some of it, or a greater amount of it.

Mr. IVERSON. I think the answer is that they are.

Mr. MILLER. There are also other uses to which the increased income can be put, and is being put, primarily for capital-investment programs.

Mrs. KELLY. Thank you.

Chairman RICHARDS. Thank you very much, gentlemen, for your appearance here this morning. I am sure your testimony will be very valuable to us.

The committee stands adjourned until 7:30 tonight.

(Whereupon, at 12:15 p. m., the committee adjourned until 7:30 p. m. of the same day.)

NIGHT SESSION

The committee met in the House Foreign Affairs Committee room, the Capitol, at 7:30 p. m., Hon. A. S. J. Carnahan (acting chairman) presiding.

Mr. CARNAHAN (presiding). The committee will come to order.

Our first witness this evening is one of our colleagues, Congressman Charles J. Kersten, of Wisconsin. We are always glad to have our colleagues with us and to appear before the committee.

Congressman, you may proceed as you desire.

**STATEMENT OF HON. CHARLES J. KERSTEN, A REPRESENTATIVE
IN CONGRESS FROM THE STATE OF WISCONSIN**

Mr. KERSTEN. Thank you, Mr. Chairman.

Mr. Chairman, I deeply appreciate the opportunity to appear before the committee on this most important measure.

The Soviet threat is the avowed reason for this \$8 billion program. But the prospectus furnished by the executive department fails to recognize the genesis and nature of this threat. It treats this crisis—one of the greatest of all time—as one without cause.

Of course, we have to become militarily strong and so do the rest of the free nations. But unless we direct our efforts toward removing the cause of the Soviet danger, those efforts are likely to be for naught.

The proposal of the administration is little more than a long-term armaments race.

Because it has murdered over 40,000,000 of its own citizens, the Soviet regime is forced to devote most of its economy to the weapons of the police state and of war. Otherwise every one of the members of that regime would probably be strung up by his own people for the arch criminal that he is.

Is the best answer of the free nations to this threat nothing more than to arm in defense against the peoples of the Soviet Union whom the tyrants of the Politburo have enslaved? If this only is our course, then world war III is virtually guaranteed.

The chief victims of communism are the peoples behind the iron curtain. Slave labor camps, perverted courts of justice, and over-worked execution squads have forged a potential resistance to communism that the free nations have given little thought to. These peoples can be our greatest allies against the regime that threatens the peace of the world.

Statements made not long ago by our Secretary of State indicate we have abandoned these greatest allies of all against communism—the 800,000,000 victims of the police state—and that we are content that the world be half slave and half free.

On March 16, 1950, at the University of California, Secretary of State Acheson said:

However much we may sympathize with the Soviet citizens who for reasons bedded deep in history are obliged to live under it, we are not attempting to change the governmental or social structure of the Soviet Union.

On April 22, 1950, in Washington, D. C., before the American Society of Newspaper Editors, the Secretary of State said:

We do not propose to subvert the Soviet Union. We shall not attempt to undermine Soviet independence.

Ladies and gentlemen, I believe that unless the Soviet regime is undermined, subverted and overthrown it will bring us war.

We must frankly face the fact that blundering and tragic steps in American foreign policy have helped to make the Soviet threat what it is. The tragic steps we have taken, and the mistakes we and the rest of the free world have made and continue to make, give the Communist peril much of its character and strength.

If we are to cope with this peril we must retrace some of those steps and cease dealing with the Soviet regime and its satellite states as though they were legitimate governments.

One of the first dynamic errors that gave the Communists the opportunity to draw upon the technical accomplishments of the civilized world and pervert them to their own aggressive designs was the recognition in the year 1933 by the United States of the Bolshevik regime as the legitimate government of the Russian people.

We had known all along that this same Bolshevik clique perverted the freedom that the Russian people had gained in their democratic revolution in February of 1917, when in January 1918 this ruthless clique drove the duly elected constituent members from the Assembly in St. Petersburg with bayonets and from that time until now they fastened and maintained chains of slavery on the Russian people.

Further tragic errors on our part occurred during the late war when our military strategy was blunted by American diplomatic deference to Stalin's postwar plans for the control of Eastern Europe.

Agreements made by us at Tehran, Yalta, and Potsdam were major Soviet diplomatic victories—and major American diplomatic defeats.

American postwar policy in China sought to force a coalition in the government of China between the Chinese agents of Moscow and the Chinese Nationalists. This helped Communist armies drive the Chinese Nationalists from the mainland and put China behind the iron curtain.

The bitter fruit of these mistakes in American foreign policy is the reduction of the eastern European nations and of China to the status of Soviet satellites. And it is precisely because it has these satellites, precisely because it holds a guilty subversive hand on Eastern Europe and upon China, that Soviet Russia constitutes the world danger against which we arm.

If the Communists had not gained control of China there would never have been a Korean War. And we helped her gain control of China. If the Communists did not hold Eastern Europe there would be no point in General Eisenhower raising a European army. And we helped her gain control of Eastern Europe.

Yet, our top policy makers seem content to legitimatize these criminal Soviet conquests. We recognize most of the stooge Soviet regimes of Eastern Europe, and there is an indication that we may recognize the Red government in China after Korea is settled, if a majority of the United Nations vote to seat the Red delegates.

As long as Soviet Russia holds Eastern Europe and China, she will be a threat to world peace.

We must, therefore, take steps toward the liberation of Eastern Europe and of China to avert all-out war between the peoples of the free world and the peoples of the Soviet Union. We must take steps to isolate the Soviet regime from the society of nations, and, when the

proper time comes, help the Soviet people liberate themselves from their enslavement.

First, we should withdraw recognition from the Communist regime of Moscow. We should also bring our full weight to bear to force the expulsion of the Communist regime from the United Nations.

In examining the state papers that were the basis for our recognition of Soviet Russia, I find in the letter of Mr. Roosevelt, dated October 10, 1933, to Mikhail Kalinin, President of the Soviet Union, the paragraph that states the essential purpose of our recognition of Soviet Russia. It is as follows:

It is most regrettable that these great peoples, between whom a happy tradition of friendship existed for more than a century to their mutual advantage, should now be without a practical method of communicating directly with each other.

That is from the letter of President Roosevelt. Kalinin's response was as follows, in part:

I have always considered most abnormal and regrettable a situation wherein, during the past 16 years, two great Republics—the United States of America and the Union of Soviet Socialist Republics—have lacked the usual method of communication and have been deprived of the benefits which such communication could give.

The history of the relations of the two peoples since 1933 shows, however, that since that time the peoples of the Soviet Union have been held incommunicado from the rest of the world. Even prisoners in a penitentiary have a visitors' day when they may talk with people from the outside, but it is now actually a felony in Soviet law for the average Russian citizen even to converse with a foreigner.

So the basic reason for recognition—communication between the peoples—does not exist. The American Ambassador and his staff in Moscow are virtual prisoners. The Soviet Embassy and consular offices in the United States are largely centers of espionage. The peoples of the Soviet Union have absolutely no means of communicating with the people of the United States.

Continued recognition by us and dealing with them in the United Nations merely gives a respectable cloak to the paranoic purposes of the Communists to subvert and conquer the world.

Secondly, we should withdraw recognition of the Soviet satellite governments of eastern Europe. Every one of the satellite embassies here in Washington is likewise little more than a potential center of espionage. They certainly in no sense represent the people of Poland, Rumania, Czechoslovakia, or Hungary, or the others. Each one of these diabolical—I say the word advisedly—satellite regimes seeks to crucify the Christian peoples of eastern Europe on the cross of atheistic communism.

Third, we should take steps to give dignified asylum to the refugees from behind the iron curtain.

Fourth, we should help form eastern European nationals, available for military service, who have escaped from behind the iron curtain or who will in the future escape, into their own national units to be attached to the European Army.

Fifth, we should let the people behind the iron curtain know that we will do everything we can to work for their eventual liberation.

Sixth, when the time is opportune we should actually assist the people behind the iron curtain to liberate themselves. The time for

assistance of this type may already be ripe in China, and it may be too late 6 months or a year from now, with the execution squads continuing in the main cities of China.

By redirecting our policy with regard to eastern Europe and China, we can demonstrate to the world that America is not motivated by a mere groveling fear, that we can do something more than assume a mere posture of defense. Ten years or more of mere armament for defense—especially with the tenor of this measure as drawn by the Defense Department—10 years or more of mere armament for defense would probably give us military arthritis.

By so redirecting our policy we can demonstrate to the world that we stand for principle and morality among nations. Such a redirection, though it means retracing our steps, would put us on the path of real moral leadership.

One word more as to the amount asked in this bill by the executive department: I have no way of knowing at this time the cost or extent of military requirements that it would be advisable for us to furnish other countries, but I suspect, however, that the amount is highly excessive.

I suspect also that much of the thinking of the project has been done by that band of bright young men in the lower echelons of the State Department who secretly tell one another that socialism and the Socialist elements in foreign countries are the chosen instruments to save democracy.

But I do not think that this committee will be taken in by that feeling. I am sure that every member of this committee will act solely from purely American viewpoints.

Mr. CARNAHAN (presiding). We will go around and give everyone a chance for questioning if they care to do so.

Mr. Vorys?

Mr. VORYS. You made a very comprehensive review of our foreign policy and pointed out some of the reasons for our present failure, Mr. KERSTEN, and it is extremely helpful.

On your six points as I have heard you give them, and skimming over them in your written statement, it would appear to me that there is only one of them that might have a place in this pending legislation. That would be to form cadres from east European nationals for military service in the European army.

Now as you know, according to the papers there is talk that a five-nation European army is being proposed.

I wonder if you have given any thought to the way in which a requirement or authorization for that might be put in this legislation.

Mr. KERSTEN. Well, Mr. Vorys, as to the precise juridical or international legal situation, I suppose there may be certain difficulties, but I think they are difficulties which should not stand in the way of setting up such cadres.

Under the present law, as I understand it, such people might be incorporated in the American Army. But I think it would be much more effective for propaganda purposes behind the iron curtain were such people formed into cadres where they would be recognized as to where they were from; in other words, Czechoslovak people, Slovaks, Hungarians.

Mr. VORYS. A Polish Legion, for instance.

Mr. KERSTEN. Polish Legion and that sort of thing.

It seems to me that we should cut through any juridical difficulties and actually help such units to be formed and attached to the NATO.

Mr. VORVA. I thoroughly agree with you, and I know this: That if there were a way to do that, to let them preserve their national designations through regimental flags and patches or something or other, as no doubt the units in the European Army might even do, though they might have uniforms that were all the same, the saving in money would be considerable over bringing them into the American forces where we have a far higher standard of pay and maintenance than they have in all the European countries.

So your suggestion would be one that would have great propaganda force because it would have great moral force, and I think it would also be a measure of sound economy.

Mr. KERSTEN. Yes, sir.

Mr. VORVA. And I hope you will think along with us in the way that that might be written into this law.

Mr. CARNAHAN (presiding). Congressman, you didn't have the idea of taking these people into any one of the national armies of Europe, into an army that would be a French Army or Belgian Army or British Army, did you?

Mr. KERSTEN. In a sense that is correct, Mr. Chairman. It seems to me that by taking in these nationals, say into the American, French, or the other armies, we would thereby lose a great deal of the propaganda potential.

If they are formed into units like, say, Polish legions or Hungarian legions, and designated and operated as such under the proper command, to be connected with the free forces, it seems to me it would have a tremendous propaganda value. In other words, it would be something which the average person in Hungary or Poland could see a picture of or hear described particularly.

It would be simple and I think much more valuable propaganda-wise.

Mr. VORVA. If I may be indulged for a minute: In our own armies we have now hit upon the idea of preserving the identities of outfits, such as the Thirty-seventh Division, which happens to be the Ohio Division with a history now of some years. And there are many other divisions that have a tradition and an association.

It is true they are issued the same arms and the same uniforms, and the chain of command does not recognize this divisional identity. But the morale inspired by having such divisions in our own forces is a good thing.

It seems to me that we could do two things: One is go forward with this European Army, which I happen to think is a great idea, and five nations have representatives that have agreed to it; but put into it cadres of proper size, and so forth, who would be subject to the Army discipline but would be identified by their source.

Mr. CARNAHAN (presiding). From what source would an army of this type get its equipment and its pay and its housing and its food?

Mr. VORVA. I presume, Mr. Carnahan, that that is one of the things that they have worked out under General Eisenhower for this European Army, where they are to have similar uniforms and a unified command. And it would be supported through contributions of the European countries—and, I suppose, would end up with a contribution from the United States.

Mr. CARNAHAN (presiding). Well, I was thinking that if you were to have much of a European Army, our contribution might have to increase. Those soldiers would have to be paid and housed and fed and clothed.

The American units in Europe at the present time are still on the American payrolls.

Mr. VORYS. I dragged out of the Army, in 1949, some figures which I put in the record, which showed that on the average a European soldier could be equipped and put in the field and maintained there for a third of what an American soldier would cost in dollars.

Mr. ZABLOCKI. That is under European command.

Mr. VORYS. Yes.

Mr. CARNAHAN (presiding). And aid through European governments.

Mr. VORYS. Yes.

Now I think the discrepancy is even greater than a third. But if the Europeans would band together and support such cadres, recruit them, and we would possibly contribute the arms and they would contribute the troop pay, and maybe uniforms, it seems to me you have a great possibility there.

Mr. ZABLOCKI. There are always a lot of difficulties. We have our difficulties now with all armies.

Mr. CARNAHAN (presiding). There would certainly be a lot of details to work out.

Mr. ZABLOCKI. Mr. Vorys, don't you think the law passed in the Eighty-first Congress provides that units would be admissible under certain conditions?

Mr. VORYS. It was 2,500 then. I think it has gone to 25,000 now.

Mr. ZABLOCKI. Eligible to fight under the American flag.

Mr. KERSTEN. An American army, but they would not be eligible as American citizens though.

Just to say one word on the remark that you made, Mr. Chairman, it seems to me that if such individuals were taken into such an army, it would necessarily cut down on the necessity for the number of American troops that would be required without them.

But much more important than that is the fact that such individuals—Poles, Hungarians, and others—when fighting under their own identity, it seems to me, would be a terrific shaft at the iron curtain that would have tremendous propaganda value and be very unsettling for the regimes of Poland and so on. And therein lies its great value.

Mr. CARNAHAN (presiding). Mr. Zablocki?

Mr. ZABLOCKI. I certainly want to welcome our colleague from Wisconsin, and I think we can agree with certain provisions in his testimony and some of the ideas he has presented.

However, I personally feel that the testimony is more applicable to the resolutions that you have introduced which are now pending before our committee as to the termination of diplomatic relations with the Soviet and satellite nations than it is to the mutual-defense bill that we are considering now.

You certainly are not in opposition to the defense bill?

Mr. KERSTEN. Well, I feel that if the bill or the measure were to be set up as indicated by the data and material furnished by the executive department—that is all I have seen, of course—it would be largely for naught. I think there has to be added to that—

Mr. ZABLOCKI. Certain policy provisions!

Mr. KERSTEN. Certain policy provisions that, instead of constituting a purely defensive armaments race, should be pointed toward the liberation, particularly of the eastern European countries, and of China.

Mr. ZABLOCKI. Is it your view then that our foreign policy should be to change the governmental or social structure of nations by force, as you imply here?

Mr. KERSTEN. I would say that we should do all we can to assist these enslaved peoples at the proper time to overturn their own regimes by force if necessary.

Mr. ZABLOCKI. At the proper time and timing is essential. I agree with you that we should assist.

Mr. KERSTEN. And I think right now in China that situation may be ripe, and it may not be ripe for too long.

Mr. ZABLOCKI. The reason for my question is your statement on page 2:

Unless the Soviet regime is undermined, subverted, and overthrown.

Mr. KERSTEN. Right. Not that we would overthrow it, but that we would do all we can to assist the people enslaved to overthrow these regimes that enslaved them.

Mrs. KELLY. Have you any suggestions as to how we could bring that about?

Mr. KERSTEN. Well, I think one thing we should do, right off, that we can do, is to terminate diplomatic relations with all these regimes. Right now we are recognizing them as legitimate governments. I think that by that action on our part, while many people in the diplomatic circles may feel that it does not mean too much, nevertheless the ordinary person, the average citizen, the average Pole, Hungarian, and the rest, feels that it means that we think they are the governments, the real governments, of these people, that we have abandoned them to these governments, which in a sense we have now.

So I think that one thing we can do right now is to cut through the diplomatic froth and false facade, and call these regimes actually what they are and let the people know what we think of them.

Mr. ZABLOCKI. Are you not in effect defeating the very purpose you have in mind when you state that—

Even prisoners in a penitentiary have a visitors' day when they may talk with people from the outside—

when you advocate termination of all our relations, diplomatic and otherwise? If you are going to cut off diplomatic relations, you are then cutting them off from the free world entirely.

At least now we have an opportunity to study them if we have missions or embassies in these satellite countries, and we have an opportunity to observe them, to observe the governments that are enforced on these people. But if you are going to withdraw recognition and terminate diplomatic relations these nations are left to the complete influence of the Soviets.

Mr. KERSTEN. I do not agree with you, Mr. Zablocki.

Mr. ZABLOCKI. Nothing would please the Soviets more than if we made the iron curtain more absolute.

Mr. KERSTEN. Well, I think that by maintaining diplomatic relations with them we are letting the people think, letting the Poles and

the other peoples think, that we recognize the governments as legitimate governments of these peoples, which they are not. And I do not think our Embassies there are listening posts as you imply. I think that our Ambassadors there and their staffs are virtual prisoners in the Embassies.

Mr. ZABLOCKI. They may be prisoners to an extent, but they are listening posts. Mr. Kersten, when visiting in Europe and Hungary in 1949 it was my observation that because we had a mission in Hungary we were better able to understand the conditions of the Hungarians living under the Communist regime. Our diplomatic mission made possible the little information services that were offered to these Hungarians. They could learn nothing of our efforts toward peace and freedom if we did not have that mission.

Mr. KERSTEN. That might have been true 2 or 3 years back, but I think the condition is tightening in Hungary and Poland.

Mr. ZABLOCKI. If we should, as you advise, withdraw and close these diplomatic contacts we have in these satellite countries, you are going to shut off the oppressed peoples completely, shutting us off from learning about them, and shutting them off from learning about us.

Mr. KERSTEN. I would like to ask you a question: Do you think that any of these regimes actually represent these people?

Mr. ZABLOCKI. Oh, no. Everybody knows they are not representative of the people. These governments represent the minority of the people, a very, very small minority.

Mr. CARNAHAN (presiding). But they are the existing governments of the countries at the present time.

Mr. ZABLOCKI. May I just ask one more question, Mr. Chairman.

Mr. CARNAHAN (presiding). Yes.

Mr. ZABLOCKI. What effect would our not recognizing these governments have? Would that cause these governments to cease, or disintegrate? They would still exist, would they not?

Mr. KERSTEN. I think we should not recognize them for the same reasons we do not now recognize Red China, and the same reasons we did not recognize Soviet Russia from 1917 to 1933.

Mr. VORYS. Gentlemen, in 1931, under Secretary of State Stimson, we adopted a doctrine of nonrecognition of governments that took over by force. We were laughed at as being non-realists in some parts of the world, but we never recognized Manchukuo.

Now we have reversed that and we have recognized these governments that took over by force, Poland and the rest of them. The reason given publicly is that we can have a public spy, a listening post, and a peephole in the middle of that country.

I want to say that I thoroughly agree with the gentleman that our past experience has shown that the high moral standard was the preferable one, and thank goodness we are following it as far as China is concerned.

Mr. KERSTEN. I agree with the gentleman.

Mr. ZABLOCKI. I want to say that some countries, Mr. Vorys, were not taken by force, but through trumped-up elections. I would like to see some way of withdrawing our recognition. But at this time we would not be helping the people of these satellite countries. We would be leaving them to their present fate by following the recommendations just presented.

Mr. CARNAHAN (presiding). Mrs. Bolton?

Mrs. BOLTON. I appreciate your being here. You are always a very stimulating thinker and a charming person.

In your third point here where you say "we should take steps to give dignified asylum to the refugees," just what do you mean by that?

Mr. KERSTEN. By that, Mrs. Bolton, I mean this: In looking into the situation somewhat, as one who is far removed from the European scene, it is my understanding that there are quite a few refugees from behind the iron curtain who are tossed from one place, from one country, to another in Western Europe, who make their escape. And they do not find things too well so far as getting along. There is no status for them.

I think that the European nations and ourselves should get together and formulate a policy with regard to these refugees so as to make it actually attractive to them to make their escape so that they will, where possible, be taken care of. The more people that we can get from behind the iron curtain and the message concerning whom can be sent back behind the iron curtain, that the world beyond is not the hell that is painted by the Soviets, the more we can weaken the Soviet regimes. That is our No. 1 objective.

Mrs. BOLTON. What would you say would be necessary in the way of machinery to screen those peoples so we would not be running the risk of bringing over a lot of very thoroughly trained Communists?

Mr. KERSTEN. Well, that of course would be a practical problem, but I do not think it would be an insurmountable one.

Mrs. BOLTON. We cannot get behind the iron curtain to do our screening there.

Mr. KERSTEN. No; that is true.

I recall reading not long ago, that the Soviet garrison in one of the satellite countries—I do not recall which one, it was last spring sometime—revolted and they were wiped out by a tank division that was sent down there to do that.

And simultaneously, in the same country, I believe it was 400 cadets that were shot because they also revolted. Now if they had known that they could have made their escape from behind the iron curtain some way or other and be taken care of, they would be tremendously valuable propagandawise.

I think, for example, a place like Spain might be induced to furnish an area, a place still on the European continent, behind the Pyrenees somewhat safe, somewhat of a refuge. They might be persuaded to set aside an area to take care of some of these people. Their care could be provided for jointly by the free nations, including us.

I would like to see if possible several divisions defect from the Soviet armed forces; and once that sort of thing began to happen, then you would begin to bore into the basic structure of the monolithic Soviet system, I think.

Mrs. BOLTON. Of course after years of study on Communists and communism, part of which have been years on a subcommittee of this committee, I would be very reluctant to trust any such divisions. Real Communists are trained so very thoroughly in what one might call camouflage. And we have not learned to differentiate. We did not know when we turned people back on those bridges in Eastern Europe when they wanted to come out of Russia, and forcing them

back in because we had absolutely no understanding whatever. I think we can be so very ignorant.

Mr. KERSTEN. I agree.

Mrs. BOLTON. I am all for helping the people who are continuing to have a feeling of unrest under Mr. Stalin. As a matter of fact that is one of the most encouraging things that is going on.

Mr. KERSTEN. I think what you say about turning the people back is certainly true.

Mrs. BOLTON. It mars our own record.

Mr. KERSTEN. Recalling what might have been done in that case if they had been kept in the West, that is something in the nature of what I think could even be done now.

Mrs. BOLTON. I think perhaps there is more feeling building up over there than we realize. Certainly I am in whole agreement with your feeling that we must be ready for the moment when those uprisings may take place, to give them the encouragement that they do need.

Mr. KERSTEN. I think that inasmuch as this project is primarily and almost solely directed at the Soviet threat, it should be oriented at the liberation of Eastern Europe and China.

Mrs. BOLTON. Mr. Chairman, may I ask one more question?

Mr. CARNAHAN (presiding). Yes.

Mrs. BOLTON. What makes you feel that the moment is now in China?

Mr. KERSTEN. Because of the almost daily reports that come from China that there are large numbers of people being executed in the various cities of China. It would indicate that resistance is pretty widespread throughout the entire area.

Mrs. BOLTON. It is a pretty big area.

Mr. KERSTEN. Yes; it is a pretty big area, and personally I believe that if Chiang Kai-shek were aided with material whereby in the not too distant future he could parachute large numbers—small groups but a large number of them—into various parts of China, it would stand a pretty good chance of rolling back the Soviet hold on China.

Mrs. BOLTON. I do not know what the percentage is between military and economic help in this bill, but do you feel that the import of this bill should be more military and less of the economic help?

Mr. KERSTEN. For the moment, that is, in this time we are in now, I think the military is the more important.

Mrs. BOLTON. Thank you, Mrs. Kelly, for allowing me to run over my 5 minutes.

Mr. CARNAHAN (presiding). Mrs. Kelly?

Mrs. KELLY. I want to join my colleagues in welcoming you here, Mr. Kersten. I think it is most helpful to learn the opinions of our fellow members.

I have several questions. I hope I have time for them.

Mr. CARNAHAN (presiding). We will give you a long 5 minutes, Mrs. Kelly.

Mrs. KELLY. Thank you, Mr. Carnahan,

Do you believe we should attempt to change the governments of other nations before we attempt to accept them as our allies?

Mr. KERSTEN. Before we accept the peoples, do you mean?

Mrs. KELLY. The governments.

Mr. KERSTEN. Will you please repeat the question?

Mrs. KELLY. Do you believe we should attempt to change the governments of other nations before we attempt to accept them as our allies or give them assistance? For instance, Spain, Tito?

Mr. KERSTEN. Well, I was going to say before I concluded that I would like the privilege, if I may, of furnishing a statement with regard to Yugoslavia, and I will have it prepared tonight if that is possible, Mr. Chairman.

Mr. CARNAHAN (presiding). Without objection, you may file the statement and it will become a part of the record.

Mr. KERSTEN. Substantially my feeling is this: that we must be extremely wary of dealing with Yugoslavia. I think that the Tito regime is not in a position to drive a sharp bargain with the United States. I think the Tito regime is on thin ice, and I am extremely doubtful that the people of Yugoslavia are behind the Tito regime.

I have heard many people say that the majority of Yugoslavs dislike Tito even more than Stalin, and I think it is true that Tito also has a Communist state, a police state.

But there is the practical situation that we now have where there is a defection between Tito and Stalin, and it may be useful to us, useful to the free world, and even useful to the Yugoslav people temporarily to do everything we can to widen that rift.

I think any help that we give Tito—and this I think is important—should be on certain definite conditions, and even though he may say that “we will accept no conditions or we will not accept this, that, or the other condition,” there are certain definite conditions we should insist upon.

Among them I think is that we should insist on religious liberty in Yugoslavia.

Mrs. KELLY. The basic freedoms?

Mr. KERSTEN. The basic freedoms, yes. And of course he will have to go a long way before he performs those conditions, from what I hear about Yugoslavia.

Mrs. KELLY. In other words, to be realistic at this point, do you think we should give Tito aid on the condition that he accept the basic freedoms?

Mr. KERSTEN. That is right. But definitely on conditions.

Mrs. KELLY. I would like to cut off diplomatic relations with Tito unless he permits the basic freedoms.

Mr. KERSTEN. Well, it may be that military people and those who have more direct information know or feel that the Yugoslav divisions would not fight under Tito, and if that were the situation there would be no point in giving aid to Tito. And it may be that giving aid to Tito might help to strengthen his police state hold on the Yugoslav people, which I would be against.

The conditions that we should lay down should be such that these things could not be done.

Mrs. KELLY. Well, you also believe, then, that we should be realistic in our approach to assistance to any country?

Mr. KERSTEN. Definitely.

Mrs. KELLY. And if from our vantage point it is necessary to assist that government from a standpoint of security for the United States, you would agree with us on that?

Mr. KERSTEN. If we can do it without abandoning principles.

Mrs. KELLY. Then we may not necessarily at this time be able to sever our connections or cut off our diplomatic association with nations because it is beneficial to the security of the United States that we maintain them at this time?

Mr. KERSTEN. I believe it would be to the betterment of our security to cut off those relations.

Mrs. KELLY. Then we would have to cut off Tito?

Mr. KERSTEN. I do not think that Tito is in the same position as the satellites. He is not at present a satellite of Moscow.

Mrs. KELLY. Then you do not fear nationalistic communism as much as you do communism which is Moscow-directed?

Mr. KERSTEN. I fear it in the long run, but not in the short run. I do not think that there is much of a chance right now, as circumstances exist, that Tito would be a world conqueror.

Mrs. KELLY. Well then, would you accept the statement in our foreign policy that it is expedient for the security of the United States at this time to assist Tito, while we do not accept his form of government?

Mr. KERSTEN. I would say that in laying down these conditions we would probably change to a certain extent his form of government. I believe that our assistance should be more directly to the Yugoslav people.

Do you see what I mean?

Mrs. KELLY. Yes, Mr. Kersten. We are actually hoping to help all people to attain their God-given right but do you believe that we should accept Franco at this time without asking him to change his form of government?

Mr. KERSTEN. Well, I think that before his death Admiral Sherman apparently, from news reports, had persuaded Franco to make certain changes there. Just what they were I do not know.

I do not think that there is anything in the Franco government that constitutes potentially, or even in the long run, any world danger. I think there has been a great deal of misrepresentation on that score by the leftist governments, by leftists the world over.

I think if Franco had not beat his opposition in the Spanish Civil War, Spain today might well be a Moscow satellite. And that would be very bad for Europe.

Mrs. KELLY. In other words, if a dictatorship lives up to its international commitments you would accept it?

Mr. KERSTEN. Well, I think in substance that would be true if one of those international commitments were to deal substantially fairly with its own people.

Mrs. KELLY. Have I time for one more question, Mr. Chairman?

Mr. CARNAHAN (presiding). One more.

Mrs. KELLY. Do you believe at this time that we should declare war on Red China?

Mr. KERSTEN. I think we are at war with Red China, have been and still are.

Mrs. KELLY. But I mean a declaration by Congress.

Mr. KERSTEN. Frankly, I do not know whether a declaration of war would put us in a better position to defend our rights and to repel invasion. I am inclined to think that the proposals made by General

MacArthur which were not declarations of war but to take certain additional steps effectively to oppose Red China, to me, as a layman, sound better than the measures we have taken.

I do not think there was the danger that was indicated that Soviet Russia would rush into this war.

But I speak only as a layman, not as a military man, certainly.

Mr. CARNAHAN (presiding). Mr. Herter?

Mr. HERTER. I have no questions. I just want to thank our colleague for coming here and giving us his views.

Mr. ZABLOCKI. I have just one more question, Mr. Kersten. If we should include the political ramifications that you advocate in your statement on the Mutual Security Defense Act we are now considering, what effect would that have in the NATO nations as to our status there, or the status of the entire United Nations?

Mr. KERSTEN. Well, Mr. Zablocki, I think that up till now we have been adopting the policy of trying to sound out, by putting our ear to the ground you might say, to find out how the various nations of the United Nations feel or how they would react. I think our prime motivation should be first to ascertain for ourselves what the right principle is in international morality and international dealings, and then after discussing it with our allies, unless we could be persuaded that it was wrong in principle, and wrong practically, we should go right ahead and assume the leadership.

Mr. ZABLOCKI. Go it alone?

Mr. KERSTEN. I think we should assume the leadership, and by assuming the leadership we would then get the maximum help from our fellow nations in the United Nations.

I think right now that this idea of "go it alone," and this conflict of thinking along that line, is unrealistic. I do not think any one of those nations would break away from the United States. They could not afford to for their own safety.

I think we should assume leadership based on proper principles, and I think these nations—most of them are Christian nations, most of them oriented in the proper direction—would shake away from their own selfish positions and follow the leadership of the United States.

I do not think there is any danger of our having to go it alone in this thing.

Mr. ZABLOCKI. There are some charges that we have difficulty in getting the European nations to join in our collective security program today. Now, if we are going to include these ramifications do you think they would be willing to go along?

Mr. KERSTEN. I think they emanate mainly from the leftist and socialist elements in these countries. Take in the question of Spain, for example: Long ago we should have insisted that Spain be included in the Atlantic defense set-up.

Mr. ZABLOCKI. I agree with you and include Turkey and Greece.

Mr. KERSTEN. France and England objected right along, and still do. I think that if we assume the moral leadership they will follow.

Mr. ZABLOCKI. I have no further questions.

Mr. CARNAHAN (presiding). If we have no further questions, we thank you for your appearance.

Mr. KERSTEN. Thank you, Mr. Chairman.

(The statement referred to is as follows:)

CONTINUATION OF TESTIMONY OF CHARLES J. KERSTEN

AID FOR YUGOSLAVIA

The Mutual Security Program for 1952 proposes to render aid to various countries including Yugoslavia. It is with respect to this aid to Yugoslavia that I wish to direct some of my remarks. The proposition of aid to Yugoslavia requires particular study and attention because of the fact that Marshall Tito operates in Yugoslavia a police state basing its power on the use of force and terrorism. The immediate question then arises:

In our effort to protect our own American people are we morally justified in rendering aid to this tyrannical regime? We must clearly remember that the people of Yugoslavia in all their history have probably never been subjected to a more frightening reign of terror than now exists in Yugoslavia, and the regime which has created this tyrannical situation was born and weaned with the aid and assistance of the United States. We Americans will some day be obliged to answer to our Creator for the part we played in helping to impose this reign of terror upon the people of Yugoslavia.

If today, in rendering further aid to Tito's regime, we merely insure his continuance in power and thus postpone or further lessen the possibility to the people of Yugoslavia of the return of their inherent rights and freedoms we cannot be morally justified in giving him aid under the proposed Mutual Security Program for 1952. And this is true regardless of how much this aid may protect our own country, for clearly we cannot buy our security at the expense of the rights and freedoms of the people of Yugoslavia. A good end can never justify an evil means.

Nor can we regard the action taken in passing the Yugoslav Emergency Relief Assistance Act of 1950 as a proper precedent to justify sending economic and military aid to Tito. In that particular instance the question to be determined was whether the United States should send food relief to Yugoslavia to avert starvation of the people. In that instance, because the lives of the people were involved, the sending of food to Yugoslavia was probably justifiable. In the present instance, however, a starvation condition does not exist and, therefore, before any aid can be sent to Tito we must be able to show, first, that we are morally justified in sending this aid and, second, that it is the best interests of the American people to do so.

The argument has been advanced by representatives of our State Department and others, that the only alternative to Tito in Yugoslavia is Stalin—that if Tito falls Stalin will take over. Therefore support Tito. This is an assumption which may or may not be correct. This conjecture has not been proved and of course it perhaps is of such a nature that it could not be proved conclusively.

However, if this assumption is in error and the real alternative to the present reign of terror is not Stalin but rather a rule which recognizes the rights of the people, either with or without Tito, then aid to Tito cannot be justified.

The people of Yugoslavia are now fighting against Tito in the only manner now available to them—by refusing to produce for the regime, by not planting or cultivating crops and by work slowdowns. Already this economic squeeze by the people has forced Tito to make concessions, particularly in abandoning his plans for collectivizing the farms. If we merely bail Tito out of his troubles by giving him aid with no conditions attached, we are doing exactly the opposite of what the people of Yugoslavia are doing. We are lightening Tito's economic burden, while they are trying to increase it. We would thus be acting against the aims and best interests of the people of Yugoslavia by lessening their squeeze which may make Tito yield to the people of Yugoslavia further, and we would enable him to continue his ruthless practices without regard for the resistance of the people. Tito would not have to worry about the economic consequences of his communistic theories and terrorism as long as the United States was financing him. In this connection it is interesting to note the comment in the Swiss newspaper Basler Nachrichten in the November 2, 1950, issue, which states:

"It would be great luck if the west does not really pass this opportunity and corrects the faults made before. It is not true when one affirms that Yugoslavia has to choose between Tito and Moscow, or Communism. The alternative is only one: Tito or freedom for the subjugated peoples."

I suggest that no one can be sure of the alternative possibilities in Yugoslavia. We can't be sure whether the real alternative to despotic rule by Tito is either by Stalin or freedom for the people with or without Tito.

In view of this fact of our lack of certainty, we must be most careful to see that in rendering aid to Tito we do not merely insure the continuance of the enslavement of the people. To avoid this possibility and thus be sure that our actions with respect to Yugoslavia are morally justifiable, I believe that our Government should give aid to Tito only under conditions which will insure greater freedom for the people of Yugoslavia and greater security in the exercise of their rights. If compliance with these conditions is assured, I believe that we can then and only then be justified in rendering certain aid to Tito, provided, however, that it is in the interest of the American people to do so.

Besides making aid to Tito morally justifiable the exacting of certain conditions to our aid provides definite material benefits. In the final analysis it is the Yugoslav people, not Tito, whom we desire as our allies in any conflict against Stalin, and we will gain far more support from them if we help them to regain their rights. Furthermore, the people of Yugoslavia and other countries subjected to communism will not believe that we are sincere in our opposition to Communist Imperialism, if we support Tito on the basis of mere expediency.

We would also derive economic advantages from exacting conditions. Much of Tito's difficulties lie in the fact that his ruthless practices have destroyed the willingness of the people to work efficiently, thus causing the deterioration of the Yugoslav economy. The restoration of the rights of the people will increase their willingness to relieve the economic difficulties which beset the country.

In addition to these conditions in behalf of the people of Yugoslavia, we should also lay down other conditions of aid which pertain to the economic and military situation in Yugoslavia, for, unless, we do this, we to a large measure would be pouring money down a rat hole. Otherwise there are other countries where we can put our money to good use. The conditions which I believe should be attached to any aid to Tito follow:

Before any aid be permitted to be sent to Tito, Tito should be required to do the following:

(1) Release all political and religious prisoners, other than pro-Cominformists.
(2) End forced labor and release all persons now working under forced-labor conditions.

(3) Terminate collectivization of farms; promise to restore to former small land owners all farms heretofore collectivized.

(4) Cease the practice of exacting quotas of farm produce from the peasants.

(5) Promise to restore to their former owners all other property confiscated by the Government.

(6) Permit all religious organizations to operate freely, to own property, to conduct religious, charitable, educational, and medical institutions.

(7) Permit every person to own property and to operate his own business or profession.

(8) Release all Greek children held in Yugoslavia.

(9) Permit Americans who have immigrated to Yugoslavia since 1945 to return to the United States.

(10) Permit free movement of Americans into and within the country.

(11) Arrange for the operation of teams of American economic and military advisers to assist them in the sound development of the economy and the army.

(12) Enter agreement to permit the United States if it desires to construct and operate airfields in Yugoslavia and a naval base at Boca Di Cattaro or elsewhere.

I recognize that the establishment of these or any conditions on our aid may be contrary to the ideas of the State Department as expressed by Mr. George Perkins and Mr. John J. Haggerty, when they appeared before this committee last December with reference to emergency relief for Yugoslavia. I know, however, that it is the view of this committee that certain conditions are desirable with reference to any aid sent to Yugoslavia as is indicated by your action last year, and I believe this principle should be adhered to and extended.

We are all aware of the fact that during World War II our policy was to give Stalin everything he asked for without any questions or conditions of any kind in the forlorn hope that he would respond to such buttering up in a spirit of friendliness and then be willing to cooperate with us. We have discovered how foolhardy such a method of dealing with the Communist dictators is. Let us not repeat the same mistake again.

The Intelligence Digest, edited by Kenneth de Courcy, in its December 1960 issue stated:

"It is important to realize that there is a growing feeling in Yugoslavia that the Western Powers are taking the same attitude toward Tito as they did toward the Russians during the war. Many potential friends of the west say that aid for Tito, with no conditions attached, is a serious mistake. If Yugoslavia is to become a western asset, the regime should be forced to modify its religious and economic policy. And it could be done. Tito has little real choice if he is to survive both the Russian military threat and the internal economic crisis."

Leigh White in his book, *Balkan Caesar*, stated:

"So be just as skeptical and as hypercritical in dealing with our erstwhile enemy Tito as we have been in dealing with our Greek, Turkish, and Iranian allies. If it is the course of wisdom to demand reforms in Greece, Turkey, and Iran is it not the course of folly to tolerate the myriad abuses of communism in Yugoslavia? We have no right nor have we the desire to exact material concessions from any of our beneficiaries. But we do have the right, indeed we have the most solemn of moral obligations, to exact the utmost in spiritual concessions from every tyrant who presumes to traffic with our aims."

Thus, in considering aid to Yugoslavia, it is important that we weigh the true facts and be not beguiled by statements from people who think Tito is "a swell fellow" as George Perkins referred to him upon his return from Yugoslavia in February.

To give a broad picture of the situation that exists in Yugoslavia, I include herewith two reports from residents of Yugoslavia. Report A was made by an intelligent observer residing in Yugoslavia in April 1951. Report B was made within the last month. I cannot divulge here the name of the individuals who made these reports since it might endanger them. I can give you more detailed information about them privately but, for the purpose of the record, I merely wish to state that I believe the source of my information is thoroughly reliable.

YUGOSLAVIA REPORT A

The numerical strength of the Communist Party of Yugoslavia, taking in consideration only the fully indoctrinated members, is estimated to be 3 percent, at the most 5 percent, of the entire population which numbers approximately 16 millions. After the conflict with the Cominform dissension within the party has been great and generally known. Cominform adherents are estimated to number over 50 percent, but as the chief personalities have been arrested, the Cominform adherents have till now remained without leaders. The personal situation of Tito in the party is considered to be very unfavorable; he maintains himself in position by means of organized force, and derives a distinct advantage from the support given to him by the west.

Western support has completely confused the anti-Communist part of the people (a majority of over 95 percent of the entire population); they do not know whether the west is supporting Tito in order to maintain him permanently in his position, or whether this is a matter of military-political opportunism.

A question that is frequently discussed in anti-Communist circles is that of a possible change of regime brought about by indirect or direct Soviet action, and of the replacement of the present regime by a pro-Soviet government. Should such a change take place due to direct Soviet intervention, it is believed possible that intervention of the Western Powers would ensue and world war III would break out. The prevailing opinion for the present is that the Soviets do not wish a third world war as yet, but fear of Soviet aggressive action is nevertheless constant.

A general impression is obtained that "political reactionaries" have in the last months been persecuted less by the regime, ever since closer contact with the west has been established; the reason, however, that the regime is easing up on the reactionaries is not that it has become more liberal, but because the reactionaries are not giving any pretexts for strong countermeasures. The reactionaries are not giving these pretexts because they have become completely apathetic. Sporadic resistance offered by peasants is purely of local character. It flares up suddenly and is repressed promptly and violently, as it is spontaneous and unorganized. According to the present state of affairs, the anti-Communist masses are so apathetic, depressed, and without any means, that it is impossible to envisage the prospect of the people undertaking any organized action for the overthrow of the regime. However, there is one circumstance which may occur.

sion surprise, and this is the general poverty and extreme want of the people. They have nothing more to sell, there is nothing they can buy. From day to day, with increasing anxiousness, people ask themselves the question: "Will I be able to keep body and soul together this year?" This is not said to stress the poverty and want. This is the awful fact. The question of physical survival is extremely acute. As consequence of this state of affairs mass suicides are expected of disheartened people, or on the other hand a spontaneous revolt might break out among hungry and desperate men who in their demented way may seek this issue from their misery, a misery which is general and from which is spared only an insignificant minority of privileged Communists.

Tito and his regime are hated, just as communism in general is hated, whether it be the Tito or the Soviet brand.

The spontaneous resistance to communism by the peasants is stubborn. The regime's plan to communize rural districts through the creation of agricultural work cooperatives has failed. All that has been written upon this matter by the regime are nothing but falsehoods, empty theorizing, and falsification of facts by use of unverifiable figures. The peasant work cooperatives which the regime has managed to set up, by using pressure, of course, are dissolved by their members as soon as suitable opportunity arises.

Youth, especially town youth, and in the first place school youth, arouses surprise by its resistance to communism, despite all the means used by the regime to win the youth over to its side.

Political personalities of prewar times have lost practically all their significance in the eyes of the people. It is typical that for the last 3 or 4 years no mention has been made in Croatia of Macek as leader of the Croatian people. He is not even mentioned at all. It is not yet possible to foresee who are the politicians who would emerge when the time comes. On the other hand there is great interest in the political activity of Yugoslav emigrants.

Two points are stressed regarding the two main national groups—the Serbs and the Croats. Both in Belgrade and in Zagreb exist groups of intellectuals holding the view that, once Yugoslavia is liberated, Serbs and Croats would not find it possible to live together in the same country again. They believe that this has been proved in the past. On the other hand, Serbian and Croatian masses realize that mistakes have been made by both sides to their common detriment, and that close ties between these sides are now imperative in order that the common enemy—communism—be overcome. It is considered that, once Yugoslavia is liberated, it will be of utmost importance that the conduct of state affairs in Belgrade be exercised in a firm and capable manner which will frustrate all attempts to break up Yugoslavia.

The masses are completely uninformed about what is taking place in the Western World regarding the fate of Yugoslavia. They have no idea how the matter of aid to Yugoslavia was discussed in the American Senate, what were the opinions expressed by many American Senators, and that aid was approved to the Yugoslav people and not to the regime. The Voice of America broadcasts are hardly listened to at all, as they favor the regime. People prefer by far to listen to broadcasts from Hungary and other Cominform countries because of the sharp attacks and criticism directed against the present Yugoslav regime.

American aid has not been felt yet among the people. Much is known and spoken about this aid, but nobody except civil servants has had any palpable evidence of its existence. It is known that there are American missions and commissions which are supposed to supervise the distribution of this aid, but they are located in Belgrade from where they are taken on sight-seeing excursions, are feasted and provided with entertainment by the regime, but are never seen in the field. Not a single mission or commission is known to have appeared in Zagreb or in Croatia to oversee the distribution of American aid.

The brain of the Communist party of Yugoslavia and of the Yugoslav regime is considered to be Pijade Mosa, although considerable intellectual value is attributed to Tito himself, but his past and his origin have not been clarified as yet.

The economic situation

The economic straits in which Yugoslavia finds herself, and from which she cannot hope to extricate herself under the present economic order, have not resulted from the greatly publicized "drought" nor from the economic "blockade" from the east; they are due solely and exclusively to the chaotic megalomaniac, completely unrealistic, theoretical-experimental attempt to replace tested means by something untried, and this not because of factual necessity but for ideological

and revolutionary reasons, the aim of which is to destroy all that formerly existed.

In the course of 8 years of "economic work and planning", enterprises were undertaken disregarding completely practical and useful results. Numerous and huge factory buildings were erected regardless of whether they could be furnished with the necessary installations, skilled labor or raw material. Inasmuch as it was possible to render these factories partially capable of functioning, their management was entrusted to laymen with only political qualifications for the job, and consequently work was directed according to the pleasure of party members. Already existing and prosperous industrial enterprises became enterprises of dubious commercial value after they were nationalized. For example, a prosperous enterprise which formerly employed 80 to 85 workers and several office workers, suddenly took on 300 to 500 workers (with the same installations) and 40 to 50 office workers with the result that the production costs were such that nobody wanted to buy the goods. This manner of work was justified by the slogan: "In socialist economy and in a specialist state the financial factor is of no significance. The financial factor is part of the capitalist system." Wherever rich ore deposits were theoretically presumed to exist, new mining installations were erected involving investments running into astronomical figures, the necessary labor was furnished, and the practical results achieved are far below anything that could possibly justify the expenditures entailed. For the needs of various managements of such a gigantic plan, for the needs of a huge but ineffectual government apparatus, for social welfare institutions planned purely for propaganda purposes, huge buildings and entire settlements have been erected, which were to be equipped with the most modern home installations which never arrived. Huge sums were invested, hundreds of thousands of workers were put to work, and the result amounted to absolutely nothing as it was not possible to put any of this to practical use. Huge sums were spent and yet nobody had any benefit of all this.

The means for this work were taken from the farmers, the most numerous (85 percent) and richest part of the population, but these never had any practical benefit from all the money taken forcibly away from them for this purpose. The farmers were constantly and increasingly burdened with furnishing means destined to be used for profitless capital investment and for the procurement of foreign currency with which machinery was imported and installed in factories having insufficient skilled labor or raw material. As a result production in these factories was nil, or in the best case, it was of very poor, almost unusable quality. Due to rigid centralization and to an enormous quantity of red tape, the insufficient quantity of goods that was available had to follow a long route through the so-called state administration. This considerably slowed down the passage of goods from producer to consumer and often the goods so accumulated (often under the open sky) spoiled and reduced still more the meager stockpiles of their goods awaited anxiously by the people. Thousands of tons of goods were lost in this manner. The ultimate result of this was the material exhaustion of all productive people. The peasants were left without any reserves, and in time lost their producing power. These were not helped in their predicament so as to better overcome their resistance to communism and the communizing of rural districts. This is, in main lines, how the economic collapse came about.

Agriculture, the chief branch of national economy, will not be of much use to the people and to the government. The danger of famine, which was explained by drought last year, will be at least as acute as last year. The farmer has no seed, no fertilizer, and he does not want to work because all his work is not sufficient even to pay all his taxes.

The general economic situation is such that there can be no work of rectifying it under the present conditions. Any aid coming from abroad is just pouring sand into the sea. The sole way of restoring normal economic conditions in Yugoslavia is to replace the existing economic system by another that is based on sound economic policy and not on Communist theory. The present regime will not deviate from its economic policy because such a change would imply changes of political character both within the country and in relations with other countries. However, Yugoslavia is not capable of effecting a change in its economic system with its own means. There is not capital, private or state, in the country. To rehabilitate economically Yugoslavia and the Yugoslav people would require an investment of at least a billion dollars provided that this money is not entrusted to the present regime nor to a government administration of the present type.

YUGOSLAVIA REPORT B (TRANSLATED)

After the final breach with Moscow one could think that the Communist regime in Yugoslavia might become more democratic. But Yugoslavia is still a pure Communist country. The hard situation forced Tito to yield toward the west in a way, because he had to devote his main attention to preserve the unity of his party, to clear it from the Cominform elements and to smother any opposition bloodily. It is obvious that the gulf between Belgrade and Moscow has become permanent, though no ideological differences divide both Communist countries.

By receiving an important aid from the United States of America Tito was forced to permit the entrance of many foreign newspapermen. But all the sympathy toward the west is only apparent. Following statement at a party conference is characteristic:

"We are between two evils right now: Cominform and capitalists. Cominform is aggressive and represents an acute foe; the capitalists are still asleep and do not represent any immediate danger. Our role nowadays is to create quarrel between them."

The decrease of terror does not represent any democratic measure, but it only signifies the strengthening of the regime, the complete suppression of the freedom and high grade of the complete control over all and everything.

Nowadays as before the Communists have the exclusive priority in each field of the social life.

Because of the economic difficulties and various political trouble the situation in Yugoslavia could be characterized as a continuation of war. In many cases the living conditions and the security are worse than during the war. This fact is stressed by strong tendency of sacrificing everything for the army.

Yugoslavia and Cominform

Just after the Cominform resolution in 1948 the Yugoslav Communist leaders behaved humbly toward the U. S. S. R. and kept telling that the discord was a confusion into which the U. S. S. R. was misled. But, later on, the relations grew worse, until they have come to the entire interruption of all economic, cultural and even partially of the diplomatic relations with U. S. S. R. and the satellites. A number of the Yugoslav Communist Party declared being in accord with the Cominform resolution, but the Government undertook bloody measures against them. The purge has constantly been carried out; the pro-Moscowite elements were put into prisons or concentration camps, but a rather great part were simply liquidated.

One could say that for the time being there is not any illegal organization in Yugoslavia. Before there were some Cominform leaflets and newspapers, but now one cannot find any of them.

Living standard

Due to the hard economic conditions the living standard is on a very low grade, far lower than before the war.

Because of exaggerated industrialization huge quantities of food were exported so as to buy industrial machines; this provoked a terrible want of food, although the country could produce enough for its population and even some for export.

Some quantities of food are guaranteed by the ration cards, of course, but they are absolutely insufficient and even unsubstantial. The prices at the free (black) market are following:

	Dinars
1 kilogram of flour.....	100-150
1 kilogram of fat.....	450
1 kilogram of sugar.....	600
1 kilogram of onion.....	120
1 kilogram of beans.....	100
1 meter of stuff.....	700
1 meter of artificial silk.....	1,500

¹ Even sometimes 250 dinars.

Certain articles are completely missing: soap, razors and blades, combs, tooth brushes, needles, thread, etc. All this could be bought at the free (black) market from the people who are getting parcels from abroad, especially from the United States, but the prices are terrific.

The average salary is about 3,500 to 4,000 dinars per month, thus the purchase possibilities are miserable. One could get 5 years of prison or forced labor if caught on the black market.

However, the peasants live the most miserably. They do not have any ration cards and are forced to sell their products at low prices and in established quantities, which mostly exceed their productive capacity. Therefore one can see the peasant buying flour in towns, even begging, a picture impossible to have been seen before the war. The peasant must sell wool to the Government (40 dinars per kilogram) and buy American flour (100 dinars per kilogram).

The action for the collectivization failed, so nobody is forced to enter the kolkhozes now. A great lot of peasants who were the members of kolkhozes are now leaving them.

Although the Communists consider themselves as the vanguard of the working class, one can openly say that the worker's living in Yugoslavia is far below the living standard in the west, and much worse than before the war. Consequently, the working class is represented in the Communist Party by a very small number. So the party does not represent a party of the working class.

Despite the famous assertions about the high productive capacity of labor, the effect of it is very small one. One could often hear such a catchword: "I produce according to my salary only."

Economic state

It is a well-known fact that the Yugoslav economy has come into an impasse. This happened mostly because of the tendency of the regime to transform as soon as possible a predominantly agricultural country into an industrial one, regardless of any conditions.

So they began to build great numbers of new factories and combines, but later all was stopped and most of the buildings were not finished. In the factories already prepared for work the machines could not be put in operation because of lack of raw materials. The products were of a very bad quality. Sometimes even not useful at all.

Five-year plan, so stressed before, has been abandoned now, for it has been carried out without any plan, carelessly and negligently.

Propaganda and its effects are the fundamental tendency of the regime. Millions have been spent in order to inform falsely the world about the state in Yugoslavia. For instance:

1. Yugoslavia had spent 500 million dinars for its pavilion at the world exhibition in Alexandria, Egypt. The machines were exposed there and sold at significantly low prices while Yugoslavia was buying them abroad at enormous prices.

2. There are some newspapers and magazines printed abroad where the situation in Yugoslavia is shown as excellent, the life as a happy one, full of abundance and enjoyment. How far from reality it is, one could conclude from the fact that the sale of those newspapers and magazines is strongly forbidden in Yugoslavia.

America's aid

Masses of Yugoslavia are convinced that Tito has made an excellent job and cheated America by his tales about the drought and its catastrophic consequences. It is correct that there was the drought last year, but such droughts, even worse ones, took place in Yugoslavia before the war, and the country never suffered from them. If the regime did not export food in huge quantities regardless of anything, there would be food enough for the whole population. Even now, Yugoslavia getting food for "starving" people from America has sold wheat to Egypt and sugar to Switzerland for 5 dinars for 1 kgr., while the people in Yugoslavia have to pay 500 dinars for 1 kgr. of it.

Although there was some talk about America's aid, the masses could not feel any great change, speaking in general. The only difference was that food got by ration cards was of American origin.

However, the special warehouses for "privileged" persons were full of different articles with labels: "Made in America" (USA).

The only real aid was the one from OARE organization, so-called OARE cards—powdered milk, dried eggs, butter.

There are rumors through Yugoslavia that tremendous quantities of American food are stocked into the stores in Bosnia, Hercegovina, and Dalmatia.

Yugoslav press wrote little about American aid, and then it was only in dull, official form. There was no word of gratitude to American people. On the contrary this aid has served as a wide propaganda for the regime and its stability. At different conferences the fact was stressed that the American aid represented a victory of Yugoslavia and proved its great credit abroad.

Behind the curtain, there where the eyes of the American observers could not reach, everything was undertaken in order to reduce the importance of the American aid and its origin; the labels were torn from the sacks of flour and sugar.

The aid got through the CARE organization has been distributed all right and it has represented a great help for children and youth. But they were told that they had to thank for it their "beloved, dear comrade, Tito, the greatest friend of theirs."

Relations with the foreigners

As already said, propaganda is one of the main means for maintaining the regime. In Yugoslavia there are many written and common laws as to how to behave and talk to the foreigners. Even the most innocent sport relations have to be approved by the Government.

The invitation of the important and eminent persons from abroad is a specialty of the regime. Those persons have to see "on the spot" the things in the country. But as soon as a foreigner has come over there he is encircled by the Communist agents. The translators are mostly the members of UDB (secret police), and they have to translate things only in a way favorable to the regime. "The guests" are led from one reception or banquet to another; they live in the most luxurious hotels and apartments, they have at their disposal nice cars and they usually can see only what the regime has adjusted to. If they want to see a town or any kolkhose, then the authorities arrange things quickly, that is, the agents of UDB go there before and teach the people what to say or show them how to behave, etc.

The case with Trygve Lie was characteristic. He was led through Belgrade by car and was always in the company of prominent men of the government or the party's so, he had not time enough to see anything worth while or interesting or to study the circumstances. When he said that he wanted to see Belgrade by walking through its streets, the agents of UDB went before him and ordered the salesmen on Prince Michael Street how to arrange the show windows, what to say and be ready to do so. On Prince Michael Street there are some nice stores with precious wares and the labels: "Not for sale" (in Serbian, of course). Those things were designed only for export.

Besides there is a large net of spies who encircle all foreign visitors. In the vicinity of the foreign embassies and legations and near some private residences, there are houses or apartments inhabited by the agents of UDB who have to watch and note everyone going in or out of those watched buildings. Likewise, all telephone talk is tapped.

The wardrobe keeper of the American library in Belgrade is a certain woman Mishovich (or so) who is the UDB agent.

Some drivers at the American Embassy are notorious UDB agents.

At the CARE organization all important positions are kept by the Communists or UDB agents. The director on personal matters is a woman member of the Communist Party. The translator is a Brana Belovich, well-known UDB agent.

The butler at the English Embassy, a youth of 18, was forced to become a UDB agent.

Rather often, all the people who were in touch with the foreigners, especially with the Americans, were arrested. Sometimes, all the readers of the American library in Chikla Lyuba Street were arrested and got 3 to 6 months of forced labor. For the time being this phenomenon is becoming more or less rare.

Schools

Communist leaders have already proclaimed that the state of the schools was very bad and that the knowledge of the pupils and the students was very low. Of course there were some consequences of the war, but they should have disappeared by now.

The teachers and the professors at the high schools are very bad and since a certain number of the high schools were enlarged and certain unreliable teachers were discharged, the authorities were forced to employ teachers with little, if not without any qualifications (except political ones).

The main worry of the regime is the indoctrination in the Communist spirit through the schools. The whole program is directed only in such a way.

At the universities, the situation is much worse. The student cannot choose the faculty which corresponds with his ability or desires. At the newspaper-diplomatic faculty, and at the medical or electro-machine (sic) ones likewise, only the Communists or exclusively talented persons could study.

Side by side with the professional knowledge, the students must do military preparation. Besides, the students must become the member of so-called national students' youth and attend the courses of: National liberation fight, party building up, Marxism-Leninism, etc. After the examination the student could enter the party, if he is not already one of its members.

Every summer the students from the high schools and universities are obliged to work "voluntarily" a month. For a bachelor this work is the main condition for the admittance into the university.

The students live very miserably, especially those from provinces and those who are not the party members. There are not enough lodgings and food is quite poor and insufficient. Therefore the health of the students at the universities is lamentable. For instance, at the juridical faculty, there were 73 percent of students with tuberculosis and 30 percent of them with acute tuberculosis (open caverns).

UDB—Direction of state security

It is the strongest and the most reliable fulcrum of the Red-Communist regime. For 5 years of the Communist regime the UDB has reached such a perfection in controlling the most trifling events in Yugoslavia that one could feel its presence everywhere. When two best friends talk alone, they are not sure at all that the UDB has not heard their talk.

UDB has a huge apparatus and unlimited possibilities and its threads are woven into even the worthless details of the everyday life. In the UDB apparatus are engaged the most dependable and fanatical people, who do not feel any lack in means and in whose hands are the destinies of all the people.

UDB maintains a permanent and daily control over every last one of the Yugoslavia people. All the UDB sections (districts, cities, counties) have a special register for every citizen: personal data about him, his "crimes," punishments, friends, relatives, denunciations, etc.

There are some well-known methods of UDB:

1. Every house janitor is a UDB spy. He is obliged to report everything about each of inmates. The door must be locked at 10 p. m. and the janitor only has the key, so he is able to check any person coming in later, and to control every person coming in or out.

2. UDB confidants at the factories, offices, schools are obliged to report everything about the people there. They have a special mission to watch the suspicious people and even provoke them.

3. The methods at the high schools are especially disgusting. Some students were schooled in special courses for spying on their fellows and reporting to the authorities everything they discovered. But, sadly enough, their main duty lay in denouncing people.

4. At the cafeterias and barrooms there are many UDB agents among the personnel. The singers, dancers, and any kind of artists must report every day about all they heard or saw. Their main duty is to become intimate with the foreigners, intrude into their rooms and, if possible, intoxicate them and then to steal everything useful for UDB.

5. Less important UDB agents are chosen from among the dregs. There is a special class of people of low moral qualifications, almost each of them a criminal. They are well-known by the people, nonetheless they can be very dangerous, if not by reporting truth, at any rate by denouncing people designated by the UDB.

Consequently, the mistrust and fright are common phenomena in Yugoslavia. Nobody trusts anybody.

Sadly enough, such conditions permit some miscreants and scoundrels to settle their personal affairs and hatred through UDB.

Some persons were forced to become UDB agents, and they do not know if their intimate friends were such, too. Thus, such circumstances have created a terrible psychological atmosphere.

Traffic

Even nowadays, 6 years after the war, the traffic in Yugoslavia is very bad. Railroad traffic: The most important traffic in Yugoslavia goes through the railroads, but the number of engines and wagons (freight cars) have not reached the prewar level yet. Although there are more wagon factories than before, the production is very small. Besides one feels rather sharp lack of fuel, espe-

cially during the winter. So, in order to improve and augment the traffic the Yugoslav authorities have installed into practice the measures for the maximum wagon charge, besides there were some trains with 150 to 250 cars. But all this caused more damage than utility and the engines were damaged, so this practice must have been ended.

Passenger traffic is very bad too. There are not passenger wagons enough and they are always full in extreme, although the prices are terribly high. There are many traffic accidents and sabotage, despite all police measures.

Auto traffic has a very insignificant role in Yugoslav traffic, for there are few good auto roads. The trucks are those they got from UNRRA and they are all old and ruined. The public has no cars. Besides one feels a great lack of gasoline in Yugoslavia and it has been rationed long ago.

Traffic on rivers is well restored and developed, but it is aggravated because of lack of dredges and during the summers the traffic could be shortened.

Sea traffic seems to be greater than before the war. Yugoslavia has ships enough and is buying them abroad. Besides, there are shipyards there. In the sea traffic one could not see much sabotage and arson on the ships.

Air traffic is greater than before the war, but there are not planes enough; so, some planes have to travel without interruption and on more lines than it is accustomed.

People's resistance

Six years of the Communist regime has not broken the spirit of the people yet, but it has frustrated any organized resistance or any greater sign of discontent or revolt.

One can certainly affirm that 90 percent of the people are anti-Communists, but due to the severe police control any organized revolt is impossible, so much the more when the people do not have any weapons in hands.

The opposition is divided into two parts: conformists and democrats. The first are numerically insignificant, the latter represent almost the whole population.

Nevertheless, there are some signs of resistance which provoke much worry and damage to the regime: Sabotage, arson, passive resistance against any government job, the resistance of the peasants to compulsory deliveries of their agricultural products, demonstrative quitting of jobs and demonstrative going to the churches.

However, despite the apparent lull and peace and despite the disorganization of the people, the Communist authorities have undertaken serious security measures and controls. All military objects, factories, ministries, Communist centers, and above all the important Communist leaders are submitted to a great protection by police and army.

Each headquarters of the Communist Party (even in small towns) and every important Communist leader are well protected by the police, UDB and by special troops.

Each exit of Tito out of his White Palace on Dedinje is protected by a whole First Guard Division and by UDB agents; on each 50 meters of the road one guardist or UDB agent is placed.

Dedinje (a hill) on which Tito's White Palace is situated, and the surrounding hills also (Banevo Brdo, Topchider, and Koshutnjak Park) represent practically a police camp; on each step there is a policeman or UDB agent. A larger circle of protection is established also with a lot of guard posts and mobile patrols on horseback.

In such a way an impenetrable wall of security is established around Tito and the Communist leaders.

ECONOMIC SITUATION IN YUGOSLAVIA

I would like to quote here a few other sources that may throw some light on the over-all economic situation which exists in Yugoslavia.

In the American Mercury of February 1950, a staff writer of the Christian Science Monitor, Mr. H. W. Markham, stated:

"Obligatory 'voluntary' labor is practiced on an enormous scale, as described in each number of Borba and every other paper, especially Glas. Practically every able-bodied person in Yugoslavia except urban industrial laborers is obliged to dig ditches, cut wood, carry cement, or lay rails, 2 or 3 months a year. Mothers and fathers, sons and daughters, mix cement side by side, for Tito. For those who fail to do their share, as for the political dissidents, there are always the forced labor camps."

"Every person over 6 years old is subjected to the constant pressures of 'mass organization,' intimidation, discrimination, and the necessity to 'work harder or starve.' But has Tito raised the living standard of Yugoslavia? It may be too early to say definitely. Certainly, as of November 1949, the Yugoslav people, including children, were hungrier, more ragged, less healthy, less adequately housed, than they have been for decades. They never before received so little for working so much. Tito himself publicly said, last July 12: 'I admit there is a lack of necessities . . . we haven't enough to satisfy everyday need.'"

Markham further states that the Yugoslav newspaper Borba stated that 70 percent of the people doing "voluntary" reforestation work were women, and that 1,336,489 women had participated during a 6-month period in work brigades.

Mr. Robert Strausz-Hupe, associate professor of political science at the University of Pennsylvania, in the winter 1951 Yale Review, on page 283, states that four-fifths of the Yugoslav population opposed Tito and that Tito is not and cannot be the chosen leader of the Yugoslav people.

One of the reasons why we should attach economic conditions to our aid of Yugoslavia is because our aid would be next to useless without these conditions. Mr. Strausz-Hupe in his article states that the country is beset by "economic and social problems of increasing severity," and further states "the severe and chronic economic crisis that this regime faces makes it a foregone conclusion that all relations with Yugoslavia will have to be cemented by massive loans. Probably at the rate of 200 million dollars annually." Mr. Hupe further states "In all likelihood Yugoslavia would have been faced with a severe economic crisis even had she never been cast out by the Cominform and had drought not parched her crops."

According to Mr. Hupe, in the postwar years planted acreage of wheat has been cut back in order to permit the expansion of such industrial crops as flax, sunflowers, cotton, and hemp; that before the war Yugoslavia produced 4½ million tons of corn a year and exported 350,000 tons. In 1949, not a drought year, corn production was only 3.7 million tons.

The Atlantic Monthly of May 1951 states that "the Yugoslav worker's living standard is very low. A semiskilled worker's monthly wages would buy him not quite a yard of material of a suit, on the free market. His annual allotment of tickets for the purchase of furniture, luxury goods, or clothing at a reduced price is just enough to give him the materials for one suit—it does not pay for lining, buttons, thread, or labor. Moreover, once these tickets are spent, he must buy everything else on the free market without reduction, and a pair of shoes would cost him his pay check for 6 weeks; the price of a pound of crude homemade soap, which the peasants produce from waste fat, would equal 2 weeks' income of the worker."

The Christian Science Monitor of November 9, 1949, contains an article written by Walter Lucas, from Belgrade. He explains in this article the economic plight of the people of Yugoslavia. Let me read parts of his article:

"There is a general over-all drabness in the cities, a look of poverty, and a feeling of utter depression. The people are shabbily dressed. Meager stocks of inferior quality goods scarcely fill the shop windows. People in long queues wait patiently for hours to buy the most inadequate rationed goods, and then sometimes the ration coupons are not honored.

"Housewives get up at 4 o'clock in the morning to buy a little something extra at the free markets where peasants sell eggs and poultry, vegetables and fats. In fact, it is difficult for the average city dweller to feed himself adequately without resorting to the free market—that is, of course, if he is not a heavy worker or a Communist Party member enjoying special ration cards.

"Prices on the free market are fantastic. A dozen eggs represent the equivalent of 1 day's wages of the average worker's pay. A pound of butter costs more than 2 days' wages. A pound of meat is just under 1 day's wage. A pound of sugar is more than a day's wages. A pair of shoes is 1½ months' wages, and a suit of clothes takes more than one would earn in a year. Rationed food is from four to five times cheaper, and the prices of rationed clothing are less than one-tenth of the free-market price. But for most people the ration for the year provides only one pair of shoes and one suit of clothes, and many people do not get a ration card at all and have to buy everything on the free market. There is, in fact, a serious shortage of consumer goods and food.

"The reasons for this are partly due to the Cominform blockade and partly to the mistakes of the regime itself, which, with its eyes fixed and transfixed on Marxian doctrine, have driven the country toward complete socialization of industry and business at a speed that has upset the whole balance of the country's economy. . . .

"Two cases in point are the vast project for a new Belgrade and the autobahn which is being built from Belgrade to Zagreb over a distance of more than 200 miles.

"The new city of Belgrade, designed as the Federal capital, is to be laid out magnificently for 250,000 persons, mostly bureaucrats and foreign diplomats. It is to have an enormous Parliament building and an ultramodern hotel. It is being built expensively on a swamp at the confluence of the rivers of Danube and Sava. Tens of thousands of 'voluntary' laborers, young men and girls snatched from the villages have been engaged on this project.

"Other tens of thousands of 'voluntary' laborers have been wrestling with the Belgrade-Zagreb autobahn. I drove along the hundred miles or so of this road. Workers with picks and shovels swarmed, like flies around honey. Something like it must have happened when the Pharaohs built their pyramids. But I passed only two private cars and three trucks on the whole extent of my drive. The fact is no one in Yugoslavia has a car except the government bosses and Tito or the foreign diplomats. I wondered then what this road was for—just so that Tito could speed uninterrupted in his black Buick at 120 miles an hour? * * *

"Something could be done to relieve the economic pressure on the vast mass of the Yugoslav people if the directors of the regime would be prepared to let up on the dogged devotion to Marxian dogma. There is, however, little chance of this, as long as there is the feeling that America must come to their aid * * *

"At this rate an egg in Yugoslavia cost 50 cents and a pair of shoes \$100 * * *

In another article in the Christian Science Monitor, July 31, 1950, by Edmund Stevens, it is stated:

"* * * The waste in effort and materials is enormous by western efficiency standards. American engineers who we found supervising a major industrial construction job grew agitated when they mentioned the subject. They estimated that it cost the equivalent of \$600 to pour a cubic yard of concrete. The waste of lumber and other building materials through careless handling was, they said, appalling. Valuable machinery was put out of commission through lack of maintenance and improper operation."

In the summer of 1950 issue of Contemporary Issues, page 110, Mr. A. R. K. Jaric, a former Yugoslav businessman now residing in London, stated: "Tito does not publish statistics, but that the economy is inefficient is no secret. No American dollars can help to restore it as long as it remains Communist. Tito's Yugoslavia is like a bottomless pit."

Mr. Jaric further explains how Tito puts the economic squeeze on the peasants by purchasing items from the peasants at much lower prices than formerly and selling to them at much higher prices. He illustrates with two examples: Cement is sold for 200 dinars instead of 60 dinars per 100 kilos; but for one liter of wine the peasant receives a fixed price of 6 dinars. Tito alone can sell the wine on the market, and receives 60 dinars for it.

In the light of the situation illustrated by the foregoing reports, the optimism of our State Department with reference to economic conditions under Tito appears to be unreliable. For instance, last fall, when this committee was conducting hearings with reference to the Yugoslav Emergency Relief Assistance Act of 1950, Mr. George Perkins stated (p. 5 of hearings):

"In regard to the long-run economic position, agricultural and mineral resources, under normal conditions, should provide sufficient exports to pay for the necessary imports. Because of the necessity of reorienting its trade from east to west and as a consequence of some of its own investment policies, Yugoslavia has had a problem of insufficient foreign exchange. They have, however, recently shown a more realistic attitude in reviewing their capital-investment program, and have resumed negotiations with the World Bank for credits to finance a long-term program of reconstruction and development. While these measures are being worked out, credit assistance from the United States and other countries, on a relatively small scale, has helped toward meeting the problem."

This is a rosy view of the situation to say the least. Again, on page 6 of the hearings, Mr. Perkins states:

"There is every indication that they are now realizing that they overstepped themselves in that direction and that they have got to slow down. This has been a very bitter pill for them to take, with their Communist theories; but they seem to be alert to that and are willing to talk sense in their investment program."

Further, in arguing in favor of a grant and against making a loan to Tito, Mr. Perkins stated that "such a loan would be a drag on their credit which they need

to use for other purposes" and that a loan would "slow down their own recovery program to a point where it would become practically impossible."

Calling Tito's economic program, which is rapidly running the country into a chaotic condition, a "recovery program" is more than a mere euphemism.

Again, on page 20 of the hearings, Mr. Perkins refers to aid to Tito as a method of economic warfare, supposedly against Stalin. We will certainly accomplish little by such means of economic warfare if we give aid to Tito without requiring Tito to rebase his economic guns.

Again, on page 23 of the hearings, Mr. Perkins states: "If we do it on a credit basis, we simply cut down the total credit which is available to them." Which implies Tito operates a responsible regime with a sound fiscal policy.

On page 25, Mr. Perkins, in further explaining why we should not make a loan to Tito, as Britain had done, stated: "They have still some credit there (meaning Britain), and they need that credit for putting the country on its feet where it will continue to survive and not be calling for outside help all of the time."

Mr. John J. Haggerty, also of the State Department, stated before this committee, at page 50 of the hearings, that "Tito realized that, after all, America was the only country to which they could turn for economic aid and, on a sound basis, I might say, to help them accomplish their economic development."

At page 51, he further stated:

"I think we have an unprecedented opportunity to influence the country and the people of its government. I think there is room in the world for our country to live as a capitalistic country and help Yugoslavia as a Socialist or perhaps a semi-Socialist country to achieve its economic objectives without destroying the human values that go with civil rights and individual liberties."

I will forego comment on the implication contained in Mr. Haggerty's statement that civil rights and individual liberties exist in Yugoslavia; but, with reference to his statements about our helping Yugoslavia achieve its "economic objectives" and to help their "economic development" and further in view of his statement, at page 74, that we should extend aid to Tito without any conditions attached, I wish to state that he is asking us to blindly take part in a program which has been plunging the people of Yugoslavia into poverty and slavery.

I submit that these representatives of the State Department are inaccurate and unrealistic in their views of the economic situation in Yugoslavia. I believe that, besides being unfair to the Yugoslav people, it would be most foolhardy and wasteful for us to extend aid to Tito without demanding that he make definite changes in the domestic practices which have created this tragic situation.

While speaking about the over-all economic situation in Yugoslavia, I would like to say a word about the so-called "economic blockade" of Yugoslavia by Stalin. The President in his letter to Congress November 20, 1950, requesting emergency legislation for Yugoslavia, stated "Yugoslavia is being subjected to an economic blockade * * *"

Further, in Senate Report 2588, Eighty-first Congress, with respect to emergency relief assistance to Yugoslavia, it is stated, under the subtitle "Economic Warfare" (p. 3): "Since 1948, the Soviet's war of nerves on Yugoslavia has been unrelenting. It has been implemented by an economic boycott that has effectively interdicted trade between Yugoslavia and the Iron-curtain countries. In 1947, 49.1 percent of Yugoslavia's exports went to the Soviet bloc; in 1949, only 14.4 percent. The picture is much the same for imports. In 1947, 51.0 percent of Yugoslav imports came from the Soviet Union and the satellites; by 1949, imports from the Soviet states accounted for only 13.4 percent of Yugoslavia's total imports. These figures show the terrific impact of the Soviet break upon the economy of Yugoslavia. Within 2 years it was necessary for Yugoslavia to reorientate her foreign trade from the east to the west. New markets had to be found for Yugoslav products; new sources of raw materials sought and means developed to pay for them."

"The economic impact on Yugoslavia of this boycott, as well as military moves by her satellite neighbors and finally the show of Communist imperialist force in far-off Korea, all combined to put the Tito regime in a most precarious position, a position where Soviet Communists, by subversion, coercion, or even military force, might have brought Yugoslavia back into the Soviet fold."

These statements about an "economic blockade" are unreal in view of the traditional practice of the Soviet Union of exploiting the satellites solely for its own purposes and not for the benefit of the satellites. Any trade which

Yugoslavia has with the Soviet Union or the other satellite countries was not in the interests of Yugoslavia, but rather to her detriment. This is illustrated well by a statement of the former Hungarian Minister of Finance, Nicholas Nyradi. The Soviet-created Council of Mutual Economic Assistance grew out of an interlocking series of bilateral trade agreements that Russia signed with its vassals in the summer of 1947. In the May 7, 1951, issue of the *Freeman*, Mr. Nyradi is quoted as having said the following about this Council: "No two satellites are permitted to deal with each other to their own mutual advantage. All exchanges between them must serve Russia's interests and be cleared through Moscow at a handsome profit to the Soviet Government. The satellites today have no more independence, economic or political, than the various Soviet Republics, which they are fast coming to resemble."

"Russia is neither willing nor able to do for Eastern Europe what the United States, by means of the Marshall plan, is doing for Western Europe. Far from bettering the living conditions of Eastern Europe, the Molotov plan is rapidly reducing them to the subhuman level that prevails in Russia."

Further evidence that the cessation of trade between Yugoslavia and the Soviet Union constituted no economic blockade of Yugoslavia is shown by the following excerpt from an article by Eric Siepmann which appeared in the April 1951 edition of the *Twentieth Century* (p. 280): "Russia's economic relations with Yugoslavia after the departure of the Russian troops are described by Popovitch (Minister of Foreign Trade) as exploitation along the most classical 'capitalist' lines. Popovitch wrote in 1949:

"In accordance with Russia's dictum that 'friendship is all very well, but business is business,' Russia established with the 'popular democracies,' commercial relations, on capitalist lines, by which the maximum profit went to Russia."

Popovitch went on to show that the exploitation of Russia's satellites by the 'mixed' trading corporations went even further than capitalism. This exploitation came to a head over the question of industrialization, when it became plain that the role allotted to Yugoslavia by Moscow was the same as that intended by Hitler: to serve as a granary, for quasi-colonial exploitation."

Actually, thus, the ending of trade between Yugoslavia and the Soviet Union was a boon to Yugoslavia, not a "blockade" of Yugoslavia. Far from being to Yugoslavia's disadvantage it was to her advantage. In fact, Mr. Siepmann contends that the breach between Tito and Stalin came about precisely because of the fact that this trade between Yugoslavia and the Soviet Union was nothing more than an exploitation of Yugoslavia by the Soviet Union.

I am sure that the people of Poland or Hungary or Rumania would be glad to be the victims of an economic blockade by the Soviet Union. The ills of Tito's economy cannot be laid to Stalin. Tito has created his own economic chaos in Yugoslavia all by himself, without any assistance from Joe Stalin.

SLAVERY IN YUGOSLAVIA

An effort is being made by many persons to convey the idea that the Tito regime is gradually letting up on the people and allowing them a freer exercise of their rights. Probably this is done in order to make America more disposed toward rendering aid to Tito.

But whatever the reason, there seems to be little evidence of any increased freedom for the people of Yugoslavia. The *New York Times* for July 5, 1951, stated "Investigation proved that 49 percent of all persons arrested in Yugoslavia in 1949 had been arrested and detained without cause."

Section 28 of the Constitution of the Federal People's Republic of Yugoslavia, January 31, 1946, provides as follows:

"Inviolability of person shall be guaranteed to citizens.

"No person shall be kept under custody for a longer time than 3 days without a motivated decision in writing issued by a court or a public prosecutor. The longest period of custody shall be determined by law.

"No person shall be punished for an offense without a decision of a competent court, handed down on the basis of law by which the jurisdiction of the court for the trial of the particular kind of the offense is established.

"Punishments may be determined and imposed according to law only.

"No person apprehended by governmental agencies shall be tried without being heard in accordance with the law and without being summoned in a proper manner so that he could defend himself."

It will be noted from the above section of the constitution that although it appears to guarantee certain rights of a person, a person may be kept in custody for any length of time merely by a decision of a public prosecutor.

Furthermore the laws in Macedonia provide for the imposition of forced labor upon the people. The Official Gazette of the People's Republic of Macedonia of May 3, 1950, Law No. 70, page 6, provides, "Measure (penalty) of socially useful labor imposed by administrative authorities under section 6 of the law on offenses against public order and peace shall be carried out by the agencies of the Ministry of the Interior.

"Measure (penalty) of socially useful labor imposed by administrative authority shall be served in working camps at the place of work, which shall be established by the Ministry of the Interior when the necessity advises.

"Application of such measure (penalty) in individual instances may take place upon a resolution of the Ministry of the Interior.

"A person, upon whom the measure (penalty) of the socially useful labor is imposed by administrative authorities, shall be assigned to a definite working place by the Commissioner of the Ministry of the Interior attached to the local people's committee which ordered such measure (penalty).

"A person serving (a term of) social useful labor may be released after the expiration of the half of his term on condition he proves by his work and behavior that the social useful labor had upon his educative influences.

"The decision for discontinuation of serving of the measure (penalty) of the socially useful labor shall be made by the Ministry of the Interior on the proposal of the management of the working place (concerned)."

According to Mr. C. B. Birdwood in his article in World Affairs, January 1951, a million and one-half peasants have been removed from the land to work in the new factories set up by Tito. I mentioned earlier the description in the Christian Science Monitor of November 9, 1949, by Walter Lucas in which he compared the tens of thousands of "voluntary" labor workers on the Belgrade-Zagreb autobahns to the situation which must have existed when the Pharaohs built the pyramids.

The Yugoslav-Slovenian Review of the National Committee for Free Europe of June 15, 1951, contains the following information about slavery and imprisonment in Yugoslavia (p. 15 (translated from Slovenian)):

"At the end of December 1950, we have received reports from our reporters concerning a statement by a major of the (Yugoslav) secret police. He stated at the end of last year (1949) there have been in jail and concentration camps about 250,000 political prisoners. In this number were not counted farmers seized on account of sabotage or because they refused to enter kolkhozes. The kolkhozes are called farmers-workers cooperatives in Yugoslavia. The same major stated also that since 1948, 43 new penitentiaries and concentration camps for political prisoners were established.

"In the 5-year report of the public prosecutor of the Federal People's Republic of Yugoslavia, covering the time from 1945 to 1950, which we published in the January Review, it is stated that approximately 6,000,000 people passed through the jails of Yugoslavia for this or that reason. This means that of every five citizens, two were punished. Or if we subtract the children that means out of every five citizens four were punished by imprisonment.

"In January 1951 we looked for proof of the above data and we were informed by reliable sources that the data of 'Godisnjaka' concerning the number of seized persons was less than the actual number. At the beginning of 1951, there were about 400,000 men, women, and children in prison.

"By edict of pardon issued on New Year's Day, 1951, published with great propaganda, about 11,327 prisoners were released. In addition 1,007 pardoned Communists were released on the anniversary of May Day, May 1, 1951. That is only a small number of those hundreds of thousands of people which the Communist regime treats as slaves. Following we give a list of some principal concentration camps which list we got from an individual whom we can trust and who experienced the treatment of the terror agents.

"How many concentration camps are there?

"It is impossible to give the exact number of penitentiaries and forced-labor camps as long as the Western Powers cannot penetrate into the dreadful darkness of the Communist regime; some agencies tried to but did not succeed. Among others Hrvatski Dom and Nasa Rec (newspapers) tried to get some information. Hrvatski Dom published in the February 1951 issue some data, although it was not complete. From this and other sources we prepared a summary of these camps according to provinces. We state that our list does not include all the

places of torture. The numbers in parentheses represent the number of prisoners as they were given to us:

"1. The People's Republic of Serbia:

Beograd: Glavnjaca, Djusina Street (jails of the central guard are in Princess Ljubice Street; New Beograd (between 7,000 and 20,000)
Banjica (where they are building more underground jails for more thousands of prisoners)
Pasino Brdo (about 2,000 to 3,000)
Zabela—Pozarevac
Otahovo (v Kosmetu za Albance)
Debar (about 350)
Decani (2,000)
Bela Crkva
Gradjani
(The penitentiary in Nis and forced-labor camps in the vicinity of Nis.)
Bor Mine (20,000)
Mine Trepca (one report says 1,300; another, 7,500)
Along the railroad between Sabac and Koviljaca
Along the railroad between Valjevo and Zvornik
Along the railroad between Pec and Prizren

"2. People's Republic of Croatia:

Stara Gradiska (5,000 and 300 priests of all religions)
Lepoglava
Planina Medvedjak v Gorskem Kotarju
Hrvatska Dubica
Slavonska Orehovica
Caprag
Delic (mixed; for men, women, and children)
Lonjsko Polje
Sisak
Gol Otok (about 5,000)
Koprivnica
Sremska Mitrovica
Slavonski Brod
Borov-Vukovar
Along railroad.

"3. People's Republic of Bosnia and Hercegovina:

Siroki Brijeg
Stup
Fale
Zenica (besides the forced labor concentration camp there is also a penitentiary)
Foca
Doboj
Stolac
Dulci krag Gackog
Sinjsko Polje (drainage project)
Banovici (coal mine south of Tuzle, 20,000)
Benja Luka
Novibazar-Raska
On the river Drina
Along the railroad between Sarajero and Dubrovnik (which is getting now a normal gage)
Along the railroad between Tuzla and Doboj
Along the railroad between Ljubija and Banjalaka.

"4. People's Republic of Macedonia:

Idrizovo near Skopje
Veles
Strumicko Polje (drainage project)
Along Black River near Bitolju
Kumanovo (along the railroad)

"5. People's Republic of Montenegro:

Cetinje
Podgorica (about 14,000)
Skadarsko jezero (drainage project, about 20,000)
Kotor
Bjelo Polje (well known jail with 360 isolation cells)

"6. People's Republic of Slovenia:

Ljubljana: Litostraj (about 1,000; district county jails of secret police in the former building of Bank of Slovenia, Siska, sv. Petra Dam, Bleiweissova road)

On the Igu

Foot of Mount Smarno

Ladevel near Rogatica

Cepicko Lake in Istria

Kocevje (about 20,000)

Celje (underground bunkers)

Strnisce near Ptuj (aluminum mine)

Skofljica foot of Ljubljano

Trbovlje (mine, about 5,000)

Radovljica

Jesenice (steel factory, about 2,000)

In the woods of Triglavskega, Karavank in Pohorja, on forced labor about 60,000."

Among the political prisoners are included some of the formerly prominent leaders of Yugoslavia. Among these are: Dr. Dragoljub Jovanovic, who was one of the most prominent economists in the Balkans. The Carnegie Endowment for International Peace has published his work on the economic consequences of the war in the Balkans. He was a leader of the Serbian Peasant Party. As a member of the Yugoslav Parliament, he provoked the retaliation of the Communists by his speech in behalf of the peasants. He was sentenced to death but his sentence was commuted to imprisonment because of the intervention of the Carnegie Endowment for International Peace. He is still in prison in Yugoslavia.

Dr. Boris Furlan, another prisoner of Tito's, was very influential in the Slovene Democratic Party. He left Yugoslavia in 1941 to work on the London radio. He returned to Yugoslavia in 1945, joined the National Front of Liberation, but refused to be a tool of the Communists and joined the movement of Mihajlovic. He was tried by Tito in August 1947 and condemned to death. Under American pressure the death sentence was commuted to imprisonment. The crime Furlan was charged with was that he wrote an article entitled "Communist 'Spillation' Policy in Yugoslavia."

Dr. Constantine Kumanudi is in prison under a 15-year sentence. Dr. Kumanudi was a professor of law at Belgrade University. During the First World War he organized the Yugoslav volunteers in Russia. After the war he was a delegate to the Yugoslav peace delegation in Paris. He served as a member of the Yugoslav Constitutional Assembly. He was a Minister of Finance of Yugoslavia in 1921. He was a mayor of Belgrade for a short time, and he served 17 years in the Yugoslav Parliament. From 1931 to 1935 he was president of the Parliament. During the Nazi occupation of Yugoslavia he was condemned to prison. His continuing action against tyrants caused him to be condemned as reactionary by one of Tito's courts. This great patriot will be 91 years old if he lives out his 15-year prison sentence.

The New York Times of June 24, 1951, in an article by M. S. Handler, stated that the Yugoslav National Assembly would enact an amnesty law early this month, which would release many prisoners. Mr. Handler reports that Alexander Rankovich, Minister of the Interior, accused the Yugoslav judges of accepting political evidence without question and also attacked his own police force for abuse of powers and for arresting persons too easily. The article went on to say that many of the cases of prisoners would be reexamined with a view to reducing the sentences or releasing them. According to the article the ones to be released were not those who were guilty of political crimes but rather those who are guilty of petty crimes.

In view of this fact that it is the petty criminals and not the political prisoners that are to be released under this proposed law, I believe the question could well be asked, whether the real intent of the law is not merely to clear out prison space for new political prisoners?

In any event, lest we think that Tito is becoming softer, here is what he said in a speech at Skoplje, on August 6, 1949, as reported by Mr. R. H. Markham in the American Mercury magazine of February, 1950: "It would be wrong to believe that the conception of kulak is to be applied to everybody who has 25 or 40 acres of land. No, comrades, the conception of kulak is identical with the conception of the enemy . . . who is against socialism. If somebody is against socialism, he is an enemy and there is no difference between him and the kulak, even if he has no land whatsoever. If he is against socialism, he is an enemy, who must and will be annihilated."

And Mr. Auberon Herbert, writing in the London Tablet last summer after his return from Yugoslavia quotes a speech which Tito made last year:

"There cannot be two programs in our country, but only one, the program of the people's front, the program of Socialist construction.

"We are living in the best of revolutionary social transformation in our country, and revolution is not prone to humor, revolution cannot play around with concessions and other things; revolution is cruel."

External evidence of this cruelty may be gleaned from the suicide of a political refugee named Nikola who jumped from a plane which was carrying him back to Yugoslavia (New York Times, March 5, 1950).

Or from the story reported from the Brooklyn Tablet of July 14, 1951, about the eight young athletes who refused to return to Yugoslavia. As members of a water polo team they had toured Europe, won all their matches, and were scheduled to return to Yugoslavia on June 10. Tito had already planned a civic demonstration for the athletes in Belgrade upon their return. The athletes, however, decided not to go back. Unfortunately, they are today living in a leaky-roofed, foul-smelling barracks in an overcrowded displaced-persons camp in Salzburg and our Government and other governments are unwilling to help them.

Another story of disillusionment is reported by NCWC News Service, June 11, 1951. George Markovich went back to his native Yugoslavia from Canada in 1947 with his wife and three children. They were going home to help build up their native country. Upon arrival in Yugoslavia he immediately was assessed \$500 to help "the people's state." When he inquired about this he was imprisoned for 17 days. He was obliged to work for \$3 or \$4 per week. On May 3, 1951, Markovich had managed to get his family back to Canada. He was much sadder and wiser—and 50 pounds lighter—weighing only 120 pounds upon his return.

Certainly if we require Tito to deal more fairly with the people and to respect their rights in accordance with the constitution of Yugoslavia it will greatly increase the friendship and cooperation of the Yugoslav people with the American people.

AGRICULTURE IN YUGOSLAVIA

I would now like to point out a few facts about the agricultural situation in Yugoslavia. In the April 7, 1951, issue of the New York Times, Mr. C. L. Sulzberger, whose writings seem to indicate that he is well disposed toward the Tito regime, nonetheless states, "It is conceded that the agrarian policy has been a failure." I wish to include herewith a few quotations from the Yugoslav newspapers which will show some of the reasons for this failure.

Dr. Bakaric, Premier and Communist leader of Croatia outlined a new agricultural policy in a speech in Zagreb on March 31, 1951. In commenting upon this speech, the newspaper Borba, in an article entitled "The Way Toward Mass Collective Farms," stated:

"The main accent of the activity of our party organizations has been placed on setting up and consolidating collective farms, as well as on laying groundwork for the establishment of future collectives, especially in grain-raising areas. As a matter of fact, the aspect of quantity has thus far been subordinating to that of the internal economic soundness of existing farms.

"Yet, in spite of these undeniable changes, study of our collective farms has brought to light a certain organic weakness in the system which militates against the growth of mass collective farming.

"The fundamental reason why our collective farms do not grow and spread is, however, due to their economic weakness.

"During 1950 little was done by local organizations to increase productivity of the farms. . . . The average number of working days of a collective farmer was between 110 and 130 (for the year); in 1949, only 104 days. This is less than one-third of the total yearly working days, meaning that two-thirds of the yearly working days were devoted to loitering or activities not connected with farming."

Miha Marinko, Prime Minister of Slovenia, said in the Slovenian Parliament on January 12, 1951: "There are many, many farms which today produce far less than they did before the war. The same must be said of many collective farms which today yield far less than the same soil yielded in prewar times."

Ljudska Pravica, a Slovenian newspaper, describes in its January 10, 1951, issue, certain larger implications in collective farm practices:

" * * * Compulsory deliveries by peasants (to the state) have an eminent political significance. They crush at the source every attempt by speculators in the countryside to raise the price of food articles. The final result of an adequate use of the weapon of compulsory deliveries will and must be consolidation and expansion of our socialized economy. * * * This task has not been carried out as it should have been. * * * The criminal price racket which some speculators were allowed to carry on and which brought them fat profits in cash caused growing antipathy among the still independent farmers toward collective farms and at the same time fostered propaganda for wholesale desertions of their members. * * * During 1950 some officially appointed collectors of compulsory contributions neglected their duty in favor of the larger farmers, particularly in nonindustrial areas. * * * They have not realized the true meaning of the policy of compulsory deliveries. * * *"

The Politika, a newspaper (Belgrade), in an article in its March 21, 1950, issue, entitled "Increase of Production on Collective Farms Is Urged," states:

" * * * We hope that this year (1950) members of collective farms will give more full days' work to the growing of vegetables. Last year (1949) it was failure. * * * There should be ample opportunity for all collective farms to increase the number of useful working days. * * * More soil should be tilled, livestock should receive more attention, and there is plenty of useful work to be done. * * * very important manpower was not fully utilized, * * * and production suffered.

The same newspaper points out in an article entitled "More White-Collar Experts in Agriculture Than There Are Agricultural Workers," appearing in its January 24, 1951, issue, a bureaucratic condition which "Politika" considers serious:

"Agriculture is now being run from Government offices. They cause more danger than they produce useful work. The distribution of agricultural experts is arbitrary. Thus it has transpired that we have in the central offices of the Minister of Agriculture as well as in local branches all over Serbia an enormous number of such experts. For instance, in the 3 agricultural institutes at Top-sider (near Belgrade) there are employed 43 graduate agricultural engineers and in one institute in Croatia there are 41 such graduates with 15 assistants. On the other hand, out in the field in Cosmet region, for instance, there is only one qualified expert with a university diploma, assisted by 32 lower-level agricultural technicians. In Vovrodina, one of the foremost of the producing areas, there are only 16 highly qualified agronomists working on the field, assisted by 52 minor technicians, representing proportionally a poorer showing than in Cosmet. * * * The situation is so bad in Serbia that there are actually 10 highly qualified agricultural graduates who work in administrative offices to every 1 such graduate who is employed in agricultural work in the field."

In an article entitled "The Crisis in Yugoslavia's 5-Year Plan," by Pavle Goranic, Wirtschaftsdienst (Hamburg, Germany), September 1950, it is stated that in 1949 the planners admitted that 435,000 fewer hectares were under collectivization in Yugoslavia than in 1939. Mr. Goranic quotes Tito himself as saying:

"I think it is precisely in the creation of peasants' cooperatives that we have made most mistakes. We reckoned mathematically and not with actual possibilities, with the morale of the people, and did not ask whether these people were ready to come into cooperatives."

The Christian Science Monitor of September 9, 1948, contains an article which shows this agricultural failure more concretely in describing how Tito confiscates pigs from the peasants. This article, written by Mr. R. H. Markham, tells of the "pig war" which Marshal Tito had begun against the Yugoslav peasants, as part of the campaign to communize agriculture and liquidate the kulaks.

Pig raising is the primary activity of the peasants in Serbia and Mr. Markham states that pig stealing in Serbia is considered in the same class as horse stealing was on the American frontier. Tito's men were seizing nearly all the pigs of the so-called rich peasants and turning them over to state-owned farms and peasant cooperatives. The official reason given for the pig seizure was that the rich peasants were hiding the pigs and not selling their required quotas to the government. They were charged with speculating and sabotaging the economy. The authorities were reported as taking pigs from rich "capitalistic elements" but leaving each family with at least two pigs. The peasants were given receipts for the pigs and told they would be paid but no price was specified.

You can well imagine the effect on the peasants of this governmental pig stealing, and it well demonstrates why Tito's agricultural "policy" was a failure. The effect of this pig-stealing program is described in Leigh White's Balkan Caesar. He states that "pork, in what was the largest hog-producing country in Europe before the Second World War, cost \$8 a pound in the fall of 1950." Mr. White makes further comment that butter was selling at \$20 a pound and eggs at \$5 a dozen. Yet wages in Yugoslavia averaged only \$60 a month.

Mr. White also reports the case of a Soviet peasant who was required to deliver 600 bushels of wheat in 1950, even though his farm produced only 365. He was forced to sell one of his two cows in order to provide his own family with bread and he expected to be arrested for his failure to deliver the required quota of wheat. Mr. White further states that in Bosnia, 25 heads of families in a village of 300 were arrested for failure to deliver their full quotas of corn.

So badly did conditions deteriorate among the peasants that eight Serbian peasants spent 1,000 dinars each to travel to Belgrade to implore the Tito government not to take so much of their crops. This story is reported by Gaston Coblenz in the April 22, 1950, New York Herald Tribune. One of the peasants declared he must surrender 400 pounds of wheat to the regime, although he had only 200. These peasants were of the "poor peasant" category owning only 2 to 6 acres of land each in a relatively poor area in south Serbia. One of the peasants, a 78-year-old man said he had fought against Turkish, Bulgars, and Germans in his time but that he had never seen his part of the country in such bad shape.

Mr. Haggerty, when he appeared before this committee last year, also testified as to the apathy and resistance of the peasants to Tito's collectivization program.

Mr. R. H. Markham, in his article in the February 1950, American Mercury, page 180, stated that Tito proudly proclaimed in Borba on September 17, that he takes up to 85 percent of the harvest from the kulaks and as we noted before, Tito regards anybody against socialism as a kulak.

The Atlantic Monthly for May 1951 (p. 14) reports that in 1949, 5,300 farms were collectivized; that during the first 6 months of 1950, 310 were collectivized and in the last 6 months of 1950, only 30 were collectivized; that there is no talk of further collectivization. It further states that 450,000 families and three-quarters of the country's land remain independent.

The State Department letter regarding the Yugoslav emergency relief program, stated:

"As the compulsory purchase system has aroused substantial resentment on the part of the peasantry and undoubtedly has been instrumental in decreasing agricultural production, this decision is an example of the Yugoslav Government's efforts to move away from a rigidly controlled and centralized type of economy to one based more on incentives and the play of supply and demand. In this connection, it may also be noted that, at least for the present, the Yugoslav Government has virtually stopped further collectivization of agriculture."

The letter also states that the Yugoslav Government has announced that it would gradually eliminate the present compulsory purchase system.

In the light of this it would seem that there should be no resentment on the part of the Tito regime if we include as a condition of our aid that he cease collectivizing the farms and terminate the compulsory quota exactions from the independent peasant. And such a change would greatly improve the agricultural situation in Yugoslavia and thus bolster the country, besides achieving greater justice for the peasant.

RELIGIOUS PERSECUTION

Let us consider the religious situation in Yugoslavia. The State Department letter states that "limited progress has been made in the direction of freeing the conduct of religious affairs from state controls." I might state that if this statement read "extremely limited" it would be closer to the true situation. The Intelligence Digest of January 1951 states, with regard to Yugoslavia:

"Religious persecution continues unabated. Atheism is taught in the national schools. In the country areas, services are regularly attended by the secret police. Hardly a Sunday passes on which some priest is not arrested for preaching doctrines repugnant to communism. Just as in the Cominform countries, efforts are being made to set up a dissident Catholic Church, loyal to the regime. Three apostate priests have already been chosen as its leaders; Ante Bajt, Josip Lampret, and Victor Merc. There is no distinction between these men and Plojhar in Czechoslovakia and Balogh in Hungary."

A Brooklyn Tablet article of June 30, 1951, stated under a Trieste date line that there had been no improvement in the general religious situation in Yugoslavia, and that more than 300 Catholic and 50 orthodox priests were still in jail, and that to date 378 priests had been murdered by the Communists. Ten priests were released in the much proclaimed amnesty of December 31, 1950, and these were all sick or near death.

The New York Times of June 17, 1951, reports the sentencing of 16 clerics to prison, including Father Josip Salac, vice rector of the Roman Catholic Theological University in Zagreb.

I would like to summarize here the contents of various news releases of the National Catholic Welfare Conference with regard to the religious persecution in Yugoslavia over the past 15 months.

EXCERPTS FROM NCWC NEWS RELEASES, MARCH 1930 TO JULY 1951

"Paris, March 4, 1950.—Bishop Smljkan Cekada was ordered to leave Yugoslavia within 4 days and told not to return. Msgr. Andrija Majic was arrested by agents of OZNA, the secret police, 2 days before Christmas and is being held incommunicado. Bishop Petar Cule of Mostar was sentenced to 11½ years in prison on the usual charge of 'collaboration.'

"Father Matthew Nulc, secretary of the bishop, was sentenced to 8½ years in prison. The bishop's brother, Father Anton Cule, was arrested by OZNA agents in November of last year and is still being held. Since that time scores of priests of this diocese have been arrested and hundreds of sisters have been expelled from their convents.

"In Cattaro, Msgr. Ivan Stjepcevic was sentenced to 8 years in prison. Father Trifoni Milosovic, was sent to prison for 15 years. Father Jasko Vresk a 38-year-old priest of Antivari, was condemned to die before a firing squad.

"Father Vittorio Kolocjra, 38, drew a sentence of 15 years. He threw the judges and prosecutor into confusion when he declared during his trial that he had been tortured and held in solitary confinement while awaiting trial. He described how his jailers thrust wires down his throat and then shot electric current in them in efforts to force a confession. This trial was staged with all the fanfare of communist propaganda: loudspeakers installed on streetcorners dinned out the courtroom proceedings which were attended by 'spectators' brought to the court from surrounding areas."

"Rome, May 19, 1950.—A government 'permit' for priests is demanded in the People's Republic of Slovenia, Civiltà Cattolica, a Jesuit review relates. The government demands that all newly appointed or transferred priests—assistants as well as pastors—must obtain government consent in their new posts nor may a priest say mass, hear confessions or preach at a neighboring parish unless he has the previous approval of the Red authorities, it adds. As a consequence parishes where the government refuses to grant its 'placet' to the priests appointed by the Bishop are without any religious services.

"Violations of these government regulations have brought fines of up to 10,000 dinars, the article reports, noting that the highest fines have been handed out for the 'illegal' hearing of confessions. Armed soldiers prevent 'unauthorized' priests from saying mass in churches deprived of their clergy.

"Another restriction on priests, Civiltà Cattolica relates, is that they are often not permitted to reside in the parish house next to the church but are compelled to live in some house miles away.

"The Yugoslavia regime makes special efforts to obstruct the pastoral visits of bishops, the review states. Boat and automobile owners are warned not to transport prelates, with the result that they must make the greater part of their journeys on foot. Party members are warned not to allow their children to be confirmed. At one place, the article relates, parents came at night to the parish house to have the bishop confirm their children. However, when the authorities discovered this they placed a cordon of police around the parish house and forced the people away.

"On September 25, 1949, Rev. Josef Vedrlna was attacked by a group of Communist youth on his return from a funeral and was stoned and beaten to death. The Red police never bothered to apprehend those guilty.

"Tito is likewise trying to make life impossible for the clergy through an economic squeeze. The 'land reform' robbed the clergy of most of their independent income. The government stopped the traditional 'allotments' paid to the clergy. Then collections outside churches were prohibited. This was followed by a decree forbidding special collections in churches such as the Peter's pence and collection for the missions, the diocesan curia and seminaries."

MILAN, ITALY, June 18, 1950.—Two outstanding Jesuit preachers of the Archdioceses of Zagreb and Sarajevo were arrested. Well-informed circles fear that a determined offensive is under way by the Communists to complete the dissolution of the Society of Jesus in Yugoslavia. Last year in Ljubljana eight Jesuit Fathers were condemned to long prison terms on the charges of fostering Catholic action. In addition to these sentences the property of the Jesuit Fathers there was confiscated by the Communists. The ancient church built by the people in thanksgiving to God for deliverance from earthquakes was converted into a movie studio."

MILAN, ITALY, June 22, 1950.—The Tito regime of Yugoslavia has effected the dissolution of another religious community of nuns by demanding the vacating of its last two houses and ordering the sisters to find jobs 'useful' to the state, it was learned here.

"Before the once thriving community was robbed of its convents by the regime it numbered some 200 nuns living in 22 houses.

"The report stated that several thousands nuns have been driven from their convents by the undiminishing persecution of the Catholic Church in Yugoslavia."

WASHINGTON, July 6, 1950.—Rev. Silvije Grubisic, O. F. M., told of the fate of the Franciscan community in Croatia to which he once belonged. He was formerly attached to the Franciscan Monastery at Mostar, Croatia.

"Of the 200 Franciscan friars—including 20 brothers—attached to the Province of the Assumption at Mostar in 1945, only 39 are left today, the priest related. Seventy-nine have been killed; 30 were last known to be in concentration camps; many have escaped the country, including some 20 who have reached the United States; the fate of a number of friars is unknown.

"In 1945 the Franciscans of the Assumption Province took care of 56 parishes, Father Grubisic stated. Now 30 are priestless. A middle school, a minor seminary, a novitiate, and a scholasticate for Franciscan students of philosophy and theology, once operated by the province, have been closed by the Tito regime."

ROME, August 3, 1950.—Civiltà Cattolica, a Jesuit review published here, in an article entitled 'Religious Persecution and the Administration of Justice in Yugoslavia,' told about one priest who refused to cooperate with the regime's effort to pin a crime on the bishop who was arrested and sentenced on charges of 'immorality.' A curate received the same treatment for refusal to testify against the pastor. A third priest, the magazine states, who refused to cooperate with Tito's police was beaten and starved so severely that he became tubercular.

"The article states it cannot mention the names and places of these priests for 'obvious' reasons.

"Describing life in a Yugoslav prison, the article says that a bishop and other priests are confined in a damp, dark subterranean cell. Another priest, 78 years old, is kept in the worst prison in his area. The imprisoned secretary of a bishop contracted tuberculosis because of an insufficient prison diet. It is not unusual for prisoners to die from privations. These are then buried secretly, the article declares."

VENICE, ITALY, September 16, 1950.—Thousands of Catholics in some 20 parishes in Yugoslavia have been deprived of the opportunity of assisting at mass and the consolation of the sacraments, according to a report received here. The report stated that in one swift act Communist authorities compelled many pastors and clergy to lay aside their sacred ministry and report for 'military service.'

"Sources here tell that the military service in question, which endures for no set period of time, consists in loading and unloading ships, cutting wood, and other forms of heavy labor. Because of the acute shortage of priests in most Yugoslav dioceses, it has become impossible to care for the spiritual needs of the faithful who live in the vacant parishes.

"Word comes too from a reliable source that a Jesuit priest, a Father Kozelj, one of the foremost preachers in Yugoslavia, has been arrested for a second time on the same charge, that of conducting a conference attended by thousands of men. He served 3 months in prison and on his release was rearrested and sentenced without trial to 2 years of forced labor."

VENICE, ITALY, September 8, 1950.—The Yugoslav Communist regime has arrested two more Catholic priests. Revs. Francis Horvath, chancery official of the Sarajevo archdiocese, and Michael Parosic, priest of the Zagreb archdiocese, who was a teacher of religion in the Crislo high school.

"Another report states that 57-year-old priest, the Reverend Louis Vrnjak, died in a Yugoslav prison, a victim of starvation and maltreatment."

"VENICE, ITALY, October 20, 1950.—Tito's latest victims are the Reverend Francis Hervath, chaplain official of the Sarajevo archdiocese, and the Reverend Emanuel Kijalc, O. F. M., of Zenica, near Sarajevo. Father Hervath received a 3-year prison term. He is suffering from tuberculosis. Father Kijalc was sentenced to prison for alleged "cooperation with a band of criminals."

"NEW YORK, November 21, 1950.—Bishop Michael J. Ready of Columbus declared that a grinding and relentless persecution is being waged against the Catholic Church in Yugoslavia.

"Since the time the Communists began operations they have killed 378 priests. At present the Communists are holding over 400 priests in prison. Archbishop Stepinac and Bishop Peter Cule of Mostar are still serving prison sentences. The unjustifiable arrests of priests continue.

"Priests are continually subjected to Communist pressure which involves arbitrary arrest, night raids on parish houses, and long hours of grilling by the secret police. In some cases priests have been murdered on the public highways. Priests have been prevented by the Communists from taking care of their parish churches.

"All religious orders of women in Slovenia and in Bosnia-Herzegovina have been dissolved by the Communists. Hundreds of Sisters all over the country have been expelled from their convents and forced to seek shelter in their paternal homes in order to obtain ration cards for food. Many Sisters have been obliged to abandon their religious garb and take jobs in factories or offices. Other Sisters remaining in convents which are not yet confiscated receive no food or clothing cards. Two such Sisters on the Dalmatian coast died from malnutrition and lack of medicine during the past winter.

"More than one-half of the seminaries in the country have been closed and confiscated. Those remaining are partially occupied by the Communists.

"Every Catholic school—elementary, high school, and college—every Catholic hospital and old-folks home, every Catholic orphanage has been confiscated by the Yugoslav Communists.

"The Communists have placed intolerable restrictions on the teaching of religion. Teaching catechism to children, even in churches, is impossible. An edict forbidding catechism classes for children in churches was published in Bosnia-Herzegovina.

"Students for the priesthood have been arrested and sentenced to prison on charges of "vagrancy" Bishop Ready related. Parents of seminarians have been threatened by the Communists and warned to withdraw their boys from the seminaries. Catholics in the armed forces or holding government jobs are forbidden to practice their religion, he stated.

"Priests have been subjected to physical torture by the Communists who thus endeavor to force "confessions" the bishop continued. Many Sisters have been arrested and held in filthy prisons. Communist thugs have broken into convents and beaten the Sisters. Churches and wayside shrines have been desecrated and destroyed by the Communists.

"The once flourishing Catholic press in Yugoslavia no longer exists. A few religious sheets are allowed but so strict is the Communist censorship that they are little more than parish bulletins.

"The Communist press continues its campaign of attack against the church with abusive articles and cartoons against the Holy Father, priests, and Sisters. No residential bishop has been appointed in Yugoslavia since the Communists seized power."

"The Reds have also struck at the Serbian Orthodox Church, Bishop Ready pointed out. Its priests have been arrested and its American-born Bishop Varnava Nastic of Sarajevo is in prison under abominable conditions, he added.

"As long as these conditions last, as long as priests and bishops are held in prison," Bishop Ready declared, "there can be only one answer to the question about persecution of the church in Yugoslavia. The Tito Communist propaganda is false."

"WASHINGTON, December 12, 1950.—A plea that Marshal Tito be required to guarantee restoration of fundamental rights and liberties before being given any United States aid was made here by the National Council of Catholic Men. The statement of the N. C. C. M. said:

"Since the accession of Tito to power, 378 priests have been put to death. Four hundred clergymen of the Orthodox and Roman Catholic Churches are now in

prison. Clergymen are continually subjected to Communist pressure which includes arbitrary arrest, night raids on parish houses, and long hours of grilling by the secret police.

"All religious orders of women in Slovenia and Bosnia-Herzegovina have been dissolved. Hundreds of Sisters all over Yugoslavia have been expelled from their convents and have been obliged to abandon their religious garb and take jobs in factories or offices.

"Every Catholic school, hospital, orphanage, and old-folks home has been confiscated by the Tito government. Intolerable restrictions on the teaching of religion have been made. The government-controlled press has waged an abusive and vicious campaign against the Holy Father, the clergy, and Sisters. No residential bishop has been appointed in Yugoslavia since the Communists seized power.

"These attacks have not been directed at the Catholic Church alone. They have embraced as well the Serbian Orthodox Church, many of whose priests have been arrested and whose American-born bishop, the Most Reverend Varnava Nastic, of Sarajevo, is at present imprisoned under abominable conditions."

"VENICE, ITALY, January 25, 1951.—Two priests died in prison as a result of ill treatment by their jailers. An entire Cistercian community was arrested. A priest was fined for accepting the offerings of parishioners."

"The Cistercian community consisted of several priests and lay Brothers, who reside in a monastery in Slovenia. They were taken off by police and held incommunicado for several weeks.

"The priest who was fined had to pay 10,000 dinars (\$200) because the faithful, according to the custom of the early Christians, left voluntary offerings at the altar. This was held to be a violation by the priest of the government decree forbidding collections in churches. When police learned that the priest had bought some sorely needed supplies with these offerings, they fined and imprisoned him. They also searched his house and confiscated a sizable sum of money donated by the faithful for the repair of their church.

"It is also recalled here that a disastrous blow was struck against the church in Croatia when police arrested over 20 seminarians of the archdiocesan seminary at Zagreb. The students were accused of taking part in 'antigovernment' activities. Several priests at the seminary were also apprehended on the charge that they 'condoned' the activities."

"VENICE, ITALY, February 1, 1951.—In Zagreb, only five or six priests have been permitted to teach religion in the schools despite the fact that, according to existing law, teaching of religion should be allowed in all schools. Reports from the Republic of Slovenia show a similar situation."

"VENICE, ITALY, April 28, 1951.—Reports reaching here give the details of the expulsion of Bishop Francis Cekada, Administrator Apostolic of Banja Luka, from that see. Bishop Cekada was first expelled from Bosnia-Herzegovina in January 1950 when he was given only 4 days' notice.

"The bishop was summoned to the Banja Luka headquarters of the secret police and told that he would be escorted to the borders of Bosnia-Herzegovina under armed guard unless he left within 24 hours.

"The reason for the prelate's expulsion was reported to be the same as last year: his persistent refusal to grant episcopal approval to a government-sponsored Association of Roman Catholic Priests.

"Bishop Peter Cule of Mostar, sentenced to 10 years' imprisonment in 1948 by a Tito people's court, is forced to wear tattered and insufficient clothing, despite the fact that proper clothing is sent to him regularly. Orthodox Bishop Varnava Nastic of Sarajevo, a former United States citizen and vigorous opponent of the Communist regime, is also imprisoned at Zenica and reportedly compelled to live under the most degrading conditions."

"TRIESTE, June 21, 1951.—In the republics of Slovenia and Bosnia-Herzegovina some priests have been arrested and fined for attempting to teach religion to children assembled in church.

"Sisters have suffered extremely throughout the land. More than 8,000 have been forced to discard their religious dress and find such employment as they could. Their property has been confiscated throughout the largely Catholic Republic of Slovenia. In Bosnia-Herzegovina over 500 sisters have been expelled and their property taken.

"Many orders of men in Slovenia have also been suppressed and their property taken. Seminaries have been closed and confiscated. In Ljubljana the diocesan

seminary which had been occupied since the war was recently declared officially confiscated. The two minor seminaries in Solvenia have also been forced to close."

From these reports of religious persecution it is obvious that we could do a great deal to restore the moral spirit of the people of Yugoslavia if we required Tito to discontinue his obstruction of the free practice of religion in Yugoslavia.

YUGOSLAV ARMY

How good is Tito's army?

President Truman in his letter urging aid last year to relieve the food shortage in Yugoslavia, said one of the reasons for our aid was that the drought "imperils the combat effectiveness of the Yugoslav armed forces." In the hearings last winter on this aid program, Gen. Omar N. Bradley stated (p. 37) that the Yugoslav Army on our side would be of material assistance. General Bradley also testified as to the importance of morale and willingness to fight in an army and he further stated, in reference to the Yugoslav Army, that in his opinion when "they are defending their own country they would be quite effective" (p. 39) and also that he considered them as a rather effective Balkan army but that he did not know the status of their supply and production (p. 41).

Mr. Kenneth de Courcy, in his Intelligence Digest of December 1950, stated "There is no change in relationships with the Cominform countries. If the Soviet Union decides to strike at Yugoslavia, it can be done with relatively small immediate military risk. The Yugoslav Army is good on paper, but politically unreliable. It will fight well only if it is given something to fight for. The opposition generally is unwilling to fight against Stalin merely for Tito. Neither of the two is considered better or worse than the other."

The statements contained in reports A and B, which I have previously submitted to you appear to bear out Mr. de Courcy's view rather than General Bradley's.

In any event, it is most important if we desire the Yugoslav people to fight on our side in case of any conflict between the United States and the Soviet Union, that their morale is high and that they are willing to fight. In this respect the attachment of conditions to our aid which would improve the lot of the unfortunate peasants and working people in Yugoslavia would help to assure the existence of good morale and willingness to fight in the Yugoslav Army, which is so largely made up of Yugoslav peasants and workers.

I do not profess to be a military expert but the establishment of airfields and a naval base in Yugoslavia might be of great assistance to the United States. They should also be of great assistance to Yugoslavia. I suggest the attachment of conditions pertaining to airfields and a naval base so that they could be established by our military forces, should it be or become desirable. This is not without precedent. Prior to World War II the British had leased the Yugoslav island of Yls for an airfield. Furthermore, immediately prior to World War II, the British were also negotiating with the Yugoslav Government for a naval base at Boca de Cattaro.

Permit me a further observation regarding military aid to Yugoslavia.

Since the strength and willingness to fight of the Yugoslav Army is doubtful, I believe we should be most cautious with regard to any military aid given to Tito. It might be prudent if we would at this time restrict our arms shipments to Yugoslavia to small arms, which the natives can take along with them into the mountains.

A realistic appraisal of the present military situation in Yugoslavia would indicate that there is little hope of the Yugoslav Army defending the country against any determined attack by Stalin. About the best that could be hoped for would be guerrilla action in the mountains as was used against the Nazis. In this case the small arms would be far more useful than heavy artillery and tanks which would probably be forfeited to the enemy.

Later, after the people of Yugoslavia have had some of their basic rights restored, and the regime has ceased its police state practices, the soldiers of Yugoslavia may regain their willingness to fight as an army. When this occurs, we can then provide the army with heavier armaments since there will then be greater likelihood of its being used effectively and less likelihood of these armaments merely falling into the hands of the Stalinists if Yugoslavia is attacked.

A condition with regard to the repatriation of Greek children should certainly be included. In its report of April 6, 1951, the State Department stated that 65 of these children had been repatriated up to March 15, 1951, and that 100 others had emigrated to Australia to join their parents. The State Department estimated that there are a total of approximately 10,000 Greek children living in Yugoslavia but that only several hundred are to be considered eligible for repatriation. In any case, whether the number is in the hundreds or the thousands, we should make every effort to see that they are returned to their parents.

Likewise, we should request Tito to permit those Americans who were lured back to Yugoslavia by his false propaganda, to return to the United States. The Christian Science Monitor of November 6, 1949, related the sad story of these repatriates. It estimated that 3,000 or 9,000 Americans, Canadians, Australians, and others of Yugoslav origin, were enticed back to their mother country by a barrage of nationalistic and ideological propaganda. Upon arrival in Yugoslavia, these repatriates were relieved of their money and goods and put to work for the Communist regime. The article estimated that the regime acquired more than \$10 million worth of foreign exchange in this shell game. Many of the swank American cars manned by Communist officers in Belgrade were acquired in this manner. We Americans should help these former American citizens to return to the United States. Hence, I believe we should include as a condition of our aid that Tito permit them to return.

Thus I believe that all the conditions I have outlined above are desirable. We have basically two objectives in Yugoslavia with reference to the military interests of our own country. One is to deny Stalin the use of Yugoslav resources, territory, and people. The other is to secure the Yugoslav resources, territory, and people as an ally in our fight against Stalin. There is little likelihood of Yugoslavia again becoming the tool of Stalin without armed intervention by Stalin. This armed intervention is most unlikely unless Stalin is intending to precipitate World War III. Therefore, we need not seriously consider sending aid to Tito merely for the purpose of denying Yugoslavia to Stalin. But we can make Yugoslavia a true ally of the West and thus of positive value rather than merely negative value to us by imposing specifically the conditions I have outlined above to any aid to Yugoslavia.

These conditions would help free the people of Yugoslavia from their slavery. These conditions would also help gain for us the true friendship of the Yugoslav people to the extent that we have helped them have their rights restored. This in turn would help improve the Yugoslav economy and thus reduce the possible necessity for further aid and make more effective what aid we do render. Furthermore, the morale and efficiency of the army would likewise improve and we would better be able to count on a real fighting force instead of the doubtful one which now exists. And the establishment of military bases in Yugoslavia would be of great value to both countries.

I do not have any suggestions as to what extent we should render aid to Yugoslavia. A newspaper article recently stated that \$500,000,000 was contemplated for Yugoslavia. I do believe that this figure is considerably larger than is warranted. In view of the State Department's bias in favor of Tito, I believe that any bill drafted by this committee should specifically limit the amount of aid which may be permitted to be used for Yugoslavia.

We must constantly remember that we are dealing with an arch criminal who desires nothing more than to rob us of all he can. We should keep in mind the nature of the regime we deal with here. The story of the British soldier, Rutledge, which was reported in Newsweek, July 25, 1949, is worth recalling. Rutledge wandered across the demarcation lines between the Anglo-American and the Yugoslav zones of Trieste. He was shot and slightly wounded. A Yugoslav sentry walked up to him and shot him again at close range. For several days Rutledge's body lay on a path just inside the Yugoslav border while British requests for its surrender went unanswered. When a reply finally came it stipulated that the body would be returned only upon receipt of a British statement completely exonerating Yugoslavia.

Mr. CARNAHAN (presiding). The next witness this evening is Mr. James G. Patton, who is president of the National Farmers Union.

Mr. Patton?

**STATEMENT OF JOHN A. BAKER, LEGISLATIVE SECRETARY,
NATIONAL FARMERS UNION**

Mr. BAKER. Mr. Chairman, Mr. Patton could not be here this evening. He had to attend an executive meeting at Denver.

I have a brief summary of his statement to read, and I will present his statement for the record.

Mr. CARNAHAN (presiding). That is a rather lengthy statement.

Mr. BAKER. Mr. Chairman and ladies and gentlemen, I am John A. Baker, legislative secretary of the National Farmers Union. I have given Mr. Patton's statement to the reporter for the record, along with five attachments, and I should like at this time to read a brief summary of Mr. Patton's statement.

Mr. CARNAHAN (presiding). Do you want to submit this statement and have it become a part of the record?

Without objection the statement will be printed in the record.
(The statement referred to is as follows:)

STATEMENT OF JAMES G. PATTON, PRESIDENT, NATIONAL FARMERS UNION, IN SUPPORT OF THE MUTUAL SECURITY PROGRAM

Farmers Union appreciates this opportunity to present its view on the Mutual Security Program being considered by your committee at this time. We want to commend your committee for the painstaking way in which you are going into the pertinent considerations.

The problems before your committee have been subjects of a great deal of thought and discussion among the members and officials of the Farmers Union. Family farmers have come to recognize that in the world of today, we in the United States cannot obtain and enjoy peace, prosperity, and democracy if these conditions are not widespread throughout the world.

We want peace, prosperity, and democracy not alone for ourselves but for everyone else in the world. We feel that they are human beings just like us. We think that they share our hopes for peace, our desire for prosperity, and our faith in democratic principles. We realize, of course, that there are always a few power-hungry men in any country, that would like to take over autocratic and despotic powers and deny all liberty and freedom to the rest of the people. But with this exception, the great bulk of the world's people, we believe, share our aspirations for prosperity, peace, and personal liberty.

These ideals can only be attained, for the long pull, in a world brotherhood of prosperous democratic nations living at peace with one another. This is an age-old aspiration of men of good will. It is the ideal we recommend to you as the proper guide in the formulation of the foreign policy of this Nation.

The United States has the greatest responsibility among the nations of the world for consistent cooperative action with the other nations. Our responsibility is greatest because our strength, power, and opportunities are greatest. We, therefore, urge that our Government take the lead in the speedy development of the United Nations and its specialized agencies into a constitutional world government of defined and limited powers.

Although Russia has apparently done all she can to disrupt and discredit the United Nations organization, she has not, fortunately, been successful. United Nations through the General Assembly, if not through the Security Council, has been able to take constructive steps.

Although Russia has joined and tried to disrupt the United Nations itself, she has not for some reason desired to participate in the specialized international action agencies such as Food and Agriculture Organization, World Health Organization, and UNESCO. This fact gives the United States a great opportunity. A successful demonstration of harmonious international cooperation in Food and Agriculture, World Health Organization, and the others would be in striking contrast to the frustrations and confusions currently characterizing the United Nations. Success in the specialized agencies would focus attention upon the obstructionist tactics of Russia and her satellites in the United Nations.

Farmers Union urges that the United States continue to give full support to Food and Agriculture Organization and the other specialized agencies and to show a genuine desire to increase the United States contribution to such agencies as rapidly as the other members will correspondingly increase their contributions.

Family farmers are realists. They have to be. Every day they must overcome the stubborn and unpredictable forces of flood, heat, and storm. Family farmers depend for their livelihood upon the marvelous but mysterious forces of life, disease, and death.

Family farmers have also had to be realists in the realms of economics and politics. Family farmers have found that they must extend their activities beyond their line fences to protect themselves. To meet this need they developed our Nation-wide farm organizations, they adopted the private business cooperative technique, and cooperated with Government in farm programs in the general welfare.

Family farmers inevitably approach the solution of problems in a tough-minded, practical way. I wish every member of this committee could attend our national policy-making conventions and observe the high moral purpose, the patriotism, and the tough realism with which our delegates democratically work out a program they think will best help them to meet their needs and fulfill their aspirations.

HOW THE PRESENT SITUATION DEVELOPED

During and immediately following World War II there were encouraging signs that peace, prosperity, and the extension of democracy and brotherhood might emerge following the horrors of war. We, and our World War II allies, were winning, and finally did win, a long, hard war against three dictators—Hitler, Mussolini, and Tojo.

We established and operated the United Nations Relief and Rehabilitation Administration. We and our World War II allies, established the United Nations. Many nations joined forces and established the Food and Agricultural Organization. Congress adopted the Employment Act of 1946, and went on record for economic stabilization. National farm organizations in many nations came together and established the International Federation of Agricultural Producers. These are but a few examples of the many constructive things that we did.

These attainments gave us some hope that further constructive action could be taken. My own organization, and our Nation, generally, attempted in every proper way to further the extension of democratic government and peace throughout the world. I am glad that we as a Nation, and my own organization, were hopeful and that we acted upon that hope.

But those hopeful conditions did not last very long. It has become increasingly apparent over the months since the cessation of hostilities of World War II, that the men who control the Russian state did not share our faith in democracy nor our desires for liberty, prosperity, and peace for all people.

Instead, these Russian rulers seemed determined to further imperialistic communistic aggression. Wherever the Russian Army was in occupation, the Russian overlords set up little totalitarian dictatorship governments, modeled upon the police system of the Soviet state and subservient to dictatorial directives from the Kremlin. In addition, Russia tried by political, economic, and subversive methods to take over many other areas not occupied by the Russian armies. Some of these attempts were, of course, successful.

With the invasion of South Korea, it became evident for the world to see that Russia is fully willing to foment her puppets to resort to military aggression to further her own selfish imperialistic aims.

The despotic rulers of Communist Russia seem determined to pursue the imperialistic aims of czarist Russia. From the facts known to us, we can only conclude that Russia under the modern Kremlin like Russia under the Kremlin of the czars desires to expand in all directions with the aim of world domination.

They use the same hard-handed, cold-blooded, freedom-denying techniques of geopolitics, made much more effective and terrifying by the adoption of modern methods of communication, propaganda, and modern scientific and technological developments.

Modern militant communistic Russian Imperialism has also adopted the Trojan horse techniques which Hitler used as a fifth column in the form of national groups who play mental tweddles tweddledum with psychoneurotics and the frustrated of all economic levels. But Hitler's fifth column and Tojo's East Asia coprosperity sphere, however, were amateurish tricks compared to the sub-

versive techniques, false promises, and glittering lures that Russia today uses through native channels to ensnare additional peoples and individual areas. Even this, as bad as it is, is not the most compelling danger.

Our basic concern is that the imperialist design of the totalitarian masters of the Soviet Union is to destroy our homes, our farms, our industry, and to fasten slavery upon our people. Our most compelling danger is that the ultimate aim of Russian imperialist expansion, if we do not stop it, is to take over the geographic area of the United States and bend its lands and its people to the purposes of the men in the Kremlin.

That is what the Russian rulers want to do to us and to all the people of the world, inside and outside the Iron curtain. That is the greatest present threat to the attainment of our aspiration for a world brotherhood of prosperous democratic nations living at peace with one another.

I feel sure that the great bulk of the people behind the Iron curtain share our aspirations for peace, prosperity, and democracy as well as our abhorrence of war, totalitarian secret police, and isolation from the rest of civilization. As long as this is true, there is always hope for an ultimate settlement.

But, temporarily, the common people behind the Iron curtain are largely blocked off by their totalitarian governments from cooperating with the people outside the Iron curtain. For the moment they are helping to help themselves. And we are unable now to provide enough of the kind of help they need to throw off their shackles.

But we can give them an example of hope. We can demonstrate the values of democracy. We can beam broadcasts to them. We can be of help in a multitude of other ways, but primarily the burden of giving the concept of democracy, prosperity, brotherhood, and peace a chance to survive and expand in the world rests upon us who are outside the Iron curtain.

Our Nation and the rest of the world may face a minimum of at least three more generations of this struggle between democracy and Russian dominated and inspired totalitarianism. Basically the struggle is a struggle for the control of raw materials and resources. Russia wants to acquire additional land areas so it can take over the resources there and incorporate them into the Russian economic machine. Russia will continue to try to acquire control over more and more of such resources as iron, oil, aluminum, and the others that are the basis of modern industrial strength. This attempt to acquire control of more resources is at the root of their drive for geographical expansion which is backed up by the ideological struggle for men's minds and the use and the threat of the use of armed aggression.

The particular brand of totalitarianism against which we are pitted is one which preaches but does not practice, a glittering and attractive sort of materialism which undoubtedly has considerable appeal to the poverty-stricken, the down-trodden, and the hopeless. This geographical and ideological aggression runs up and down like fever; it takes the form at one time of propaganda, later of diplomacy, and at another time or armed conflict. There is every reason to believe these sporadic outbursts of aggression to obtain additional natural resources and win the minds of men by false promises will continue to flare up in one form and another at one place or another for many years to come.

We may be approaching the end of more than a year of armed combat in Korea. War is still going on in Indochina. The military uprisings in the Philippines are an extension of this struggle between communistic totalitarianism and the forces of democracy. Such outbursts of military aggression may be only the prelude to full-scale world war, or more probably, they are just the first few of a continuing succession of such events.

Democracy can again defeat totalitarianism if the people who believe in democracy have a will to win. But to gain the victory and lasting peace we must win both the ideological struggle for men's minds and the military struggle for area supremacy.

THE JOB BEFORE THE FREE WORLD

While making the United States and the rest of the world outside the Iron curtain strong militarily, we must also demonstrate that democracy, even under forced draft, provides the means to the material, as well as spiritual, improvement in the lot of all the peoples of the world.

The situation I have just described confronts the people outside the Iron curtain with the necessity of building and maintaining a defense against aggression while at the same time it is building the economic and political strength

and understanding necessary to extend democracy, improve living standards, and establish an international brotherhood.

Our efforts to build economic, political, and military strength start with what we have. To go somewhere, we have to start from where we are, even though it looks as if we could not get there from here. This means that your committee must carefully examine the situation of each country that is outside the Iron curtain.

You have already received and will continue to receive the testimony of many experts. You have before you the committee print of basic data supplied by the executive branch. We have studied this material carefully. Without going into detail I should like to say that it largely substantiates my own observations in some of these countries coupled with information I have acquired in discussion with other members of the International Federation of Agricultural Producers, and the foreign observations of other officials of Farmers Union. The descriptions of the problems appearing in each regional section of the committee print are, as far as I can determine, accurate, if not entirely complete, appraisals of what the problems are in the countries of each region.

With respect to the European appraisal I would add only three points. First, several of the European nations need to make improvements in their land tenure and land utilization patterns; second, international economic integration of European agriculture is an essential element of economic strength and increased agricultural productivity in the area; third, some European national governments need to move more rapidly than in the past toward more democratic forms of government.

The committee print statement on the Near East and the independent countries of Northern Africa does put nearly enough emphasis upon the need for land reform and for faster strides toward greater democracy in government. Land development, economic investments, and economic aid alone will not strengthen this area sufficiently in absence of educational, cultural, and institutional changes required to see to it that basic understanding of democratic processes and the benefits of economic progress and national defense are widely distributed among all the people.

On this point I invite your attention to the report of a committee of experts prepared for the United Nations called Measures for the Economic Development of Underdeveloped Countries. Chapter III of this bulletin covers these preconditions I have mentioned. Since this chapter is not very long, I should like to offer it for the record as a part of my statement (attachment A).

The pressing need for properly sponsored reform of all the economic and social institutions surrounding farming and farm life is also very great in Asia and the Pacific. These nations and our own Government have already done a great deal on this. I should like to invite your attention to several items which document our actions to further land reform. These items include—

1. A copy of a letter I wrote to the Administrator of Economic Cooperation Administration on this subject (attachment B).

2. An address of Secretary of Agriculture Charles F. Brannan before the Association of Land Grant Colleges and Universities (which was printed in the Congressional Record of January 17, 1961).

3. Senator Sparkman's address to the General Assembly of the United Nations in connection with a resolution on land reform that was adopted by the General Assembly.

4. A resolution adopted on land reform by the fifth annual meeting of the International Federation of Agricultural Producers (attachment C).

5. The address of Under Secretary of Agriculture, Clarence J. McCormick, before the council meeting of the Food and Agriculture Organization which met recently in Rome, which I am offering as attachment D.

The committee print of basic data does not do full justice to the importance of the other American republics nor to the magnificent potential they have of helping out in the mutual job of building strength for peace, prosperity, and democracy.

The need for reforms in the economic and social institutions of agriculture in Latin America is, again, largely overlooked in the committee print. In this matter, I invite your attention to a resolution adopted at Montevideo by the agricultural section of the Organization of American States. I offer a copy of this resolution for the record (attachment E).

When we have examined the economic situation of the different countries outside the Iron curtain, except our own, we find that none of them has the present ability to build the strength they need as rapidly as the world situation

demands. We can assume and must demand that each of these countries do all they can themselves. But I feel sure that you will conclude, as I have, that we must help them to help themselves.

BACKGROUND OF UNITED STATES DECISION

This leads us to the question of what the United States should, and can, do to help most effectively. That is the major question before your committee. It is a vitally important matter for the world and for the United States.

The family farmers of this country are not unfamiliar with the necessity of making decisions of the kind which face your committee and the Nation at this time; nor are our family farmers unaccustomed to making such decisions. Let me illustrate what I mean.

A frequent occurrence within the farm family is the necessity of making a hard choice about how to use the proceeds of a particular cream check or the funds received in payment for a load of hogs. The money could be used to buy a couple of new dresses for the farm wife, a new suit for pa, and some extra toys for the kids. The same money could be used to build an addition to the barn that would provide protection for some new machinery, for additional livestock, or to put up more hay or feed.

Quite often there isn't enough money on the farm at one time to do both.

So a hard decision has to be made whether to protect the capital resources that have already been accumulated and that can be used to produce more income in the future and for a while do without the additional dresses and suits and toys and other family living goods. Even in good times the farm family must make countless decisions of this kind.

It has been common throughout our history for young farmers, and those who were not so young, to improve their barns before they improve the house the family lives in. And when you stop to think of it, this is not such a dumb decision after all. With a better barn there is a possibility of lower costs and a higher income leaving a greater net from which to cover the cost of improving the home.

In international affairs, likewise, we must decide whether to invest in those things that will protect us against aggression and build toward peace, prosperity, and the preservation and extension of democracy at the temporary expense of the higher standard of living that might have been possible if the same effort had been put in peacetime pursuits. The question is, Shall we expand and strengthen the barn? The question is as simple as that, and as fundamental.

Out in my country, wolves are a threat to our livestock. As you know our farmers and ranchers have not sat idly by and tried to accommodate themselves to the prospect of expanding numbers of this predatory beast.

We have taken guns in our hands with a view to protection. And through our governments we have provided economic assistance and economic incentives, in the form of bounties, to those who are willing to join our campaign against wolves. We haven't yet gotten rid of all the wolves, but we're keeping them under better control than if we had refused funds to pay bounties.

The United States must play a major role in assisting the free world to resist the encroachments of the predatory forces in international affairs and to ultimately roll them back. Our aim must be to build maximum strength—political, economic, social, and military—in the United States and throughout the free world.

Fortunately, even under present circumstances, this aim does not require actions that completely conflict with the kinds of progress we would want under more desirable circumstances to bring about the economic and political development that would lead toward sustained and widely distributed abundance in a peaceful democratic world.

Much that we must do to build a defensive shield against Russian dominated and planned totalitarian aggression will contribute constructively and permanently to the building of a better world even though considerable funds are expended in purely defense mobilization activities. It is unfortunate and tragic to rank and file people everywhere that such a large part of our stepped-up efforts must go into military defense. But in building those military defenses we not only build a defensive shield to protect the attainments we have already made but we can, also, if we are wise, make a vast net contribution to the welfare of the world. As a matter of fact a large share of our domestic program and of our foreign assistance must be channeled into improving economic and political conditions if the military defense shield is to be as secure as we would like.

SIZE OF PROGRAM

Some of the witnesses who have appeared before your committee have said that the current need for defense expenditures and foreign assistance far exceeds our ability as a nation to provide. Although I have no particular argument with that point of view, I am not at all sure that it expresses the really pertinent question that the Nation and your committee is called upon to answer. I feel quite sure, without examining a lot of statistics and financial reports, that the maximum physical and economic ability of our Nation to divert resources and manpower from civilian goods to defense and foreign assistance, if total war were imminent, would very greatly exceed the proportion of such resources that wisdom would now dictate that we should so allocate.

So the really pertinent inquiry is how large a total effort we should make and what proportion of the resulting total national output would it be wise at this time to devote to domestic defense expenditures and foreign assistance.

The present period of international tension will, in my opinion, last a long time. Meanwhile, life and progress must go on. This means that we should adopt the size of program that we think the Nation can accomplish in stride, year in and year out, without sacrificing the values and personal integrity which our defensive shield must protect. We believe that some such workable approach is more conducive to the building of maximum sustained military and economic strength than any other alternative.

To arrive at the proper tempo, different people and different groups will make different sorts of calculations. What any of the calculations come down to is a judgment of how much resources and how many man-hours we as a nation and as individuals are willing to put into the crusade for freedom.

We must all remember that it is our liberties, our prosperity, and the prospects for peace that are at stake. We have estimated what different rates of expenditure for foreign assistance would come to in taxes for farm families in each of the income groups. Checking through these figures, we have concluded that the President's recommendation of \$8,500,000,000 is moderate.

Your deliberations are being conducted during a period of uncertainty—uncertainty concerning the next moves of the Kremlin and also concerning the final outcome of the cease-fire talks in Korea. We must, however, realize that there is no security, but insecurity. Actually, man never moves forward when searching for security. Only when he is daring does he have security.

We must not allow our hopes for a Korean cease fire to lull us into a feeling of false security. Even the genuine attainment of a secure and genuine cease fire or armistice in Korea would not change the basic underlying necessity for the United States to contribute abundantly to building the economic and political strength and understanding required to move as rapidly as we can toward a world brotherhood of prosperous democratic nations living together at peace.

It is our recommendation that the outcome of cease fire talks not be allowed to affect the total amount of appropriations to be authorized for foreign assistance. With or without a cessation of armed hostilities in Korea, we recommend that the United States make an annual investment of at least \$8.5 billion in building an integrated economic and military strength of the free world.

In the conduct of our foreign economic assistance programs, as much as possible of the assistance should be extended through appropriate international agencies. A desirable corollary policy is that bilateral arrangements in the extension of foreign assistance should be used only to the extent that international agencies cannot for some imperative reason carry out the proposed project and for the extension of economic aid beyond the capacity of the appropriate international agency to expand rapidly enough to undertake.

ALLOCATION OF FUNDS TO SPECIFIC PURPOSES

While we do not think the total over-all authorization should be reduced even if we are able to work out a genuine cease fire in Korea, we do recommend that the allocation of the funds among the different forms of foreign assistance should be shifted from finished manufactured goods—consumers goods and military end products to productive goods—machine tools, assistance in building factories, developing new sources of power and raw materials, and provision of technical assistance.

Accordingly I have prepared two sets of recommendations: One set will indicate the allocation of the \$8.5 billion total that we recommend in case no genuine cease fire can be negotiated in Korea. The second set of figures is the

allocation among forms of assistance that we recommend should be authorized in case of a genuine cessation of hostilities, in Korea.

The President's recommendation was \$3.3 billion for military aid and \$2.2 billion for other forms of foreign economic assistance. I am sure the committee will consider these recommendations carefully. I am sure that you will insist that as much as possible of the projected aid be in the form of assistance to the other nations to build expanded plant capacity and to do their own production with their own manpower and natural resources rather than in the form of end products such as relief, finished goods, and military end products. This is the only means by which we can help the free peoples to help themselves. I recognize, of course, that considerable amounts of foreign assistance must be in the form of finished goods to meet the deadlines of military and strategic expediences that cannot await further economic development in areas where needed, but I hope that this can be kept to a minimum.

For this reason the restrictions imposed by section 104 of the Mutual Defense Assistance Act should be eliminated in whatever legislation this committee recommends and the Congress enacts.

With the elimination of the restrictions contained in section 104, I believe that probably as much as \$1 billion could be shifted from the \$3.3 billion for military end products to other forms of assistance without damage to the military defense programs of the nations to be aided. If this is true, and assuming no Korean cease fire, this shift would result in \$3.2 billion for nonmilitary assistance and \$5.3 billion for military end products.

In case of a genuine cease fire in Korea, I recommend that a further increase of \$1 billion be made in the nonmilitary assistance with a corresponding reduction in the funds provided for the granting of military end products. Acceptance of this recommendation would provide, in the case of a genuine cease fire in Korea, that \$4.2 billion should be allocated to assistance in forms other than military end products and \$4.3 billion allocated to military end products for shipment abroad.

Information that we have studied in meetings of the National Advisory Committee on Mobilization Policy has impressed me with the very great rapidity with which our scientists and development engineers render existing models of tanks and airplanes obsolete. If the Russians are improving their models only half as rapidly, I would not want our side to get caught with a lot of our raw materials already made up into obsolete airplanes and tanks and electronic devices.

If we do get a genuine cessation of hostilities in Korea, I would like to see us concentrate more of our efforts both in foreign assistance and in the defense program here at home on resource exploration and development, expansion of productive capacity, raw materials stockpiling, and vocational and scientific education to build even more rapidly the underlying economic strength that will continuously give us the ability to produce greater quantities than we otherwise could of the then most recent models.

A genuine cease fire in Korea will give us an opportunity to put greater attention on building fundamental economic strength with less of our efforts devoted to a feverish attempt to increase our supply of finished military goods in forms that may soon be obsolete. If we do not relax but shift the emphasis of our efforts, we can frustrate whatever aim the Kremlin has in trying to lull us now into dropping our guard.

LEGISLATIVE SEPARATION OF FORMS OF ASSISTANCE

We want to recommend that in whatever legislation is written to authorize the Mutual Security Program, the different forms of foreign assistance should be set off in separate titles, one title for each of the following forms of assistance:

- (a) Relief and rehabilitation.
- (b) Military end products.
- (c) Foreign economic development—

- 1. Through private loans and investments, United States firms and persons.
- 2. Through loans by the United States Government and its instrumentalities and through international credit agencies.
- 3. Through grants from the United States.

- (d) Technical assistance.

Any foreign procurement programs should be coordinated with economic assistance programs.

We feel that this suggested separation of the proposed bill into functional titles is an important consideration, both to make our basic aims known to other

nations and to increase the understanding of the legislation by our own people. If the authorizations are separated in this way, all of us can understand better just what it is that we propose to do and we can keep a better check on the actual progress and accomplishments of different parts of the total program.

For convenience of reference, I have here a brief table that summarizes the appropriations I am recommending for each of the different forms of foreign assistance. You will notice the two sets of figures, one based on no cease fire in Korea and the other based upon a genuine cease fire.

Form of assistance	Recommended appropriation	
	No cease-fire	Genuine cease-fire
Total.....	\$4,300,000,000	\$4,300,000,000
Technical assistance.....	164,000,000	300,000,000
Grants for economic development.....	2,873,000,000	3,737,500,000
United States contribution to economic development revolving fund 1.....	1,400,000,000	1,800,000,000
Set aside to guarantee private foreign investments by United States citizens 1.....	100,000,000	200,000,000
Military end-products.....	5,250,000,000	4,230,000,000
Relief and rehabilitation.....	212,500,000	212,500,000

1 Loan funds not included in totals at head of columns.

You will also notice that I have not shown a recommended regional allocation of the funds. This is deliberate. We do not agree with the basic concept underlying the lumping of all the functions together regionally. We think it would be a mistake for regionalization to be the major structure of this proposed legislation. In carrying out these programs we will not be dealing primarily with formally organized regional groupings of governments.

Almost all of our direct dealings will be with international organizations and with individual sovereign nations. We recommend that the major divisions of the legislation into titles be along functional rather than regional lines.

TECHNICAL ASSISTANCE

The limiting factor in the provision of technical assistance is neither the need nor the available funds to make the expenditure, but rather the limited number of available technicians, and the speed with which we can develop a sound and effective program. I would personally like for us to move a great deal faster than these limiting factors will allow. But taking account of these limiting factors, which many who oppose the program will tell you are a great more limiting than they really are, I recommend that the following amounts be made available for technical assistance:

In case of no cease fire in Korea..... \$164,000,000
 In case of a genuine cease fire..... 250,000,000

These recommended funds would be available for the type of technical assistance and technical-collaboration programs as are currently conducted by the Office of Foreign Agricultural Relations in the Department of Agriculture and by the Institute of Inter-American Affairs, the Technical Cooperation Administration of the State Department and by the Economic Cooperation Administration.

We recognize that there has been some controversy among those who believe strongly in one or another of these forms of technical assistance. Each group of partisans seem to favor his own approach to the exclusion of the others--our attitude is that there is a place for the "Services" type of technical assistance performed by the Institute of Inter-American Affairs, along with the other types, but we do not believe that our entire national effort should be channeled through this one device. There are several effective approaches; our Government should make full use of all of them.

It is also my recommendation that, in addition to the scientific and professional type of personnel that these programs are currently sending overseas, that the technical-assistance work be augmented by working United States farmers; actual shop, factory, and foundry workers; by typical United States citizens from all walks of life. These ordinary citizens would join into farm

and village life in the other nations to pass on the magnificent skills that have made United States farmers and workmen the most efficient per man-hour of any people in the world.

Let me take a farm illustration to show you what I mean. At the request of the Government of India, the United States Department of Agriculture has a trained United States extension agent working with a group of villagers in India. He has helped train a number of Indians and together they are teaching the local farmers how to improve their production by using the things they have—such as improved varieties and local legumes. In 3 years the farmers in those villages have doubled their wheat production and increased other crops almost as much.

Unfortunately there is a limit to the number of men of this kind that we have to send abroad. So I would propose that we send a number of farmers over to help him. These farmers would live in the village, work closely with the farmers and help them learn how to solve their own problems. They might help them form a cooperative, or a farm organization, or buy an improved bull or bring in some better chickens.

The same thing could be done with industrial workers and small-business men. The rewards of this kind of program not only in the teaching of technical skills but also in people-to-people good will would be very large for each dollar spent. A few of our best people are doing this with young farmers and it is working extremely well. So we are speaking from practical experience.

This program would also work in reverse. When the farmer came home after a year or two he would bring several of those farmers with him—men picked for their potential leadership ability. The Indian farmers would live on the farm of the American and some of his neighbors.

We should greatly increase the number of citizens of foreign nations that are provided with on-the-job training in the United States, and we should encourage them to stay here long enough really to acquire advanced skills and technical know-how. I doubt if our money is being well spent when we bring a foreigner over here and he stays only a month or 6 weeks.

Language schools would, of necessity, have to be provided as would transportation and subsistence. Here again, the returns in good will, international understanding, and increased diffusion of technical knowledge and skills would far outweigh the dollar cost.

FOREIGN ECONOMIC DEVELOPMENT

Grants

As you see in the table, I am recommending an authorization and appropriation for grants in aid of foreign economic development of nearly \$3½ billion in case of a genuine cease-fire. The "no cease-fire" total, \$2.87 billion, is made up of the \$1,873,000,000 recommended by the executive branch for economic assistance to Europe plus the \$1 billion that is to be shifted from military end products by the elimination of section 104 of the Mutual Defense Assistance Act, plus the funds recommended by the President for nations in regions outside Europe. In case of a cease-fire in Korea, we should put additional funds into resource exploration and development, plant capacity expansion, agricultural land development, and other forms of expanding and strengthening the basic economies of nations outside the Iron curtain. In the total of \$3½ billion, I have included funds for additional land reclamation and development in southern Italy, farm consolidation and enlargement in southern France and elsewhere and for economic development generally in the dependent territories of Africa. The remaining funds I have recommended in the event of a cease-fire would be available to provide financial encouragement to expanded economic development of all types in regions outside of Europe.

Authorizations in these amounts would allow the initiation of some really important economic development projects—projects that would be sound and practical applications of the kind of internal improvements continuously authorized in the United States throughout our 175 years of history since the Declaration of Independence announced the birth of modern democracy and economic evolution to the world.

Our own internal improvements, the canals, and waterways, the land grants to railroads, the multipurpose dams, and the rest were very important contributions to the economic progress of our own Nation as it pursued its "manifest destiny."

Similar good results can be expected in other nations from United States financed and encouraged economic development.

The Congress should require that United States funds advanced for economic development be matched by local funds and/or economic goods or services in a ratio to be determined for each country by the President. Regulations and restrictions relating to these matching funds should be the same as those now required under the Economic Cooperation Act for the so-called counterpart funds. These counterpart funds should be used as a means of integrating the entire Mutual Security Program with the total resources of the free world. Not nearly all of the jobs required to build economic and military strength and better political understanding require the use of dollars. In many cases non-dollar counterpart funds can get the job done. Nations receiving aid should contribute according to their ability counterpart funds to be used in financing additional projects to further the purposes of the Mutual Security Act. We feel that this purpose can be attained through appropriate international negotiations under current regulations concerning counterpart funds but would represent a change in existing procedure and practice. This should be done in a manner consistent with the dignity and nationalism of cooperating countries.

At least some part of the economic assistance funds extended to Europe, plus matching counterpart funds, should be earmarked for agricultural credit and technical guidance to further the aim of agricultural economic integration of that area. A part of these funds should be available for short-, intermediate-, and long-term agricultural production, farm enlargement and improvement, and farm-purchase credit.

Another part of the funds should be available for the establishment of a West European agricultural commodity stabilization fund similar to the Commodity Credit Corporation in the United States. Other funds should be made available to initiate a crop-insurance program for the area on a sound experimental basis.

In no case should the entire cost of an economic development project be taken from the grant funds I have just recommended. As a matter of fact I would hope that the bulk of the costs involved in these projects could be financed with local private and governmental funds in conjunction with long-term loans obtained from an international development revolving fund of the World Bank and from loans advanced by the United States Export-Import Bank.

I hope that if we establish the appropriate environment and special encouragement, there can be a surge of foreign investment on the part of private firms and persons of the United States on a basis mutually advantageous to our investors and the people in underdeveloped countries. The primary purpose of the grant funds I have recommended in this section is to facilitate and encourage as a sort of catalytic agent, the undertaking of economic development projects that can be largely financed in one of these other ways.

Loans

I recommend that this section of the proposed legislation authorize the use of \$1,800,000,000 in case of a cease-fire, or \$1,400,000,000 in case there is no cease-fire, to establish revolving funds from which loans can be made for foreign economic development projects of the type described above. I suggest that at least \$800 million in case of a cease-fire or \$400 million otherwise, be earmarked for the United States contribution to an international economic development fund to be administered by the World Bank, provided that other nations will put up in total a somewhat larger amount. A part of this fund could be used to create an UN revolving fund for loans to cooperatives. The other \$1 billion would be an addition to the funds of the Export-Import Bank to make loans to further the purposes of the mutual security program. The World Bank should not be restricted by the present requirement of securing its loan funds in the private investment market.

ENCOURAGEMENT OF PRIVATE FOREIGN INVESTMENT BY UNITED STATES CITIZENS

The economic development of our own Nation was largely done by private funds very greatly encouraged in many cases by governmental guarantees and Federal grants-in-aid. Federal guaranty of private loans and investments is an accustomed and accepted method of encouraging private investment to enter fields important to the public interest where the risk is high. These same conditions prevail in respect to foreign investment for United States private capital.

We have never hesitated in this country to provide encouragements and assistance to private investments in high risk enterprises if the public interest was thereby advanced. We should not hesitate now with respect to foreign investment. We want and need private foreign investment, not for purposes of imperialism

or exploitation, but rather for sound economic developments for the benefit of the economy and the people of the areas where the investments are to be made, as well as for an outlet for some of the domestic United States savings that would result from a maximum production economy.

To accomplish this, I recommend the following actions:

We need to move as rapidly as we can to negotiate whatever treaties are required to aid nations in developing an environment in which private foreign investment has a chance for success.

We should be willing, and I recommend that you incorporate in this Mutual Security Act, relief from double taxation of income produced in other countries by United States companies.

In addition, it is my recommendation that you set aside a contingency fund of approximately \$100,000,000 in case the Korean fighting continues, or of \$200,000,000 if the hostilities are brought to a genuine close, to serve as a fund from which losses incurred from foreign loans and investments, through no fault of the private company, may be reimbursed: *Provided, however*, That sufficient safeguards should be included in the legislative authorization to insure that the program will in no way guarantee profits or monopolistic control by United States companies.

RELIEF AND REHABILITATION

I recommend the United States should make its full contribution of \$162.5 million to the United Nations to finance the work of the United Nations Korean Reconstruction Agency. The total amount would be too small, even if it were larger, to do more than partially restore the war-torn people of Korea and their economy. No expenditure, no matter how large, would make up for the heart-rending suffering of that courageous and war-torn country. This amount would represent the \$50 million already appropriated plus the \$112.5 million that has been requested by the executive branch.

I also recommend that the United States make its full contribution (\$50 million) of funds required by the United Nations to reintegrate the Arab refugees in the Near East.

We cannot foresee at this time what new developments may occur in other countries outside the Iron curtain that may require the type of assistance I have recommended for Korea and the Arab refugees. So that we may be able to move into operation with the needed relief program without waiting for specific congressional authorization, I recommend that a foreign relief contingency fund of \$50 million be established as one of the provision of the Mutual Security Act. This would come to a total of \$212.5 million for relief and rehabilitation purposes.

With regard to the UN relief programs, I hope that our Government will exercise some close review of the staffing plans of these agencies. I am absolutely opposed to the development in New York, or any other headquarters, of a large staff of high-salaried men to mastermind these relief and rehabilitation programs.

A large group of highly paid staff parasites in New York or elsewhere will be of no real aid to the war-numbed and homeless Korean people or the Arab refugees. I recommend that our Government insist upon a heavy allocation of administrative budget to field operations and a stringent limitation on headquarters office staff. Administrative costs of international relief should be kept to a minimum; so a maximum is available for substantive expenditures. Workers employed for field work should be those who have a full knowledge of and sympathy for democracy and the needs and feelings of the unfortunate peoples who are being aided. For example, the field staff of the UN Korean Reconstruction Agency should be made up, as far as possible, of Orientals acceptable to the Koreans.

LAND REFORMS

The United States agency or agencies entrusted with the administration of the mutual security program should be required by the authorizing law to be prepared to insist that full consideration of necessary reforms in agricultural, economic, and social institutions should be given with respect to all phases of every project or program of economic development and technical assistance that is approved. I again invite your attention to the recommendations included in my recent letter to the Economic Cooperation Administration, which I have offered for the record.

ADMINISTRATION THROUGH INTERNATIONAL AGENCIES

The agencies administering these programs should be required by the law to operate as much as possible of the authorized programs through the United Nations and its specialized agencies such as the Food and Agricultural Organization. My organization looks upon these international agencies as the nucleus upon which a democratic world federation will one day be built. We should push these agencies to take on additional programs and functions just as rapidly as they can expand soundly to administer them.

In some cases, the most effective way of enlisting the efforts of international agencies is a procedure whereby the Overseas Economic Administration would decide upon the specific project to be carried out and contract the job of doing the work to a selected international agency. The Mutual Security Act should authorize the use of this procedure.

ADMINISTRATION

Farmers Union concurs with the recommendations of many other groups that the administration of all forms of economic assistance authorized by the proposed Mutual Security Act should be placed in a single unified agency outside any presently existing department or agency of government. The new agency should absorb the personnel and functions of the Economic Cooperation Administration and of the Institute of Inter-American Affairs, the Technical Cooperation Administration and several other units in the State Department. Actual administration of the military end-products should be in the Department of Defense, subject to general policy established by the National Security Board and the President. This new agency should be built upon the existing structure of the organizations named but would be so reorganized that it will become an entirely new agency.

Another principle of administration that should be required by the authorizing legislation is that the new agency shall make full and complete use through contracts and reimbursable working agreements, of the personnel and facilities of existing governmental departments and agencies rather than attempting to build, by transfers or outright hiring, entirely new and complete functional services within its own structure.

Let me give an example or two. The various agencies of the Department of Agriculture are the world's greatest depository of technical, scientific and professional knowledge and skill on all matters relating to farming and farm life. This Department, through its Office of Foreign Agricultural Relations, can bring to use by the new agency the full resources of this great group of agriculturists and of the cooperating land grant colleges, state experiment stations and extension services.

We need United States agriculture, as such, to participate in the implementation of programs. The Department of Agriculture, through its field offices, could do a great deal to provide for this participation and could do the work of interesting farm families in overseas technical assistance work and could supervise the training of farmers from other countries brought to our farms by the expanded technical assistance program I have recommended.

The same general principle holds with respect to the Public Health Service of the Federal Security Agency.

We should push out as much of this foreign economic development work as we can to the UN and to its specialized agencies. We should encourage these international agencies to take on these additional duties just as rapidly as they can efficiently and effectively. Doing so will relieve our efforts of any stigma of imperialism.

Provision should be made in the legislation for the appointment of a Public Advisory Committee on Foreign Economic Affairs and an Inter-Agency Board made up of an official from each of the major federal departments and agencies concerned with economic problems of foreign relations.

This we believe to be the minimum foreign economic assistance program that the United States can with safety and good conscience undertake annually for the next several years. It is a program that is urged by humanitarian motives, moral principles, and enlightened self-interest. It is the minimum program that we can embrace to hasten the ultimate establishment of a brotherhood of prosperous democratic nations living together in peace. It is the way to greater strength for democracy, prosperity, and peace.

CHAPTER III—PRECONDITIONS OF ECONOMIC DEVELOPMENT

23. Economic progress will not occur unless the atmosphere is favorable to it. The people of a country must desire progress, and their social economic legal and political institutions must be favorable to it. In this chapter, we discuss the psychological and social prerequisites of progress. The next chapter discusses questions which are more clearly a matter for legal or administrative action.

24. Economic progress will not be desired in a community where the people do not realize that progress is possible. Progress occurs only where people believe that man can, by conscious effort, master nature. This is a lesson which the human mind has been a long time learning. Where it has been learnt, human beings are experimental in their attitude to material techniques, to social institutions, and so on. This experimental or scientific attitude is one of the preconditions of progress. The greatest progress will occur in those countries where education is widespread and where it encourages an experimental outlook.

25. Even where people know that a greater abundance of goods and services is possible, they may not consider it to be worth the effort. Lack of interest in material things may be due to the prevalence of an other-worldly philosophy which discourages material wants. It may also be due to a relative preference for leisure. In the latter case, the amount of work people wish to perform will be small, but they will not necessarily be averse to measures which increase the productivity of such work as they do. A high preference for leisure is not consistent with great material possessions, but it is not necessarily inconsistent with economic progress.

26. Alternatively, people may be unwilling to make the effort to produce wealth if the social prestige which they desire is more easily acquired in other ways. Thus, in feudal or aristocratic societies where power is inherited rather than earned, and where little respect is accorded to wealth which has been created in the first or second generation, the energies of ambitious men are not attracted so much to the production of wealth as to the acquisition of skills which may secure entry into the strongholds of power—to the acquisition of military skill, or the skill of the hunt, or the skill of the lawyer or priest. In such societies, the production of wealth is frequently held in contempt as a profession for well-bred young men. By contrast, economic progress is rapid in countries where the successful organizers of economic activity are among the more highly prized members of the community.

27. Where wealth confers power, and is desired, there may nevertheless be lack of enterprise for a variety of reasons.

28. In the first place, men are in general unlikely to make efforts where they cannot secure the fruit of their efforts. Thus, little progress occurs in countries where governments are too weak to protect property or where civil disorder is endemic. Neither is there progress where governments act arbitrarily in requisitioning property—as happened in the past on frequent military campaigns.

29. Even the demands of the family may discourage initiative if family obligations extend over a wide network of persons, and if enterprising members of the family resent being subject to the claims of their more distant relatives.

30. In societies where production is left to private enterprise, initiative will be weak unless the property institution creates incentives. Thus, livestock cannot be improved if all pasture land must be used in common; neither can improved rotations be practiced in agriculture if the enterprising farmer is not allowed to enclose his land. In some African communities where land has been held in common, the introduction of permanent agriculture has produced tensions because of the desire of the progressive farmer to protect his investment in a particular piece of land. Private enterprise and communal property are not always consistent with each other and with economic progress.

31. Defects of the law are also frequently a reason why a man cannot secure the fruit of his efforts to himself. For example, the law governing the relations between landlord and tenant may not adequately protect the right of the tenant to unexhausted investment which he has made in the land. Some of these legal defects are discussed in the next chapter.

32. In the second place, producers may be prevented from innovating by custom or by law. In some societies, for example, the techniques and rituals of agriculture are prescribed by priests, and an innovator would be committing sacrilege. Or the technique may be prescribed by law, as in the edicts of Col-

bert, the seventeenth century French statesman. Even in the most advanced societies, pressures are frequently organized to prevent the adoption of technological improvements.

83. Thirdly, potential enterprisers may be denied opportunity by the social system. To begin with, in any society inequalities of wealth may deny equality of opportunity to the greater part of the population, and keep ignorant many persons who, given the opportunity, would contribute to raising the national income. This is at its worst where the society is stratified by caste, color, or creed, and where whole sections of the population are deprived of opportunity by law, by custom, or by chicanery. Rapid economic progress is seldom found in societies which do not have vertical mobility or where a section of society is seeking to maintain special privileges to itself.

84. The social system may also deny to enterprisers the resources they need for organizing new units of production. Thus it may not be possible to recruit labor, because it is tied to the soil by law, or because caste restrictions prevent labor from moving to new occupations. Or land may be concentrated in the hands of a small number of persons who are unwilling, often for reasons of political prestige, to sell it to persons outside their group. Or the banking system may discriminate against borrowers of a particular race or creed. Horizontal mobility of resources is, like vertical social mobility, a prerequisite of economic progress.

85. Potential enterprisers may also be excluded by monopolistic organization of production. Sometimes this results from the concentration of wealth in a few hands. Or it may be the organized pressure of a number of small producers, banded together to protect themselves against competition. In either case, the monopoly may be backed also by legal restriction on free entry. Rapid economic progress is bound to damage some persons whose fortunes are tied up with old techniques.

86. There is a sense in which rapid economic progress is impossible without painful readjustments. Ancient philosophies have to be scrapped; old social institutions have to disintegrate; bonds of caste, creed, and race have to be burst; and large numbers of persons who cannot keep up with progress have to have their expectations of a comfortable life frustrated. Very few communities are willing to pay the full price of rapid economic progress.

87. In our judgment, there are a number of underdeveloped countries where the concentration of economic and political power in the hands of a small class, whose main interest is the preservation of its own wealth and privileges, rules out the prospect of much economic progress until a social revolution has effected a shift in the distribution of income and power.

88. There cannot be rapid economic progress unless the leaders of a country at all levels—politicians, teachers, engineers, business leaders, trade unionists, priests, journalists—desire economic progress for the country, and are willing to pay its price, which is the creation of a society from which economic, political, and social privileges have been eliminated. On the other hand, given leadership and the public will to advance, all problems of economic development are soluble. We wish to emphasize that the masses of the people take their cue from those who are in authority over them. If the leaders are reactionary, selfish, and corrupt, the masses in turn are dispirited, and seem to lack initiative. But if the leaders win the confidence of the country, and prove themselves to be vigorous in eradicating privilege and gross inequalities, they can inspire the masses with an enthusiasm for progress which carries all before it.

MAY 4, 1951.

HON. WILLIAM C. FOSTER,
Administrator, Economic Cooperation Administration,
Washington 25, D. C.

DEAR BILL: I have some comments and recommendations relative to the place of land reform policy in our foreign relations. This is a question in which I am deeply interested and on which I have a very deep feeling.

At the outset, let me say that in my thinking, land reform means much more than agricultural land ownership and the conditions of tenancy. It refers, in my opinion, to profound goals of human welfare which can be achieved by this means. Politically, a just and secure tenure system confers on the rural masses a great stake in private property institutions while insuring the economic aspect by securing to the producer a fair share of the product. But a wide initial

distribution of land among many small owners does not in itself guarantee the persistence of that pattern. Indeed, exploitive tenure systems are the end product of multiple causes among which have been found unsound taxation systems, usury, adverse marketing conditions, resulting in high prices for the goods and services needed by the farmer and extremely low prices for his product, lack of technical guidance, poor tools and inefficient methods. These and other less direct causes, such as adverse health and malnutrition, are almost certain causes for the failure of programs confined to the narrow concept of a change in the existing tenure pattern.

A good general definition of the term "land reform" is the provision of that pattern of land distribution among individual producers which, conforming to regional cultures, insures a wide distribution of land as property or as rights in land among producers, security of their tenure, and a fair share to them of the agricultural product. It should be clear from the foregoing that by the term "land reform" I contemplate not only a wide and just distribution of the land itself but also closely coordinated programs, simultaneously effected, for tax reform, adequate credit systems, cooperative legislation, technical guidance, discovery of improved methods and tools, and finally of affiliated programs of health, sanitation and education.

I wish to make it very clear that I am not discussing or advocating any particular form of tenure arrangement. I am perfectly aware that forms of landholding vary widely in different parts of the world and are often deeply imbedded in the indigenous culture. These cultural limitations must be fully understood and respected. For this very reason I have defined the term "land reform" in terms of its objectives rather than in a legal sense. I wish to make another proviso to the effect that land reform should never be conceived in narrow punitive terms implying the objective of turning out one set of owners in favor of another. Such a concept misses the point entirely, which is the strengthening of the general welfare of the rural population while serving the ends of democratic institutions.

Our own land tenure system, together with the other economic and social institutions surrounding agriculture in the United States, has been throughout our entire national history a strong bulwark of democracy. In most countries, as in the United States, economic progress and political stability in a free society is conditioned by the prevailing pattern and type of agricultural institutions, of which land tenure stands at the center.

If our foreign policy and its implementation through economic and technical assistance programs is to be most effective, it will require the active support by the United States of specific reform measures which are required to alleviate the underlying problems of poverty, political unrest, and lack of hope of the mass of the people in large areas of the world. Yet a criticism of undemocratic ideologies alone will not attain our objectives. The development of specific, positive policies is indispensable. In some of the countries with the greatest population in the world, unsatisfactory farm tenure, agricultural marketing, taxation, and credit policies have led to a state of hopelessness, discontent and unrest on the part of their entire population, for it must be emphasized that for almost all of Asia, Africa, South America and considerable portions of Europe, the entire population is altogether rural or semirural. That these conditions can be overcome through an actively supported, broadly conceived land reform program is dramatically attested by the successes of similar policies in Korea and Japan, as well as by our own national history. Moreover, when we take leadership of this type, we gain a deadly weapon with which to combat Communist agrarian doctrines.

Here is what I would recommend that we should adopt as our national policy on this subject:

1. In our foreign economic-assistance programs, the United States Government should insist that adequate provision for land reform be included in every phase of each undertaking, involving any country in which 60 percent or more of the population is engaged primarily in agricultural pursuits. This would include both the development phases and the operational phases. I would not go so far as to make the adoption of a complete land reform program an iron-clad requirement on the part of a country before receiving foreign economic assistance from the United States. However, we should require at least a few decisive steps in the direction of land reform as defined above. I would also set a requirement that all foreign economic assistance to agriculture be predicated upon arrangements adequate to insure that the benefits of United States aid would go to the man who actually works on the land. I feel very strongly that we

must be more positive in our attempts to equitably "count in" farmers in all our efforts at economic aid.

2. In regard to technical-assistance programs, every project for technical assistance (point 4) should include as a basic criterion a thorough consideration of the land reform aspects involved in the subject matter of the project. That is to say, if our technical-assistance projects are to be most effective, they must be based upon a contribution toward improvement of agricultural economic institutions of a nature that will allow the benefits of technical aid to become a permanent acquisition of the man who toils on the land. Every possible effort should be made in helping people on the land in developing methods and skills in self-help, an understanding of the responsibilities of private property and of democratic procedures.

3. The United States Government, through its diplomatic and other representatives abroad, importantly including our delegation to the United Nations, should take every possible opportunity to openly avow its firm belief in land reform as I have defined it, as an international standard applying throughout the world, and, if possible, within limits of diplomatic relations lend active assistance and encouragement to land-reform movements, groups and people within individual countries. The moral and political influence of the United States should be thrown behind indigenous movements toward land reform, particularly in the underdeveloped nations of the world when these are in accord with the criteria outlined above. Pseudo programs inspired by the Communists must be exposed in contrast to genuine programs based on democratic action and private-property institutions.

In summary, I strongly recommend that attention to land reform should be made an integral part of every phase of the planning, administration and operation of all our foreign-assistance programs. Land reform, in the sense that I have defined it in this letter, is not something which is separate and apart from land and industry development projects, irrigation, land reclamation, drainage. It is not something apart from education, vocational training, and extension. Land reform, in my meaning, is in effect the democratic way of life and has an intimate bearing on all types of economic and social activities. Land reform is something which must be included as a part of each different assistance project and not conceived as a separate and distinct project.

Finally, I wish to emphasize that I am proposing a program of action. I am not discussing theory. It takes several years to get a program such as I have proposed off the drawing boards; more time is required to assemble and train the staff required to execute the program. Consequently land reform proposals that do not in specific instances take definite form in tangible plans and programs in the immediate future cannot be regarded as likely to be placed in effect in the foreseeable future and therefore cannot qualify as meeting the requirements indicated above. We should not support empty talk, no matter how well phrased.

I appreciate the opportunity to comment on this very important matter, which is quite close to the hearts and minds of the family farmers of America. I hope that sufficient attention will be given to this important matter to develop a hard-hitting democratic policy which will be a beacon of hope to the landless, poverty-ridden peoples in the underprivileged areas of the world and instill in them a renewed faith in democracy and its great homeland: the United States of America.

Sincerely,

JAMES G. PATTON,
President, National Farmers Union.

RESOLUTION NO. 20 ADOPTED BY THE PLENARY SESSION OF THE FIFTH ANNUAL GENERAL MEETING OF THE INTERNATIONAL FEDERATION OF AGRICULTURAL PRODUCERS

20. Recognising with satisfaction the agricultural progress made in various free countries as a result of the reforms introduced in systems of land tenure and other democratic agrarian reforms which give to farm people the benefit of their production in a free and expanding system; and having been informed of the attention now being given to this highly important matter by the UN and the FAO, the IFAP pledges its support of the development, adoption, and imple-

mentation by nations of equitable systems of land ownership and land tenure, farm taxation, and agricultural credit. The organized agricultural producers of the world recognise that bad tenure relationships are a severe limitation on efficient and abundant production. IFAP also recognises the importance of better tenure arrangements in giving hope and incentive to workers on the land. Accordingly, the IFPA will urge FAO to give high priority to requests of member governments for technical assistance on tenure improvement and other agrarian reform programs. IFAP will also urge the United Nations to continue to maintain in its work a broad rather than narrow concept of agrarian and land reforms—the broadened concept to include free farm organizations, farmer-owned and farmer-controlled cooperatives, equitable farm credit and taxation as well as land ownership and landlord-tenant relationships.

BEYOND TODAY'S HORIZON

Summary of remarks in opening statement of Under Secretary of Agriculture Clarence J. McCormick, United States Member of the Council of FAO, prepared for delivery at the Twelfth FAO Council Session in Rome, Italy, June 11, 1961.

On behalf of the United States, I want to commend the FAO for its success in getting this Council session under way so capably despite the natural upset conditions occasioned by the recent move. I am certainly glad to see that the FAO is already so well settled here in Rome.

I am even further pleased to be able to report to you that the interest of the United States—its Government and its citizens—in the FAO is just as strong as ever.

Our faith has not wavered in the ideals and principles upon which FAO was established. Our determination is undiminished that FAO shall be vigorously supported by our Government in translating those ideals and principles into constructive accomplishments in the international realms of food and agriculture.

My country feels that the working party on long-term trends has done an excellent job, establishing a solid foundation for the future of this organization.

It is indeed heartening, in these times of world tension, to see this organization planning so soundly for the future.

I am sure most of us agree that the world's best hope for that future is just such cooperation, mutual understanding, and teamwork in tackling common problems that the FAO exemplifies in the particular field of food and agriculture.

We feel that way in the United States—not just our Government, but the American people.

We're looking beyond the immediate horizon; we're looking toward a better world ahead, and we are looking to the FAO to share in the responsibility of creating that better world.

We believe we are on the right road, and that we are already advancing along that road.

Global tensions of the past year may have partly obscured the fact that most freedom-loving nations have made substantial progress in facing up to important world agricultural problems through friendly cooperation.

We welcome this still growing spirit of international cooperation in agriculture.

In my country, from a standpoint of long-range significance, we regard the increasing international collaboration in agriculture as one of the most important trends of the past year.

We believe we have ample reason for feeling that constructive progress is being made.

In addition to the regular work of FAO, the point 4 program of technical assistance has been placed in operation, the International Wheat Agreement is concluding its second year of successful operation, Western European nations with the help of the Economic Cooperation Administration have laid increasing emphasis upon stepping up agricultural production, and increasing emphasis is being placed upon the role that land tenure reforms can play in alleviating unrest in many parts of the world.

All in all, the aspirations of rural people everywhere are making themselves felt in the highest councils of government.

Our progress adds encouragement to the hope that the basic resources of food and fiber may yet prove a common denominator in guiding mankind closer to its real goal of a world living and working together in harmony and peace.

Make no mistake about our attitude.

We are acutely aware of the grave problems confronting all freedom-loving countries as a result of continuing threats to international peace and security—threats occasioned by selfish forces of aggression, not yet fully restrained by the world's family of nations.

We recognize that such aggression is a dangerous obstacle that must be overcome before we can achieve the better world of peace and progress that I am sure is the true aspiration of all rural people on the globe.

We are fully determined that such obstacles shall be overcome—that eventually they shall no longer stand in the way of the constructive long-range goals most of us seek to achieve, both as individual nations and through friendly collaboration in this and other international forums.

We are determined that the progress already being made, through this body and elsewhere, toward creating international economic and political stability shall not be thwarted by any willful power unwilling to abide peacefully within the world family of nations.

Yet to make sure that doesn't happen may require some reorientation and shifting of our sights.

To protect the progress already made, and to preserve the opportunity for further progress in the future, necessity now calls for diverting much of our attention, our energy, and our resources to the more immediate task of strengthening ourselves and other friends of freedom, both militarily and economically, to the point where the world's balance of might will be overwhelmingly on the side of right. Only then, apparently, can human justice and freedom survive and expand unperiled by the ruthlessness of Communist aggression and ideology.

In other words, defense of the progress free peoples of the world have already made, must for now take precedence over the future progress we aim to achieve. There can be no hope for the far-away tomorrow, if it is snuffed out in the tomorrows close at hand.

The necessity for such a course has not been of our own choosing, but the decision to meet it head-on has.

As much as we deplore turning so much of our resources and energies from a positive course of human betterment in the world to the more negative purpose of girding against the threat of armed conflict, we have no other alternative.

For that reason my country proposes channeling much of its foreign-aid programs toward that immediate objective: defense of the free world. The President of the United States has recommended to our Congress the enactment of a new Mutual Security Program, combining military assistance, economic assistance, and technical assistance, so that our strength may be merged with the strength of other freedom-loving peoples in a resolute stand against further inroads of aggression anywhere in the world.

We are doing what must be done to protect security and stability in the world today, but we are doing it without taking our eyes off the future.

We want FAO to continue looking beyond today's horizon.

Regardless of emergency problems requiring the immediate attention of most of us as individual nations, we also need to keep thinking beyond the crisis of our time.

FAO's long-range planning can help all of us meet that need.

This organization can and should be the means of contributing to preparations for the brighter future that we as individual nations seek to make possible by strengthening our defenses now.

The fact that our approach to such defenses is toward mutual security and a sharing of strength, and the fact that economic assistance and technical assistance are counted upon as well as military assistance in assuring that security, is evidence that we, too, are still looking beyond today's horizon, and that our objective is still world betterment and world progress through international cooperation.

The Mutual Security Program is actually a continuation and intensification of policies and programs which we believe have contributed constructively to world betterment in the postwar years. Among these are the Greek-Turkish aid program; the Economic-Recovery Program in Europe; the technical-assistance program in Latin America; and the entire philosophy and objectives of the point 4 program that have met with such enthusiastic acceptance throughout the world.

We are not turning back. Rather, we are going ahead—by making sure we can and do defend what has already been achieved. The proposed Mutual Security Program is to be applied as an insurance that progress already made by many countries will not be reduced or halted by the march of aggressive communism.

I am mentioning our Mutual Security Program at this time because I believe it is pertinent to what this body is endeavoring to do, and because I do not want any misunderstanding about my country's wholehearted support of the long-range planning we have always favored in FAO regardless of the immediate problems that must be faced in the world today.

I am mentioning it also because agriculture has such a vital stake in mutual security of freedom-loving nations, and because agriculture has such a vast contribution to make toward that mutual security.

Our agenda reflects many of those contributions.

I believe one of the foremost can come in the field of land tenure which we are to consider. Land reform in its broadest interpretation deeply affects security in the world today, and is definitely among the problems we must face up to in looking ahead to the future.

In most countries, including our own, economic progress and political stability are closely related to the prevailing system of agricultural economic institutions. In many areas present unsatisfactory institutional arrangements are a source of persistent discontent and unrest. This has been recognized in United States domestic policy, and more recently emphasized in our foreign policy as illustrated by far-reaching land reform in Japan and support of land-reform measures in Formosa and South Korea.

We in the United States regard land reform in the broad terms of improvement of all economic and social institutions surrounding farm life. We believe it must be concerned with improvement in opportunity of agricultural land ownership and security of tenure, with problems of land rents, with taxation of agricultural land or income from land, with agricultural credit and producer marketing. In our broad definition of land reform agricultural technology, physical problems of land utilization and development, conservation of resources, methods and levels of productivity, and problems of rural industries are also included insofar as they are relevant to the institutional problems I have enumerated.

We favor efforts to improve such agricultural economic institutions wherever possible, in order to lessen the causes of agrarian unrest and political instability, and as a key to increasing rural standards of living. We believe that objective can best be sought by improving the position of the farmer on the land to the end that he may have greater security of tenure, and incentive to increase production and conserve resources (including the utilization of technological advances suitable to each economy), and an equitable share of the output from that land.

We recognize, of course, that specific land-reform measures will have to be evaluated in relationship to the conditions peculiar to each region and country, and that the individual cultural patterns of many countries may have differing constructive contributions to offer toward the same basic objective.

In support of this policy, which we as a nation have affirmed, the United States Government intends, giving encouragement and assistance to land reform when and wherever it will substantially contribute to promoting the objectives I have enumerated.

We shall do so in both planning and administration of our foreign economic and technical-assistance program, and we will also lend other practical assistance to desirable land reforms in addition to the economic and technical-assistance programs. We shall also actively encourage and assist in carrying forward land reforms in non-self-governing territories under United States administration, and, upon request, will work with other governments in connection with desirable land reform in such territories under their administration. Furthermore, we shall take every opportunity to support and encourage desirable land-reform programs through all appropriate international agencies.

Because of our interest in this broad field of agricultural betterment, I am looking forward to its discussion under the agenda item on land tenure. We feel that FAO's emphasis should be on assistance to governments requesting it in land reform, not just on study. Our advisory group of nongovernmental organizations in the United States strongly supports that approach.

I am looking forward with equal interest to discussions on the rest of our agenda, particularly on technical assistance. FAO deserves commendation for

the excellent progress it has made, and the readiness it has shown to coordinate its work with the United States program and the British Commonwealth's program.

We feel that FAO will want to examine the direction of its commodity work in this period of shortages.

In conclusion, I want to assure you again that the United States stands solidly behind FAO. In our country, nongovernmental organizations have participated actively in framing of our long-term recommendations, and they have all voiced strong support for the future of this organization.

To live up to that support, I believe FAO's challenge in these troubled times is to keep its eyes beyond today's horizon.

Attachment E

RESOLUTION I (Aid to Rural Families as the Basis of Democracy)—PRESENTED BY THE DELEGATION OF THE UNITED STATES OF AMERICA, FOURTH INTER-AMERICAN CONFERENCE ON AGRICULTURE, MONTEVIDEO, DECEMBER 6, 1950

Whereas:

The American Republics, individually and collectively, have pledged themselves to the preservation and perfecting of democracy as a way of life, as a principle of government, and as the supreme hope for world peace;

Democracy is, among other things, a system of farm-land tenure in which the cultivator of the land has the opportunity to own the land and to attain economic and social opportunities equal to those enjoyed by the other members of the whole society;

Families who own the land, or have leased it on equitable terms that give them reasonable profit for their work and other productive investments, have the strongest motives for adopting efficient agricultural practices; and

Recognition by governments of the interest and aspirations of rural families for a satisfactory way of life, including the inviolability of individual dignity, will strengthen the traditional inter-American system of individual freedom, and will be a strong bulwark against the regressive and reactionary force known as communism;

The Fourth Inter-American Conference on Agriculture resolves:

1. To recommend that each American Republic review its policies and programs so as to determine whether rural families have at their disposal services and facilities, including the services of research and education, credit, aid in the marketing of their output, economic information, and assurances of reasonable prices for their products, which are necessary to and consequent upon the growth of democracy.

2. That each of these governments direct its agricultural policy toward achieving welfare of the rural families.

3. That international organizations develop, encourage, and help the execution of these policies and programs in cooperation with each and every nation and to the greatest extent desired by these nations.

Mr. BAKER. I should like at this time to read you a brief summary of Mr. Patton's statement.

The Farmers Union appreciates this opportunity to present its view on the Mutual Security Program being considered by your committee. We want to commend the committee for the painstaking way in which you are operating.

The Farmers Union favors, for the long pull, a world brotherhood of prosperous democratic nations living at peace with one another. We recommend this ideal to you as the proper guide in the formulation of the foreign policy of this Nation. We want peace, prosperity, and democracy not only for ourselves but for everyone else in the world. The Farmers Union supports the general purposes of the mutual security program.

The current situation confronts the people outside the iron curtain with the necessity of building and maintaining a defense against

aggression while at the same time it is building the economic and political strength and understanding necessary to extend democracy, improve living standards, and establish an international brotherhood.

You have before you the committee print of basic data supplied by the executive branch. We have studied this material carefully. Without going into detail I should like to say that it largely substantiates our own observations in some of these countries, coupled with information we have acquired in discussion with other members of the International Federation of Agricultural Producers. The descriptions of The Problem appearing in each regional section of the committee print are, as far as we can determine, accurate if not entirely complete, appraisals of what the problems are in the countries of each region.

The committee print does not put nearly enough emphasis upon the need for land reform and for faster strides toward greater democracy in government in many countries.

Land development, economic investments, and economic aid alone will not strengthen the free world sufficiently in the absence of educational, cultural, and institutional changes required to see to it that a basic understanding of democratic processes and the benefits of economic progress and national defense are widely distributed among all the people.

BACKGROUND OF UNITED STATES DECISION

The family farmers of this country are not unfamiliar with the necessity of making decisions of the kind which face your committee and the Nation at this time.

It has been common throughout our history for young farmers, and those who were not so young, to improve their barns before they improve the house the family lives in. And when you stop to think of it, this is not such a dumb decision after all. With a better barn there is a possibility of lower costs and a higher income leaving a greater net from which to cover the cost of improving the home.

In international affairs, likewise, we must decide whether to invest in those things that will protect us against aggression and build toward peace, prosperity, and the preservation and extension of democracy at the temporary expense of the higher standard of living that might have been possible if the same effort had been put in purely peacetime pursuits.

In the western part of our country wolves are a threat to our livestock. As you know, our farmers and ranchers have not sat idly by and tried to accommodate themselves to the prospective of expanding numbers of this predatory beast.

They have taken guns in their hands with a view to protection. And through Government they have provided economic assistance and economic incentives, in the form of bounties, to those who are willing to join their campaign against wolves.

Basically, the decision how big a program to authorize comes down to how much taxes we are willing to pay to support foreign assistance. In checking through our own calculations we have concluded that the President's recommendation of \$3.5 billion is moderate.

It is our recommendation that the outcome of cease-fire talks in Korea not be allowed to affect the total amount of appropriations to

be authorized for foreign assistance. We must not allow our hopes for a Korean cease fire to lull us into a feeling of false security. With or without a cessation of armed hostilities in Korea, we recommend that the United States make an annual investment of at least \$8.5 billion in building the integrated economic and military strength of the free world.

ALLOCATION OF FUND TO SPECIFIC PURPOSES

While we do not think the total over-all authorization should be reduced even if we are able to work out a genuine cease fire in Korea, we do recommend that the allocation of the funds among the different forms of foreign assistance should be shifted if we get a genuine cease fire, from finished manufactured goods—consumers goods and military end products to productive goods—machine tools, assistance in building factories, developing new sources of power and raw materials, and provision of technical assistance.

I am sure that you will insist that as much as possible of the projected aid be in the form of assistance to the other nations to build expanded-plant capacity and to do their own production with their own manpower and natural resources. This is the best means by which we can help the free peoples to help themselves. We recognize, of course, that considerable amounts of foreign assistance must be in the form of finished goods to meet deadlines of military and strategic expediencies that cannot await further economic development in areas where needed, but we hope that this can be kept to a minimum.

For this reason the restrictions imposed by section 104 of the Mutual Defense Assistance Act should be eliminated in whatever legislation this committee recommends and the Congress enacts.

With the elimination of the restrictions contained in section 104, probably as much as \$1 billion could be shifted from the \$6.3 billions for military end-products to other forms of assistance without damage to the military-defense programs of the nations to be aided.

Mr. VORYS. What is section 104?

Mr. BAKER. I believe I can find it here in this committee print.

Mr. VORYS. You mean, of the draft bill?

Mr. BAKER. No, sir. It is in the one now.

Mr. CARNAHAN (presiding). That is in the present law?

Mr. BAKER. Yes. It is in the present law. Over on page 57. None of these are numbered. It is this particular one.

Mr. HERTER. Is that the basic data?

Mr. BAKER. Yes, sir. "Basic data supplied by the executive branch."

Here is the explanation of 104.

Mr. CARNAHAN (presiding). Let us see if the clerk can get us copies of it.

Mr. HERTER. I wonder if we could have that read so we would all know what we are talking about.

Mr. CARNAHAN (presiding). We can do that if Mr. Baker cares to read it.

Mr. BAKER. Would you like me to read it for the record?

Mr. VORYS. Yes.

Mr. BAKER. It is page 57 of the committee print, entitled, "The Mutual Security Program for Fiscal Year 1952, Basic Data Supplied by

the Executive Branch." It begins in the second sentence of the third main paragraph.

Mrs. BOLTON. Beginning with "Section 104 of the MDAA"?

Mr. BAKER. Yes, ma'am. It reads as follows:

Section 104 of the MDAA imposes limitations on the use of MDAA funds by forbidding their use (a) to construct or aid in the construction of foreign factories or to provide equipment (other than production equipment) for them; (b) to defray the cost of maintaining such factories; (c) to compensate any country or person for diminution in export trade resulting from the carrying out of any program of increased military production or to make any payment to the owner of any factory as an inducement to undertake or increase the production of military goods; (d) to pay any person for personal services rendered in any such factory other than personal services of a technical nature provided by United States employees in order to establish or maintain production to effectuate the purposes of the act and in conformity with desired standards and specifications.

Our point is, it seems a little queer or peculiar for us to use up our resources and to use the scarce time of our scarce manpower in this country to produce ammunition, for example, which people in Europe have known how to make for a long time and have the resources and skilled manpower so they can make it.

Another item of that kind is mine sweepers. There are factories in various countries of Europe that can make acceptable mine sweepers. In terms of dollars, in a sense, if we hired them to do it they can make mine sweepers cheaper than we can on the same specifications.

With or without the cessation of armed hostilities in Korea, we feel it is a billion dollars. We do not know whether it is \$800,000,000, or \$1,000,000,000, or more than \$1,000,000,000 that could be shifted if that restriction were eliminated. We would not take that off the total, but would add it to the economic assistance. We would feel it would go half again as far, maybe.

If this is true, and assuming no Korean cease-fire, this shift would result in \$3.2 billion for nonmilitary assistance and \$5.3 billion for military end-products.

In case of a genuine cease-fire in Korea, we recommend that a further increase of one billion dollars be made in the nonmilitary assistance with a corresponding reduction in the funds provided for the granting of military end products. Acceptance of this recommendation would provide, in the case of a genuine cease-fire in Korea, that \$4.2 billion should be allocated to assistance in forms other than military end products and \$4.3 billion allocated to military end products for shipment abroad.

FORMS OF ASSISTANCE

We want to recommend that in whatever legislation is written to authorize the Mutual Security Program, the different forms of foreign assistance should be set off in separate titles, one title for each of the following forms of assistance:

- (a) Relief and rehabilitation.
- (b) Military end products.
- (c) Foreign economic development—

1. Through private loans and investments by United States firms and persons;

2. Through loans by the United States Government and its instrumentalities and through international credit agencies;

3. Through grants from the United States;

(d) Technical assistance.

Any foreign procurement programs should be coordinated with economic-assistance programs.

We have not made a recommended regional allocation of the funds. This is deliberate. We do not agree with the basic concept underlying the lumping of all the functions together regionally. In carrying out these programs we will not be dealing primarily with formally organized regional groupings of governments. Almost all of our direct dealings will be with international organizations and with individual sovereign nations.

We recommend that the major division of the legislation into titles as well as the organization structure of the Overseas Economic Administration be along functional rather than regional lines.

TECHNICAL ASSISTANCE

We recommend that the following amounts be made available for technical assistance:

In case of no cease fire in Korea, \$164,000,000; in case of a genuine cease fire, \$250,000,000.

These recommended funds would be available for all the types of technical-assistance and technical-collaboration programs that are currently being conducted by the Office of Foreign Agricultural Relations in the Department of Agriculture and by the Institute of Inter-American Affairs, the Technical Cooperation Administration of the State Department, and by the Economic Cooperation Administration.

We recognize that there has been some controversy among those who believe strongly in one or another of these forms of technical assistance. Each group of partisans seems to favor his own approach to the exclusion of all the others. Our attitude is that there is a place for the "Servicio" type of technical assistance performed by the Institute of Inter-American Affairs, along with each of the other types, but we do not believe that our entire national effort should be applied through any one device alone. There are several effective approaches. Our Government should make full use of all of them.

We also recommend in addition to the scientific and professional type of personnel that these programs are currently sending overseas, that the technical assistance personnel be augmented by working United States farmers; actual shop, factory, and foundry workers; by typical United States citizens from all walks of life. These ordinary citizens would join into farm and village life in the other nations to pass on the magnificent skills that have made United States farmers and workmen the most efficient per man-hour of any people in the world.

We should greatly increase the number of just ordinary citizens of foreign nations who are provided with on-the-job training in the United States, and we should encourage them to stay here long enough really to acquire advanced skills and technical know-how. I doubt if our money is being well spent when we bring a foreigner over here and he stays only a month or 6 weeks.

FOREIGN ECONOMIC DEVELOPMENT

Grants

We are recommending an authorization and appropriation for grants-in-aid of foreign economic development of nearly \$3¾ billion in case of a genuine cease fire. If there is no cease fire we recommend a total of \$2.87 billion.

Our own internal improvements, the canals and waterways, the land grants to railroads, the multipurpose dams, and the rest were very important contributions to the economic progress of our own Nation as it pursued its manifest destiny. Similar good results can be expected in other nations from United States financed and encouraged economic development.

The Congress should require that United States funds advanced for economic development be matched by local funds and/or economic goods or services in a ratio to be determined for each country by the President. Regulations and restrictions relating to these matching funds should be the same as those described to you by Mr. Porter of the EOA for the so-called counterpart funds. These counterpart funds should be used as a means of integrating the entire Mutual Security Program with the total resources of the free world and not just the resources of the United States.

Part of such counterpart funds in Western Europe should be made available for the establishment of a West European agricultural commodity stabilization fund similar to the Commodity Credit Corporation in the United States.

In no case should the entire cost of an economic development project be taken from the grant funds I have just recommended. As a matter of fact, we would hope that the bulk of the costs involved in these projects could be financed with local private and governmental funds in conjunction with long-term loans obtained from an international development revolving fund of the World Bank and from loans advanced by the United States Export-Import Bank.

Loans

We recommend that this section of the proposed legislation authorize the use of \$1,800,000,000 in case of a cease fire, or \$1,400,000,000 in case there is no cease fire, to establish revolving funds from which loans can be made for foreign economic development projects of the type described above. We suggest that in addition at least \$800 million in case of a cease fire or \$400 million otherwise, be earmarked for the United States contribution to an international economic development fund to be administered by the World Bank, provided that other nations will put up in total a somewhat larger amount.

ENCOURAGEMENT OF PRIVATE FOREIGN INVESTMENT BY UNITED STATES CITIZENS

Federal guaranty of private loans and investments is an accustomed and accepted method of encouraging private investment to enter domestic fields important to the public interest where the risk is high. We should apply this principle with respect to foreign investment by United States private capital.

We need to move as rapidly as we can to negotiate whatever treaties are required to aid nations in developing an environment in which private foreign investment has a chance for success.

We recommend that you incorporate in this Mutual Security Act relief from double taxation of income produced in other countries by United States companies.

In addition, we recommend that you set aside a contingency fund of approximately \$100,000,000 in case the Korean fighting continues, or of \$200,000,000 if the hostilities are brought to a genuine close, to serve as a fund from which losses incurred from foreign loans and investments, through no fault of the private company, may be reimbursed. Provided, however, that sufficient safeguards should be included in the legislative authorization to insure that the program will in no way guarantee profits or monopolistic control by United States companies.

RELIEF AND REHABILITATION

We recommend that the United States should make its full contribution of \$162.5 million to the United Nations to finance the work of the United Nations Korean Reconstruction Agency. The total amount would be too small, even if it were larger, to do more than partially restore the war-torn people of Korea and their economy. No expenditure, no matter how large, would make up for the heart-rending suffering of that courageous and war-torn people. This amount would represent the \$50 million already appropriated plus the \$112.5 million that has been requested by the executive branch.

We also recommend that the United States make its full contribution of \$50 million to the United Nations for reintegrating the Arab refugees in the Near East.

We cannot foresee at this time what new developments may occur in other countries outside the iron curtain that may require the type of assistance I have recommended for Korea and the Arab refugees. So that we may be able to move into operation with any needed relief program when needed, I recommend that a foreign relief contingency fund of \$50 million be established as one of the provisions of the Mutual Security Act.

ADMINISTRATION THROUGH INTERNATIONAL AGENCIES

The agencies administering these programs should be required by the law to operate as much as possible of the authorized programs through the United Nations and its specialized agencies, such as the Food and Agriculture Organization.

We should push out as much of this foreign economic development work as we can to the UN and to its specialized agencies. We should encourage these international agencies to take on these additional duties just as rapidly as they can efficiently and effectively. Doing so will relieve our efforts of any stigma of imperialism.

ADMINISTRATION

The Farmers Union concurs with the recommendations of many other groups that the administration of all forms of economic assistance authorized by the proposed Mutual Security Act should be placed in a single unified agency outside any presently existing department or agency of Government. The new agency should absorb the personnel and functions of the Economic Cooperation Adminis-

tration and of the Institute of Inter-American Affairs, the Technical Cooperation Administration and several other units in the State Department. Actual administration of the military end products should be in the Department of Defense, subject to general policy established by the National Security Board and the President. This new agency should be built upon the existing structure of the organizations named but would be so reorganized that it will become an entirely new agency. This Overseas Economic Administration should be given authority to make limited shifts of funds between the different forms of assistance.

Another principle of administration that should be required by the authorizing legislation is that the new agency shall make full and complete use through contracts and reimbursable working agreements, of the personnel and facilities of existing governmental departments and agencies rather than attempting to build, by transfers or outright hiring, entirely new and complete functional services within its own structure.

Provision should be made in the legislation for the appointment of a public advisory committee on foreign economic affairs and an interagency board made up of an official from each of the major Federal departments and agencies concerned with economic problems of foreign relations.

There is a summary table on page 9 of Mr. Patton's statement that summarizes our recommended allocation of funds to different forms of foreign assistance. You will notice two columns of figures, one based on no cease fire in Korea, and the other based upon a genuine cease fire.

This is my first appearance before your committee, and I want to thank you for your consideration and the nice treatment I have had. I am sorry that my performance has not been up to the usual polished performance that you should expect. I am just a country boy trying to tell you what we think about this thing.

Our heart is with you in the painstaking way you are going at it.

Thank you very much.

Mr. CARNAHAN (presiding). Mr. Baker, we certainly thank you for your appearance. We appreciate the definiteness that you have in your statement. We regret very much that Mr. Patton could not be here.

I am not going to go the rounds, but if anybody has any questions, we will have those questions now, and I will hold you to the 5-minute rule.

Are there any questions?

Mrs. BOLTON. I have a question.

Mr. CARNAHAN (presiding). Mrs. Bolton, you are recognized for 5 minutes.

Mrs. BOLTON. Mr. Baker, I take exception to your statement that you have not done so well, because we have had very few statements that have been as clear and so well presented.

Mr. BAKER. Thank you.

Mrs. BOLTON. It is very good to have these pointed and very definite statements of what you think so that we can sit down and really study your point of view, because there is a great deal to be studied in this very challenging statement.

You spoke before of what would happen if there is a cease fire. Does that mean that you feel that if there is a genuine cease fire in Korea the problem of the Kremlin and the Communist goal is any less?

Mr. BAKER. Indeed not. No, ma'am. We feel that assuming that we get an honorable, honest, and genuine cease fire in Korea, that that may mean—it may mean, not that it does mean, but it may mean—that the Kremlin may have decided to go through a period of trying to relax us and soften us up.

If that is true, it might give us a few extra months, or maybe a few extra years, in which we can do some of the fundamental things to build greater basic economic strength and political understanding which would give us a broader base from which to build up in case they decided to heat the cold war up some more.

Mrs. BOLTON. But you would not want us to go so far back—

Mr. BAKER. Absolutely not.

Mrs. BOLTON (continuing). That we should not be able to jump again?

Mr. BAKER. No, indeed. We have seen no signs that have come to our attention that would indicate that they have changed their minds a bit. They have just changed their tack.

Mrs. BOLTON. That is, their tactics, and their strategy, their studied procedure.

Mr. BAKER. That is right. I might add there, if it does not take up too much of your time, that in looking at this Kremlin threat and putting it in actual terms that all of us can understand, as Mr. Patton did in his statement, although I did not include it in my statement, actually if we do not stop them, what they are up to is taking over the geographic territory of the United States and turning our farms and factories over to carrying out the wishes of their war machine, and putting our people in slave-labor camps, like they have their own.

Mrs. BOLTON. Complete control of the world.

Mr. BAKER. That is right.

Mrs. BOLTON. To go back to this section 104 business, in our proposal in title I on page 51, you see in subparagraph (b) there that our proposal is to use the ECA for military production. Does that not agree with your thinking, or do you have in mind we could do more?

Mr. BAKER. That is in line with our thinking, but it does not apply to the big parts of the dollars that are in this bill.

Mrs. BOLTON. I see. I would have to study that.

Mr. BAKER. It applies to the \$1.7 billion in here, but it does not apply to the \$5.3.

Mrs. BOLTON. Why not?

Mr. BAKER. Because the 5.3 go over there in military end products. They are already manufactured shells and machine guns.

Mrs. BOLTON. I know we have had considerable testimony here on just the basis you spoke of, of having them make as much as possible in their own factories.

Mr. BAKER. I think it is awfully important.

Mrs. BOLTON. You spoke of the mine sweepers. We have also had that presented to us, and several of my own questions to some of the witnesses when we were meeting over in the big room, were to the effect that perhaps the Army would have to change its attitude a little of trying to have everything finished here and sent over there

perfect, because it was so important to have the factories there moving.

Mr. BAKER. We agree with that point of view.

Mrs. BOLTON. We are very much in sympathy with that point of view.

Mr. CARNAHAN (presiding). Are there any other questions?

Mr. JAVITS. I am just reading the gentleman's statement, and it seems to me you are in rather substantial accord with the International Development Advisory Board headed by Nelson Rockefeller.

Mr. BAKER. Not in all particulars.

Mr. JAVITS. Of course, I assume that, but I said in substantial agreement.

Mr. BAKER. Well, I do not know exactly what the words are. We are in some particulars. Yes, sir. In others we are not, particularly on the regional authority breakdown sort of thing. We think that the initial breakdown and the important breakdown is by function. In other words, agriculture, health, and so on, rather than have an Assistant Administrator for Latin America, and another somewhere else.

Mr. JAVITS. I do not think they go into it that strongly.

What I was thinking about in making your statement was your advocacy, which is the first time I have seen it by any witness except Mr. Rockefeller, of backing up this international economic development fund.

Mr. BAKER. We think of that as an extension of the same way we built our own Nation.

Mr. JAVITS. In other words, you feel strongly—and would you like us to take your recommendation—that in this bill, in view of the fact that it is a new program, we should provide funds for capital investment in underdeveloped areas? Not just technical aid, that is, but capital investment?

Mr. BAKER. That is correct.

Mr. JAVITS. And you think the best way to do that is through loans made through an affiliate of the International Bank?

Mr. BAKER. Only partially. Actually, we are recommending a larger allocation of funds to the United States Export-Import Bank.

Mr. JAVITS. Do you feel the Export-Import Bank then ought to change in this regard and make capital investment loans instead of commodity or material loans?

Mr. BAKER. Both.

Mr. JAVITS. But you understand that would be a different role than it has played before?

Mr. BAKER. That is true. In addition, we would like the incentives and the assurances that would assist private investors in the United States, we would hope, to carry out as much of those as possible.

Mr. JAVITS. I might say it interests me to see an organization like your own recommending relief from double taxation in order to get private capital invested abroad. I think that is a very good thing, and I am glad to see it.

Mr. BAKER. We are interested in particularly the underdeveloped areas, but in all the rest of the countries there should be building of plant capacity, expanding resources, exploration, developing and building their fundamental economies.

Mr. JAVITS. You have great faith in American business to do that job!

Mr. BAKER. That is right. Or, if some of the limitations are taken out of it.

Mr. JAVITS. That is right. Thank you very much.

Mr. CARNAHAN (presiding). Are there any other questions? Mr. Fulton.

Mr. FULTON. On the form of guaranty spoken of, do you not think it would be wise to go further and have a guaranty against loss of the investor's capital through the change in rates of foreign exchange?

Mr. BAKER. We have said "through no fault of their own," which would cover that, and changes in governments, and confiscations, if that should happen, and so on.

Mr. FULTON. One of the problems, and I believe one of the reasons why the present guaranty provision is not used more by businessmen, is that each foreign government, through its own fiat and its own separate action, can by change of the currency value immediately wipe out a person's savings.

Mr. BAKER. We would hope that part of that would be taken care of in these treaties we recommend. In other words, that an assurance against that sort of thing would be incorporated in the treaty that could be worked out and negotiated.

Mr. FULTON. How would you go about implementing your recommendations for land reform abroad? Do you have any particular program that would be generic, or would you approach each country separately?

Mr. BAKER. It would have to be done in each country separately.

I spent about a year in South Korea in the South Korean land reform and I could tell you what we did there. The land reform that was accomplished under General MacArthur's direction in Japan was a little bit different. The one they are doing now in Formosa is yet different from either of those two; and the one that ECA is sponsoring now in Italy is still yet different from the others.

Mrs. BOLTON. Would it not have to be?

Mr. BAKER. There is no other way that it can be that I know of.

Mr. FULTON. So you have no set program then as to the implementation of the land reform, but you do reach a result in each country?

Mr. BAKER. We feel that attention to the land-reform aspect of any economic development program should be thoroughly considered for each technical assistance project and each economic development project as it is developed, as it comes up for approval, and as it is actually operated.

Mr. FULTON. In conclusion, do you then believe in countries which have repressions of civil rights and bad economic land tenure rules, that either through treaties or through bilateral agreements, or through the implementation of this program that we should begin to bring them over to the democratic ideas, and also to influence and reform those systems?

Mr. BAKER. I might say that our definition or concept of land reform is a very broad one, including equitable farm taxation, free farm organization, farmer owned and controlled cooperatives, as well as what is usually considered just strictly land tenure.

The answer within that context is that we feel that through the three means you mentioned an awful lot, or very much good can be done in the way of proving that democracy will work for the people,

and that that is the soundest and solidest long-term measure if the invading army is not next door to the glittering promises and lures of this Communist ideology.

Mr. CARNAHAN (presiding). The time of the gentleman has expired.

Are there further questions?

Mr. FULTON. May I just finish and conclude that?

Mr. CARNAHAN (presiding). You have used your 5 minutes.

Are there any other questions?

(No response.)

Mr. CARNAHAN. (presiding). If not, we will go ahead to the next witness.

Mr. FULTON. Could I just sum up what I meant, please, Mr. Chairman?

Mr. CARNAHAN (presiding). All right. You may have one more minute.

Mr. FULTON. Therefore, in Yugoslavia and in Spain on the other side, the United States then should attempt by means of this program to obtain reforms at this time?

Mr. BAKER. Yes, sir.

Mr. FULTON. Thank you.

Mr. BAKER. We should also, if I may add to that, be looking for every avenue possible to extend democracy beyond where the iron curtain is now located.

Mr. FULTON. Thank you.

Mr. CARNAHAN (presiding). Thank you very much, Mr. Baker.

Our next and last witness for the evening is Mr. Boris Shishkin, of the American Federation of Labor. You have a prepared statement. Did you want to file that?

STATEMENT OF BORIS SHISHKIN, ECONOMIST, AMERICAN FEDERATION OF LABOR

Mr. SHISHKIN. I have a prepared statement which I would like to present to the committee, if I may.

I want first to thank the committee for the opportunity for me to appear here on behalf of the American Federation of Labor. I am very glad to have this opportunity, particularly since in the last 3 years the committee was particularly kind to me in giving me a hearing as a representative of the ECA, where I served as the Director of the European Labor Division. This year I appear in a different capacity, representing the American Federation of Labor.

I returned to this country from the overseas assignment a short time ago. In addition to the 3 years of service as the Director of the European Labor Division I was given a special assignment by our special representative in Europe, which included a survey trip over a number of western European countries, just before my return to the United States, for the purpose of reporting on the current developments particularly.

The American Federation of Labor supports the Mutual Security Program outlined in the President's message to Congress of May 24, 1951, and strongly urges authorization of the necessary funds to carry this program into effect without delay.

Both the military and the economic assistance to other free nations contemplated in this program are vital and urgent. The defense of the United States and its national security are intimately bound up with the execution of this program of aid to other nations. Labor, therefore, looks upon this program as being of equal importance with the defense production program and other domestic measures essential for our national defense.

During the last few weeks the Kremlin has drastically changed its propaganda tune. It has suddenly begun to proclaim peaceful neighborliness and amity toward the free nations of the west, including even Great Britain and the United States. This "new look" in Communist propaganda is designed to beguile us and to lull the aroused American giant back to sleep. But the American people know better. They refuse to be beguiled. They realize that the Soviet attack upon the free world is not a threat—it is a grim, ugly, and persistent reality.

This Communist attack is being waged with increasing intensity in many forms and with many weapons. The most dangerous among these weapons are internal subversion, political infiltration, and psychological warfare. These weapons are used to spread disaffection and unrest among the free nations and to bring division in the free nations' ranks. They are used, above all, to win time for the rearmament of the Moscow-controlled Communist bloc.

Time is, therefore, of utmost essence. We are most gratified by the diligence of the Foreign Affairs Committee, which is holding three sessions a day, including night sessions, in order to give this particular program speedy as well as thorough consideration.

Our only wish, Mr. Chairman, is that the rest of this present Congress would give as much attention to the time and urgency of the responsibilities before it at this time.

The Mutual Security Program is one of the foremost responsibilities of this Congress. We ask that it be authorized speedily and in full, in the light of comments and recommendations the American Federation of Labor here submits.

ECONOMIC AID NO LESS IMPORTANT THAN MILITARY

Our program of military preparedness and our military assistance to the free nations standing with us are for defense and defense alone. We need modern military strength to deter the Soviet Communist forces from invading free and peaceful nations. For us, a defense common with the other free nations is the only effective defense.

Labor supports the proposed military assistance to the free nations threatened with Communist aggression. We believe that the rapid development of defensive self-reliance on the part of our associated free nations will prove an effective safeguard against Communist military aggression.

Yet, rearmament is only a part of security. Advancing communism relies on military force, not as the first, but as the last, resort. Frontal attack is the exception and not the rule in the Kremlin tactics. Infiltration from within each free country invariably precedes and prepares the ground for invasion from without.

Once the groundwork is laid through covert infiltration and subversion, overt aggression using force is carried on by proxy, as much as possible. The shooting may be the result of Soviet-inspired in-

ternal strife or it may be launched by a satellite puppet on Moscow's orders.

The greatest pitfall for us would be to fail to recognize the true menace of this technique of vicarious aggression, whereby repeated blows can be delivered to freedom and free institutions without involving a single Soviet military unit. The gravest mistake for us would be to assume that rearmament alone can make us secure and to neglect the paramount need for continuing economic assistance.

The program of economic aid which can effectively deal with the sources of unrest and disaffection in the free countries is by no means secondary to rearmament. In terms of timing and in certain economically weak areas it deserves prior consideration.

POSITIVE POLICY NEEDED

The greatest strength in the American foreign policy since the end of the war has been in the positive leadership and the positive initiative taken by the United States in the building of the free world, embodied in the Marshall plan and the point-4 programs.

We can easily lose both the initiative and the leadership if we trade in the positive character of these programs on a purely defensive model. We have just begun to prove to others that human betterment, high employment, and increasing real income is made possible in an expanding economy such as ours. We have just begun to show how the free people can accomplish this with a minimum of aid and through reliance on their own skills and resources. Our aid to this end offers a promise far more real than any promise of a Communist dictatorship.

Such aid need not be costly. The essential minimum of economic aid plus a substantially developed program of technical assistance can accomplish much at a small cost. It is essential that such aid be continued as an instrument of a positive policy of the United States. Development of productive resources, increased productivity and, above all, sharing by those who work in the increased production and lower costs should spearhead the positive task of our economic aid.

AID SHOULD BE CONDITIONAL

Economic assistance in the future should be based on the agreement by the nations aided to use this aid toward the maintenance of high employment and the increase in the real income of their people.

The Government of the United States has an obligation to make sure that its economic aid will be used for the positive purposes to which America is committed.

All our domestic programs of Federal aid within the United States involving grants and loans require the acceptance by the State and municipalities of standards on the maintenance of which this aid is conditioned. We see no reason why this approach should be abandoned in the foreign-aid program. Advance acceptance by the participating countries of broad positive conditions would place the responsibility on them for specific legislative and administrative actions in order to make sure that the aid is put to positive uses.

Foremost among such conditions should be the agreement on the part of the recipients of our aid to further the improvement of real

income consistent with defense and to provide for highest attainable employment. In many of the nations of the free world direst poverty and widespread privation still prevail. The positive purpose of American aid should be to work such improvements as may be possible to stamp out poverty and increase the real income of the great mass of the people.

In order to carry this positive approach into effect, we recommend that section 102 of the Economic Cooperation Act of 1948 be amended to include the following in the declaration of policy:

It is declared to be the policy of the people of the United States to provide economic assistance to countries pledged to promote, to the extent consistent with their national defense, national and international action designed to attain the following objectives:

1. To assure a large and steadily growing volume of real income and effective demand, and the attainment of the higher standards of living.
2. To increase the production, consumption and exchange of goods, and thus to contribute to a balanced and expanding economy.
3. To promote full and productive employment.
4. To foster and assist such industrial and general economic development, particularly of those countries which are still in the early stages of industrial development, as will contribute to the achievement of higher living standards, and to encourage the international flow of productive investment toward this end.
5. To enable countries, by increasing the opportunities for their trade and economic development, to abstain from measures which would disrupt world commerce, reduce productive employment, lower living standards, or retard economic progress.

I might add, Mr. Chairman, the language contained in this proposed recommendation, to be included in section 102 of the Economic Cooperation Act of 1948, which undoubtedly will be integrated in any of the proposals for the continuation of the program, is the language to which the policy of the United States is already committed.

In our agreement with the United Kingdom on tariffs and trade as long as 6 or 7 years ago this was the basic position taken by the representative of the United States.

Mr. FULTON. I have just said to Mr. Javits that is familiar language.

Mr. SMITH. So we feel that the United States should not hide its light under a bushel and refrain from stating its purpose affirmatively. We should state that our purpose in all the cooperative effort among the free nations is to attain these positive objectives behind which the American people stand. To fail to state it would be to miss the greatest opportunity we have today to show the people not only within the free countries, but the people behind the iron curtain, that this is the purpose of our entire activity. This is why we are the liberators. We must show that we are not merely doing everything we can in order to provide guns, tanks, and bazookas for military effort, but that we have a positive purpose in mind. In that way I think you can lick the fear of having some Soviet divisions break rank and run across the border. Because only when we are, through every means available to us, able to say to everyone who can understand human language that we are standing today as the leader in the world for a positive purpose of this kind, only then would we be laying the foundation upon which our economic-assistance program must be founded in order to succeed.

SINGLE, INDEPENDENT OVERSEAS ECONOMIC ADMINISTRATION

We strongly recommend the unification of the foreign economic activities of the United States Government in a single independent agency under an Administrator responsible to the President of the United States. We believe that both the economy and the effectiveness of the several foreign economic programs would be greatly enhanced by such an integration of the foreign economic activities of our Government.

Of course, the foreign policy of the United States must be a concerted policy. The responsibility for this policy must rest with the Secretary of State. Within the framework of agreed general policy, economic policy decisions can and should be made by the Foreign Economic Administrator, or the Overseas Economic Administrator, which is the term which has been suggested by some others.

Experience of the Economic Cooperation Administration has demonstrated that unity and harmony in the operations can be maintained while retaining independence of the economic agency in operations and economic policy decisions. Closest coordination among all agencies concerned both at home and abroad is, of course, indispensable to successful operation.

ECONOMIC ASSISTANCE SEPARATE FROM DIRECT MILITARY FUNCTIONS

The functions of economic assistance, mutual economic cooperation, and economic development should be kept distinct and separate from direct military responsibilities involved in the military aid. The effectiveness of the military program, as well as that of the economic program, will be increased if the military decisions relating to organization, deployment, and procurement requirements of the Armed Forces are handled by the Department of Defense for the United States, where they properly belong.

By the same token, the problems of defense production, contract allocation, and civilian manpower should be in civilian hands and handled for the United States by the Overseas Economic Administration.

I would like to add a word on this point which I think is extremely important. There is a real problem that has developed, particularly during recent months, and perhaps since last summer, when Mr. Spofford took over NATO, and the gradual development of two distinct organizations—OEEC and NATO—was taking place. The problem is to develop an area of clear agreement as to where the military decisions stand in relation to economic organization and how independent those decisions are of civilian interference with regard to military matters.

On the other hand are the decisions that should be made by civilians in the context of the NATO concepts as well as the concept of the OEEC in Europe. Experience, with which I have had a good deal to do at first hand, has shown this can be done, and certainly needs to be done.

THE MILITARY PROGRAM FOR EUROPE

The proposed program calls for military assistance for Western Europe for fiscal year 1952 totaling \$5,293,000,000. This amount is

designed to provide almost entirely military equipment and supplies to be produced in the United States. It is to be supplemented by military training and technical assistance aids.

Under the leadership of General Eisenhower remarkable progress has been made in developing within Western Europe a defensive military force-in-being. A notable degree of agreement has been reached in pooling the military resources of the Allied Powers in Europe, as we have seen by the developments in the last 2 days.

Despite extremely weak economies still suffering from the chronic ailments afflicting the economic structure of Western Europe and from the ravages of war and postwar inflation, our Western European allies are doing their full part toward the building of military defense. England and France, for example, are devoting in 1951 as great a share of their national product to military expenditures as we do in the United States. The proposed program is essential to sustain the accelerated pace of defense activities needed to keep Western Europe free.

The North Atlantic Treaty Organization is engaged in the equally important task of developing programs necessary to sustain the defense activities and to coordinate the defense supporting efforts of the NATO countries. The job of organization of defense mobilization and defense production in Western Europe is properly a civilian responsibility and should remain in civilian hands.

We wish to emphasize the need to develop standards and policies whereby the impact of defense mobilization would result in the minimum of disruption in the still precarious economies of Western Europe. It is urgently necessary to press for agreements under which contract allocations and defense production in the free countries of Europe would be based on the criteria of maximum utilization of unused capacity available in Western Europe, the maximum employment of available manpower, and the maintenance of fair labor standards. We ask that the United States representatives in the NATO be directed to press for these obligations.

Let me say this, Mr. Chairman: In the work of the NATO and the Defense Production Board in Europe, we have a real problem. We know from experience now how deeply involved the questions are with which Mr. Wilson's Office of Defense Mobilization is struggling in this country. In Europe, we have the NATO Defense Production Board in which the task is 10, or 20, or 100 times more difficult because of the different standards in different European countries. But no provision is made today that will give assurance to the great mass of the workers in Europe that their interests will be safeguarded, or that the contract allocation will be on the basis that will help their countries; and that we are taking cognizance of their problems and that these standards are being considered.

The second question, which is of extreme importance also, is that in the supporting programs in Europe, in which the actual allocation of funds for European production may now develop, it is vastly important it seems to us to make sure that there is an agreement, an advance agreement, on the part of the European countries that they will be willing to utilize the facilities of a neighboring European country where that excess capacity is available.

In my experience in the discussions in the committees dealing with this problem there has always been a reluctance, which is being grad-

ually overcome with a great deal of difficulty, to provide an agreement for contracts that will be let in Italy, for example, where there is unused capacity. In Italy there are high skills, unemployed skill, available skills, as well as unused capacity for many successful operations as well as the assembly of component parts which may even be produced in the United States.

Yet, with a scarcity of time and skills we are abandoning the Italian unemployed to the fate of joblessness only because at the diplomatic level there is not the drive to make sure that provision is made for them, for the sake of economy and to accomplish the positive purposes we have in mind.

THE EUROPEAN RECOVERY PROGRAM

It is now less than 3 years since the Economic Cooperation Administration became a going concern in Europe. During this short time, mutual cooperation of Western European countries, their self-help and, above all, American aid, have made possible tremendous strengthening of the economies of Western Europe.

The Marshall plan, conceived and administered on a voluntary basis, has averted economic disaster and bankruptcy of Western European nations. It has made possible a strong organization for European Economic Cooperation carrying on the task not only of gradual integration of Western European economies, but also of cooperative programming in the development of Europe's future economic resources.

The Marshall plan made it possible to stop inflation and prevent financial collapse in most of the Western European countries. It helped avert mass unemployment. It created the European Payments Union which, by removing the barriers to monetary exchange, primed a free flow of currency and credit necessary to sustain trade among European countries. By closing the dollar gap and reestablishing a large measure of the balance of payments between Europe and the rest of the world, the Marshall plan has made it possible for European countries to begin to pay their own way in providing for their needs.

With the exception of France and, for different reasons, the Netherlands, the Marshall plan has made it possible for most of its participating countries to raise the real income of their wage earners substantially above prewar levels in a remarkably short time. It has helped sustain full employment in most of the countries and made it possible to reduce unemployment in others. It provided means for freer movement of workers across national boundaries. It has helped discover outlets and means for overseas migration to surplus populations in Europe.

It has provided technical assistance for the difficult and important task of rehabilitation and economic integration into the Western European economy of some 10 million refugees and expellees from the other side of the iron curtain, and some of them very recent arrivals.

And, it has launched a program designed to enable European industry to increase productivity, basing the productivity program on the principle that the benefits of reduced unit costs will not be confined to increased profits, as in the past, but will be passed on to benefit the community in the form of lower prices and increased wages.

In the development of these programs labor played a vital part through the activity of Trade Union Advisory Committees, estab-

lished in most of the ERP countries, as well as through the work of the ERP-TUAC, now merged with the European Regional Organization of the International Confederation of Free Trade Unions and the activities of many international trade secretariats.

In the short time of the Marshall plan operation, a firm foundation has been laid for building a strong Europe—a free and united Europe.

The crucial question before this Congress is, How should the remainder of the program of European recovery be related to the mutual defense of Western Europe?

There is before the Congress the proposed economic program for Europe totalling \$1,675,000,000. We regard this amount as the absolute minimum consistent with the discharge of the responsibilities the United States has assumed toward the completion of the task undertaken in 1948. But we are deeply apprehensive about the manner in which the future program is to be administered under the proposals now before the Congress.

Economic assistance is completely subordinated to military defense in the proposed program. The economic aid is put entirely in defensive terms. The justification given it is a purely emergency justification.

We question the wisdom of this approach. The relationship between the United States and the free nations of Western Europe is not an emergency relationship. It is, and should be, lasting and permanent. Our dependence on a free Europe, a Europe growing in strength, is just as vital as the dependence of Europe on a free and strong America.

We should state our purpose and our policy in positive terms. Short-term needs and emergency steps should be made subsidiary to long-term objectives. We should recognize that a diminishing amount of temporary aid is indispensable to achieving long-term goals.

Every American should recognize what the economic assistance under the Marshall plan has meant in the past and what economic aid will mean in the immediate future. It should be clearly realized that every dollar spent to assist the European recovery was spent, not abroad, but in the United States.

Since I have returned, Mr. Chairman, I have visited almost all of the States in a very short time. I have seen a number of factories which would have shut down, which were primarily wartime plants, in which there were thousands of workers who had migrated from other sections of the United States to do war work and who had been stranded at the end of the war, and all of that stranded population would not have been employed if it had not been for the Marshall plan aid. These workers would not need any explanation of what I am trying to state here because they know it from their own very vivid experience.

Our aid has not been for selfish ends. However, we have to emphasize this point because the great majority of the American people still think these vast amounts of money are sent abroad, are never returned and are not playing a productive part in this country.

It should be understood that if it had not been for the large-scale employment generated by the Marshall aid in the United States, the mild recession we experienced in 1949 would have undoubtedly extended into a full-fledged depression.

It should be recognized also that the rapid expansion taking place in our economy as the result of the defense program is generating industrial capacity and employment opportunities which will not be sustained indefinitely unless our growth is matched by the economic development elsewhere in the free world. We will be paying a small price in supporting the flow of exports desperately needed abroad in relation to the future gains we will get from the growing markets for our goods in foreign countries this aid will generate in the future.

We are keenly aware of the fact that the European countries have been doing, and are doing, their full part in terms of both self-help and mutual cooperation to translate the limited amount of our assistance into a vastly greater program of economic expansion. They have been doing this under enormous handicaps which have been overcome only because of their unswerving adherence to the principles of mutuality and constructive cooperation.

Commodity speculation and raw material shortages since Korea have dealt a severe blow to the economies of Western Europe. Although the Marshall plan stopped inflation in the ERP countries in 1950, a new inflationary round has been set off, cutting deeply into the real income of the mass of the Europeans.

Let us look at the basic facts of economic life in Western Europe. Here is the comparison of the per capita income in the United States in 1949 as compared with some of the Western European countries.

May we have that table reproduced in the record?

Mr. VORYS. That is a table I have been looking for for 3 weeks and it is the first time we have had it. Thank you.

Mr. CARNAHAN (presiding). We certainly appreciate your putting it together. It will be copied in the record.

Mr. VORYS. We feel pretty sure of the statistics too.

(The table referred to is as follows:)

Per capita incomes, 1949

United States.....	\$1, 453	Iceland.....	\$470
Switzerland.....	849	Ireland.....	420
Sweden.....	780	Western Germany.....	320
Great Britain.....	773	Portugal.....	250
Denmark.....	689	Italy.....	235
Norway.....	587	Austria.....	210
Belgium.....	582	Greece.....	128
Netherlands.....	502	Turkey.....	125
France.....	482		

Source: Statistical Office of the UN.

Mr. SHISHKIN. I would like to point out that roughly here is the picture in Europe. The per capita income in the United Kingdom is roughly half of the per capita income of the United States.

The per capita income in France is roughly six-tenths of the per capita income in the United Kingdom.

The per capita income in Italy is roughly half of the per capita income in France.

So, you have these disparities in the standards of living that have to be recognized when we are dealing with the problem of economic integration, or with objectives that are long-term objectives that need to have, broadly speaking, a short-term program to accomplish them.

In this connection I would like to point out also that it is increasingly apparent from this very comparison of what we are dealing with,

what still remains to be done in the situation. The dollar gap, as we understand it, and as the professors of economics, some of whom are now engaged in governmental activities, have been interpreting it for some time, is a limited kind of a problem. There still remains a residual problem we cannot overlook.

It is not enough for us to close the dollar gap. We have to look at these comparative figures and find out what can be done in those countries with a low income so as to prepare them to resist Soviet aggression. The way to do it is to win the minds and hearts of these people with the low standards of living, and the source of that inspiration is in the United States.

Much has been said about the effect of the Marshall aid on the standard of living of European workers. Some critics have complained that the Marshall aid has made the rich richer, and the poor poorer, repeating the charge made by the Communist propagandists. This charge is false. The available figures show that the real earnings—that is, wages adjusted for the cost of living—have increased in virtually every Western European country between March 1948 and the end of 1950.

The real earnings were virtually unchanged during this period in the United Kingdom, and they have declined 3 percent in the Netherlands where the decline was due mainly to the loss to the Dutch economy of foreign exchange in the east and a high rate of investment at home.

In France the real income of a worker with two children increased 1.7 percent during the Marshall plan period; in Italy for a worker with three children, 11.1 percent.

In Austria the worker's real earnings increased 23.1 percent; and in Western Germany, 61.3 percent.

The result is that with the exception of France and the Netherlands, the real earnings of wage earners in all ERP countries were above the prewar level of 1938 by the end of 1950. In the Netherlands these earnings were still 16 percent short of prewar and in France almost 20 percent short for a worker with two children. They were even shorter for a single worker because the family allowances play an important part.

I am reciting these figures particularly because I think it is terribly important for us to look at the real facts and put them in the proper perspective. It is very easy for anyone looking at the conditions of wage earners in one of these countries to say the Marshall plan has done thus and so, or this was the effect of the Marshall plan.

The very narrow relative margin of aid the Marshall plan has provided has been directed in almost its entirety to the capital investment for the development of the dormant resources of these countries.

Capital investment in hydroelectric plant means investment in future power for future production in consumer goods only at a later date. It is not immediate.

Yet there is a very real problem on the part of many of the European governments in their failure to take the necessary measures to see that the recovery has been progressing equitably. Therefore, we see wide disparities in the different countries. There has been a question long debated as to the extent which any American mission in a foreign country should intervene or not intervene in that country's internal affairs.

We feel that this question can be resolved by the kind of thing that was done in the adoption of the Marshall plan at the beginning. Stated in broad terms it would be a requirement placing the obligation on the foreign government to undertake the necessary measures through their own legislative powers, with full preservation of their sovereignty, to insure across the entire range compliance with the basic purposes, I have stated here.

Two things must be borne in mind in connection with this economic analysis. One is that in the past 3 years European reconstruction called for heavy capital investment. The heavy outlay in capital equipment could not bring an immediate increase either in the supply of consumer goods or in the standard of living of the workers.

But this investment has laid a firm foundation for increasing living standards in the future, if sound policies are pursued by the countries concerned.

The second factor is the basic disparity in the earnings in highly industrialized countries, such as the United States, and the industrially backward countries of Europe. A recent study by Irving Kravis, of the Bureau of Labor Statistics, on the Work Time Required To Buy Food, shows the disparity in the level of earnings before the war and in 1949 and 1950.

By 1949, the buying power of the workers' earnings in terms of food equaled or exceeded the comparative prewar level of relation to the United States in all countries except France, Austria, and Germany. This study reveals that between 1949 and 1950 the buying power in the ERP countries did not keep up with the United States where an improvement has taken place.

Thus, the 1950 comparison shows some deterioration in the buying power of Western European workers in Austria and Germany, and especially in France.

Mr. Chairman, I would like to have this table, which gives this comparison inserted at this point in the record.

Mr. CARNAHAN (presiding). Without objection, it will be done.
(The table referred to is as follows:)

Indexes of purchasing power of hourly earnings¹ in terms of food, prewar, 1949 and 1950

(United States = 100)

	Pre-war	1949	1950		Pre-war	1949	1950
Austria (Vienna).....	38	26	28	Italy.....	26	24	24
Denmark.....	79	80	73	Netherlands.....	45	47	33
France (Paris).....	68	37	31	Norway.....	68	88	84
Germany.....	81	33	38	Sweden.....	80	68	63
Great Britain.....	73	80	72	Switzerland.....	49	51	46
Ireland.....	44	46	46				

¹ Work Time Required To Buy Food, Irving B. Kravis, Monthly Labor Review, February 1951, pp. 149-151.

Mr. SMIRNIN, I think it is a crucial point that has been overlooked and is not sufficiently understood in this country, that the prewar levels in the European countries, by and large, with variations, of course, were vastly lower than the level of the ability of the American wage earner to purchase for an hour's work the food that is necessary to sustain him.

The war has meant a terrific drop in most of the countries in that standard.

In Germany, for example, before the war it was about half our standard. You had to work 2 hours to buy what we work 1 hour for in the way of food. After the war it was only a third.

So you can see the basic relation in terms of food, which is the essential burden on the purchasing power of the European worker, and which provides the measure by which we can estimate our continuing responsibility in economic assistance.

The plant in Morgantown, W. Va., which I visited recently, which had been engaged in the making of fertilizer under the Marshall plan, has a personal concern in this because they know that fertilizer which they have produced, and which gave them jobs, has given the European countries an ability, with the fertilizer, to develop production themselves, not to be relying on the United States taxpayers for continuing support.

That is the dramatic example of the kind of thing this problem involves, and which cannot be written off because the dollar gap is closed.

The significant fact is that the workers of Italy could earn in an hour only about one-fourth of the amount of food an American worker could earn before the war, and this ratio had not substantially changed by 1950. But this disparity is clearly not the failure of the Marshall aid. Actually had it not been for the Marshall aid, Italy would have been swept by a devastating famine instead of being able to maintain even the low level of living they have.

There are two considerations we believe Congress should have in mind in this connection:

(1) Economic assistance should be made conditional on policies which would translate increasing productivity into higher wages and lower prices under the policy we recommended in the amendments to the Economic Cooperation Act I suggested earlier.

(2) Affirmative steps should be taken by the Overseas Economic Agency to make sure that the investment capital accumulated by the participating countries, much of which is outside their own borders, should be put to work toward the economic recovery of these countries. Repatriation of the escaped capital held for foreign accounts can make an enormous contribution toward stepping up the progress of economic development in Western Europe.

Mr. Chairman, I have not seen any evidence of any affirmative action taken by the United States to make sure that appropriate steps be taken, in the light of the vast amount of foreign private investment capital being sheltered within our own country when—

Mr. HERTER. Has the gentleman taken it up with the Secretary of the Treasury?

Mr. SHISHKIN. My witnessing of this problem was in a capacity of a bureaucrat, in our Foreign Service. I was not in a position to take the problem to the Secretary of the Treasury.

Mr. HERTER. Excuse the interruption.

Mr. SHISHKIN. With regard to the labor program of ECA, I wanted to say very briefly this much and leave whatever else the committee might like to know to questions.

Operation of the ECA's labor program has been of strategic importance. It has resulted in positive progress toward increased productivity, manpower utilization, migration of surplus population,

and resettlement and integration of refugees. Above all, the labor program has brought free European labor into a direct partnership with the programs of economic development in individual participating countries and in Western Europe as a whole.

This program reaches far beyond the assistance provided under the country programs in strict economic terms. Utilizing the resources of technical assistance and exchange of personnel, the labor program should continue to play a larger part in strengthening the anti-Communist European labor, independent of the dollar aid provided.

This particular phase of the labor program should be based on the acceptance of the free and independent democratic unions in Western Europe as the primary instrument of European labor policy. The International Confederation of Free Trade Unions is the agency which we must accept and rely upon for furthering the objectives of the European workers through the representatives of their own choice.

Greater utilization of facilities to the trade-unions of the United States, especially to receive delegates of the European trade-unions, would further the objectives which we have already advanced among the Western European nations.

To put it in a sentence, my experience with the labor program is that it is fundamental to the program as a whole. We have to realize we are strengthening these countries. Their institutions are the ones we have to rely on, we must make sure that we do not have a number of people brought over with our assistance who go over to Europe and begin to tell the others what to do and how to do it, setting themselves up as a complete judge.

If the Europeans have democratic institutions, and if they have a free trade-union movement, that is the test of their ability to deal with these problems.

The American Federation of Labor wishes to emphasize the key importance of assistance to underdeveloped territories in which a relatively small amount of aid can bring the largest returns. The American Federation of Labor was represented by Mr. Lewis G. Hines on the International Development Advisory Board headed by Mr. Nelson Rockefeller, and supports the basic findings and recommendations in the report of that Board.

I might add that Mr. Rockefeller asked me to serve briefly as a consultant but my service was so brief, and limited to the final editing of the report, that I do not think my contribution is of any great significance. I did quite a bit of work on the preliminary studies leading to the report.

The present appropriation before Congress calls for \$85,000,000 under the point 4 program. We regard this appropriation as, indeed, a modest step in the development of a cooperative point 4 program.

The program of international development is based on the proposition that the free nations of the world working together with the underdeveloped countries, each making its proportionate contribution toward the total effort, is indispensable to the success of the program.

This is by no means a give-away program. It is one that will start us on the way toward growth and betterment of the standards of living in the most depressed areas of the world where the greatest strides could be made in economic progress. Let me stress the state-

ment made by the International Development Advisory Board with regard to labor standards. The Board said:

Improving the standard of living of the people of the underdeveloped areas is a definite strategic objective of United States foreign policy. That grievances are constantly being exploited by subversive forces hardly needs elaboration. Soviet agents have been particularly diligent in efforts to propagandize and control industrial and rural workers.
